The Outlook

SEPTEMBER 7, 1912

LYMAN ABBOTT, Editor-in-Chief HAMILTON W. MABIE, Associate Editor
THEODORE ROOSEVELT
Contributing Editor

The Bar Association and the Negro

Two very practical questions were before the lawyers who gathered together at the meeting of the American Bar Association at Milwaukee last week. Both of these questions have been involved in the political campaign, but they are not primarily political. One of them is the Negro question; the other is the question as to the relation between the people and their courts. The Negro question was presented in a very practical form. Some time ago three lawyers were proposed for membership in the American Bar Association. They were members of the bar in good standing, and were vouched for professionally. The executive committee of the Association to whom these three candidates were recommended accepted them as members of the Association. It then became known to the executive committee and members of the Association generally that these three lawyers were Negroes. Probably no general publicity would have been given to this matter if it had not been for the fact that one of the three has been appointed by the President of the United States as an Assistant Attorney-General. When the fact that he and the two others were Negroes became generally known, there was a protest from members of the Association. The reason for the objection was alleged to be that the Bar Association was primarily a social organization, and that the feeling for the social separation of the races was so strong, particularly in certain parts of the country, that it was unwise to admit colored men to membership. On the ground that the names of these men had been submitted without any statement that they were colored men, and that therefore their election was brought about under a misapprehension, the committee rescinded its own action and referred the whole matter to the Association itself. In doing this, it seems to us, the committee, if it was acting within its power, did wisely. Such a question as this ought not to be left for final decision by a committee, but should be acted upon by the whole body. We are glad to say that the Bar Association, in taking up this subject, confirmed the election of these three colored lawyers. By this action the Bar Association has rendered a service, not primarily to these particular lawyers, but to its own standing. If the Bar Association were merely a social club, there is no reason whatever why its members should not prefer to keep its membership confined exclusively to the white race. By recognizing the membership of Negroes, however, the Association has declared that it is not a club, but is a body of men organized in the interests of a great profession, and of the high ends to which that profession is dedicated. Incorporated in the resolutions recognizing these three men as members was a statement to the effect that, "as it has never been contemplated that members of the colored race should become members of this Association," recommendations of colored men for membership should hereafter be always accompanied with a statement of the candidate's race. We can see nothing objectionable in this statement concerning the practice hitherto of the Association, and none but good reasons for making it clear hereafter that such a misunderstanding as has raised this question this time should not occur again. One of the three colored lawyers, upon having his membership confirmed, immediately resigned from the Association. He did not withdraw until the fundamental question regarding race lines had been passed upon; but, that being settled, he, with great self-respect, relinquished his membership, since it had been the product of a misunderstanding. A difficult question which might easily have resulted in a bitter and lasting controversy has thus, by the application of good sense, been settled with general credit. The other question, that relating to the relation

between the courts and the people, was the subject of prolonged discussion and of resolutions passed by the Association. We await the receipt of an official report of these resolutions before making comment upon them.

Another Disturbance in Secretary Wilson's Department

Trouble, like a cloud, seems to hang over the Department of Agriculture. The Pinchot-Ballinger controversy involved it in turmoil. The Wiley case, affecting the enforcement of the Pure Food Law, revealed to the public the state of disorganization and conflict within the Department that deprived it of a measure of public confidence. Now a Committee of Congress—the House Committee on Expenditures in the Department of Agriculture—has made report regarding an investigation it has been conducting on the work of the Department in relation to the drainage of the Florida Everglades. This Committee has been holding hearings for some time and has collected a large amount of testimony. Its report, however, is very brief. It consists of two parts, one expressing views of the majority, signed by Mr. Moss, the Chairman, and two others; the other, representing the views of the minority, signed by Mr. Sloan, with the reported concurrence of the other two minority members. There are two great classes of reclaimable waste lands in the United States. One of these classes consists of the lands which cannot be cultivated for lack of water. Immense tracts of such lands have been held by the Government and are now reclaimed or in the process of reclamation by means of vast irrigating projects. The other lands are those which are useless because they are largely submerged by water. These lands can be reclaimed by a process just opposite to that of irrigation—namely, drainage. Unfortunately, these swamp lands were allowed years ago to pass out of the hands of the Federal Government into the hands of the several States. It is of course obvious that the Government of a single State is much weaker than the Government of the Nation. It is less able to deal with such enormous undertakings as are involved in the drainage of such stretches of submerged lands; and it is much less competent to cope with the great powers of special private interests that see in such lands opportunities for speculative enterprise. The Florida Everglades provide a striking example of this fact. Companies organized for the purpose of exploiting these lands in Florida seized upon certain statements issued under the approval of the Drainage Division of the Department of Agriculture and circulated them in order to stimulate the sale of these lands before they had been drained. It transpired that these statements were made by the official in charge of the field investigations that had been carried on by the Department, but had not been critically examined by the authorities of the Department. The report from which these statements were culled was therefore held up. As a consequence there was an immediate protest from the people who were interested in these lands. The investigation of the Committee has now apparently shown that Mr. Wright, the official who made these statements on the part of the Government, was financially interested in these lands. This was several years ago. Mr. Wright has for some time now ceased to be connected with the Government. The Committee is divided in opinion concerning the relation which Assistant Secretary Hays holds to this affair. The majority cite facts which indicate that he knew about Mr. Wright's transactions, and that he himself, though not financially profiting by any transactions in the lands, took part in negotiations concerning those lands. The minority report defends Assistant Secretary Hays, and cites testimony to show that he did not know of Mr. Wright's connection, and that he is in no wise culpable. One other subject is considered in this report—namely, the methods used to meet a deficit in one of the subdivisions of the Department. The majority of the Committee believe that, though the methods used to meet that deficit were not justified, the two men who have been subjected to discipline because of these methods were unjustly treated. The minority do not deny this, but they do deny the authority of the Committee to express its opinion on this subject. There are two conclusions which the ordinary reader will draw from the report. One is that, coming after other revelations, this one confirms the impression that the Department of Agriculture is not, and has for some time not been, efficiently controlled or administered as a whole. The other conclusion is that this report emphasizes the folly of the Government in handing those swamp lands over to the State, and provides for the wise legislator and for the intelligent citizen a

new warning against the proposals so insistently made that the Government repeat its former blunder by handing over other great natural resources to the States. When first made, such an error could be credited to ignorance. If it is repeated with regard to water power, for example, it can be credited only to stupidity.

Nicaragua

While Mr. Bacon, of Georgia, was introducing in the United States Senate the other day a resolution forbidding the use of American military forces in Nicaragua, orders were being issued by the Navy Department for the prompt reinforcement of those forces. There is need for such reinforcement if we are to protect the lives and property of American citizens. The attacking forces have been firing upon churches and hospitals, and even upon the American Legation at Managua, the Nicaraguan capital, and have otherwise disregarded the accepted rules of war. In the five days' bombardment of Managua many victims were mangled with *machetes* beyond identification, among them being a large number of women and over a hundred noncombatants. Our naval surgeons and the marines and bluejackets already at Managua volunteered their services to the Government in caring for the wounded there, and were able to check a threatened epidemic of fever. Mr. Weitzel, our Minister at Managua, claims that our interests can be protected only by a force at a number of points competent to act in defense against such assaults. Accordingly, the Navy Department is sending a force of upwards of two thousand bluejackets and marines into Nicaragua to protect foreign lives and property at the several points where there is danger and to keep the railway communication open from Managua to the Pacific coast. This line, American owned, runs from Managua to Corinto. Since the revolution broke out it has been in constant danger of interruption by the revolutionists under General Mena, formerly the Nicaraguan Minister of War. Of course, if the revolutionists took possession of the railway, all Americans in the capital would be cut off from the principal seaport on the Pacific Ocean. The sending of an American police force into Nicaragua seems abundantly justified by the events there, and by the statement of Señor Moncada, recently Nicaraguan Minister of the Interior, that "the lives and property of many Americans in Nicaragua are now imperiled," thus confirming the statement of our Minister at Managua. At Corinto the many foreigners, including all their women and children, have sought refuge on our naval vessels, and the town is policed by all the available men from those ships. The expected arrival of the cruisers California, Colorado, Cleveland, and Denver, with their marines, may convince doubters that our Government is in earnest in protecting our citizens and its property abroad, especially when threatened by such barbarity as now reigns in Nicaragua. According to late information, one reason why General Mena attempted to overthrow the Nicaraguan Government was because he fancied that ours did not "mean business" regarding its insistence upon the preservation of peace, the protection of our citizens and property, and respect for the pledges of our convention with Nicaragua, requiring an open election of the successor of President Diaz. It is now proposed that this election shall be properly guarded by our armed forces. Whether this be necessary or not, the Monroe Doctrine implies our moral responsibility for the conduct of the Latin-American republics, and, of them all, none has been more incorrigibly turbulent than Nicaragua.

The Alsop Claim

With the payment last week of a large amount to the Alsop claimants, attention is again drawn to international arbitration. Several years ago the Alsop claims threatened the friendly relations of the United States and Chile. The firm of Alsop & Co. was an American concern. It dealt in guano, hides, and minerals. It did business in Peru, Bolivia, and Chile. Thirty years ago these three nations were involved in war, in which some of the company's property was destroyed. In consequence, the company made claims against the three Governments. Bolivia and Peru settled with the company; but Chile did not, on the ground that the claims had to do with certain lands which meanwhile had been ceded outright by Bolivia to Chile. Thereupon the firm of Alsop & Co., by virtue of the American citizenship of its members, demanded our Government's support. Its defense seemed within our Government's right; certainly this had been accentuated by the firing by some Chilean enthusiasts on members of the crew of the United States gunboat Yorktown at Santiago, the princi-

Chilean port. Our Government proposed arbitration by the International Court of Arbitration at The Hague, but this was not welcomed by the Chilean Government. It finally consented to refer the claims to the good offices of Edward VII, King of England, as arbitrator, or, as the French have it, "amiable compositeur." On the King's death the dispute was submitted to his successor, George V. Last month, acting on the report of Lord Desart, Lord Robson, and Mr. Hurst, whom he had designated to study the case, King George pronounced his award, assigning a sum about one-third as much as the original amount of the claim to the Alsops in full settlement. The news was received here with much satisfaction, not only because of the decision itself, but also because the British Government had enabled ours to dispose of the only disputed question outstanding with Chile. The case is generally interesting as being one of the few nowadays for which the good offices of the International Court of Arbitration at The Hague were not successfully invoked. Chile, though evidently willing to have the matter settled by arbitration, would not accede to our Government's request to submit the case to the Hague Court. Doubtless the Chileans thought that they might come off with better grace by submitting to more old-fashioned and more elastic arbitral methods. At all events, Latin-American pride seemed ruffled at a suggestion of The Hague's supposedly sterner justice. The old order naturally persists, especially among emotional peoples.

The Hague Court's Record

If the Alsop case calls attention to the Hague Court, it also calls attention to what that Court has accomplished since its establishment in 1902 following favorable action by the Hague Peace Conference of 1899 in authorizing its creation. Powers in controversy may establish special tribunals or mixed commissions, or, as in the Alsop case, may refer the case to a single arbiter. But if they choose the Hague Court, they must choose the judges from its general panel or list. To that list each signatory Power may contribute, if it likes, as many as four persons, to be appointed for a period of six years. From among these members of the permanent Court each party in dispute appoints an arbitrator. The two arbitrators choose an umpire. If they do not agree, each of them proposes two candidates taken from the list of the members of the permanent court, exclusive, of course, of the members appointed by either of the parties, and not being "nationals" of either of them. The manner of determining the choice of an umpire from these candidates is by lot. The umpire presides over the tribunal, which gives its decisions by a majority vote. The first case was that of our Government versus the Mexican in the "Pious Funds of the Californias" controversy. We won. The second case was that of Germany, Great Britain, and Italy versus our Government, the French, Dutch, and others in the Venezuela blockade case, in which the right of preference was claimed by the first-named Powers, which had blockaded Venezuelan ports. They won. The next case was that of Germany, France, and Great Britain versus Japan on the question of Japanese house taxes. The three Powers won. The fourth case was between Great Britain and France with regard to their respective treaty rights in Muscat in Arabia. Great Britain won on the main point. The fifth case was between Germany and France with regard to deserters from the army of occupation at Casablanca, Morocco. The decision left honors easy with each side. The sixth case was between Norway and Sweden with regard to their maritime frontier. Sweden won. The seventh case was between ourselves and Great Britain with regard to the Newfoundland fisheries and the interpretation of the treaty of 1818. We won on most of the points. The eighth case was between ourselves and Venezuela in the case of the Orinoco Steamship Company. We won. The next case was between Great Britain and France concerning the arrest of Savarkar, a Hindu. Great Britain won. The next case was between Russia and Turkey concerning arrears of interest on Russian indemnity. The award has not yet been rendered. The eleventh case was between Italy and Peru concerning the so-called Canevaro claims. Peru won. The latest case before the Court is between France and Italy, and concerns the seizure by the latter during the Turco-Italian war of three French ships. The court to inquire into this seizure has only recently been formed. We learn from an interesting statement just put forth by the "World Peace Foundation" of Boston that a thirteenth trial will shortly come before the Hague Tribunal. The contestants are Russia and Japan. Last year, it appears,

when the Russian Government determined to extend the boundary of its territorial waters in the Sea of Okhotsk—east of Siberia and north of Japan—the Japanese Government immediately lodged a protest. The question, it appears, has now become so acute that three Japanese cruisers have been sent to the north. Without the Hague Court this controversy might have serious consequences. In view of past international dissensions the record of the Hague Court is impressive.

The Political Campaign

In the political campaign last week Governor Wilson invaded Pennsylvania and Mr. Roosevelt Vermont, while Governor Marshall and a number of other Democratic campaigners were busy in Maine. While Mr. Roosevelt was making a hundred-and-fifty-mile automobile journey through the Green Mountain State, speaking to attentive and enthusiastic crowds, Governor Wilson went into the Keystone State to make a speech at the picnic of the members of the State Grange. On his way to and from Williams Grove, where the picnic was held, he was compelled by large and expectant crowds to make a number of subsidiary talks. In his speech to the Grangers Mr. Wilson declared that, whether he was elected or not, he was going to have just as much fun one way as the other. He continued:

> I would like to have the fighting advantage that that great office would give me, but, having been born of a fighting breed, I do not have to have the office to do the fighting. I have enlisted for life, and I do not have to be an officer. I can shoot just as straight as a private. Moreover, I was born of a talkative race, and the only thing necessary in our day is to bring the facts out in the open and talk about them frankly.

He reminded his hearers that when he was running for Governor in New Jersey he told the people that, while he did not know what he would be able to do when he got in, there was one thing he could promise them: "Only let me inside and I will tell you everything that is going on in there." Governor Wilson declared that instead of conducting the National business along the lines laid down by Jefferson, as Americans had supposed they were doing, as a matter of fact they have been conducting it along the lines laid down by Hamilton. The leaders of the Republican party, he said, "have called into consultation in every vital matter only those who had the biggest material stake in the economic development of the country. These men financed party campaigns and were always on the inside when party policy was to be determined. . . . Everything went as they suggested, while the rank and file of us fared as we might and were happy if we had any small share in the prosperity which they organized for themselves. They were the trustees, we were their wards and took part in the common life as they planned and directed. What went on in the trustees' meeting we were very seldom allowed to learn—learn, indeed, only by impertinent inquiry, only by Congressional investigations or trials in court, which the trustees complained sadly interfered with the regular course of business." Governor Wilson declared that the whole method and spirit of conducting our Government should be changed, that the people should insist on being actual partners again and upon knowing how their business is being conducted and in whose interest. In referring to the tariff, which he has made perfectly evident that he considers the most vital issue in the campaign, Mr. Wilson gave an adroit turn to a phrase which Mr. Roosevelt has used in many speeches. Mr. Roosevelt has repeatedly said that what he was after was "a better distribution of the prize money." Governor Wilson in his speech said that Mr. Roosevelt has proclaimed himself a convert to the protective policy, has also said that, while no doubt some duties were too high, on the whole the policy pursued by Republican Administrations had been the right one, and "thought the prize money which had been received under that system by the manufacturers of the country was legitimate booty." Mr. Wilson continued:

> Prize money is generally acquired by capture and not by any process of earning, but Mr. Roosevelt is always frank and says that his only objection to the system is that too much of the "prize money" remains in the hands of the officers and too little of it is distributed to the crew. His own object he avows to be to see to it that more of the prize money gets into the pay envelopes of those whom the freebooters employ. The interesting point I wish to raise now is, Who supplies the plunder? From whom is the prize money taken? I suspect that a vast proportion of it comes out of the pockets of the farmer, unwillingly enough no doubt, but inevitably, for I see in him that great helpless class, the unbenefited "consumer."

Governor Wilson has put his finger on what is unquestionably the chief danger in a protective tariff. The difficulty is that as long

as the tariff is a matter of international "tariff wars," no country can disregard the need of seeing that it gets its share of the benefits of the protective policy, and it should not ignore its duty in seeing that those benefits are justly distributed.

Congress

The second session of the Sixty-second Congress began on December 4, 1911; it ended on August 26, 1912. It lasted 267 days. Only seven times before in our history has a session exceeded it in length. The Sixty-second Congress is Republican in the Senate and Democratic in the House. Much of the legislation passed at this session is good; some is bad. The more important measures which are to be classed as good include:

The Children's Bureau Act.

The Direct Election of Senators Amendment.

The Phosphorus Match Act.

The Parcels Post Act.

The Russian Treaty resolution.

The Eight-Hour Government Work Act.

The Federal Regulation of Wireless Companies Act.

The Wireless Operators Act.

The Alaskan Civil Government Act.

The Industrial Bureau Act.

The Fur Seals Act.

Amendment to Food and Drugs Act.

The Panama Act.

The Act against prize-fight moving pictures.

The Act to prevent filibustering on the Mexican border.

Several good laws for the army and navy.

To offset these, there are few pieces of legislation against which to write the word "bad" save emphatically the Sherwood Pension Act. The events on the "bad" side are mostly sins of omission, not of commission. Congress's sins of omission are its failures—

To pass needed tariff legislation.

To pass needed trust legislation.

To pass needed monetary legislation.

To pass needed naval legislation.

To abolish the involuntary servitude of seamen.

To pass a workmen's compensation bill.

To extend agricultural education.

To act on the President's civil service recommendations.

The record of the session on the tariff may be summed up in the following results:

A Wool Bill and a Steel Bill passed Congress, were vetoed, and were repassed by the House but not by the Senate.

The Chemical Bill was killed in the Senate.

The Cotton Bill died in conference.

The Sugar Bill passed by the House was rejected by the Senate; and the Sugar Bill passed by the Senate was blocked in conference by the House.

The Excise Tax Bill, to replace the revenue to be lost if the House Sugar Bill had passed, died in conference.

More than a hundred thousand dollars has been actually expended, and as much more appropriated, by the House in a programme of investigation.

Economy—of a Kind, and Riders—of all Kinds

The Democratic majority in the House, according to the statements of its leaders, set out to make a record for economy. But we doubt very much if the means which it adopted to this end will commend themselves to the country at large. They included depriving the navy of a battle-ship, attempting to cut down the army, trying to eliminate some necessary bureaus in the Department of State, parsimony in making appropriations for the Government service, and abolishing the bi-partisan Tariff Board. On the other hand, the Democrats did not hesitate to pass a dollar-a-day service pension law involving additional expenditure of about $75,000,000, afterwards reduced by the Senate to $25,000,000 annually. The record of this session was further marked by an unprecedented use of "riders." The "rider" involves an endeavor to get through legislation, by attaching it to another piece of legislation, which could not be passed if the attempt were made to pass it by itself. Riders were attached to the appropriation bills for the army, pensions, the post-office, the Legislative, Executive, and Judicial, and the Sundry Civil Bills. It was also the case with the Panama Bill. Some of the "riders" proposed were good, as, for instance, the parcels post provision in the Post-Office Bill and the free ships provision in the Panama Bill; and some, like the latter provision, were more cognate to the general subject of the bills to which they were attached than were others. But the principle of legislation by "rider," especially when attached to an appropriation bill, is thoroughly bad. By the courageous use by the President of the veto power, there were prevented such spiteful pieces of mischief as Congress intended to perpetrate

in the legislation aimed to oust General Wood as Chief of Staff; and in the seven-year civil service tenure "rider," which would have re-established the sway of the spoils system.

Congress and Foreign Relations

In the realm of foreign relations, any analysis of the work of the session must give prominence to three acts. The first was the joint resolution passed which forced the President to take immediate steps to abrogate the Russian treaty because of the Russian Government's persistent refusal to honor the passports of American citizens of Jewish faith. The second was the passage by the Senate of the Lodge resolution, growing out of the Magdalena Bay incident, and amplifying the Monroe Doctrine by asserting our Government's policy toward other Governments obtaining control of strategic harbors or bases of mine operation. The third is of course the act providing for the opening and operation of the Panama Canal, a measure that closely affects our foreign relations. As to the Senate's failures to pass proposed treaties, the most notable was when it refused to pass the general arbitration treaties with Great Britain and France recommended by the Administration, and approved them only in a shape not acceptable to the Administration, so that ratifications have never been exchanged. What is of more practical importance, especially in view of the present revolution in Nicaragua, is the Senate's failure to accept the treaties with Honduras and Nicaragua designed to prevent revolutionary activity in those countries. But perhaps the most important thing accomplished at this session was not legislation at all—the ousting of Senator Lorimer. When the inside history of this Congress is written, it will be seen, we believe, that the Lorimer contest was interwoven with the whole programme of legislation, and that it was the real cause of the failure of Congress to adjourn before the two National Conventions, rather than the natural desire of Congressmen to see how those Conventions "came out" and then "play politics."

The Character that Achieves Success

The New York "World" publishes an interesting and valuable interview with Theodore N. Vail, who is the head of the Bell Telephone and Western Union Telegraph systems. With Mr. Vail's taking the headship of the Western Union Telegraph system the spirit of that system has been radically changed, and the feeling of hostility to the Western Union Telegraph Company is rapidly disappearing. He has evidently set himself to work to make the telegraph minister to the needs of the American people. He has made connections with the telephone and the telegraph such as facilitate the sending of telegrams from any telephone station—and telephone stations are far more frequent than telegraph stations. He has arranged so that men who have acknowledged credit can send telegraph messages "collect." And he has created the system of Day Letter and Night Letter, which has immensely enlarged the practical value of the telegraph, making it a real means for the conduct of quick correspondence. In this interview he tells three things which a great many Americans wish to know. The first is what are the qualities which enable a man to earn a salary of from $10,000 to $25,000 a year. He "must, first of all, know his business from the ground up. He must be absolutely efficient; that is, he must have ability, judgment, courage, enthusiasm, self-confidence, energy, initiative, foresight, experience, a great knowledge of human nature, and personality enough to be a real leader of men. He must take infinite pains in small things as well as in large. He must demand of himself as well as of others nothing but the best." It is true that society does not pay the highest price for the best service. It pays more to many a hotel chef than it pays to most college presidents, although giving luxurious food is not a greater service than giving a fine education. But in each particular department of life society pays for the service rendered in fair proportion to the value of the service, as society estimates it. Men with the qualities described by Mr. Vail find plenty to do, and fair, if not great, remuneration for the doing, in whatever department of life they may choose their work.

Cost of Living and Big Business

Mr. Vail also points out one cause of high living: "The cost of living is high, but it has not increased more than the standard of living has. . . . People to-day insist upon elevators, tiled bath-rooms, dumb-waiters, telephones, electric light, gas, hot water, etc., all of which add very greatly to

the cost of construction and to the rent. People are far too apt to forget that it is not the tiled bath-room that keeps you clean; it is soap and water." We have come into an era of high living, and we must pay high prices for it. We must cut off useless and enervating luxuries, of course, but not the comforts which add both to the joy and the efficiency of life; and the comforts which add both to the joy and efficiency of living cost somebody service, and therefore cost money to remunerate for that service. What is far more important than finding out how to reduce the cost of living is finding out how so to equalize wealth that the very rich shall lose the luxuries which enervate and degrade them, and the common people shall have the means to pay for the comforts which add joy and efficiency to life. Mr. Vail's third statement goes to the root of the question, Shall government disorganize big business, regulate big business, or carry on big business? The individualist says government should disorganize big business; the Progressive says government should regulate big business; the Socialist says government should carry on big business. Mr. Vail's position, which is the position of an increasing number of the great captains of industry, the great leaders of labor, and the great teachers of political economy, is summed up in the following paragraph:

> No government can run business, and no business can run the government. Our form of government was never intended to run business; it was not cut out for that; its organization is different. It is the duty of the government to conserve our rights and privileges, and to see that we all enjoy them. That applies to the rich as well as to the poor, and to the strong as well as to the weak. This duty of conservation gives the government the right to regulate business, and I want to say that it is far easier to regulate business than to run it. Take the men who are looked upon as great captains of industry. There are very few of them, because there are very few men who can run a big business or a big corporation. But there are any quantity of men who could review their acts, and who—if they had the proper information and gave the question proper examination and study—could say whether or not the men who were doing things were doing them right.

In this paragraph Mr. Vail answers with remarkable brevity and terseness the principal objection to the proposition that government should regulate big business, and we recommend the paragraph to the studious consideration of our Senators and Representatives and all campaign orators in the pending Presidential election.

The Alleged Russo-Japanese Alliance

A little more than a year ago — in April, 1911 — certain American newspapers gave wide circulation to the positive statement that Japan and Mexico had entered into a secret treaty hostile to the interests of the United States, and that a photographic copy of such treaty was in the possession of our Government. A little more than a week ago—in August, 1912—the same newspapers published an equally positive statement that Japan and Russia had entered into a secret agreement to oppose the aims and undermine the interests of the other Powers in eastern Asia, and, eventually, to intervene jointly in China for the purpose of strengthening their positions in Manchuria and Mongolia and securing, as far as possible, Russo-Japanese control in Far Eastern affairs. The secret Japanese-Mexican treaty of 1911 proved to be non-existent. No such treaty had ever been made, and the story of the photographic copy of it was a fake. There is good reason to believe that the alleged secret Russo-Japanese agreement of 1912 is also non-existent, and that the story of the negotiation of it by Prince Katsura and Premier Kokovtsef is either a fake or a flimsy tissue of unsupported assertions and plausible guesses woven about the solitary fact that the ex-Premier of Japan stopped in St. Petersburg in July, on his way to Germany and western Europe. An alliance of Russia and Japan for the attainment of the objects set forth in the story of their secret agreement seems improbable. In the first place, their alleged conspiracy to get control of Manchuria and Mongolia, crowd out the other Powers, and dominate China is in flagrant violation of at least half a dozen treaties, agreements, understandings, and declarations, beginning with the Treaty of Portsmouth in 1905, and ending with the statements of policy by the Russian and Japanese Ministers of Foreign Affairs in 1911 and 1912. Both Governments have bound themselves not to intervene in China without previous consultation with the other interested Powers (Japanese declaration of November 30, 1908, and Russian reply to Secretary Knox in January, 1910), and both have repeatedly committed themselves to the policy of equal opportunities and the

open door. Of course either Power may break its promises, violate its agreements, and disregard its treaty obligations; but is Russia likely to do so? Certainly we do not expect Japan to dishonor herself in that way. The alleged statements of Prince Katsura and Baron Goto, which the story puts in quotation marks, are manifestly faked, because they are inconsistent with the opinions of Prince Katsura as set forth in the authorized Imbrie interview, and are in violation of the principles laid down in the Root-Takahira Declaration of November 30, 1908.

The Russo-Japanese Treaty

The latest existent agreement between Japan and Russia with regard to their interests in China is embodied in the Russo-Japanese treaty of July 4, 1910. That treaty assumes that, inasmuch as Japan and Russia have covenants with China to which the other Powers are not parties, they (Japan and Russia) have certain treaty rights in Manchuria to which the other Powers are not entitled—rights that are peculiarly their own. Such rights are not exclusive of the rights of other Powers, but are outside of them. They are rights which Russia and Japan have acquired by treaty, at the cost of treasure and blood. In defense of these rights, which they regard as distinctively their own, Japan and Russia agree to act together, so far as they can do so without violating the promises that they have made to the other Powers concerning equal opportunities and the open door. Japan has made nine treaties with China since the Russo-Japanese War, eight of them relating to Manchuria; and Russia has made seven treaties with the same Power since 1896, six of them relating to Manchuria. These treaties, for the most part, deal with railway administration and business enterprise in the strip of leased territory through which the railways run. As the interests of the two Powers in this strip are practically identical, they naturally stand together in defense of them. They have certain rights there which we have not, just as we have certain rights in Cuba which the other Powers have not; and when an attempt is made to infringe such rights, they stand together in opposition to it, as they did in the case of the proposal to neutralize the Manchurian railways, which was made by Secretary Knox in 1909. This probably is the only basis of fact that the story of a secret Russo-Japanese agreement has. The treaty of July 4, 1910, was not aimed at the other Powers, so far as we know, nor was any objection made to it either by the other Powers or by China herself. In reply to a note from the representatives of Russia and Japan transmitting a copy of the convention, the Chinese Foreign Office said:

> This Ministry is perfectly satisfied that, inasmuch as Russia and Japan bind themselves by this agreement to respect the various treaties that now exist between China and Russia, China and Japan, and Russia and Japan, said agreement is a new and solemn confirmation of the promise made by Russia and Japan, in the treaty of 1905, to recognize the sovereignty of China in Manchuria; to acknowledge the equal right of the foreign Powers to co-operate with China in the development of Manchurian trade and industry; and to maintain the principle of the open door.

Reports that Russia and Japan are seeking to oust the other Powers and secure for themselves the hegemony of the Far East will probably continue to circulate so long as there is money to be made by the promotion of international discord and the creation of war scares; but the authors of such reports should try to improve their literary methods. The story of the secret Russo-Japanese agreement of 1912 is no more plausible or convincing than the story of the secret Japanese-Mexican treaty which was said to have been photographed by Ambassador Wilson in 1911.

The Roman Catholic Opportunity in Peru

The region in Peru between the Putumayo and Japura Rivers, affluents of the Amazon, consists of thousands of square miles of thick forest. It is inhabited by scattered tribes of Indians. Apart from these the only population consists of the employees of a concern engaged in overseeing and forcing the Indians to collect and deliver at fixed intervals definite quantities of rubber derived from the wild rubber trees scattered through the forest. The Indians are practically slaves. The region is controlled principally by the Aranas, a Peruvian family, who, five years ago, turned their rubber purchasing concern into a British company, now called the Peruvian Amazon Company, Limited. Attention was drawn to the operations of this company some years ago by a series of articles in the London "Truth." As the result of pressure from the British Foreign Office, the company entered upon its own

investigation, while the British Government itself despatched Sir Roger Casement to make an official investigation. The Outlook has already reported the result of Sir Roger's mission—a story of horrible cruelty, oppression, and outrage. In the greedy rush for rubber the wretched Indians have not only been oppressed while they lived, but their lives have ultimately been taken, so that of some fifty thousand Indians said to be dwelling in the region early in the century, only one-fifth of that number are now admitted to exist. It is true that many have fled; but it is also claimed that thousands have been slaughtered. Despite denials to the contrary, there are indications that practically nothing is being done to improve the lot of the Indians in the Putumayo country. During the first half of the present year rubber has been collected in greater quantities than ever before; under present conditions every pound of rubber means torture of helpless people. Their condition should, and must, be immediately changed. Peru, it is true, claims to be instituting a new régime of reform and civilization. But against this claim it is urged that she has neither the administrative capacity, the power, nor the money. However much the Church in Peru may wish to engage in reform, it is also too poor to do so. But, in order to be most effective in a Latin-American land, humanitarian effort should have, if possible, a religious character; and as Peru recognizes the Roman Catholic Church only, any mission to be really efficient should operate under its auspices. While the natives are as yet in no state for distinctly religious propaganda, Sir Roger Casement declares that any mission should have the authority of the national and historical Church of Peru behind it. Sir Roger adds:

> Neither the individual Peruvian nor his Government will recognize Protestant intervention as a legitimate religious act. It would be represented by those on the spot as a meddlesome act of foreign interference in their private concerns, which they would not tolerate. . . . A Protestant organization on the Putumayo would be the cause of much resentment, bad feeling, and a quite definitely organized opposition that would inevitably defeat the object it had in view, namely, the protection and the betterment of the Indians. . . . I feel that this is a case where it is imperative on humane men and women to do something to help the Indians, and I see no means of bringing help to them that can at all compare with those offered by a Roman Catholic mission. . . . The work, as it is, will be one of extreme difficulty for the one Church that can operate with least question or opposition. . . . That the Church of Rome . . . is in the best position to accomplish this work I am profoundly convinced, and, were I ten times a Protestant, I should never hesitate to help its missionaries to the extent of my ability to set up a rule of charity, compassion, and kindliness—a task they are eminently qualified to fulfill—among the unhappy tribes of this region. To help these poor people is a matter of urgency. It is not a matter that can be put off or discussed to-morrow. . . . It is a thing that must be done, or at any rate attempted, to-day.

The Lawn Tennis Championship

For at least three reasons, the result of the American All Comers' Lawn Tennis Championship Tournament this year is especially interesting to followers of that exhilarating sport. In the first place, the championship passes from the hands of a veteran to that of a youthful player. Mr. W. A. Larned won the championship last year for the seventh time. For about a score of years he has been in the front rank of lawn tennis players in this country. This year the title has been won for the first time by Maurice E. McLoughlin, who was born only twenty-two years ago. In other words, last year's champion was a skillful lawn tennis player when this year's champion was born. In the second place, the method of determining the championship has been changed. Heretofore the practice has been each year for the winner of the previous year's championship match to have the privilege of standing one side until the winner of the All Comers' Tournament was determined, and then to be called on to defend his title. From now on the champion of each year, if he wishes to retain his title, must enter the tournament like any other aspirant for the honor. This year Mr. Larned, on account of illness, was unable to play through the tournament. In the third place, this year's championship was notable from the fact that it goes for the first time to the Pacific Coast. With it goes the championship also of the ladies' singles and of the men's doubles. California has made a clean sweep of the National lawn tennis field.

Immigrants and Bibles

In the chief inspection room at Ellis Island, the immigrant station for the port of New York, the old high iron network that separated each row of immigrants has been removed. Seats are provided for the immigrants while waiting their turn to appear before the inspectors. After the immigrants

have passed their inspection two missionaries of the New York Bible Society supply those admitted with Bibles, and carry copies to those who may be detained. During the past year there was the largest distribution of the Scriptures among the immigrants by these missionaries. The Society distributes the Scriptures in forty languages and in raised type to the blind. In addition, the Society employs missionaries to visit the steamships, schooners, barks, barges, and canal-boats in port, and to distribute the Bible among all classes of men employed. During the past three months a thousand vessels were thus visited, and the Scriptures given to many times that number of men. In addition, the Society supplies the Bible to attendants at the many outdoor meetings held in New York City every summer, not only for those who speak English, but for the Italians, Slovaks, Hungarians, Greeks, Poles, and Chinese. Again, many Bibles are distributed by missionaries who visit the prisons in New York City; it may be remembered that in the Borough of Manhattan there are annually over eighty thousand persons in prison cells, and over ten thousand persons constantly in the institutions on Blackwell's Island. The New York Bible Society is the only society having for its sole work Bible distribution in the city and harbor of New York.

A Students' Congress of the Two Americas

A significant event is the International Students' Congress, which has just finished its sessions at the oldest American university. That institution is not Harvard University, but San Marcos University at Lima, the capital of Peru. The university was founded in 1551 by grant of the King of Spain and the Pope of Rome. This antedates the founding of Harvard University in 1636 by nearly a century, and takes scholastic traditions in the New World back almost to the beginning of modern times. The Royal and Pontifical University of San Marcos, from which the present progressive San Marcos has been developed, embraced at its beginning little, if anything, more than the curriculum of the Middle Ages, when Aristotle, St. Thomas Aquinas, and the theologians preceding the days of the Inquisition were thought to embody all the learning and science necessary for the higher orders of the community, whose education alone was provided for. San Marcos, therefore, in its beginning was decidedly aristocratic as to its students and ecclesiastical in its training, though now one of the foremost and most progressive of South American universities. It has faculties of theology, jurisprudence, medicine, political science, and literature. The Students' Congress just held within its historic halls was the third in the international series of such Congresses. From them good should come in an interchange of thought and ideas between the two Americas, and so in preparing the way for the new era in intercourse which will begin when the Panama Canal is thrown open to the commerce of the world. Among the American universities that participated in the Congress were the Howard University of Washington, D. C., the Leland Stanford University in California, the University of California, and the Universities of Wisconsin and Michigan. It is a hopeful and auspicious sign when our universities are the first to recognize what the opening of the Panama Canal will mean in the domain of education to the two Americas. At the recent session of representative British universities in London, Lord Rosebery, Chancellor of the London University, forecasting troubled times and new relations throughout the world, remarked that it was to the universities of the Empire that the country looked for guidance and leading. The fact that in the United States at present three men, the graduates respectively of Harvard, Yale, and Princeton, are the leaders of political thought and political parties, also points in the same direction. It is to be hoped, therefore, that the Congress at the University of San Marcos will be efficient in promoting a better understanding and knowledge, not only between South American and North American universities, but also between the people of the two Americas, whose relations, for better or worse, must be more intimately related in the near future than heretofore.

The Public and the Public Schools

The fact that the system of common schools in the United States—the greatest single educational institution that civilization has ever seen—is popularly called the public school system is not at all a guarantee that the public takes the active interest in these schools which it should. Large numbers of citizens, even large numbers of parents whose children are pupils of the

public schools, have very little intimate knowledge as to their administration. It is a common and just complaint of public school teachers and principals that the parents of their pupils show so little interest in the operations of the public school. There has existed in the city of New York for a number of years a voluntary association called the Public Education Association, the purpose of which is "to study the problems of public education, investigate the condition of the common and corporate schools, stimulate public interest in the schools, and to propose from time to time such changes in their organization, management, or educational method as may seem necessary or desirable." This excellent Association has recently been reorganized for the purpose of making its work more effective. On a money basis alone such an organization is highly desirable, for the city of New York spends on its public schools the enormous sum of $35,000,000 a year. The Association in its reorganized form hopes to become a sort of clearing-house for current educational ideas. Its general object will be:

To obtain the ideas and suggestions of the teachers and school administrators themselves, on the one hand, and, on the other hand, of citizens and organizations outside of, but interested in, the schools.

To make available the results of the experience of other cities.

To provide for the numerous citizen organizations interested in education a means of co-operation by which their efforts will be economized and made more effective.

To provide a simple and direct channel by which the Department of Education may utilize the suggestions and data furnished by the other agencies.

In carrying out this programme the Association will do systematic work with the aid of a competent staff of experts. It will classify the facts which it obtains, and will supply the information in its possession to all those who are interested in the problems of the public school. It is estimated that the annual expenditure of the Association will be about $45,000. We call attention to its purposes and programme for two reasons: first, to bespeak for it the financial and moral support of those who recognize the fact that the public school is the corner-stone of American education; and, second, to advise those who are dealing with similar problems in other parts of the country to co-operate with it. Inquiries for further information may be addressed to the Executive Secretary of the Association, Mr. Arthur W. Dunn, 281 Fourth Avenue, New York City.

The Use of Intoxicants by Railway Employees

The management of the Delaware, Lackawanna, and Western system has issued a general order which deserves chronicling. It will be appreciated, we think, by all railway travelers. Its most discussed clause refers to the use of liquor by employees. One of the American Railway Association's rules, adopted by most of the railways of the country, reads as follows:

The use of intoxicants by employees while on duty is prohibited. Their habitual use, or the frequenting of places where they are sold, is sufficient cause for dismissal.

It is a good rule that prohibits the use of intoxicants altogether while employees are on duty. And it is also a good rule that prohibits their habitual use, or the frequenting of places where they are sold, at any time. But we are glad that the Lackawanna Company at least is now going a step further and will prohibit the use of intoxicating liquors to employees directly connected with the movements of trains at *all* times. The principle of action on American railways generally is still that, so long as men avoid the habitual use of liquors when off duty, and abstain entirely when on duty, they are reasonably safe. There is, however, but one absolutely safe course to be followed by these classes of men; and that is the extreme course which the Lackawanna Company has now wisely ordered. The Company may be criticised for interfering with personal liberty, but, in view of the great risks involved in railway transportation, public sentiment will, we believe, support its position. Its new general order reads as follows:

In furtherance of the objects of the several Federal and State "hours of service" laws, employees in engine, train, yard, and station service are prohibited from using their time while off duty in a manner that may unfit them for the safe, prompt, and efficient performance of their respective duties for the Company. They are strictly enjoined and required to use their time while off duty primarily for obtaining ample rest. The use of intoxicants while on or off duty, or the visiting of saloons or places where liquor is sold, incapacitates men for railroad service, and is absolutely prohibited. Any violation of this rule by employees in engine, train, yard, or station service will be sufficient cause for dismissal.

Though it has not attracted nearly as much public attention, the first part of the new rule is, we are convinced, quite as important

as the second. There are many other forms of dissipation besides drinking which tend to unfit men for their duties. Where the safety of hundreds of passengers is absolutely dependent upon an engineer's alertness, it is certainly essential that he should come to his work refreshed by abundant sleep and in full possession of all his physical and mental faculties. While Federal and State laws require railway companies to give their men sufficient time for rest at stated intervals, something further is requisite if the opportunity those laws afford is to be rightly used. The public welfare, as well as the welfare of the men, requires that the time allowed by law for rest should be reasonably well spent, and to this end moral pressure exerted by the companies and, better yet, by the men themselves, is in the public interest.

THE INVISIBLE GOVERNMENT AT WORK

Mr. Archbold, of the Standard Oil Company, and Mr. Penrose, Republican Senator from Pennsylvania, with the aid of Democratic Senators, including Messrs. Stone and Bailey, have rendered a service of signal value to the American people. They have been giving to the people a glimpse of the "Invisible Government" at work.

This is the Invisible Government—it was described in Mr. Beveridge's speech at the Progressive Convention:

> The special interests which suck the people's substance are bipartisan. They use both parties. They are the invisible government behind our visible government. Democratic and Republican bosses alike are brother officers of this hidden power. No matter how fiercely they pretend to fight one another before election, they work together after election. And, acting so, this political conspiracy is able to delay, mutilate, or defeat sound and needed laws for the people's welfare and the prosperity of honest business, and even to enact bad laws, hurtful to the people's welfare and oppressive to honest business.

Such is the Invisible Government as described in general terms; but what evidence is there that it exists? It is a "hidden power." How can it be revealed? This is where Messrs. Archbold, Penrose, Stone, and their allies enter and give their testimony. They are benefactors of the Nation; for at the very moment when the people are most ready to listen they have given an answer.

Mr. Archbold represents a special interest whose methods have been described by the United States Supreme Court in terms severer than any we should care to use. Mr. Penrose is the head of a political machine whose power has been unsurpassed in the history of any boss-ruled State. These two men have acknowledged that they were participants—one as giver, the other as receiver, of money—in a transaction the object of which was to protect this special interest from molestation by the Government; and they both acknowledge that Mr. Archbold's special interest was at the time of this transaction under investigation by a commission of which Mr. Penrose was a member!

Why have they made such a confession? Because they did not realize it was a confession until they had made it. They thought it was an attack upon a common enemy. And running to their assistance in this attack have come Messrs. Stone and Bailey and other Democratic Senators. It is a strange and instructive spectacle to see these members of the tripartite Invisible Government grouping themselves naturally against the Progressives.

They seem to have forgotten for the moment that the strength of the Invisible Government depends upon its remaining invisible.

This "hidden power" will cease to be a power when it ceases to be hidden.

Messrs. Archbold, Penrose, Bailey, and Company, with their supporters among the subsidized press, have been public benefactors in bringing the operations of the Invisible Government, if only for a moment, into the public view.

THE USES OF REPARTEE

Mr. Brander Matthews's happy definition and illustration of "The Art of Repartee" in the August number of the "Century Magazine" admit of almost indefinite expansion. It is not beside the mark to say that Mr. Matthews himself has often furnished admirable examples of the retort courteous which is also the retort entertaining. The repartee is not always the kind of answer that turneth away wrath, but it is generally the kind of answer that makes conversation interesting. Talleyrand, from whom Mr. Matthews draws some "fetching" examples of this art of verbal fencing, was one of its greatest practitioners, but he was not a solitary master of the verbal rapier; he was surrounded by

experts. For the repartee is an art fostered by a highly organized or highly artificial social life. The French, who have developed with exceptional success what Matthew Arnold called the power of social life, have made conversation one of the great resources of that life. They have not been content simply to talk; they have learned to converse, which is talk raised to the rank of a fine art.

Any person of average quickness of mind can talk, and many are able to talk without any intellectual qualification; but conversation involves restraint, fair play in the matter of time, the courtesy of attention, and skill in the use of words. Many talkers use the bludgeon; the conversationists use the rapier. The talker may be, and often is, a barbarian surviving from the age of brute force; a conversationist is the product of a high degree of civilization, a person whose mind has been ripened by contact with other minds, and who has responded to the touch of that happy genius of respect for one another which is the source of good manners. The repartee often has the edge of a Damascus blade; it never has the mass or shape of an Indian club. When Dumas, who was a master of wit as well as of the art of writing the romance of adventure, was asked by a lady how he grew old so gracefully, he made the inimitable answer: "Madame, I give all my time to it!" This has a very different quality from the remark of a Member of Congress whom Speaker Reed had finally forced into his seat: "I thank Heaven I don't look like a gigantic rubber baby blown up by a cyclone!" The provocation was great and the retort had an elementary effectiveness, but it was war, not art. Mr. Reed was a czar in speech as well as in parliamentary methods, and had a natural gift for putting things. When a recalcitrant Member was forced, after a fierce struggle, to yield the floor, he tried to take the edge off defeat by repeating *sotto voce* the well-worn phrase, "I would rather be right than be President." The Speaker promptly retorted, "The gentleman need not trouble himself; he will never be either," and went on with the business before the House.

The campaign orator is sometimes sorely discomfited by a really insignificant foe who happens to put an embarrassing question to which a quick and convincing reply is not at hand. Such questions are, however, the happy opportunities of men of rapid mental action whose replies have the quality of the repartee. The platform repartee is sometimes preceded by a condensed argument. During the campaign in which the resumption of specie payments was an issue Mr. Blaine was urging on an audience in a Maine city the wisdom and practicability of Greeley's maxim, "The way to resume is to resume." He declared that the time had come and the Government was ready; it had a hundred millions in gold in the treasury. "But," said a man in the audience, "there are five hundred million greenbacks out, are there not?"

"Yes," was the prompt reply.

"Those greenbacks are all payable in gold on presentation, are they not?"

"Certainly."

"Suppose they should all be presented at once?"

"Will the gentleman allow me to ask him two or three questions? How many people are there in this city?"

"About forty thousand."

"They must all die."

"Certainly."

"Are there forty thousand coffins ready at the undertakers' this evening?"

In this case the repartee required a little clearing of the way, but when it came it ended the discussion. The wife of a well-known public man was once presented to Mr. Blaine at a reception. She had only a few words with him and passed on, and did not meet him again for several years. She is a woman of charming personality and of unusual height. At the second interview Mr. Blaine held out his hand with great cordiality and promptly called her by name. "Is it possible that you remember me, Mr. Blaine?"

"There are people whom one never forgets," was the reply.

"Yes," responded the lady; "my unusual height makes me conspicuous."

"There are other altitudes than physical height," retorted the gallant statesman.

There have been not only witty statesmen but witty kings; Charles the Second was one of them. When some one praised Lord Godolphin, a very successful courtier and politician, he promptly replied, "Godolphin is never in the way and never out of it;" a description of the time-serving politician as complete as it is brief. And when, in a time of great popular excitement, he was riding home from a review with his brother the Duke of York, afterwards James the Second,

beside him, and James warned him not to expose himself more than was necessary, the King replied, "James, they will never kill me to make you King."

Napoleon the Third wore a mask of impassivity, and either was or seemed to be a man of sluggish mental activity, but at times he showed traces of French wit. His cousin, Prince Napoleon, commonly known as "Plon-Plon," was a spendthrift who was always in need of money, and sometimes made his Imperial cousin's life a burden by his importunities. On one occasion, after trying vainly to extort five hundred thousand francs from the Emperor, he cried out, "You have nothing of our uncle about you!" "Oh, yes, I have," was the quick retort; "I have his family."

The art of repartee is largely a matter of cultivation, though there are many to whom it would be impossible of acquirement under the most favorable conditions; for there are men who could live in a world of humor and never understand the verbal flash and stir about them. But given a group of quick-witted people who are in the habit of meeting one another on easy terms, or a society which has both leisure and brains and uses one to give finish and edge to the other, and the quick return of the ball becomes a kind of second nature. Many forms of expression which seem to be the exclusive possession of a few are largely matters of general habit. The older improvisers, who could turn an incident into a ballad at sight, seem to men of a later generation born poets, while, as a matter of fact, they were facile users of current forms of expression. The habit, not of writing poetry, but of rhyming, is easily acquired if it happens to be the habit of the time. Even in a dull company "capping verses" loosens tongues which have always run to prose.

The art of repartee demands more than the ability to rhyme or to make a passable oration; it demands at least a modicum of brains and the ability to use them quickly. There are few Talleyrands or Sheridans, but one need not be a past-master of fencing to put up a good guard, and the repartee, while more a weapon of attack, is a very convenient weapon of defense. When Mr. Lowell was complimented on his manners by a lady of fashion in London, who expressed surprise that an American should be so well bred, he promptly replied, with mock deference: "You forget, madam, how favorably I have been exposed; I have been long in London." She probably did not understand, but the thrust must have given the primitive man in Lowell the satisfaction of having given a neat rapier stroke. And the American girl who met the remark of a lady in the same city that she could see "no reason why you Americans seem to think so much of your own country," with the retort, "I suppose it must be because we have seen some of the other countries," deserves the place Mr. Matthews makes for her well-put answer. He might well have added the repartee of another American who, in answer to the remark, "It must be very disagreeable to live in a country whose rulers you are not willing to invite to dine with you," promptly replied: "It is; but it's less disagreeable than living in a country whose rulers are not willing to ask you to dine with them." The international uses of the repartee are many, and happy examples of the art are found everywhere. One of the neatest was the retort of the Englishman to the Viennese who commented on the awkwardness with which many English people speak foreign languages: "You see, we have not had half the armies of Europe here to teach us."

CAPITALISM, PROGRESSIVISM, SOCIALISM

Any one who is inclined to imagine that Socialism and Progressivism are akin is recommended to read two new books, one by a Socialist, "Socialism As It Is," [1] by W. E. Walling, the other, "The New Democracy," [2] by Walter E. Weyl.

There is one opinion, and only one, which Progressivism and Socialism hold in common. They believe that social conditions to-day are not right; that there are too many excessively rich men and far too many poor men in the community; that we have not solved, and hardly have begun to study, the problem how to distribute wealth; that the rising discontent is not due to demagogues, nor is it a discontent with conditions which must in the nature of the case exist; that it is real and well grounded, and is due to conditions which ought to be corrected; that

[1] Socialism As It Is: A Survey of the World-Wide Revolutionary Movement. By William English Walling. The Macmillan Company, New York.

[2] The New Democracy: An Essay on Certain Political and Economic Tendencies in the United States. By Walter E. Weyl, Ph.D. The Macmillan Company, New York.

there are real evils, and that they can be remedied.

But the remedy proposed by Progressives and the remedy proposed by Socialists are not the same; they are not merely inconsistent, they are directly and emphatically antagonistic. The greatest foe to Socialism is not Conservatism, it is Progressivism.

Mr. Walling points out with great clearness, in his chapter on "Socialism and the Class Struggle," the essential spirit of Socialism: "The Socialist view of the evolution of society is that the central fact of history is this struggle of classes for political and economic power." This class struggle becomes more bitter the longer it lasts. It is "not a mere theory, but a widely recognized reality." "No indorsement of any so-called Socialist theory of reform is of practical moment unless it includes that theory which has survived out of the struggles of the movement and has been tested by hard experience—a theory in which ways and means are not the last but the first consideration—namely, the class struggle." Because Theodore Roosevelt and Lyman Abbott do not believe that this class struggle is to go on and that peace is to come only by the victory of one class over the other, they are taken by Mr. Walling as types of the men whose teaching Socialism most emphatically resists. "Without this militant attitude Socialists believe that even the most radical reforms, not excepting those that sincerely propose equal opportunity or the abolition of social classes as their ultimate aim, must fail to carry society forward a single step in that direction. Take as an example Dr. Lyman Abbott. . . . Notwithstanding his advocacy of industrial democracy, his attack on the autocracy of capitalism and the wages system, and his insistence that the distinction between non-possessing and possessing classes must be abolished, Dr. Abbott opposes a class struggle." So again: "Said Mr. Roosevelt in his Sorbonne lecture: '. . . Ruin looks us in the face if we judge a man by his position instead of judging him by his conduct in that position.'" To this Mr. Walling replies: "Ruin looks us in the face if, in politics, we judge the men who occupy a certain position (the members of a certain class) by their conduct as individuals, instead of judging them by the fact that they occupy a certain position and are members of a certain class."

In brief, Socialists hold that there is a certain amount of wealth in the world. It is now largely in the control of one class. They desire to league together the other of the two classes to get possession of that wealth for themselves. The two classes are like two gamblers at the gaming-tabe, each trying to get the stakes away from the other.

Mr. Weyl approaches the same problem from the point of view of the Progressive. He repudiates emphatically the notion that peace can come only through a class war carried on to its consummation. It will come through the recognition of the fact that modern industry creates a social surplus; that the prosperous community creates more than it consumes; and that, to remain prosperous and peaceful, it must learn how this surplus wealth can be justly, equably, honestly administered. It is because in America this social surplus has increased so rapidly, and because in America the distribution of this social surplus has, in spite of the creation of multimillionaires, been carried further than in the Old World, that Socialism makes little headway here, and would make none at all if it were not increased by immigration. "In America the old doctrine of a class war between two classes must of absolute necessity be given up by the Socialist party, and must fail of adoption by other parties." "Democratic civilization will progress even more through adjustment and education than through the war which aids one class and injures another. Political power in the State will not change from one class to its opponent, like a reversible top or an overweighted balance, for the State is not and will not be absolutely the representative of a single class." In the early centuries of Christianity slavery was abolished, not as the result of war, but as the result of education. The slaves grew into too large a manhood to be kept in slavery. The slave-owners grew into too large a manhood to be willing to keep them in slavery. Both capitalist and laborer are going, in America, through a similar process of education. "Capitalism develops elasticity. Instead of dying of its own excesses, it shows wonderful recuperative and self-reforming power. Class hatred softens as the working classes strengthen, and the impending clash between the classes is always delayed. The absolute Socialist cries, 'War, War!' when there is no war." Mr. Weyl believes, and his book gives abundant justification for his belief, that the remedy for the present unrest is neither, on the

one hand, leaving things as they are, nor, on the other hand, a class war to destroy the old conditions, in order to create new conditions. "The old *laissez-faire* liberal philosophy is done for, and the old absolute Socialism is dying in the embrace of its dead adversary. To-day even Conservatives unhesitatingly accept reforms which, a generation ago, would have been decried as Socialistic, while Socialists in good party standing propose alliances, concessions, and palliatives which would formerly have been called (and by the crassly logical are still called) subversive of Socialistic doctrine and inimical to the emancipation of the proletariat."

The essence of the old Socialism is class war, and the capitalist who is making war on organized labor is really the ally of the Socialist who is making war upon organized capital. For both are making war upon society. The real remedy for the social war, and the evil conditions out of which that war has grown, is the recognition that tool-owners and tool-users are partners, and a readjustment of their relationship in terms of a partnership, which will include participation in profits and participation in the control of their united industry.

Capitalism, Progressivism, Socialism—which shall it be?

TWO DAUGHTERS OF MERCY

We hear much nowadays about the limitations on woman's activity. It is therefore worth while to point out what two women did who have just passed away: Octavia Hill in London, and Ellen Collins in New York.

Octavia Hill was one of the first, if not the first, to start the housing reform movement in London. Born in the thirties, she gave herself, with all her heart, when still young, to what was to become her life-work—helping the poor. At that time Frederick Denison Maurice was at the head of those who were actively so engaged, and Octavia Hill became one of the workers who acted under that brilliant man's leadership.

The girl's experience taught her two things. The first was that which must come to every settlement worker—not to follow one's generous heart unchecked, but so to sharpen the intelligence as to control any natural excess of emotion aroused by the sight of distress; for only as head operates equally with heart may the poor be helped and not pauperized. The second thing the girl learned was that the poor could not be helped at all except as their dwellings and other surroundings were bettered.

With these two convictions firmly in mind, Octavia Hill set out to work "on her own hook" and on her own special line of action, namely, to rid the poor of some of the rapacious landlords. But her endeavor was to be no charitable endeavor, as the word charity was then understood. She sternly ruled out any gifts of money to the poor, and, what was more, in the rent-collecting upon which she entered, there was to be an immediate notice to quit if a tenant failed to pay. Miss Hill did not try at first to collect rents for others. Fortunately, she was able to borrow £3,000 ($15,000) from a friend—no less a personage than John Ruskin—who, to his lasting credit, had entered heartily into her scheme. She took over the unexpired term of the lease of three houses, fairly well built dwellings, but deplorably dirty and neglected. First of all, she repaired and cleaned these dwellings. And then she charged a rent to bring a return not exceeding five per cent on the capital invested. As soon as her tenants began to enjoy the blessings of cleanliness and of abundant air, light, and water, it became easier for them to learn to be punctual in meeting the moderate rents asked, and rarely did they fail when pay day came round.

The success of this scheme now assured, Miss Hill branched forth into another, and, in our opinion, a necessary corollary of proper housing—a playground. To this end she bought six squalid houses, crowded with inmates and facing a bit of desolate ground occupied by dilapidated cow-sheds and manure-heaps. Here again John Ruskin's name was associated with Octavia Hill's. While the houses were being cleaned and repaired they had the ground cleared and trees planted, and they arranged with welfare workers to teach the children games and sports. Thus were provided also "outdoor sitting-rooms for the weary housewife," as Miss Hill once described them. The second scheme was, of course, even more successful than the first. It led to large results, for Octavia Hill promptly organized the Commons Preservation Society to preserve and provide open spaces and playgrounds for the city people; indeed, to her activity in raising a fund of $1,500,000 London owes the preservation of a great part of

Hampstead Heath from private encroachment.

As time went on, and as other blocks of houses came under Miss Hill's management, a third feature was added. She had already provided for better houses and for more space; but when Ruskin planted creepers by the walls of some of her dwellings, he immediately suggested the idea of "bringing beauty home to the poor." Accordingly she formed the Kyrle Society, to bring beauty by whatever means—by the decoration of houses, by flowers, by the cultivation of a taste for music, or painting, or literature. To this end she built at the back of her own house a large room where she could meet her tenants for the purpose of talk or entertainment.

Her tenants themselves did not fail to appreciate, as such people always will appreciate, Octavia Hill's combination of the qualities that also distinguished the late General Booth—an equal amount of shrewdness and sympathy. As such, her counsel was vital to the success of the London Charity Organization Society, the establishment of which was due to her more than to any other single agency, and to the famous Women's University Settlement in Blackfriars Road, whose members have co-operated with Miss Hill in "working" a dozen streets of houses in Southwark. Seven years ago Miss Hill was deservedly appointed a member of the Royal Commission on the Poor Laws, for she and her associates then had charge of nearly six thousand dwellings. Her books, "Homes of the London Poor" and "Our Common Land," show how eminently practical her work was. As such it should be enduring.

Almost at the same time there passed away in this country Ellen Collins, New York City's Octavia Hill. These two women were alike in the fact that, before any one else saw how bad housing underlies more of the mischief that is abroad in a great city than do most of its other causes, they saw and understood. What is more, they attacked the evil where few in their day had the courage, and fewer the will, to meet it. The American woman's efforts, however, began somewhat later than did the English woman's.

About a generation ago, three of the worst tenements in New York City were bought by Ellen Collins, who set about redeeming them and their tenants. Later she added three adjoining tenements. All had been filled with brothels and were the haunts of thieves. The whole neighborhood was the lowest in the city. It was characteristic of Miss Collins that she should have chosen to settle just there. In her small body lived a spirit of unconquerable faith in her fellow-men as children of God. She believed that, if given the chance to work out of their slough, they would quickly seize it. Fair play between landlord and tenant was her simple creed—the square deal—and it worked, as it always does when the profession is real.

The old tenements were dark and filthy. She let light into the hallways, and the piles of dirt by the sinks disappeared. She put sanitary plumbing in, and a janitor to see that her rules were obeyed. She broke the saloon-keeper's lease, and ever after, to her financial loss, refused to let him come back. The lewd women and the thieves took themselves off. A few of the worst tenants went with them. The rest stayed and came up to her every expectation. She made the rents as low as consistent with a business investment that was expected to return a fair interest. Before long her tenants planted flowers in the yard, and the flowers remained unmolested. The whole block became as orderly as any in the city. The houses ran themselves. With forty-five families in the building, it was never necessary to put up a "to let" sign.

The late W. Bayard Cutting, with his brother Fulton, built improved tenements a year or so after Miss Collins made her start. These were the beginnings of tenement-house reform in New York City.

Miss Collins sought out the worst of her kind, pinned her faith to them, and won. When she was getting old and tired, and planned to give up her personal management of the property she had redeemed, her tenants went to her in a body and begged her not to desert them, and she did not. In recent years she gave the mortgage she held to a young relative, who has taken over the fight with the powers of darkness, including the saloon-keeper, and is winning out too.

Miss Collins lived to be eighty-four years old. The last time she appeared in public print was when Tammany, in the Gaynor mayoralty campaign, lampooned her along with R. Fulton Cutting, Mr. Schiff, and others, for supporting the budget inquiry. They did not know—how should they?—that they were trying to heap ridicule on a woman who deserves to be set beside Josephine Shaw Lowell and Richard Watson Gilder as among

New York City's most justly honored citizens.

It is often said that "the good die young." But here were two good women who lived to a great age. And the two greatest cities in the world are immeasurably better because in them those women lived and labored.

REPRESENTATIVE GOVERNMENT

A correspondent who has had an unusual opportunity to familiarize himself with governmental questions in various parts of the world takes issue with the following paragraph from a recent editorial article which appeared in The Outlook:

> The American Government should be a Government by the people, not by representatives of the people; representatives are selected, not to rule the people, but to carry out the will of the people.

"I am at a loss," says our correspondent, "to know how the people can run the Government and still have representatives. I can understand that representatives may misrepresent the people at times, but the remedy for this lies with the voters. You surely cannot expect 11,000,000 voters to give sufficient time from their busy, workaday lives to identify themselves individually with matters of legislation, and to enforce their will upon their representatives as each new issue comes up for discussion. You might as well ask the people to edit and manage The Outlook or 'The Encyclopædia Britannica,' or to manage the Steel Corporation. Government by representatives is the only practical expedient or means by which the people can rule themselves. If this method shall fail, then democracy fails with it. But it has not yet failed. I should be glad if The Outlook would tell us definitely how the people can deal successfully with the thousand and one questions of political reform and social justice, unless they delegate the power to legislate on these questions to their chosen representatives."

This letter represents admirably a very common confusion of thought regarding representative government. The Outlook certainly does not expect "the people to run the Government;" it does not expect that the people themselves will be able to manage successfully "the thousand and one questions of political reform and social justice." It does expect that they will delegate to their representatives the power to deal with details.

But here we part company with our correspondent. He apparently believes that ours is a Government by representatives; we consider it to be a Government by the people through representatives. Government should spring from the people as its source, and should be administered by the representatives to whom the people delegate the power to manage details.

The people determine whether there shall be a Panama Canal, whether it shall be as free as the ocean, or whether fees shall be charged to ships that pass through it. The representatives settle the engineering questions connected with its construction and the financial questions connected with the collection of those fees.

The people determine whether there shall be a Protective Tariff; the representatives manage the details of imposing and collecting that tariff.

The people determine whether there shall be an Income Tax; the representatives decide all the details connected with the administration of the Income Tax Law.

The people determine whether Senators shall be elected by the Legislature or by popular vote; the representatives of the people arrange the rules which shall govern the Senate when it is elected.

The people determine whether Presidents shall be nominated by a small committee or by direct primaries; the representatives devote themselves to seeing that the will of the people is carried out in this particular.

The great body of American voters to-day are what is called Progressive. Their will is that their Government shall be a Progressive Government.

The great political issue in this country to-day is whether the representatives of the people shall devote themselves to managing the details of great questions which are determined by the people, or whether the representatives shall decide the fundamental questions for the people. When representatives misrepresent the people, our correspondent is entirely right in saying that "the remedy for this lies with the voters." We are to-day actually seeing the process by which the voters remedy misrepresentation.

"Boss" government differs from popular government in one characteristic essential. The bosses believe that they, instead of the people, should determine the fundamental questions of government. It is for that reason that they are called by the people

"bosses." When they cease to be "bosses," and sincerely and effectively endeavor to ascertain and to carry out the will of the people, it is then, and then only, that they become truly the representatives of the people.

PROGRESSIVE DEMOCRACY[1]

COUNTRY LIFE AND CONSERVATION

EDITORIAL BY THEODORE ROOSEVELT

THERE is no body of our people whose interests are more inextricably interwoven with the interests of all the people than is the case with the farmers. The Country Life Commission should be revived with greatly increased powers; its abandonment was a severe blow to the interests of our people. The welfare of the farmer is a basic need of this Nation. It is the men from the farm who in the past have taken the lead in every great movement within this Nation, whether in time of war or in time of peace. It is well to have our cities prosper, but it is not well if they prosper at the expense of the country. I am glad to say that in many sections of our country there has been an extraordinary revival of recent years in intelligent interest in and work for those who live in the open country. In this movement the lead must be taken by the farmers themselves; but our people as a whole, through their governmental agencies, should back the farmers. Everything possible should be done to better the economic condition of the farmer, and also to increase the social value of the life of the farmer, the farmer's wife, and their children. The burdens of labor and loneliness bear heavily on the women in the country; their welfare should be the especial concern of all of us. Everything possible should be done to make life in the country profitable so as to be attractive from the economic standpoint and also to give an outlet among farming people for those forms of activity which now tend to make life in the cities especially desirable for ambitious men and women. There should be just the same chance to live as full, as well-rounded, and as highly useful lives in the country as in the city.

The Government must co-operate with the farmer to make the farm more productive. There must be no skinning of the soil. The farm should be left to the farmer's son in better, and not worse, condition because of its cultivation. Moreover, every invention and improvement, every discovery and economy, should be at the service of the farmer in the work of production; and, in addition, he should be helped to co-operate in business fashion with his fellows, so that the money paid by the consumer for the product of the soil shall to as large a degree as possible go into the pockets of the man who raised that product from the soil. So long as the farmer leaves co-operative activities with their profit-sharing to the city man of business, so long will the foundations of wealth be undermined and the comforts of enlightenment be impossible in the country communities. In every respect this Nation has to learn the lessons of efficiency in production and distribution, and of avoidance of waste and destruction; we must develop and improve instead of exhausting our resources. It is entirely possible by improvements in production, in the avoidance of waste, and in business methods on the part of the farmer to give him an increased income from his farm while at the same time reducing to the consumer the price of the articles raised on the farm. Important although education is everywhere, it has a special importance in the country. The country school must fit the country life; in the country, as elsewhere, education must be hitched up with life. The country church and the country Young Men's and Young Women's Christian Associations have great parts to play. The farmers must own and work their own land; steps must be taken at once to put a stop to the tendency towards absentee landlordism and tenant farming; this is one of the most imperative duties confronting the Nation. The question of rural banking and rural credits is also of immediate importance.

There can be no greater issue than that of Conservation in this country. Just as we must conserve our men, women, and children,

[1] In a series of editorials, of which this is one, Mr. Roosevelt is repeating in essence the statement of his political faith made before the Progressive Convention at Chicago.

so we must conserve the resources of the land on which they live. We must conserve the soil so that our children shall have a land that is more and not less fertile than that our fathers dwelt in. We must conserve the forests, not by disuse but by use, making them more valuable at the same time that we use them. We must conserve the mines. Moreover, we must insure so far as possible the use of certain types of great natural resources for the benefit of the people as a whole. The public should not alienate its fee in the water power which will be of incalculable consequence as a source of power in the immediate future. The Nation and the States within their several spheres should by immediate legislation keep the fee of the water power, leasing its use only for a reasonable length of time on terms that will secure the interests of the public. Just as the Nation has gone into the work of irrigation in the West, so it should go into the work of helping reclaim the swamp lands of the South. We should undertake the complete development and control of the Mississippi as a National work, just as we have undertaken the work of building the Panama Canal. We can use the plant, and we can use the human experience, left free by the completion of the Panama Canal in so developing the Mississippi as to make it a mighty highroad of commerce, and a source of fructification and not of death to the rich and fertile lands lying along its lower length.

In the West, the forests, the grazing lands, the reserves of every kind, should be so handled as to be in the interests of the actual settler, the actual home-maker. He should be encouraged to use them at once, but in such a way as to preserve and not exhaust them. We do not intend that our natural resources shall be exploited by the few against the interests of the many, nor do we intend to turn them over to any man who will wastefully use them by destruction, and leave to those who come after us a heritage damaged by just so much. The man in whose interests we are working is the small farmer and settler, the man who works with his own hands, who is working not only for himself but for his children, and who wishes to leave to them the fruits of his labor. His permanent welfare is the prime factor for consideration in developing the policy of Conservation: for our aim is to preserve our natural resources for the public as a whole, for the average man and the average woman who make up the body of the American people.

FOLLOWING THE CAMPAIGN

A WEEKLY DIGEST OF POLITICAL OPINION
AS EXPRESSED BY PEOPLE AND NEWSPAPERS

HOW HAS CONGRESS AFFECTED THE CAMPAIGN?

"THE Political Debating Society and Anti-Business Association at Washington adjourned yesterday," announces the New York "Sun" (Ind.). Thus is Congress described.

As to organization, in the House a Democratic majority controlled; in the Senate a Republican majority. But, as the Washington correspondent of the New York "Tribune" (Rep.) says, "the upper house was in a disorganized condition;" there was consequently "a lack of responsibility and an indefiniteness of aim that made it almost impossible to consider legislation with the single purpose of promoting the public welfare." Added to this "was the determination of the Democratic majority in the House to prevent, as far as possible, the approval of any measure which might reflect credit on the Taft Administration." But "in predicting that the Democratic House of Representatives had made Democratic victory possible by the great things it has accomplished," the Leavenworth, Kansas, "Times" (Rep.) declares that "Speaker Clark has fallen into error."

If the House has accomplished any "great things," the country has not taken note of it. If Democratic victory is possible, it is not because of the things the Democrats have done in this Congress, but because of Republican dissension.

The session has been, the Scranton "Tribune Republican" (Rep.), says, "prolonged, turbulent, and inefficacious. But it has been genuinely representative."

The muddled state of public opinion throughout the Nation . . . has been perfectly reflected in both branches of the National Legislature.

. . . As a matter of fact, we are now engaged in a great National debate on our future policies, and, because no decision has yet been reached, the actions of Congress have been indecisive, full of turmoil and aggravation.

During the just ended session of Congress over 26,000 bills were introduced in the House; in the Senate nearly 7,500. On the House side over 1,200 of these proposed pieces of legislation were favorably reported; on the Senate side something over 1,000. From all this about 300 public laws have been enacted. How were these passed? How do they affect the various political parties in the present campaign?

As regards campaign material, the legislation passed by the recent session of Congress will be found wanting. Any claims to it by Republicans, Democrats, or Progressives are sure to be disputed. The Democrats claim much, because, a majority of the House, their efforts at tariff reform were frustrated by the Republicans in the Senate. For campaign material the Democrats have relied chiefly upon their attempted tariff legislation. It has doubtless given them much material. But the effort has been crude enough to elicit this reproof from one of their own party exponents, the New York "Times:"

The tariff schedules should be revised. They must be revised. But it was chiefly with an eye to campaign effect that the Democrats of the House prepared bills which they knew the President would veto. Duties are not lowered in that way. Nothing is done in that way save to provide material for campaign speeches. The public business is not advanced a peg, the public welfare is not promoted, by these tactics.

Republican opinion of the Democratic tariff agitation is succinctly summed up by the South Bend, Indiana, "Tribune" (Rep.). It says:

With the tariff . . . the one supreme desire has been to put President Taft in the hole.

Progressive opinion is expressed by the Chicago "Evening Post" (Prog.):

With Democrats in control of the House, with Progressives and Reactionaries dividing opinion in the Senate, and with the Democrats there helping first one and then the other, only to make confusion worse, what chance has there been, save in a case or two, to do anything worthy with the schedules? . . . The session has not been a success from a Progressive point of view.

Among the proposals concerning the appropriation bills none called forth sharper adverse criticism than did those inserted in the Army Bill which elicited the President's prompt veto, namely, the limitations placed upon the President's choice of his Chief of Staff, which would have rendered ineligible Generals Wood and Funston, Colonel Goethals, and many other able officers; the provision which tied the Secretary of War's hands in dealing with army posts, the proposition to cut down the army by five regiments of cavalry, the big cut in the number of major and brigadier generals of the line, the perpetuation of the Adjutant-General's staff corps on the General Staff, and the provision with regard to detached service, which would have seriously hampered the work both of the Panama Canal engineers and of the Philippine constabulary.

The Army Bill as now passed is so good as to elicit commendation from the Secretary of War, because, first, of the consolidation effected of the quartermasters' subsistence and pay corps, "a reform which has pressed for many years, and which will, I believe, result in much economy of effort, and in greater simplicity and efficiency in those three lines of army administration."

But a more important item of legislation is the taking of the first step towards creating a regular army reserve. This is a most satisfactory outcome of the long contest over the length of the term of enlistment. At present, while the regiments of the regular army are kept at half strength in time of peace, there is no provision made by law for filling their ranks in case of war.

For the failure of some measures the Republicans may be held responsible, as, of course, for the tariff bills; and for the failure of other measures the Republicans "cannot be held altogether blameless," as the Philadelphia "Telegraph" points out in speaking of any lack of attempt made to reform the currency. As is natural in a Republican paper, however, the "Telegraph" does not fail to pay its compliments to the Democrats with regard to their lack of action on two of the most important measures before Congress, the Immigration Bill and the Employers' Liability Bill. The first was "shelved" in the House Committee because "the majority was afraid of offending the naturalized voters of New York and other cities of the Atlantic seaboard." The House Committee failed to report the second, "and will again fail to report it at the short session which begins the first Monday in December." For, with Southern Democrats dominating the majority of the Committee, "nothing else could be

expected." Continuing, the "Telegraph" says:

These men are from States that are half a century behind the North in the character of legislation looking to better conditions for labor. In some of them children under ten years old are permitted to work all night in cotton mills.

If we may believe the "American Federationist," the Sixty-second Congress has so far been one of the best ever known as regards labor legislation. The paper quotes sixteen measures, either fully enacted or advanced further than ever before. The New York "Times," however, takes exception to some of these. For instance:

The proposals to limit the issue of injunctions in labor cases and to provide a jury trial in cases of contempt of court are strictly class legislation, wanted by labor alone, and prejudicial to every interest except unionized labor.

As to the eight-hour bill itself, the "Times" complains that "it can be claimed as of general interest only in so far as it advances an eight-hour day outside of Government employ, those in Government employ being previously a favored class at the expense of the taxpayers." The provision that Post-Office employees may be unionized is characterized by the Federation of Labor as restoring them to the full rights of citizenship in the manner "written and urged" by that body.

Good enactments, for which party honors seem to be easy, are the Parcels Post Law (which the Syracuse "Post Standard" (Rep.) calls "the most important constructive measure that the recent Congress can claim credit for"), the amendment to the Pure Food and Drugs Act, and the Panama Bill. The first was suggested by President Taft in a special Message, but its strenuous protagonist was Representative Sherley, in whose efforts the Democrats may feel just pride.

The Panama Bill is attacked and defended by all parties. The Democratic New York "Times" calls it "beyond dispute the most disgraceful and flagitious measure passed by Congress during this session." This for two reasons: first, because its provisions, avers the "Times," are in open conflict with our treaty obligations; and, second, because, as the Washington "Herald" (Ind.) also avers, "it turns out to be a subsidy enactment for the benefit of the coastwise trade."

As to the first point, we make four quotations from English, French, German, and Russian papers. The London "Times" declares it to be what the British Government affirms it involves, namely, "a flagrant disregard of British treaty rights."

These rights are too plain for us to refrain from asserting them as strongly as the forms of diplomatic intercourse with a friendly nation would allow. There can be no mistake upon that head, or upon the degree of support which the Government will receive from the whole nation and the whole Empire in making protest. Should diplomacy fail to solve the controversy, a contingency we can hardly think probable, confident in the goodness of our cause, we shall unhesitatingly propose to submit the dispute to arbitration at The Hague. It is already suggested that the Government, which has hitherto prided itself upon being the foremost champion of arbitration, may refuse to go to arbitration in its own case. That is an eventuality which we refuse to contemplate unless and until it becomes imminent.

If the "Times" is a weighty exponent of British opinion, so is the Paris "Temps" of French opinion. The "Temps" declares that Great Britain, in demanding arbitration at The Hague, "will have the moral support of all the Powers which stand to gain by the treaty held to be violated." The "Temps" adds: "The only effect of President Taft's measure in which he attempts to justify the Panama Canal Bill is to prove that the bill is questionable." It further says:

Before the Act again comes up for discussion in Congress the American elections will have been held, and British diplomacy will perhaps have persuaded American statesmen of the truth of the salutary principle that honesty is the best policy.

As a rule, the old custom of American politicians at election time of twisting the British lion's tail leaves England indifferent. But this will not be the case with the Panama Canal Bill, which not only twists the lion's tail but violates a solemn treaty.

In Germany the Berlin "Vossische Zeitung"—"Tante Voss," as it is affectionately called—is a newspaper intended for family reading rather than for the reading of the "man-in-the-street." Even the placid "Tante," however, is moved to something strenuous as it comments editorially on the "disruption" of Anglo-American friendship, and asks ironically, "What has now become of Joseph Chamberlain's once cherished dream of an Anglo-Saxon alliance?" Other more violent expressions from German papers give color to the opinion of the Berlin correspondent of the New York "Times," who declares that

If the Kaiser's Government were not itself sitting on the lid, the Government of the United States would be treated to some expression of

German opinion which would make British comment a whisper by comparison.

Finally, one of the most important of the Russian papers, the St. Petersburg "Novoe Vremya," has this to say concerning the Panama Bill in its relation to the alleged violation of the Hay-Pauncefote Treaty:

Such is the value of the word passed by the great Republic of America. Russia is not directly interested, and, moreover, we are not signatories to the Treaty of 1901. But we have a right, and we regard it as an obligation, to point out how the Americans deal with international treaties.

The New York "American" (Dem.) takes another position. Quoting the first rule of the Hay-Pauncefote Treaty, it says:

It seems clear that the treaty-makers intended that the United States, party of the first part, building and owning the Canal, should adopt the rules for the control of the Canal, and that all other nations, parties of the second part, observing these rules, should be allowed to use the Canal on terms of equality. . . .

This is also the sense of the President's Message to Congress:

The right to the use of the Canal and to equality of treatment in the use depends upon observance of the conditions of the use by the nations to whom we extended that privilege. The privileges of all nations, to whom we extended the use upon the observance of these conditions, were to be equal to that extended to any one of them which observed the conditions. In other words, it was a conditional favored-nation treatment, the measure of which, in the absence of express stipulations to that effect, is not what the country gives to its own nationals, but the treatment it extends to other nations.

To this the "American" adds:

There is no more reason why our country, owning the Canal, should concede to all nations all the rights that we enjoy than that our ships should also leave the Canal within twenty-four hours in case of war, just as the rule requires foreign ships to do. . . .

In arbitration involving a right so vital as this, no self-respecting nation like ours could stand upon any decision of The Hague which denied to our country the rights in our Canal which England has in the Suez Canal, and the rights which only England, of all nations, now protests in us.

If it should be decided by any arbitration court that the United States had, by any treaty, deprived itself of the right to pass its own commerce free, or to remit tolls to its own vessels, then the demand of this people would be to alter the Hay-Pauncefote Treaty, or to terminate it, as treaties can always be altered or terminated when necessary.

Our one defender abroad on the subject of the Panama Bill seems to be the London "Nation." It admits that, on the surface, the British case against the exemption of American ships from Canal dues is exceedingly strong.

The treaty surrendered to one of the parties all its political interests for what was believed to be a guaranty of commercial rights.

The provisions of the treaty for equality of treatment "could not apply to vessels engaged in coastwise traffic and using the Canal, because only American vessels, in fact, were so engaged." The "Nation" adds:

No one ever suggested that the treaty suspends the operation of the navigation laws when the coasting trade goes through the Canal. The greater discrimination includes the less; and as the navigation laws exclude all but American ships from the coasting trade, the grievance of discrimination in tolls upon coastwise traffic would seem to be somewhat unreal. The coasting trade is already an American monopoly, and the imposition or relaxation of dues upon it would seem to be a purely domestic affair.

Aside from these laws, the claims of the Democratic majority for the paternity of others is thus dealt with in a statement by Representative Mann, of Illinois, the Republican minority leader in the House:

Practically all of the laws of any importance passed at this session were either bills prepared in a previous Congress and left over for lack of time for their consideration, or else they were bills prepared by officials in President Taft's Administration. The laws relating to steamships are of some importance, but they were prepared by the Department of Commerce and Labor, and were Administration measures. So also was the one to establish the Children's Bureau, which was a copy of one previously reported in a prior Congress, and which passed this session largely through the friendly efforts of President Taft. The white phosphorous match law was simply a copy of the Esch Republican bill in the last Congress. The three-year homestead law was put through by the efforts of Republicans in the House and the Senate and President Taft. The law providing for the quarantining of nursery stock was prepared by the Department of Agriculture.

In the same sense Mr. Mann points out that the parcels post provision in the Post-Office Bill was made possible only because of a parliamentary situation brought about by the Republican side of the House, and that the Republicans forced through an amendment to the Campaign Publicity Act, making it apply to primaries as well as to general elections. Also the bill creating a commission on industrial relations, "which will undertake an investigation designed to bring about peace in the industrial world, is

another measure sponsored by President Taft in a special Message."

Yet, even with this record, the session has been "almost barren of constructive legislation," complains the Buffalo "Express" (Ind. Rep.). Not so, rejoins another Buffalo paper, the "Enquirer" (Dem.). "Much *constructive* legislation, but much less *constructed* legislation, is the record of the second session of the Sixty-second Congress." The "Enquirer" explains:

> The record of the first session . . . now seems far in the past, but it should be cited to make complete the showing of excellence. Reforming and liberalizing the rules of the House, reciprocity, the farmers' free list, and other features of the first session rank among proofs that the lower branch of Congress was in harmony with the progressive spirit of the times. . . .
>
> The work of the second session was in general accord with that of the first. Genuine effort was made to relieve the people from the oppression of special privilege. The Democrats of the House, and the Senate Democrats with their Progressive allies, accomplished much . . . and attempted more which has the whole-souled approval of the country.

In the same spirit another Democratic organ, the Baltimore "Evening Sun," thus eulogizes the Democrats. They have reason, it declares, "to look back with pride and satisfaction to the record of this session. They have . . . fought a good fight and kept the faith. They faced the work of the session in a new spirit and with a new sense of responsibility."

> There were some stumblings and an occasional relapse into old ways, but for the most part they were free from the timidity, the vacillation, the political cowardice and opportunism that have so often exposed them as a minority to the ridicule of their opponents and to the censure of the country. They marched straight forward without twistings or turnings, and they tried honestly to redeem every promise they made to the country.
>
> The record they have made is one of the most valuable Democratic assets in this campaign.

At the beginning of the Sixty-second Congress the Democrats decided that they would "show up the extravagances of Republican rule for the last sixteen years." Nine committees on expenditures in the several Government departments were set to work. In addition to these nine committees, various special committees were set on the trail of the trusts. Have the nine investigations—the steel and other investigations—started by the Democrats produced the expected campaign material? This seems a sore point with the average Democrat, the Republican papers are quick to note; it is perhaps significant that in all the stump speeches inserted in the "Record" by Democratic orators little mention is made of this feature of the work of the House. The investigations have cost already $100,000 in the aggregate—with an equal amount appropriated for a continuation of various inquiries. The Washington correspondent of the New York "Tribune" declares that "not one of these investigations has produced anything which will be of aid to the Democrats in seeking control of the next House." On the other hand, another Republican paper, the Scranton "Tribune-Republican," declares that "so far as the last session has been effective it has been in the way of scandals and exposures." And the Scranton paper adds:

> Men get mad, begin to talk, and in the course of crimination and recrimination much washing of dirty linen takes place, and whole periods of secret conspiracy and corrupt bargainings are opened to the public view. The Lorimer investigation, the steel investigation, the campaign contribution exposure, have given the people a look-in at their Government which is only vouchsafed at long intervals.

As to appropriations, the Democratic announcement that unheard-of economies would now occur is seen in the fact that a saving of seven million dollars has actually been made from the total appropriations of the last regular session of a Republican Congress. But, to quote again the Washington correspondent of the New York "Tribune," this saving has been made "by failure to appropriate for authorized expenditures, which will result in a deficiency that must be provided for at the next session of Congress."

One way in which the saving was attempted was by granting one battle-ship instead of two. Concerning this the sentiment of most observers is expressed by the Minneapolis "Journal" (Ind. Rep.) when it points out that, at a time when we extend the Monroe Doctrine, the Democrats in the House refuse to grant money for battle-ships, "as if Japan or any other great Power were to be kept out of Magdalena Bay or any other post by the loud discharge of paper resolutions." To which the Brooklyn, New York, "Eagle" (Ind. Dem.) adds: "The Monroe Doctrine, with elaborations or without, is no stronger than the navy of the United States."

Other proposed economies are thus described by the "Tribune's" correspondent:

> If President Taft and a Republican Senate had not stood in their way, the Democrats might

have effected a much greater saving by abolishing two of the most important bureaus in the Department of State—the Bureau of Trade Relations, and the Division of Latin-American Affairs! The plan would have badly crippled the State Department had it carried.

Furthermore,

If the Democratic House majority had been sincere in their efforts to bring about greater economy, they would have acted on President Taft's recommendation to extend the civil service to include the local officers under several of the departments, and would thereby have saved about ten million dollars. This is one of several recommendations made to Congress by President Taft, based on the findings of the Economy and Efficiency Commission by which economy in Government expenditures could be effected and the efficiency of the public service increased.

But Congress thought so little of this Commission that it ruthlessly trimmed the salaries of its members, and limited its powers to "matters of transacting the public business of the Government only in the several executive departments." As is well known, the Commission has been in favor of instituting the English budget system in presenting the Government's estimates of what the expenses of the various departments would be likely to be. But in the Legislative Bill a paragraph was "sneaked in" at the last moment which, it is claimed, shows the temper of the Democratic House leaders:

The regular annual estimates of appropriations and expenses of the Government shall be prepared and submitted to Congress by those charged with the duty of such preparation and submission, only in the forms as at the time are required by law, and in no other form and at no other time.

The session has been prolific of vetoes by President Taft. These affected the wool and steel tariff, the army and legislative appropriation bills, the purchase of permanent army maneuver grounds, the Dixie and Coosa River water power bills, the sales of burned timber on Indian lands, and the reimbursement of those who furnished labor and materials for work on the Corbett tunnel.

That Progressive opinion does not approve the wool veto may be indicated by the Tacoma "Tribune" (Prog.):

President Taft, in explaining his veto of the wool tariff revision bill, declares that the bill "was passed without ample study and investigation."

The wool schedule has been under study and investigation since September, 1909, when Mr. Taft made his famous Winona speech, in which he declared the wool schedule was "indefensible." . . .

. . . President Taft has done more than all other men in public life combined to prevent downward revision of the tariff in compliance with the pledges of the Republican platform of 1908.

In general, however, the President's vetoes, says the Buffalo "Express" (Ind. Rep.), "have successfully blocked most of the attempted mischief."

The Democrats have not themselves to thank that they are not facing the country with the record of a tenure-of-office bill to break down civil service reform, a reduction in the army and an interference with promotion for political ends, a refusal to keep up the navy, and the precipitation of a period of business depression through reckless tariff-smashing.

The President emerges from the session in good condition, if we can believe the New York "Sun" (Ind.). It is true that, "laboring under the disadvantage imposed by hostile control of the House of Representatives and a hopelessly split majority in the Senate," he has had an unusually difficult course to steer; and that, under these circumstances, "the position of the Executive has been vexatious, trying, and exposed to unusual dangers." The "Sun" further expresses its opinion:

It is to Mr. Taft's credit that he has sustained it without more concessions to the expediencies of the hour or the necessities of the political campaign in which he is engaged. He has been the President of the United States first, and an intelligent partisan second. He has not been a trimmer, nor has he sacrificed his convictions because of clamor or misrepresentation.

President Taft has made mistakes, as every President must; but his essential sincerity, modesty, good sense, and strength of character are convincingly apparent.

Another New York paper, however, the "Evening Post," does not agree with this. I does not indicate that the President has emerged from the session with enhanced prestige:

The difficulty is not simply that he had endlessly recurring differences with Congress. Some of them were perhaps unavoidable, but in them all he bore himself with a certain awkwardness. Where he was in the wrong he had not the adroitness to make his cause appear the better, and even where he was right he had no facility in evoking popular support.

"We should gain in self-respect and in the appearance of public decorum—at least, we should be less disgusted with ourselves," remarks the New York "Times" (Ind. Dem.), "if it were so ordered that, in Presidential years, Congress should finish its business and disperse on the 4th of March."

MR. BRYAN'S VIEWS OF GOVERNOR WILSON AND THE DEMOCRATIC PLATFORM

AT the request of The Outlook for a brief statement of his views concerning the Democratic platform, Governor Wilson's candidacy and the prospects of his election, Mr. Bryan has sent us the following letter for publication:

THE COMMONER

Lincoln, Nebraska, August 19, 1912.

The Outlook, New York City:

Dear Sirs—The platform adopted at Baltimore is the most progressive ever presented to the country. It speaks out plainly and strongly on every important question. It puts the party on record in favor of a tariff for revenue only, to be approached gradually; the popular election of Senators; an income tax; Presidential primaries; the election of National committeemen by popular vote, service to begin immediately; a single term for the Presidency; and labor legislation. It opposes the principle of private monopoly, the Aldrich Bill and any central bank, and imperialism. These are only a few of the subjects treated. In Governor Wilson we have a Presidential candidate who inspires confidence among progressives of both parties, and whose fighting qualities have already been tested. His election seems assured. Governor Marshall, his running mate, is a strong personality, and has also shown his courage in political battles—his greatest being his successful effort to secure the selection of a United States Senator by popular vote. The Baltimore Convention made a record for progressiveness and has set the pace for the campaign.

Very truly yours,

(Signed) W. J. BRYAN.

We should have agreed with Mr. Bryan that the platform adopted at Baltimore is the most progressive ever presented to the country if he had added the words—"by the Democratic party."

We heartily agree with Mr. Bryan in his personal estimate of Governor Wilson, for whose integrity, human sympathy, lucidity of mind, determination of purpose, and executive capacity we have sincere admiration.

We do not suppose that any intelligent and thoughtful man can hope to agree with every detail or even with every plank of any political platform. We doubt if Mr. Bryan himself accepts every detail of the Democratic platform—certainly we do not accept every detail of the Progressive platform.

But, dismissing details, there are four fundamental grounds in respect to which the Democratic platform and Governor Wilson's candidacy appear to us to be reactionary and not progressive.

First, the tariff. Mr. Wilson and the Democratic platform stand for a tariff for revenue only, and announce that the protective principle is unconstitutional. There is no such thing as a tariff for revenue only. Any tariff of any kind necessarily involves some degree of protection to those interested in the manufactures or products upon which the so-called revenue tariff is laid. The Democratic party endeavored to frame a revenue tariff in the Wilson Bill, and made one of the most deplorable fiascos in the history of the tariff. We see nothing in the recent history of the Democratic party or in the conflicting elements which formed the Baltimore Convention to justify the hope that Governor Wilson, with all his power of character and ability, will be able to exercise more power than Mr. Cleveland did in persuading his party to refrain from the inconsistency of protecting special industries under the guise of raising revenue. If Mr. Wilson is elected, we believe that he will find his party as hopelessly divided on this question in 1916, and his country as hopelessly at sea as regards its business policy, as Mr. Cleveland found his party and country when he retired from the Presidency in 1897. In our judgment, the only logical positions are those of the free-trader and the protectionist. Free

trade, however, is reciprocal. We cannot have free trade with Germany unless Germany will have free trade with us. In the present state of civilization protection in industry appears to be as inevitable as military force in society. We hope, in the evolution of society, that free trade will come as universal peace will come; but in the present stage the aim of statesmen should be to see that protection in industry is for the general welfare and not for special interests.

Second, the bosses. It is true that Governor Wilson's nomination was made in spite of and not at the behest of the bosses. But it could not have been made without their acquiescence. And the corrupt Democratic machines in those States which admittedly have such corrupt machines will be strengthened and not weakened by Governor Wilson's National success. Mr. Bryan will be a victor in the event of Mr. Wilson's election, but will not Mr. Ryan be equally a victor? It does not seem to us that the effective way to destroy what Mr. Beveridge has so well called the invisible government—that is to say, the partnership between corrupt politicians and corrupt special interests—is to make it merely half visible. Governor Wilson cannot openly and persistently fight and antagonize Mr. Charles Murphy, of Tammany Hall, however much he may despise him. The Progressive party despises Mr. William Barnes, of Stanwix Hall, and does openly and persistently fight and antagonize him.

Third, the taxing power. Governor Wilson has said specifically in his speech of acceptance that the taxing power of the Government should be used only to raise revenue for public purposes, and that to employ taxation for any other purpose is unsafe and illegitimate. From this view of the taxing power we radically dissent. We believe it is not only Constitutional but highly desirable in many instances to use taxation as one of the instruments of the police power of the State and the Nation. If Governor Wilson and the Democratic party are correct, we cannot tax wildcat State bank notes out of existence; or impose licenses on liquor saloons for the purpose not only of raising revenue but of regulating those saloons; or lay a tax on corporations for the purpose of obtaining from them public and accurate statements regarding their capital, profits, and other financial matters; we cannot tax "phossy-jaw" matches out of existence; or lay so high a tax on opium as to keep out of the country all but the very limited quantities needed for medicinal purposes. The taxing power of the Government provides one of the essential instruments for effective welfare legislation. Governor Wilson condemns it; the Progressive party commends it and proposes to use it. We favor its use.

Fourth, States' Rights. What shall be the powers of the National Government? What shall be the powers of the separate States? What shall be the relation of the separate States to the Nation? These questions form one of the most important and far-reaching issues of the campaign. The inevitable, and in our judgment the desirable, tendency of the time in economics, politics, commerce, and social relations is towards Nationalism. The abolition of general social injustices, the regulation of all trusts and the throttling of corrupt trusts, the development of sound and useful business prosperity, can be obtained, not by spasmodic and often conflicting State acts, but by a consistent and well-framed policy of National acts for the public good. The States must more and more deal with matters of merely local self-government, the Nation more and more with questions affecting all the people of the country. The Democratic party and Governor Wilson lay special emphasis on so-called "States' Rights" at a time when the country ought to be concerning itself about National rights. The doctrine of States' Rights is obsolete and cannot be revived by even so able a historian and publicist as Governor Wilson. And we doubt whether the party which lays emphasis on this obsolete doctrine is the party to intrust with the work of effecting great National reforms. The Democratic party by its own platform and by the utterances of its chosen leader announces itself as the party of "little Federalists." The Progressive party, by its pronouncements, by the record, philosophy, and achievement of its chosen leader, and by its very name, announces itself as a party of Nationalists. Those who believe that the best way to avoid the evils of political corruption is to divide responsibility and make Government weak will logically believe in "little Federalism." Those who believe, as we do, that the way to destroy corrupt politics and promote social justice is to make governmental authority as strong as possible in executing laws for general social welfare will logically, in our opinion, support the Progressive party.—THE EDITORS.

EDUCATING THE CONSUMER

BY MARTHA BENSLEY BRUÈRE

FROM one of the universities which offer special courses in Domestic Art and Household Science I got a pamphlet on "The Principles of Jelly-Making." It is an admirable pamphlet. It covers the subject thoroughly, and lays out a straight road to the production from a given amount of fruit of the most jelly of the best quality at the lowest cost. Besides definite directions for the making of particular jellies, it gives a résumé of the principles that underlie all jelly-making, so that one who reads is richer in general culture as well as in specific information. It is a valuable pamphlet in its place; but its most serviceable place is not in the training of the housekeeper. To be of most benefit to her it should be primarily a pamphlet on the Principles of Jelly-Eating. For the modern housekeeper is in the throes of metamorphosis from producer to consumer, and the most important function of real education is to fit her, not for the state she is leaving, but for the state she is entering into. To make jelly is ceasing to be an important part of housekeeping; to eat jelly is, let us hope, the unending privilege of us all.

Now, it has been taken for granted through the generations that, since we all do consume things from the moment we are born until we die, consumption must be instinctive, no more needing to be taught than breathing. We see dimly that modern housekeeping has let go of production and concentrated on consumption; but we are, most of us, a little loth to admit that an education in housekeeping must be almost entirely an education in consumption. This was not true in the past, it may not be true in the coming ages, but in the present and the immediate future it is not to be questioned; for, as Mrs. Ellen H. Richards said, home economics must stand for the ideal home life of to-day, "unhampered by the traditions of the past."

Time was when the woman who kept house was expected to be the high priestess of that dire goddess How-to-Save-Money, but her metamorphosis from producer to consumer has shifted her worship to the new deity How-to-Spend. From an all-round producer the American woman has become the greatest consumer in the world. Of the ten billion dollars spent annually in the United States for home maintenance, food, shelter, and clothing, fully ninety per cent is spent by women. Isn't the science of consumption, then, worthy of special emphasis in the training for home efficiency?

Not many schools of home economics have grasped the fact that they should be *per se* trainers of consumers. They still tend to overemphasize home production; but the best of them are very generally swinging toward the first and most important work of training the consumer—they are beginning to establish standards.

"I am conscious of a standard," writes a pupil of a correspondence school from southern Illinois. "I see it in the way I manage my household, in my expenditure, my work. I think a change in my standards is now going on under the influence of my household studies. The change will, I suspect, consist largely in a shifting of emphasis in delivering me from certain traditional ideas."

The standards of this lady were the inherited housekeeping standards, the standards which our ancestors established through the long ages when they were building up the home as a factory.

Take the matter of food. It is undoubtedly for the advantage of the community that every individual stomach should have enough, and not too much, inside of it. The old standard was to distend its walls by mere bulk; the new school-set standard is to furnish it some two thousand to three thousand food units daily. The schools have worked out this standard of consumption through the study of protein and starches and fats, of calories and muscle-builders and heat-producers, till they have found the amount and kind of fuel the human machine needs for the various kinds of work it must do. To build these standards is a question of laboratories and applied mathematics not within the command of any middle-class home. If all of us are to have the benefit of them, they must be brought to us by the universities and the public school.

I met a Pratt Institute graduate on the Chicago train and led her gently to tell me how much of her domestic science she found useful in her housekeeping.

"Well," she confessed, "when the baby is teething, and the cook has left, and there is company to dinner, I don't think much about

calories or a balanced ration, but somehow I've got the theory so well digested that I put the right things together without thinking about it."

Her food standard has become a part of her unconscious mental furniture, like the gauge by which we measure the length of our steps and the focus of our eyes.

I looked over some papers on Housing written by pupils of the American School of Home Economics. Says one of the students who lives in the country: "In the matter of house sanitation the important point is to know exactly what you have to deal with. There is no use in taking country plumbing for granted. You have got to get away not only from the traditional ideas of the man who built the house, but from your own old ideas as well."

These old ideas from which she is being freed by new school-set standards taught that a country house did not need an indoor bathroom, that the parlor was a jewel-casket to be opened only on rare occasions, that the children should be "bunched" in one room, that running water on the second floor was a luxury, that sanitary garbage disposal was optional with the individual. Under the influence of her new standards she has found out where every one of the pipes in her house is located, what they are for, and how they attend to their job. She has worked out for herself a system of out-of-the-house drainage, a new water system, and a method of scientific ventilation. As a consumer of housing she has put her training in practice.

Now, the basis of all these standards must be the ability to recognize quality when we see it. This is so important and so difficult that the Government tries to make it unnecessary. To establish standards—minimum standards, to be sure—has come to be the work of sanitary inspectors, tenement-house inspectors, clean milk commissioners, pure food and drug experts, departments of street-cleaning, and a hundred more. Theoretically, it would be well for the Government to establish standards for all things used by the consumers, and so save the schools from the onerous duty of inculcating them, and the pupils from the travail of assimilation. But how shall a Government that can reasonably say, "Potatoes below a certain grade shall not be used for human food," regulate the number of up-to-date potatoes a man shall eat? How shall a Government that can, and does, keep printed matter below a certain grade out of the mails say to the voracious consumer of storiettes, "Thus far and no farther?"

Besides, an efficient Government without efficient citizens is not a democracy. We don't want to revert to a benevolent despotism, or even to an apron-string bureaucracy. The setting and maintenance of standards is a two-handed business—the establishment of standards by the Government, and the testing and use of these standards by an enlightened citizenship. And in matters where the Government has not yet established standards of quality the initiative must come from the consumer.

Consider the consumption of textiles—a job we have been at ever since we progressed beyond the wearing of raw skins. But the quality of textiles is still one of the unguarded frontiers of knowledge. In fact, the general knowledge of quality in textiles is decreasing; for though the specialists have grown wiser, the consumers, who used to know a good deal about cloth they themselves spun and wove, have grown more ignorant. Have we not, all of us, seen our mothers place a wet finger under the tablecloths they were buying, to see if they were pure linen? That is a perfectly good test with hand-spun linen; but it is a dull manufacturer who can't circumvent a wet finger. We need both the training of the schools and the Government guarantee to buy cloth wisely.

The University of Wisconsin is giving a course for consumers of textiles at the same time that members of its faculty are working to get through a law on the standardization of cloth. The students study wool from sheep to broadcloth, silk from worm to ribbon, and are required to do one piece of weaving on the hand-loom, not for manual skill, but to make them understand the tests of quality. They are not expected to become weavers, but consumers of clothes. With this same end in view, they are taught the processes of dyeing and the durability of colors, and they study especially the adulteration of fabrics. I was shown card after card of cloth sold for "all wool" which, when tested by the students, proved to be practically all cotton.

But it is no longer enough that cloth should be all wool and a yard wide—that means little. These Wisconsin consumers must learn that even pure wool, when it is short and stiff, or soft and weak, is a poor purchase; that there are qualities of cloth in which the warp and weft are so uneven in

weight that the heavy threads pull the light ones, and the cloth wears itself out; that there are weaves in which certain threads are so exposed that they break and leave a rough surface. All tests of "pure wool" cloth!

But even this is only a small part of the study of woolen fabrics, only a preliminary to establishing the standards of quality and price for the benefit of the consumer. Into these standards enter conditions of cloth production in the factory, wages paid operatives, taxes paid the Government, "Schedule K," freight rates, and the costs of selling the finished product. Nor is this training in textiles limited to general principles. It applies itself to such definite things as blue serge and black broadcloth, and other standard products. These students of the science of consumption have determined that, under existing conditions of wool production, price of labor and tariff, the lowest cost for blue serge fifty-four inches wide and of efficient quality is a dollar and a half a yard, and that the lowest cost of a similar quality of black broadcloth is nearly three dollars. Will not the trained consumer who has thoroughly assimilated these facts realize that when either blue serge or black broadcloth is offered for a less price it is not all wool, or is wool of poor quality, or damaged, or "mill ends," or remnants? Of course we recognize that both good and inferior cloths have their legitimate uses if the consumer is neither deceived as to their quality nor overcharged. There is no reason why the law should prohibit their manufacture as it may well prohibit the manufacture of adulterated foods and drugs. All that the consumer needs is to be protected by an honest label. How could the world get along without "shoddy," for instance, a cloth made from odds and ends of wool fiber, usually fiber that has been used before, when the present production of new wool is not nearly equal to the demand?

But the student has got to be taught that even these standards of quality are not absolute things. The perfect buttonhole may be produced at such a cost of time and labor that it is for the general advantage to use the commonplace hook and eye. It is not a question whether we can individually afford to pay in money for hand-made lingerie, but whether the community can afford the expenditure of so much eyesight and time and thought to make what is perhaps a superior product, but for which there is an approximate substitute; for are not things expensive to the community even when we make them ourselves?

Besides knowing what is for the advantage of the community and being able to recognize quality when one sees it, it is the work of the consumer to see that what the community needs is produced. Can one eat eggs, however wholesome, in a land where no hens are? I listened to one domestic science teacher who seemed to set me right between the covers of "Our Mutual Friend," where Dickens tells how "Mrs. John Rokesmith, who had never been wont to do too much as Miss Bella Wilfer, was under the constant necessity of referring for advice and support to a sage volume entitled 'The Complete British Family Housewife.' But there was a coolness on the part of the British Housewife that Mrs. J. R. found highly exasperating. She would say 'take a salamander,' or casually issue the order 'throw in a handful of'—something entirely unattainable. In these, the Housewife's glaring moments of unreason, Bella would shut her up and knock her on the table, apostrophizing her with the compliment, 'Oh, you *are* a stupid old donkey! Where am I to get it, do you think?'"

A good many instructors—far be it from me to call them what Bella did—entirely ignore the difficulties of getting the "salamander." That is one place where Teachers College in New York City is strong—it teaches the prospective consumer how to get the "salamander."

Now we know that it is to the advantage of society that we should all have clean clothes and house linen, and we are fairly able to recognize cleanliness when we see it. But to produce this cleanliness under modern conditions is quite another matter. We have, thank Heaven, passed, mentally at least, beyond the stage of mother-at-the-washtub. We are passing rapidly beyond the stage of anybody at the washtub anywhere, and at Teachers College the consumers of clean clothes, prospective and actual, are being taught how under actual conditions clean clothes can be produced.

"How people can accept clothes blued with the old liquid indigo I don't see!" exclaimed an instructor at the College.

"Why not?" I inquired, all bluing being more or less alike to me.

"Why not? Don't you know that it makes rust spots?"

And then and there she took me into a

class that was making a special study of bluings, and I learned how much waste there was in block and ball bluings, and that the proper thing to use was a specially prepared aniline dye of the proper shade. I was shown how my intelligent demand for clean clothes could be satisfied, how the thing I wanted could be produced. As part of this education, the girls at Teachers College also test out washing-machines and mangles, irons, and soaps, bought in the open market, with reference to their effect on the things washed, their cost to buy and operate, and the skill, time, and strength their use involves. The College does not, however, lay down any fiat on bluing, nor on washing-machines, nor on any other laundry appliance; for may not far better things be invented in the future? It teaches the points in the production of clean clothes as it might teach the points in judging fox-terriers—not whether any specific flat-iron or small dog is good or bad.

Inextricably mixed up with learning how to get produced the things one wants is learning how to secure them after they are produced. The consumer must be trained to remove the obstacles between himself and the thing he needs. These obstacles are usually matters of cost—cost and its contributing causes, transportation, the exploitation of public utilities, the smothering of useful patents, and the arbitrary limiting of useful manufacture. From all over the country come letters full of the same things that are in the contributors' columns of the papers and magazines. "Eggs cost sixty cents a dozen, so we use rice instead." "Electric current for heating is so expensive that we still burn coal." "I would like to send Harold to college, but it costs so much that I cannot afford to." "Do not use butter in making pastry, for, though the flavor is better, the cost is very much more."

The consumer and those who advise him take prices as final things, as representing the true cost plus a fair profit, whereas in reality—

Now the trained consumer knows that there is no fuel like electricity, so clean, so reliable, so easily controlled; but the better trained she is, the more certainly she knows that she is as much cut off from using it as though it were ambergris. Why? Because it varies in price from ten to nineteen cents a kilowatt-hour. I have just called up the contract department of the Commonwealth Edison Company, of Chicago, and found that the net rate for family use is ten cents, exactly the same as in New York City. But the people of the region have taxed themselves to build a drainage canal, a property now belonging to the people, which has developed 125,000 horse-power, about 100,000 horse-power of which is available. This, in the form of electric current, at the very lowest estimate, is worth about $2,000,000 a year. Some experts reckon it to be worth ten times that. A small thing, but their own, and what could it not do if turned into the kitchens of Chicago at cost? Does that ten cent a kilowatt-hour rate have to stand? Is it wise to teach the consumers that it is a Heaven-fixed obstacle to good housekeeping? They broke down the $1 per 1,000 feet gas limit in New York City, the car-fare rate in Cleveland, and the freight-rate limits in Wisconsin!

I was talking with a woman from Sun Prairie, a small Wisconsin town in the midst of a dairy district.

"Oh, yes, I cook with electricity," she said. "It does cost a good deal now, because, you see, the plant is just new and we haven't paid for it yet."

"Paid for it?"

She looked at me for a moment in uncomprehending surprise, then smiled her amusement.

"Oh, it belongs to the town, you know. We pay a good price for the current now—almost as much as they do in the city; but as soon as we have paid for our plant we shall get it at cost, and then it'll be the cheapest thing we could use."

This, of course, is on the basis of a municipally owned plant—a small one, that is supposed to be more costly to run than a larger one.

The University of Illinois, in a pamphlet written by Mrs. E. Davenport, has worked out the cost of equipping a single country house—one that can be sufficiently lit by thirty tungsten burners—with an electric plant of its own. The cost of buying and installing this plant is approximately $600, the cost of maintenance from eight to ten dollars a year, and the cost of the electricity so produced is five cents a kilowatt-hour. This is on a scale so small that it is theoretically very expensive to run! Now of course Mrs. Davenport's plan involves electricity at a low voltage to be used for lighting only; but the country consumer who has refused to

consider the kerosene lamp as final may well refuse to let the coal range obstruct her efficiency. Aren't the problems of electric light and electric heat Siamese twins?

Certainly it is part of the consumer's job to perform an economic steeple-chase over the fences and the ditches and hedges that are between her and the things that it is for the advantage of the community that she should have, and it should be part of her education to practice her in economic hurdle-jumping.

I have been talking with Miss Snow, head of Household Arts work in the Chicago public schools.

"If this instruction in housekeeping," said she, "were nothing but teaching the children to cook and clean and wash and do all the other things that are done *in* the home, I shouldn't be very much interested in it. As I see it, Domestic Science is a training in the valuation of life relations. It concerns itself with government and politics and business and health and capital and labor and the social setting of them all. It is really training the consumer to *live*."

And to live is to consume!

In the public schools, where the courses are comparatively elementary, the relations between life and the specific studies are not difficult to establish; but when the general principles cover themselves with a mass of detail, as they do in the more elaborate courses of the universities, it takes a conscious binding together of the threads to bring them into relation in the students' minds. This is not very often done, for the reason that few members of the faculties themselves understand these "relations."

"What is the object of all this home economics work?" I asked the head of a department in a great State university. "You're supported by the State funds; what are you giving back to the people in return?"

She looked a little vague, and then said, brightening:

"We've five thousand students."

"I suppose you're taking such courses as this one in sewing on through the commercial production of clothes, through factory legislation, and wages, and hours?"

"Oh, we couldn't go into that!" she cried.

The detailed study in that university was good, but a course in textiles naturally gets itself a long way from the piece of cloth boiling in caustic potash to see if it is all wool or not, and a cooking course a long way from how to make muffins, and a sewing course from how to make buttonholes, and all the other courses in a Home Economic department sprangle away from the ostensible starting-points. It takes not only a big underlying idea but a forceful personality to do the new work of correlating these things and feeding them predigested to the consumer in training. Both the idea and the personalities they have at the University of Wisconsin. As Mr. Hatch, head of the extension work of the Wisconsin Agricultural College, told me: "You Eastern people who are used to endowed institutions may not understand it, but the object of this university that the people have made is to be serviceable to the people."

And Professor Abby L. Marlatt, head of the Wisconsin Department of Home Economics, has had the force to draw all these diverse activities into a course in what she has called "Humanics," planned to link the theories of the class-room to the realities of life. I heard one lecture in this course. Its subject was "The Child in Industry: Its Effect upon State Laws and Necessary Legislation."

It was a talk backed by Government documents and State investigations, by the reports of charitable societies, tariff schedules, and the rate regulation of railways, and not a conclusion did it draw! Quite unemotionally it showed that there is child labor in quantity, and how much and where, according to the Census; showed the cost of this in health and intelligence, quoting from Government investigations in the South and New England; in the death rate, quoting from the report of the Association for the Prevention of Infant Mortality; showed that it is absolute necessity that forces children to go to work, quoting from the Massachusetts report on why children go to work; showed the wages of fathers and mothers in the woolen mills of Lawrence before the last strike, and correlated these with the claims that the high tariff on wool is to protect the standard of wages of the American workingman, and with the number of children actually working in these same mills because their parents cannot support them; and all these things with the price of woolen cloth and the profit on it—Miss Marlatt *didn't have to draw conclusions*. The brain of a twenty-year-old college student, after it has been tabulating chemical and physical experiments in three columns—first, the process, as laid down in the book; second, the result, as observed by the eye; third, the

inference as made by the brain—draws conclusions quite automatically from such a lecture as this of Miss Marlatt.

Miss Marlatt's students will be among the very few of us who have been trained in the principles of consumption beyond the narrow individual principle established by our individual digestions or complexions, our social aspirations or our mental appetites. Housekeeping, even the larger housekeeping which is not production, is but a small part of this science of consumption which can operate quite as directly upon a memorial statue at Washington as upon a can of beans.

Consumption is our one universal function, and through it we have power and happiness and progress, or retrogression and spiritual and bodily death. Some of us already know what we want to consume and how to get it, but it takes an educated social vision to see the needs of the race and how to satisfy them. Is there any bigger work for the universities, the colleges, and the public schools than to train consumers to this end?

TRAITS OF CELTIC POETRY

BY SHANE LESLIE

IN the course of what may be called the golden age of Irish literature, between the eighth and twelfth centuries, the Irish Celts reduced their system of meters and alliteratives to a minute and scientific condition. So far from spontaneity receiving any encouragement, no aspiring poet was permitted to hold poetic rank until he had completed twenty years of continuous and successful study. But once he had acquired the robe and status of a true poet, he simultaneously acquired an honor and emolument that the less qualified writers of to-day might envy. The Irish laureate was placed immediately beyond the bounds of criticism or competition. He ranked next to the blood royal. At feast or assembly he sat in the place of honor. His person was as sacred as that of a bishop, and the most truculent warrior was obliged to give him precedence. When he traveled, he was followed by the equipage of a prince; and by the law of the land no king could refuse him whatever gift he cared to exact in return for an elegy of mourning or praise. It was only natural that such a privileged class should develop symptoms of heads swollen beyond the reasonable inflatus of the Muse; and again and again the arrogance and covetousness of bards is noted in Irish *prose*. At one time their actual banishment *en masse* from the country was averted only by the personal intervention of Saint Columcille. To this day it is worthy of note that Lough Derg (the Lake of the Red Eye) owes its name to the preposterous demands of a bard who, having exhausted every conceivable form of remuneration, asked the local king to reward the poem which he had composed by the gift of his single eye, which painful payment the king, to his everlasting credit, performed rather than incur the disgrace of being a half-hearted patron of literature.

As regards the literary tradition which the Irish race made such extraordinary efforts to dignify and maintain, it is not too much to say that it eventually had more effect in the molding of the vernacular poetry of Europe than any of the tongues of the ancient world. It was fated that the Celts should show themselves not only geographical pioneers from the day that they set out on the westward journeying that brought them to final settlement in the isle of their destiny, but explorers in the domains of literature as well. Unbiased by any classical tradition borrowed from Greek or Latin, they set out and traversed by themselves entirely new paths. They extended the power of song over a wider conquest than the Romans had ever carried the power of the sword. They entered into realms of literature untouched by the legions of Latin writers. Into "regions Cæsar never knew" they bore the eagles of their song. They evolved forms and devices of poetry which never occurred to the poets on Parnassus or at Tibur. They built up harmonies of word-music which we are seldom able to translate into English meter, even when we have learned sufficiently to admire them. If they never walked upon the sunlit heights which were touched by the Greek philosophers,

or upon the smooth and pleasant plains trod by the Augustan writers, they passed under seas to the strange and mystic cavern from which came the light that the modern world knows as romance.

To narrate the sum of their achievements is to indicate almost every device and variation known to modern poetry. They re-echoed and perfected the echo of refrain, and the broken stave they were the first to break. With the power of alliteration which exists only in Virgil as a sober though harmonious occurrence, they devised a great alternating music of words in which vowels made voice like live things and consonants sounded all the movements of wind and storm and sea. For the expression of intense feeling they employed a strange and original method of diction called the *rosg*, from which the conception of modern blank verse is largely taken. Above all, they made a discovery which was as typical of their racial imagination as the discovery of the uses of steam by Englishmen or the finding of the Polar North by an American. They discovered solely and beyond question of doubt the joy and the grace with which the Creator of all harmonies has invested the power of rhyme.

So that it was with no crude outfit that the poets of Ireland set out to elaborate the three great cycles of mingled verse and prose in which their race found the revelation and reflection that Homeric poems afforded to the Greeks and the Old Testament affords yet to the Jews. The earliest is the mythological cycle, in which the strife between the elder races of Ireland and their conquerors is waged, not in the sober recital of fact, but in the distorted silhouette of saga that the wand of the weird casts across the record of untold centuries until the original conflict of mortals is lost in a shadowy war of gods. Secondly, there is the saga which remains forever associated with the Court of King Conor mac Nessa, the great historical contemporary of Christ, which is almost entirely occupied with the life and exploits of Cuchulain, the Hound of the North, the peerless champion of Ulster. It was this epic of Ulster that remained the most representative tale of Irish valor as long as the northern O'Neills sat on the High King's throne at Tara. Later the triumph of Brian Boru and the ascendency of the Munster monarchy was followed by the predominance of the third great saga, the tales dealing with Fian mac Cool and the legendary Fianna, unhappily popularized in modern days under the much bruited and degraded name of Ossian. It is this saga which has continued to hold the greatest position in the oral tradition of the Scotch and Irish Celts, and out of which James Macpherson built up the ingenious but lying fabric upon which the poetical fame of the hapless Ossian has been made to rest. The Cuchulain saga has come to us in manuscript rather than in oral custody. It has had to be pieced together out of many separate stories compressed in all the wealth of cues and runes into which the mediæval bards loved to stereotype their traditional legends. On the other hand, the Ossianic poets have been resinging and resetting the Fenian tales until recent times in the way that skillful musicians build up new harmonies out of ancient and familiar themes.

But rather than sketch the trackless latitudes of Celtic poetry, it would be preferable to give an idea of some characteristics which it shares with few, if any, other world literatures, and which have enabled it to sound so distinct and so vibrating a chord in the "concert of Europe."

First, we may notice a peculiar and wonderful sense of nature, almost amounting to a pantheism at times, a spirit which fills Irish poetry with so many quaint and personifying expressions, which speaks of the robin's cry as "the music of the red-breasted men" and the bees and chafers as "the little musicians of the world," which trembles with the horror and dreariness and silences of winter scenes, and yet rises to a wild frenzy of joy over the coming of summer when "the talk of the rushes" is heard and all nature finds so many voices that even "the stuttering quagmire prattles." Here is a winter song dating from the ninth century:

"These are my tidings for you—that the forest stags bell,
And that summer has gone and left snow upon flood and on fell,
That the winds leap up cold and the sun sinketh low in the sky,
And shorter of course are the tides of the sea running high.

"Blood-red is the bracken, the flower of its beauty is gone,
And the wild geese are raising their cry, oh, so weary and wan,
For the fingers of winter have clutched the bright wings of the bird,
And the season of ice is at hand—such tidings I heard."

Secondly, we may distinguish a richer sense of color than is usual with any but the

Oriental mind. Ethnologists often ask whether the Celts did not bring their love of brilliant hues as well as many other racial characteristics out of the radiant East. Colors, which in Latin poetry are merely named for conventional and epithetical purposes, are dwelt upon in Irish verse for the sheer love of color and the intoxication of reader and bard. Every color is lavishly poured into the lines until it becomes as visible to the eye as to the imagination. The Celts possessed this sense in common with Pindar, alone among classical writers, who knew well how to weave the delicate woof of his Nemean and Olympian odes with a gold and a scarlet that ran through them like molten ore or running blood. As one instance of the fascination that color had over the Celtic mind we subjoin a translation of a dirge written for King Niall of the Nine Hostages, who died in the early fifth century. It is interesting as being composed in the dialogue, which, as far as we know, was the nearest approach the Irish ever made to the dramatic form:

Tuirn, son of Torna

When we hied to the hosting with Niall of the Nine,
His hair like a primrose would glimmer and shine.

Torna

Well spoken! a slave would I give to be thine,
For that hair like a primrose agleam in thy line—
And his lashes so darkly and delicate lay,
With eyes like the woad or the hyacinth spray.

Tuirn, son of Torna

All blood-red and changeless his color would stay,
Like the foxglove, or crown of the forest in May.

Torna

White teeth and red lips that no anger could feel,
As high over all burst the flame of his steel.
Like the moon, like the sun, like a beacon, burnt Niall,
Like a dragon-ship, flawless from bulwark to keel.

Tuirn, son of Torna

All the Kingdom of Kerry makes musical woe,
But my grief for his death must all grieving outgrow.
The East will be ravaged with blow upon blow,—
Since Niall is dead let all bitterness flow.

Torna

The Saxons are baying, the Lombards are sped,
And falls the bright Gael with his King who lies dead.

Tuirn, son of Torna

Once Tara was bright with the hair of his head,
Like iris for yellow, like gold for its red.

Nothing could be more typical than the color which illumines this dirge of death. Even when terror is uppermost, and the enemies of Ireland threaten to harry her coasts, the poet broods not on past victories or coming disaster, but on the sheen of the dead King's hair.

Thirdly, there is a constantly recurring sense of the weird, the magical, and the mystic, which reveals itself in a thousand similes and hyperboles, loaded with a cloying taste for the marvelous or the grotesque, without a keen appreciation of which the classical student is likely to find Irish poetry more productive of rhyme than of reason. It was this power of exaggeration in expression which Tennyson summed up in a phrase as the "blind hysterics of the Celt," though he made a fair effort to indulge in some such hysteria himself when he wrote the "Voyage of Maeldune" and described how

"We wallowed in beds of lilies, and chanted the triumph of Finn,
Till each, like a golden image, was pollened from head to feet."

Like the poetry of Robert Browning, that of the Celt relied on a finely educated as well as a strainingly attentive audience. Though the knowledge of Browning's allusions was so recondite as to be often shared by the poet with the poet's Creator alone, the allusions or symbols employed by the Celtic poet were based on a set coinage of phrases carrying a literary weight and value that no bard or reciter, however weird or far-reaching his flight, might dare to change or falsify. The hazel tree, for instance, is always allusive of the tree of knowledge, without further explanation. The hushing of women in travail and warriors in pain invariably connotes the presence of the most exquisite music.

The love of allusion and the practice of artistic hints which occupied the mind of the Irish poet is akin to the genius of Japanese painting, wherein the artist works not to surfeit the vulgar so much as to win the gentle wonder of the initiated. The obvious and the commonplace in diction or description was as detestable to the Celtic pen as the gaudy realism of European painting to-day is

to the subtle brush of the Oriental. Even impressionism as an artistic term does not convey the love of the Irish for what was half said or glimpsed in his words, for impressionism leaves doubts and queries in its tracks, whereas both Celtic poetry and Japanese painting gave to the few qualified to judge such clear-cut emotions and certain delights as only the refinements of centuries could produce.

It is true that the Celt has never shown himself capable of a sustained effort in any sphere of art, preferring to exhibit his powers in the gleam of a short and brilliant effort, or in the achievement of some unexpected *tour de force.* It was characteristic of his writings that he never attempted to unravel plots or develop strong, silent characters through chapters of tedious description. He preferred to reveal a few flashlight incidents and accidents to sum up his characters, while the situations in which they strove remained to be guessed from some slight but unerring clue. His power of contrast and condensation could be tremendous, and we have snatches of poetry in which opposing emotions run unmixed, but molten, in adjacent lines. An entire novel of the expansive style could be composed out of the following situation from the history of Congal's rebellion, in which the foster-father reproaches the rebel for his unnatural feeling in turning against himself and country after he had been offered as conciliation "a steed from every shed and a cow from every herd, an apple from every rath, and a garden in every townland in Ireland." It must be remembered that the tie of fosterage with the Celt was stronger and more sacred than that of man and wife, and a foster-father trembled to slay his foster-son more than his own child.

"Let him have his desire, let him drink of his well.
No demon hath thought of forgiveness in hell!
Yet my fight is the fight of a doe with her fawn,
Of a mother who gores the sweet son she hath borne,
Or the strife of two brothers whose love has grown dim,
For Congal, sweet Congal, I taught and I fostered him,
And 'tis Congal the child that mine eyesight yet sees,
Whom I took from King Scannlan the brave, from his knees;
But now will I give thee a spear for a spear,
And like withering flame will I circle anear,
And thee the fierce javelin shall thrust through and quell—
No demon hath thought of forgiveness in hell!
Alas! there was none of thy race like to thee,
To go planning my ruin from land and from sea."

From this condensation of feeling and incident it has resulted that, though there are ten thousand stories in Irish, there is no single sustained epic. There is no Odyssey, though there are endless "navigations," as perilous journeys were called by the Irish story-tellers. There is no outlined system of philosophy, though there is a marvelous growth of proverbs and epigrams, which do not lose their savor with the years or even with translation. The bitterness of death, its contrast with life, and its unreasonableness remained a problem insoluble to the philosophy of the Celt, and he could meet it only with a few whimsical or passionate sayings dropped by the wayside. "Death is the best story-teller" is perhaps the most pregnant of these. He fell back upon such a passionate tenderness as is revealed in the dirge of Drilrosg for Armhor. This dirge, which is sober in comparison with the overwhelming grief that fills the laments of Cuchulain or Deirdre, gathers to a quiet pathos that the Greek anthology would scarcely surpass:

"Under the flag thou art lying,
O Love of all love of my heart,
Yet still through the mists of my crying,
Where mine eyelids have vision, thou art.

My grief and my woe! mine own brother!
Our bulwark and circle of fire,
Thou never shalt share with another
The spoil of the children of Ire.

And thou, where my brother is lying,
O love-laden mansion of grass!
Yet list to my heart that is crying
The deeds that my Love brought to pass."

In all his literature the Celt was haunted by the riddling terror of the after-life. He watched, or rather felt, his life moving swiftly under its burden of love and beauty into the gulf of the unknown.

Death he recognized as supreme. This supremacy seemed only the stronger for the momentary presence of light and love. All the thousands of transient colors that delighted his eye went only to enrich and darken the ultimate shadow towards which his creation moved.

It is only the pessimist, perhaps, who can really enjoy the passing glory of the world. Certainly of the ancient races none showed a more persistent pleasure in the pageant of nature and life than the Celtic people, whom Melancholy is thought to have most avowedly made her own.

THE DESERTER

BY MARY KATHARINE REELY

I CONFESS that the O'Rell case puzzled me. Mike O'Rell was a good sort, as men go on Second Street—brought his pay envelope home on a Saturday night, was good to the children, and didn't drink much. And Minnie, for a woman of her years (she was twenty-two or so, I dare say, but looked ten years older after six years of married life), did remarkably well—gave Mike his meals on time and kept the children and the house up as well as her limited means and intelligence allowed. They got along together, too, very well. Romance dies young in such families, so that if people just get along together it is all one expects; one hardly looks for affection. And now, all of a sudden, without word or warning, here was Mike O'Rell deserting. He was out of work, of course; so many men are just now. And so many men out of work desert their families; but, some way, I had not expected it of Mike O'Rell.

I had been home over Sunday—had had an awfully good time, and had forgotten all about the Settlement—and I came back Monday morning joyous.

"Message for you, Miss Maris." I had not had time to get my hat off. "Mike O'Rell left home Saturday night—hasn't been seen since. You are to go right up."

It's funny how three minutes after you get back from a vacation you can forget you ever had one. I was a district visitor again on the instant. I dropped my suit-case inside my door, changed my coat, put on my other hat, and started for Second Street.

"Mike O'Rell," I kept saying to myself. "Of all men, Mike O'Rell!"

I found Miss Simons already there, and as she, as an Associated Charities agent, takes precedence over me, there was nothing for me to do. I took Freddy on my lap, and, with a word to Minnie, sat down while Miss Simons went on with her interview. She has been in the work five years—two years longer than I—and I look at myself in the glass sometimes to see if my mouth is settling into those grim lines, and if that look, cynical and suspicious, is coming into my eyes. When I see it begin, I am going to resign and go into some other profession—get married, maybe—anything to grow human again. Miss Simons is an expert. Her case records are the envy of every charity worker in the city. I don't know that anybody ever envied me anything, but I could tell her one thing, and that is, that if she wants to get information out of a woman she had better not sit down in front of her with a note-book.

"I don't know, ma'am," said Minnie, stolidly, with the expression of a blank wall.

"Had he been drinking?"

"I don't know; some, maybe."

"More than usual?"

"Um-m, I don't know."

"How much is usual?"

"Um-m, I don't know. What any workingman takes of a morning, maybe."

"Have you ever seen the man in a state of intoxication?" Miss Simons wheeled to me. And I swear that if I ever had I should have denied it. That's the effect Miss Simons had on me.

"Had there been any trouble between yourself and your husband?"

"Um-m, well—I don't know as there had."

"Mrs. O'Rell, have you any idea where your husband is, or why he left home?"

"Um-m, no, I can't say as I have."

Miss Simons snapped her note-book shut. "You see," she said, turning to me as she rose to go, "the woman would not help us if she could. And my suspicion is that she knows more than she tells. I shall notify the police at once, of course. The man is probably out of the State by now, but, thank Heaven, we have the inter-State law and can bring him back. If we can arrest this one case—"

"Arrest him?" Minnie was roused. "Arrest Mike? And what for, now?"

"She knows more than she will tell," said Miss Simons in a low voice as I followed her to the door. "Get it out of her. It may help us to trace him."

"And what if we do get him back?" I asked, a little curiously.

"Then," said Miss Simons, "we are relieved of the support of his family."

"But he had no work."

"He must find work. In a case of what appears to be pure shiftlessness—"

"Have you found it so easy to find work for men?" I said. "We haven't."

"Well," said Miss Simons, "we can't help a man till we are sure that he has tried.

We must not break down self-respect. Nothing is more demoralizing than giving help to the able-bodied head of a family. Now all the thanks I got from this man for the suggestions I made was an outburst of profanity."

Miss Simons went her charitable way. So then, I thought, Mike had appealed to her for help. I hadn't known that it had gone so far. He had had a little money in the bank when he was laid off. But they had had the doctor for the baby, and, of course, living is so high.

I went in to Minnie, and—well, I am not an expert, and never will be. Minnie wept on my shoulder, and I patted her and petted her, and said consoling nothings to her. "Now," I said at last, "Minnie, what do you know about this? Why did Mike leave?" For my suspicions had been those of Miss Simons.

Minnie dried her eyes on her wet ball of a handkerchief. "Honest-to-Gawd, Miss Maris, I don't know. He was mad at me," she went on. "But that's nawthing. Only I suppose it was once too often, and he went, and didn't come back."

I got the story out of her—all there was to it, and there wasn't much. When Mike came home that afternoon—the same day he had appealed to the Charities, I gathered—Minnie had suggested that she should come down to ask us for work, leaving Mike to stay with the children, and Mike had said, "Damned-if-I-do!" and had left the house. That was the last seen of him.

It was not a very satisfactory explanation. But maybe Minnie was right. Maybe it was just a fit of temper. I would not have thought it of Mike, but, as Mrs. Hagarty, the next-door neighbor, said as I was leaving, "You can niver tell. Men are queer creatures. You'd think now," she said, "that a man would be willing to stay home and mind the childer for a day or so. Wouldn't you, now? He might do that much. Well, Miss Maris, I sometimes think you're as well off not being married. Honest, I sometimes think you are."

By night the case was pretty well arranged. I had seen the City Poor Department about the fuel, and had actually got it out of them! (It's the boast of the administration that they are cutting down expenses in that department.) The Charities agreed to put in temporary relief, and the visiting nurse promised the certified milk for the baby. Our employment secretary was to give Minnie work in the morning, and the children were to be taken into the Settlement nursery. We are dreadfully crowded, but we doubled up to take them in, as we always do. I was fairly well satisfied with the day's work, only I was a little disappointed. I have an india-rubber faith in humanity. It would spring up again in a day or so, I knew, but for that night it was pretty limp. I had always liked Mike O'Rell.

I ran up in the evening to tell Minnie about the work, and I stayed to help her with the dishes. She had been crying, and needed cheering up, poor girl! I let her talk away while she worked. It did her good. And she told me, irrelevantly, about the dress she wore when she was married to Mike and how much the lace cost a yard.

It was rather late when I left the house, but not more than nine or so. And, while I am not the least bit afraid around the neighborhood, because everybody knows me, I was startled when a man's figure darted out of the shadow of the house and made for the alley. I was not in the least afraid for myself, but I was startled. What was a man doing slinking about Minnie O'Rell's house, and her alone and unprotected? Not thinking, I started to follow. The man had paused and turned, and, seeing me, he came slowly back. It was one of those murky nights that come after a day of January thaw, and I suppose his figure loomed up bigger through the half-lighted mist. Then I was frightened—alone at the head of a dark alley with an unknown man bearing down on me.

"Well," he said, in a low, gruff voice, "I s'pose you seen me now."

The light of the street lamp struck his face.

"Mike!" I gasped.

"Well," he said, "what of it? And what you going to do about it?"

I heard again the snap of the elastic binder on Miss Simons's note-book as she had risen to go. "Report any word you may hear of this man. He must be arrested, for an example, if for nothing else."

"Step back into the shadow, Mike," I said. "This is Casey's beat. He's been instructed to watch for you."

"He's a friend of mine," said Mike. Nevertheless he did as I suggested. I followed.

"Casey's a good friend of mine. And, say," he said, "you're another. Ain't you now?"

I can't resist the Irish, ever, and the appeal in Mike's voice would have melted

me. I tried to be professional. "I am," I said, "but I'm a friend of Minnie's, too."

"Sure, and I knew you was. I knew you was."

"But what are you doing here now?" I demanded.

"Looking in me own windy. I guess a man can, can't he? Say, they're all right in there now? They had a square meal? Yes? And there's the milk for the little shaver? And the medicine? And the bit of coal to warm them up? And Min? What's she going to do?"

"I have work for her to-morrow."

"What doing?"

"Fine ironing," I said. "Minnie's good at that."

"That's not so bad," he said. "And the kids?"

"They're coming to our nursery."

"That's it," he said. "That's it."

If the man's action had puzzled me before, his attitude was no more intelligible now. "Mike O'Rell," I said, "what, in the name of all that's sensible, did you leave home for, scare Minnie to death, and give us all this trouble?"

Mike nodded toward the house where Minnie's light still gleamed. He started to speak, but Casey, the patrolman on the beat, strolled into the light and we clung closer to the fence.

"What did you do it for?" I repeated.

"Lost me job," said Mike, succinctly. "It's one of the army of the unemployed I am. You know it!" He turned on me fiercely. "You know it! Don't talk to me! Me, that's walked the streets for two weeks, and earned twinty cints shoveling snow! Great country, this! Great system, that loses an honest man his job just because there's going to be a Prisident illicted a year from last November! Better get an Imperor William, say I, or a Czar of Russhy, or even a King George, say I, that will last a lifetime. Lord love you, Miss, if I ain't had work, you know how it is! And I told 'em so!"

I remembered Miss Simons's reference to the outburst of profanity. "What did they say to you down there?" I asked.

"Thank Gawd, you're not one of them!" said Mike. "Yes, I went down to their nice easy office, and I asked to see the head of the joint. Him being a man, I thought I could talk easier. And, damn it, with a wife and children hungry, what can a man do? They might 'a' knowed it wasn't for meself. Well, he wasn't in; was out giving a lecture on Pawverty, the pert young man with the specs says. 'But here's Miss Simons,' he says, 'as will interview you,' he says. And interview me she did! Got me name, and me father's name, and what me grandmither died av. Interview me! Yes, she did. And when she was t'ru, if she'd 'a' give me a glass of cold water, which she didn't, I'd 'a' t'rowed it in the face of her. 'We'll give you another week,' she says, 'to look for work,' she says. 'And if you don't find it, send your wife down, and we'll give her work.' A week! A week! Can't a kid die of starvation in a week? Or of the fever in a day? Send me wife out to work? Me?"

"Minnie *is* going to work," I protested.

"Well, she ain't supporting me, is she? Let her keep her little dollar and a half for herself and the kids. She ain't going to feed me on it. Let her take their charity. It's all right for women and childer, but not for me. I'll beg my way honest from door to door first."

I held out my hand in the darkness. "Come into the house and see Minnie before you go. She's breaking her heart. Thinks you're mad at her."

"Ah, poor girl!" he said. "Ah, now—" He made a step toward the house. "No," he said. "No, I ain't going to let her in on this. Let that sharp-eyed charity woman come around trying to find out me whereabouts, and it's a hard time the poor girl'd have lying for me. No! And maybe I can pick up a bit of money down in the country to send her with a letter. Maybe there's a jay or two down there don't know there's going to be a Prisident illicted next November."

He moved forward and stood looking at the window. "Sure, and they're all right in there," he said, a little wistfully perhaps. "They're all right, meself being out of the way. 'We can't give help to a family so long as there's an able-bodied breadwinner sitting around the house.'"

A form moved across the curtain of the lighted window. Mike O'Rell grasped my hand in a mighty grip. "You're a good sport," he said. "You ain't going to tell nothing—and you'll look after 'em."

"But, Mike," I called softly after him. It hurt me so to see him go. "Where are you going? What's to become of you?"

"Me?" he said, turning. "Don't you do no worrying about me. I'm going out to-night. Side-door Pullman on the C., B. & Q., going south."

AN ADVENTURE IN PUBLIC OPINION

BY A PRESS SECRETARY

THE attitude of public opinion toward certain Nation-wide movements in cities which make a pretense of being metropolitan is very often humorous if it is not paradoxical and inconsistent. There are communities which are set dead against the entrance within them of railways, electric lights, cement sidewalks, paved roads, and sanitary sewers. We have seen such towns many times, or, if we have not seen them, we have placed them, in our minds, in some out-of-the-way section of the country or in the backwoods.

But one is hardly prepared to find practically an entire community of some thirty thousand people in a Middle Western State either decidedly apathetic or openly antagonistic toward the establishment of a Young Men's Christian Association and the possibility of a campaign for building funds. There are few such communities in the United States. Many places would like such an Association, but cannot afford the cost of building or the expense of maintenance. But it is unusual to find a fairly hustling manufacturing city whose people are unwilling to make certain definite sacrifices, financial and otherwise, in order to bring about such an end.

This particular city numbers several thousand employees in its industries. It supports at least twenty churches, half a dozen of which are magnificent edifices with large congregations. It is only a short ride by interurban from a metropolitan city of five times its size, and it boasts of a six-story office building in addition to one saloon for every thousand in population.

It shows unmistakable need of some social center for its hundreds of young men and boys, who, having no other interests to occupy them, must idle their leisure hours on the streets, in saloons or pool-rooms, or walk about the city at all hours of the night singing the latest ragtime "hit" and shouting ribald jests.

This adventure in public opinion covers a period of three weeks, which constituted the preliminary publicity campaign for a State Convention of the Young Men's Christian Association. It also marked the first systematic effort by a State committee to conduct a State-wide publicity campaign through the newspapers with the aid of an official "press agent."

The first revelation came when the press secretary discovered that the morning paper of the Convention city refused to use any Association news which was printed in the afternoon paper, and *vice versa*. Personal bickerings and petty jealousies were behind this editorial pronunciamento. It appeared as if there would be a muddle from the very start.

In answer to the press secretary's explanation of Association "news," the managing editor of the afternoon paper said:

"We'll be glad to print anything we think is news. But if the Young Men's Christian Association or any other concern wants any free advertising, they'll have to pay for it."

Anything which strayed from the path of strictly Convention news came within his definition of "advertising." It was equally impossible to convince him that the "free" press notices of the cheap and vulgar third and fourth rate melodramas and burlesques and some of the motion-picture shows were less interesting and entertaining than instructive articles on the general State work of the Association. Almost every other day, however, this paper used from two to eight columns of matter clipped from metropolitan papers—principally editorials.

The Convention was regarded at first as merely a proposition to "relieve the community," as it was expressed, of about five hundred dollars in cash. What it might accomplish was wholly lost sight of.

"If you fellows stick to your Convention and don't start a building campaign, you may come out all right; but, if you don't, you'll fail flat as a pancake," said one newspaper man. This was only begging the question, for the statement had been made repeatedly and emphatically that no building campaign would follow the Convention unless it was the desire of the townspeople themselves. If such were desired, the State Executive Committee would be only too glad to exert every energy toward putting through a vigorous campaign for building funds.

That very evening the same paper printed a half-column story declaring that the Young

Men's Christian Association was already negotiating for the purchase of a site, and named half a dozen available locations. The denial which the managing editor, with some chagrin, agreed to print next day never quite offset the first error.

A prominent resident who might have contributed handsomely was afterward introduced to an Association secretary.

"Oh, yes," said he, "I see by the paper you're goin' to put up an Association here."

In answer to the denial he only said:

"Well, we had one of them Associations here ten year ago, an' I think it didn't pan out very well." It was a very difficult matter to explain to this man the wonderful—not to say marvelous—change through which the Association has gone during the past ten years.

The campaign included half a dozen neighboring towns, whose newspapers gave the Convention more publicity than those of the Convention city itself. One manufacturing city of ten thousand had the enterprise to send a delegation of a dozen representative business men to ask for the Convention the next year. These cities knew more about the Association and accorded its secretaries a heartier reception than the Convention city.

In the matter of funds to defray the general Convention expense, the local "corresponding" member found a large opposition. But this opposition was found to be less than that of the housewives who did not want to be "bothered with strange men in the house overnight," and who had been looked to to furnish accommodations for a large share of the delegates.

Business and professional men offered a most peculiar objection, one which was not a little amusing. Years before there had been a land-selling scheme for locating a number of factories. Residents, for once in their lives, waxed enthusiastic over the prospect of making their city one of the largest manufacturing centers in the State. A fund of some $400,000 was subscribed for several hundred acres for factory sites, and the promoters set to work to secure the industries. Seven factories were secured. Two of these were in a bankrupt condition when they came, and failed, despite a deal of local bolstering. Within a year two more failed, so that the plan fell through, and investors are still trying to get their money out of the land they bought.

This incident would seem wholly disconnected with an Association movement, yet the reader has no idea how many times it was brought out of the closet, as if the Young Men's Christian Association were a similar sort of doubtful enterprise. It was used as quite a satisfactory excuse.

The land-selling scheme had been followed by a "wet" and "dry" campaign, in which the saloons first lost and then won. This fight had separated the newspapers. It also seemed to be within the human order of things that members of one faction should not assist members of the other faction, despite anything for the public weal which might be contained in the move.

It was found useless to object to the treatment accorded Association news, but it was always interesting, if patience lingered, to get at the causes.

"There are men mixed up in this thing who are absolutely objectionable to a majority of the people," was one newspaper editor's reason for refusing to print Association news. One man, he said, was a rank Prohibitionist, another was a crook, another a political demagogue, a fourth ought to be in the penitentiary, and a fifth was "hooked up" with that land deal.

"If any of these fellows started out to raise money for a Young Men's Christian Association, do you know what we'd do?" he asked. "We'd simply sit back and hoot at 'em."

"But this is not a private enterprise," it was objected. "No one is making any money out of it but the city itself—the young men and boys who need it."

"Do you suppose I'd give a red penny to any enterprise or organization that those five fellows were connected with? Not on your life!" he exclaimed with some heat and an air of finality that closed the incident. It reminded the secretary of a young schoolmate who once made the heroic declaration before his fellows that, "if they thought he was going to study for old Teacher So-and-So, they were mighty much mistaken!" These crooks and demagogues on the committees were guilty of being good business men, good lodge members, and regular church attendants, all vitally interested in the welfare of their sons and daughters.

Then there were those who pointed to eight or ten men rich enough to build and equip an institution and present it to the city. Their attitude is hit off exactly by a popular phrase—"Let George do it." When

told that, in a city of 40,000 not a hundred miles distant, 3,600 separate subscriptions ranging from 50 cents to $100 had gone into a building fund of $78,000, they had nothing to say, except perhaps that times were hard and it cost more to live nowadays.

What seemed to cap the climax was the blunt, brutal question of a local editor fired at a secretary:

"How much are you getting out of this?"

The secretary was on the point of fainting. He felt almost like giving up on the spot. Yet it did seem to be inconceivable to many residents that men should come into their city and work as the corps of Association men and local committeemen had worked without reaping some vast financial harvest.

Then came the last week of the preliminary work. A hundred newspapers throughout the State had been printing two or three stories a week. The metropolitan papers also had used some of the "feature" stories concerning State work, and had prodded their local correspondents for advance Convention news.

The whole scheme of things had been reduced to a perfect system of order, and things took shape in surprisingly prompt fashion. Then, and then only, the two newspapers and many of the opposition awoke to the fact that there was a strong current of determined human energy behind the movement. Banners appeared across the streets, announcements were made in the churches of impending meetings, posters adorned business display windows, and one newspaper actually asked the press secretary for a complete story of the final arrangements for the three-day Convention period. It was the first request for news, and the secretary called daily after that with his news. The converting influence in that instance seemed to have been the metropolitan papers, which set a standard which the lesser journals were ambitious to attain.

When over two hundred delegates came from all parts of the State, and those townspeople who were in sympathy with the movement attended the public meetings, there was a noticeable change in the public attitude. One hundred and fifty business men of the city attended a dinner planned for their benefit. Many went out of sheer curiosity, while others wanted to hear a famous after-dinner speaker. But their curiosity turned to active interest as the meeting progressed from dinner to speakers and then to a stereopticon lecture—always a convincing argument. A blind man could have seen the change in attitude as it crept over many of those business men. It certainly made the secretaries' hearts glad to see it. The account of this dinner and of a meeting at one of the churches the same evening was spread out over two pages of the twelve-page paper the next day.

The last day of the Convention (Sunday) was filled with meetings. A college president addressed a meeting of 2,500 men and boys in the opera-house, an attendance far beyond estimates of a week before. The managing editor of the afternoon paper—the most rabid opponent encountered—was there, and listened to a wonderful appeal to men with tears in his steel-gray eyes. As he left the meeting he said to the press secretary:

"I'd like to have two or three columns of this speech and meeting and a half-column editorial to-morrow morning, if you can get it to me by ten o'clock." The news and editorial copy was there in ample time, and was used in full.

The morning paper printed nearly five columns of news matter with half a dozen cuts, and commended the movement editorially. An incident which warmed the heart of the secretary occurred during the stress of getting out that Monday morning story in the newspaper office. It made him feel, in fact, that all he had gone through was perhaps worth while, after all.

"I want to apologize to you for my attitude in this thing," said the managing editor, stopping in the midst of his work. "I've been wrong most of the time, and I don't want you to go away from here thinking that I'm what I seem to be.

"I had no idea that the Young Men's Christian Association was the systematic business organization I have found it to be. That glimpse yesterday, and again to-day, gave me a new outlook. Why, you have every department running just like clockwork and every man in his place. I never saw anything so smooth as this Convention has been. So far as I could see, there hasn't been a ripple. I'm proud to know you fellows. I I hope you'll have occasion to come back here again some time in the near future. In the meantime, you can rely on this sheet doing some real boosting."

There has not yet been any concerted effort to establish an Association in a building in this city. Perhaps the time is not ripe for

such a move. But the employed secretaries, the men "on the firing line," who fought their way through that hostile public sentiment, are confident that one day the seed they planted among the rocks and thorns will sprout into an Association plant, fully organized and completely equipped by "members of the opposition."

IMMORTALITY A PRESENT POSSESSION

BY CLARA E. MILLERD

A RECENT writer in The Outlook has said that the only really convincing proof of immortality is the consciousness that the thoughts and feelings and experiences of our lives are concerned with things which are eternal. This is profoundly true, and is surely one of the most significant things that has ever been said upon the subject. Perhaps the thought of this writer may be carried a step further. Is not immortality, after all, primarily a matter of the quality of a life rather than of its duration? The existence of a moth prolonged forever would not be an immortal life. A life that in its aspirations, its sympathies, its longings, touches the fundamental currents of life, touches God, is already eternal. The mere desire for continued existence has little significance. We all know that the material atoms that make up our bodies will live again in myriad forms of variety and beauty. There is no comfort in that fact to the heart that longs for eternal life. Merely to add year upon year of new experiences to a life finite in its scope, finite in its imaginative reach, finite in the range of its ideas, would have value, but not the kind of value that constitutes genuine immortality. An immortal life is a different kind of a life from a mortal one. Every moment of it is lived, to use that grand old phrase of Spinoza's, "under the form of eternity," "*sub specie æternitatis*." Eternal life is as different from finite life as light from darkness, as harmony from discord, as the Sistine Madonna from the daubs upon a painter's palette. To-day, in an immortal life, is radiant with significance, radiant with prophecy. To-day, in an immortal life, is illuminated by "the light that never was on sea or land." The mediæval painters loved to paint the Christ, or God, as sending forth light upon all around. The symbolism is true as well as beautiful. The element of the divine within us, the consciousness of this divine element, is what constitutes immortality.

As immortality has to do primarily with the kind of life, and not the length of life, it has many degrees. It seems strange, but it is none the less true, that to-day may be more or less immortal, more or less eternal. Real immortality is an achievement, and it cannot be altogether attained at once. Just as the fragile acorn sends its tendrils this way and that, penetrating deeper and deeper and wider and wider, until finally it is rooted firmly in its native soil and grows into majestic and enduring strength, so the soul may root itself little by little in God, its native dwelling-place, until it grows to the majesty of an immortal life.

The immortal life does not consist in rapt contemplation or adoration of God. It is dynamic. It is a life, not a state. It is a vital, creative energy, not a mere way of thinking and feeling. As gravitation binds the smallest clod to the most distant stars, so the immortal life connects the soul with all that lives. Love is its essence. In dynamic, creative love the soul realizes its immortality.

Love, like gravitation, has many homely tasks to perform. But the homeliest task it can illumine with an eternal radiance. In washing another's feet, or in giving a cup of cold water, life finds present immortality.

THE SPECTATOR

THE entrance to the Gully Road, now that August is drawing to its feverish close, must seem a golden gate to those who whirl by it in their motor cars, for it is half choked with blooming goldenrod where a few weeks ago it was blue with cornflowers. The highway, with its oily black center, is a great contrast to the delta of clean sand which every storm washes out upon it from the track between the beautiful weeds. This Gully Road, now so neglected, was in old times a part of one of the great highways of Long Island, the post-road connecting all the little ports and shore villages from Gowanus Bay to the Peconics. Just here it came along the crest of Chicken Hill and over the rise of Brewster's Hill —there is a big seventeenth-century house now down at the harbor where they say Elder Brewster himself lived for a time—and then, descending to the head of the bay, it turned eastward over the rise of Briar Hill to the next bayhead. As time went on, however, the small tidal inlet here was dammed and bridged near its mouth, the marsh silted up or was filled in, the shore-front changed from a farmers' clam flat to a ship-building yard, and a new highway was built beside it. Thus this piece of the ancient post-road was left inland, and its former dignity was so far forgotten that lately it required a search of records to prove that it ever had been, and still was, county property.

Although its status had been lost sight of even in this conservative settlement, the road itself could not be forgotten. Nothing is more permanent than man's marks upon the earth. Even a century of plowing has not made untraceable those elevations in the Mississippi Valley which once bore the stockades and cabins of the mound-builders. The trenches and earthworks thrown up in the Civil War, or even in Revolutionary campaigns, may yet be found, low but distinct, in many a field and wood-lot. The trails and wallows of the lost herds of buffaloes still indent the surface of our Western plains and will be discernible for generations to come wherever undisturbed. These are very modern instances, but in Turkestan explorers of former oases, abandoned because of that progressive drought of climate which compelled the departure of their population ten thousand years ago, may still map out the irrigation channels, dikes, and low terraces incident to the agriculture of that far-gone era.

But trails and roads, worn and hardened by the tramping of thousands of men and animals, are now more enduring. The emigrant trail through South Pass to California is a broad, grassy depression as easily followed now as when it was studded with the carts, prairie-schooners, and bull trains of the gold-seekers of 1849 and 1850. There are places where even the meager Escalante trail may be traced. These also are comparatively recent examples, but much older ones are not hard to find.

Some years ago the Spectator spent a little time in Surrey, England. There, not far from Coulsden Common, a double row of gnarled and storm-bent yews attracted his eye, and closer attention noted others continuing at irregular intervals a line which here and there had a curiously terraced appearance on the hillsides. He believed that these were indications of an abandoned roadway of great age, and further study convinced him that it marked the course of the great Pilgrim Road from the west to Canterbury. Later, in Sussex, one of the longest-civilized parts of England, he wandered along narrow, sloping roads sunken sometimes twelve or fifteen feet deep between mossy walls of chalky or stiff clay little disposed to wash down or cave in, while trees and bushes, rooted on the summits (the country level) on each side, overhung like the roof of a verdant tunnel. It was plain that these deeply trenched roads had not been purposely dug, but were the result of centuries of travel by pack-horses and carts, which had worn them down wherever a slope allowed the dust to be washed and blown away.

And this brings us back to the Gully Road and shows why it has come to be so called—*has come*, for it is only latterly that it has acquired the character of a ravine. It crosses a low wooded ridge, the summit of which is tough gravel, but the slopes of which are of looser soil —that fertile till which lay on the safe northern side of the great glacial moraine which is Long Island, and never was washed and reassorted by the ocean as the south side has been. It is doubtful whether the forefathers found it needful, considering the then high level of the connecting road westward, to make any cutting at all on the hill, except possibly at a sort of shoulder where terraces on each side as high as one's head show what seems to be the original level. The rear of a disused barn, now held together only by the crisp pea-green and gray lichens and moss on its ashy, worm-eaten old boards, where the wasps come to get paper material for their nests and the flickers hammer in pure enjoyment of the hollow racket they can make—those boards come down to foundations on this terrace. This sounds very archæological, but it is only circumstantial history. When

the post-road was diverted to the new harbor and shore road, and steadily graded down to suit the advancing "improvements," this old piece over Briar Hill was left as a useless relic, of service only to a few as a wood-road or a cut-off, and was no longer cared for. At once—for Nature is ever on the watch to reclaim ground lost for a time to man's domination—sun and frost and rain began their replevin. The light soil, disturbed along the single wheel-track, was swept down by wind and water until a narrow gully has been aggraded, hardly half as wide as the original road, and ten feet deep in places.

It is so narrow because a rank vegetation of trees and shrubs and herbage long ago took possession of the high neglected borders and protected them against washing, except in the central track at the bottom. This tangled borderage, rising steeply on each side and shaded by outreaching tree-tops, makes the Gully Road a beautiful place in summer. Nowhere in early spring does the local naturalist find pleasanter promises of reawakening life. Here, sheltered from the winds, gather juncos, whitethroats, and fox-sparrows—finest of their race, and seeming proudly conscious of their beauty; while song-sparrows and Canada sparrows carol in rivalry overhead or join their larger fellows and the goldfinches and towhees in their feast upon the berries and seeds still so abundant in the thickets below. Later the gully becomes a gallery of color and music, and a rich field for the insect-hunter.

The banks are indeed perfect little Northern jungles. A score of different trees may be catalogued. The ancient high borders are defined by rows of gale-torn cedars and cherry trees annually producing bushels of fruit for the benefit of innumerable squirrels, robins, cedar-birds, blue jays, and what-not; while in May masses of dogwood bloom light up the densely mingled foliage that struggles eagerly out toward light and air. Underneath, of course, is an impenetrable tangle of vines and low scrub, silvery green ropes of catbrier, knotted threads of grape and ampelopsis, content to creep where they cannot climb, and fuzzy chains of poison ivy crowding in everywhere among the good plants like—well, find your own moral simile! Blackberries and raspberries strive to outdo even the smilax in prickly vigor. And over all, in this late summertime, spreads a veiling network of wild buckwheat, making the most of a brief life. As for the weeds, well, what are there not in this collection, from the miserable ragweed which kills off the grass to the tall, swaying sow-thistle that invites the slash of a stick to cut down its weak and ugly impudence? Here thrive the feathery yarrow, the exquisite cassia which meekly folds its rows of leaflets if you speak to it harshly, velvety mulleins, primroses, bouquets of goldenrod as big as barrels, and a carpet of pretty little flowering plants, most of which bloom by English roadsides just as they do in this land to which their seeds were brought long ago.

The "human interest" in this so charming bit of secluded old road centers in a shanty half up the slope, where is manifested neglect and degradation of its own kind; but that is "another story."

LETTERS TO THE OUTLOOK

A PIONEER WOMAN'S COLLEGE

In Dr. Abbott's most interesting article "Democracy in Education," published in The Outlook of August 10, it is stated that girls were not admitted to any of the colleges before 1850. But Oberlin in 1833 admitted women on the same terms as men. And as far back as 1830, under the patronage of President Bishop, of Miami University, and two of his professors, McGuffey and Scott, the latter the father-in-law of President Harrison, a school was founded for the higher education of women in Oxford, Ohio, with Miss Bethania Crocker, the daughter of a Massachusetts clergyman, in charge. In three or four years she married the son of President Bishop, and the Misses Smith and Clark, one of them being the sister-in-law of Henry Ward Beecher, became principals. In 1839 this school was formally chartered by special act of the Ohio Legislature. A regular cottage system for boarding pupils from a distance had been established for several years. Mr. Harry Lewis, the uncle, I think, of Mrs. Philip Moore, had in his own home several of those boarding pupils. In 1849 the Oxford Female Institute was chartered by special act of the Ohio Legislature and the property of the Academy was turned over to this institution. In 1855–6 a handsome building in the east part of the village was dedicated for the Oxford Female College, another institution started under the auspices of the old school Presbyterian Church. In 1867 these colleges for girls were formally united by purchase. From their incipiency, the schools had the avowed purpose of offering to

girls the same opportunities for higher education that the boys were enjoying in Miami University, which latter institution did not become co-educational until 1895. The college girls pursued the same branches as the Miami boys, and, although their curriculum could not compare favorably with that of our best high schools, it represented the college standards of those early days.

Professor Upham, in his "History of Miami University," reports that he has found references to a school for girls in Oxford as early as 1827–8. The intellectual activity of Oxford is traceable to the influence of the New England scholars who settled in southern Ohio in the early days, and especially to the Beechers, who, in their westward progress, unlike the wandering Jew, left a trail of educational institutions behind them. JANE SHERZER.

The Oxford College for Women,
Oxford, Ohio.

THE HIGH SCHOOL TEACHER

As a teacher in one of our city high schools, I should like to take exception to several statements made by Professor Chase in The Outlook of July 27.

The best of our high schools now require their teachers to have college training and previous experience in teaching. As ability (not sex) is the chief requisite, and as women as well as men have "experience of life," it is plain to be seen that the former can fill the requirements of being a high school teacher quite as well as the latter. The degree of "sympathy with young people" felt by teachers depends upon the individual; nevertheless, it might be assumed that, upon the whole, women teachers possess at least as much of this desirable quality as men teachers.

Professor Chase says: "Boards of education not uncommonly are pleased to fill such positions with seven-hundred-dollar inexperienced girls. . . . The only person who should be thus employed is the man or, in rarer cases, the woman who makes teaching a life profession." Boards do, indeed, make a mistake in offering only seven hundred dollars for such work, but why such positions should be rarely offered to women I fail to see. On account of the narrow, old-fashioned policy which still prevails in most of our Eastern cities of making women ineligible for the higher positions, the schools are losing some of their best teachers. The fact that women are taking advantage of the larger opportunities in other professions and in business life shows the policy to be a shortsighted one which fails to offer the same opportunities for advancement to both men and women teachers.

It seems as though Professor Chase does not sufficiently appreciate the faithful work done by women teachers when he says: "The admitted prime motive for such a person being in the profession is to acquire temporary self-support and the means of attracting a suitable life companion." Even acquiring "temporary self-support" is not an unworthy ambition. When it is found, upon investigation, as was lately the case in one of our largest cities, that one-third of the women teachers, besides supporting themselves, had others dependent upon them, it looks as though many women did not have much of a chance at being only "temporarily self-supporting."

Another condition which makes a great number of women teachers permanently self-supporting is that they enter the profession believing that they have the qualities of a good teacher and thinking of marriage only as a possibility in case they should be fortunate enough to meet a suitable companion. They expect, as high-minded women to-day do, the same moral standard in men they would marry that they require of themselves, which makes their chances of "attracting a suitable companion" less likely. It seems as though men, who use teaching merely as a stepping-stone to other professions, were the temporary teachers and women the permanent ones.

Gradually, as women's work comes to be better understood and more highly appreciated, boards of education will offer equal pay for equal work, and equal opportunities for all teachers; and our great universities will be glad to secure the services of many valuable teachers who are now overlooked. A. C. B.

PERSONAL CHRISTIAN WORK

Pardon me for protesting against the spirit of the article in The Outlook for August 10, 1912, entitled "Letters to Unknown Friends."

It is of course true that Christ never forced any one to talk with him regarding spiritual matters. You are, however, at variance with the record when you say in your article that "the woman at the well opened the conversation with him." By referring to John iv. 1, etc., it is quite clear that the conversation, much to the astonishment of the woman, *was opened by Christ* asking her for a drink of water, and then adroitly leading the conversation to spiritual things. This is Christ's method, and should be the method of every true follower. *Force no man*, but attempt to *lead all*. Here is the standard; attempt to carry it out as far as possible, and if one addressed on this great subject, after a tactful approach, takes exception and objects to the conversation, we agree then that there is absolutely nothing in the whole Bible to warrant any individual, church, or government forcing upon him the consideration of the subject, but rather the contrary is true, "Let him alone." L. C. V.

Germantown, Tennessee.

BY THE WAY

Mrs. Janet Ross is one of the few living persons who ever had the temerity to rebuke Thomas Carlyle. When Mrs. Ross was a child of six, she was present at a somewhat animated conversation between her mother and Mr. Carlyle. She became indignant at the blustering tone of the philosopher, and burst out with the exclamation, "My papa says men should be civil to women!" Carlyle paused and then remarked graciously to the little girl's mother, "Lucykin, that child of yours has an eye for an inference!"

Americans who went abroad this summer to escape the heat found that they had gone too far, for complaints are general that Europe has had cold and disagreeable weather this season. Tourists in England especially have suffered from cold, and it is even reported that there was a heavy fall of snow in central England on the August Bank Holiday.

It is pleasant to learn that some of the garment workers of New York City are bettering their industrial conditions. Last week the cap-makers of that city secured a Saturday half-holiday the year around, and the furnishing of sewing-machines in the shops by the employers instead of having to provide them for themselves. A strike was thus happily averted.

Ex-President Diaz, of Mexico, is now living in Switzerland. He is reported to be in good health, clear of mind, and "as erect as a West Point cadet, despite his eighty-four years." He maintains that he could have held his position in Mexico by force, but that he desired only Mexico's good, and felt that it was wiser to withdraw. That sounds patriotic, but hardly explains why Diaz lost his grip on things.

A new hemp-breaking machine promises to bring renewed prosperity to certain districts of the South. In slavery days hemp-raising was a great industry; Kentucky, for instance, devoted 30,000 or 40,000 acres to the crop, while latterly scarcely a tenth of this acreage has been employed in this way, for breaking hemp by manual labor is extremely hard work, and the laborers grew scarce. Now the machine is said to have produced excellent results, and a large extension of hemp-raising is looked for.

A statistician has calculated that during the year 1911 there were twenty-two billion telephone calls throughout the world. Fourteen and a half billion of these were in the United States.

The National Secretary of the Associated Clubs of Domestic Science, Mrs. Christine Frederick, is applying efficiency methods to her own housework. She tells in the "Ladies' Home Journal" how she used to wash eighty dishes after dinner, taking three-quarters of an hour to do the work poorly by the old methods. Now she washes the same number of articles in half an hour, and better, by the scientific method. The elimination of "lost motions" is the chief factor in bringing about this most desirable result.

Three or four decades ago the banana was almost unknown in the United States, while to-day we are importing nearly 30,000,000 bunches of the fruit annually. Of these New Orleans gets nearly one-half, making it the greatest banana port of the world; Boston, Mobile, and New York come next, in the order named. England also has lately become a great consumer of bananas.

Three survivors of the Civil War are more than one hundred years old. One of these, at the age of 103, recently walked from his home in Jersey City to the pension agency in Brooklyn to see why his quarterly pension check had not arrived:—"Congressional Record" please copy!

Outside the walls of a temple in Puri, India, says the "Christian Herald," lie remnants of this year's car of Juggernaut. A new car is built every year. "The British Government," says the "Herald," "now prevents the sacrifice of life under the car." We note that Sir W. W. Hunter, the authority on India, in speaking of the reports of death under the wheels of this car, says that "nothing could be more opposed to the spirit of Vishnu-worship than self-immolation." Suicide in this way, it appears, is about on a par with self-destruction under the wheels of railway cars in America.

The youngest Mayor in the United States, says the "American Magazine," is Joseph F. Sullivan, of Imboden, Arkansas. He was elected just before his twenty-first birthday, and assumed office just after that anniversary. He is a "self-made man" in more than the usual sense, for he won his education and supported his widowed mother notwithstanding the fact that he is a cripple and goes about Imboden in a wagon drawn by two goats.

That the old order changes even in a church that is supposed by some to be immutable is seen in the announcement that the Sisters of St. Joseph, a Roman Catholic order, are to erect on their property in Brooklyn, New York, an up-to-date building in which Catholic girls will be trained for a business life.

A fellow-craftsman of Benjamin Franklin, Isaiah Thomas, whose career in many respects closely paralleled that of his more famous compatriot, has been honored by a biography issued by the Club of Odd Volumes of Boston. Thomas began to set type at the age of seven; when eight he set the types for an edition of the "New England Primer;" when thirteen he engraved the cuts and printed the sheets for "The New Book of Knowledge;" later he founded the newspaper "The Massachusetts Spy," and still later the American Antiquarian Society.

Guadalajara, Mexico, which occupies the second place among the cities of that republic, has been devastated by earthquakes during the past few months. A newspaper report makes the curious statement, in referring to these disturbances, that parrots are the best prophets of seismic troubles, and that they have frequently given warning to Guadalajara's residents, by their peculiar cries, when an earthquake was impending.

Mrs. Malaprop, who, it will be remembered, once said that a pantry was a place for keeping pants and a vestry was a place where vests were made, now shows herself to be up with the times, according to an exchange, by supplying a questioner with the information that "an apiary is where they keep apes and an aviary is where they keep air-ships."

The Outlook

SEPTEMBER 14, 1912

Contributing Editor

The Political Campaign

The first week in September abounded in political events of importance. Chief among these were the election in Vermont, Ohio's vote on constitutional amendments, the State Progressive Conventions in New York, Iowa, Ohio, and Nebraska, the primaries in California, the statements of Senator Bourne of Oregon and Senator Cummins of Iowa giving their reasons for adhering to Mr. Roosevelt's candidacy, and the addresses made by Mr. Roosevelt in the West and Governor Wilson in the East—and to these one is tempted to add an equally significant non-event, namely, the inertness of the campaign of the Taft Republicans. As to Vermont, an enormous amount of printer's ink has been wasted in trying to figure out by arithmetical ratio what would be the result the country over in November on the assumption that in all the States the party cleavage in the National election would be on the same lines as it was in Vermont on State issues and State candidates. How preposterous such an application of the "barometer" idea is may be seen by comparing Vermont's choice of delegates to the Republican National Convention at Chicago with what happened later in many big and strong Republican States. The real deduction from the Vermont election is that in an ultra-conservative, slow-moving New England State the new party on its first appearance at the polls was so strong that it presented a solid fighting phalanx and forced the choice of Governor into the Legislature. Even violent anti-Progressive newspapers took this view at first, echoing the utterance of the Republican candidate for Lieutenant-Governor, Mr. Howe, who said: "This means that Roosevelt has more than a fighting chance in Vermont in November." It is known that large numbers of voters who will support the Progressive candidates in the National election feared that to vote for the Progressive State ticket would have a bad effect on local questions, and this fact justifies Senator Poindexter's comment: "The Vermont election shows results in the direction of popular rule which are unprecedented in the entire political history of this country. That so large a proportion of the old party should organize, cast off old alliances and come out for the party that stands for the rights of the people, all within two weeks' time, is simply marvelous." The vote, in round numbers, was: Fletcher (Republican), 26,000; Howe (Democrat), 20,000; Metzger (Progressive), 16,000. Apparently the Legislature has a small Republican majority and will elect Allen Fletcher as Governor. The Vermont Democrats are naturally elated at the moderate increase in their vote. It may be said with perfect truth that one indication of the Vermont election is that the real fight there, as elsewhere, is to be between Democrats and Progressives.

Ohio Indorses Progressive Ideas

If Vermont is conservative among Eastern States, Ohio also is conservative among those of the Middle West. All the more significant, therefore, is Ohio's emphatic indorsement of Progressive methods and principles. With the exception of woman suffrage, which was decisively defeated, and possibly one other exception, the forty-two proposed amendments to the State Constitution were ratified. The greatest interest was shown and the highest vote was cast in the case of the initiative and referendum; the liquor license amendment was carried by a moderate majority in a relatively small vote; the interest in judicial reform was second only to that felt in the initiative and referendum. In the judgment of The Outlook, the result of the woman suffrage fight indicates that men in Ohio do not believe in imposing the responsibility for government on women until the women have had an opportunity to say officially whether they wish

to assume that responsibility; and it also appears to indicate, from the way in which the vote was divided, that the working classes in the cities are opposed to woman suffrage. The issues in Ohio's revision of her Constitution, and the large principles which apply to State Constitutional revision generally, were discussed in an editorial to be found in The Outlook of August 24. Taking the many changes adopted as a whole, it may be declared emphatically that they make for social justice, for greater flexibility in the political machinery, for larger democracy, and for direct control by the people of the State. In brief, with few exceptions, Ohio has written into its fundamental law many of those things for which the Progressive party is fighting the country over. This was fully recognized at the Ohio State Progressive Convention, which was largely a meeting of rejoicing and congratulation. A full Progressive State ticket was put in the field, headed by Arthur L. Garfield as candidate for the Governorship. The other State Progressive Conventions named above were businesslike, thorough, and hopeful in tone, and through them and those to follow the Progressive party will go into the field admirably organized, with leaders of ability, and with clear-cut programmes and pledges of action. In California the primaries showed a sweeping Progressive victory, not less welcome because it was anticipated; it was indeed so great that the Taft leaders will have to put their Presidential electors in the field by petitions, each of which must be signed by eleven thousand voters who did not participate in the primaries. In Iowa John L. Stevens has been selected as the Progressive candidate for Governor; in North Carolina, Dr. Cyrus Thompson. Turning to personal political utterances, we quote from Senator Cummins's statement referred to above:

> The renomination of President Taft was opposed by an overwhelming majority of the Republicans throughout the country simply because in his Administration he had not done nor said the things which the great body of the people believed he should have done and said. . . . The reason the Republicans were so largely against the renomination of Mr. Taft was their profound conviction that he is not a Progressive, and does not believe in a proper sense that the people should rule the country. . . . Theodore Roosevelt was the manifest choice of the great number of Republicans who expressed a choice for President. He is appealing to the moral and progressive forces of the people, and I expect to vote for him; but it must be understood that I will do so protesting against the organization of a new party, and dissenting with some of the doctrines of his platform. My vote for him will indicate that I believe he desires to promote the common welfare, but will not indicate that I look upon the new party as a wise or enduring movement in public affairs.

Senator Bourne is equally explicit. He says:

> The Republicans of Oregon, as well as of every other Presidential primary State except Wisconsin, selected Mr. Roosevelt as their choice for President this year. These Presidential primary returns clearly indicate that Mr. Roosevelt is the choice of the great majority of the Republican party, and he certainly was of Oregon; hence I, being the originator of the Presidential preference law, shall support Mr. Roosevelt for the Presidency at the November election.

Nothing has so effectively brought out the fact that the nominations of the Chicago Republican Convention were based on the suppression of the wishes of the vast majority of Republicans as these reasons given by Senator Cummins and Senator Bourne for their decision to support the Progressive National candidates.

New York's Progressive Convention: Unbossed and Unafraid

Oscar S. Straus, who has been closely associated with two Presidents, Cleveland and Roosevelt, who as Ambassador to Turkey has had an exceptional record in diplomatic service, who was the first Secretary of Commerce and Labor, who has served as arbitrator in labor disputes, and is a member of the highest tribunal in the world, the International Court at the Hague, was chosen at the State Convention held at Syracuse last week to be the Progressive candidate for Governor of New York. This nomination alone makes this State Convention of National interest. There were other features, however, which also mark it as extraordinary. In the first place, the circumstances surrounding the nomination were highly dramatic and moving. Like the National Convention of the Progressives at Chicago, this Convention at Syracuse had great capacity for enthusiasm. The great body of delegates, among whom there was a considerable number of women, sang hymns and songs after the manner of the delegates who assembled in August at Chicago. The Convention hall was reddened with the color of the bandannas that were waved whenever, as often happened, the assemblage rose to cheer. At the same time the Convention had an extraordinary capacity for silent attention. The chief contest was over the nomination for the

Governorship. As the sessions continued this became tense. Two nominees were offered: one was the State Chairman, Mr. Hotchkiss; the other was Mr. Prendergast, the Comptroller of New York City. The Convention was very evenly divided. Just as it was about to proceed to ballot, a man sprang to the platform and unexpectedly named Mr. Straus. In spite of the fact that Mr. Straus had said plainly that if the assembly named him he would decline and it would have to reconvene, the delegates saw in this the solution, and by a great demonstration made their determination at once evident. When, in the midst of the shoutings, the announcement was made in writing, "He accepts," the delegates broke into singing "Onward, Christian Soldier." This singing of a Christian hymn in celebration of the selection of a Jew as a leader in a moral uprising marked as nothing else could have done the breaking down of old barriers. Frederick A. Davenport, known in the State through his effective support of Governor Hughes, was named for Lieutenant-Governor. The fact that this Convention had to continue and nominate seven other candidates serves to illustrate the need of the "short ballot" which is advocated by the party. Even a free convention, as this one was, is not a suitable means for the selection of a long list of executive officials. Under the State law none of the candidates will be legally entitled to appear on the ballot until he is nominated by petition. One other striking feature of this Convention was the method it used for planning to put its platform into practice. The platform, like the National platform of the Progressive party, consists of proposals for securing measures extending popular rule and measures on behalf of social and industrial justice. By resolution the Convention provided for a permanent committee whose business it will be to draft these proposed measures and present them to the Legislature, and even for the reconvening of the Convention, if necessary, in order to reaffirm its demands. This is the first time, so far as we know, that a political convention has taken practical action for carrying out "a covenant with the people." In its tone and in its action the Convention was independent, aggressive, and self-reliant. At last New York may make a non-partisan fight on clear-drawn issues against the rampant bossism of both the Republican and Democratic machines.

The Political Use of School Buildings

During the past two years the Wisconsin State Law has required the school boards to make free provision for the use of school-houses as neighborhood headquarters for political discussion. Wherever, in scores of Wisconsin communities, the citizens have availed themselves of this right, there has been, it is asserted, no case of abuse or disorder; on the other hand, there has been a revival of the good custom of an earlier day when every American schoolhouse, in the country at least, was a familiar place of public assembly. The custom might obtain in every city as well. We are not surprised, then, that Dr. Josiah Strong, President of the Social Center Association of America, has written to the Chairmen of the National political party committees, recommending the use of school-houses for political meetings. In some cities school-houses are already used as polling-places. This has resulted in a saving of the public's money—for instance, the use of the Los Angeles school-houses is said to have saved to the taxpayers of that city at least seventy-five hundred dollars at each election. A similar use would save seventy-five thousand dollars in New York City. Another value would result from the wider use of the school-houses. As Dr. Strong points out, aside from office and printing expenses, there are two channels of legitimate party expenditure: the rental of meeting-places for the presentation of party claims, and the transportation of speakers. Now, in every city, says this writer, where the schoolhouses have begun so to be used, the feasibility of eliminating the private or party rental of meeting-places has been shown. Hence, by removing one of the two causes "for the expenditure of private money in the influencing of public choice," not only is there a resultant economy, but half the shield behind which corrupt practices operate is cut away. But the third value, and the greatest, would be the educational value. It is interesting to note the opinions of two of the Presidential candidates on this subject. Governor Woodrow Wilson remarks: "I do not wonder that men are exhibiting an increased confidence in the judgments of the people; because, wherever you give the people a chance such as this . . . in the school-house, they instantly, eagerly, avail themselves of it. I see in a movement like this a recovery of the constructive and creative genius of the American people." In his speaking tour last week

Mr. Roosevelt also referred to this matter, proposing that the school-houses be turned into a "senate of the people," where they could discuss the issues of the hour. He declared his hearty approval of the maxim, "Public buildings for public uses."

New Orleans Reformed

The political events of the past fortnight have not been exclusively in the National campaign. A municipal event is also well worth chronicling—the sweeping victory in New Orleans, by a vote of more than ten to one, for the commission form of government. Like many another community, New Orleans has suffered under the failure of the aldermanic system, accompanied by the activities of unscrupulous bosses, to give proper government to its citizens. At last the old political ring has been partly broken; but not entirely. It still will try to elect an "organization Mayor and Commissioners." But its more comprehensive power has certainly been broken. In Galveston, where the plan was first tried, Houston, Dallas, Fort Worth, and Austin in Texas, Mobile and Montgomery in Alabama, as well as in Shreveport, Louisiana, the New Orleans people have had a chance, close at hand, to see just how the commission form of government works. At first there was a feeling that the plan might work ill because a yet stronger control over the city would be given to the Mayor and four Commissioners than to the Mayor and sixteen Aldermen. But conditions in New Orleans, one of the "widest open" towns in America so far as liquor, gambling dens, brothels, dives, and all sorts of "joints" are concerned, and with streets, health conditions, and internal improvements neglected, led the people to feel that, even if the newer form of government might mask a possible danger, it would be more than offset in the chance quickly to fasten responsibility for wrong-doing. Hence the vote of nearly twenty-four thousand in the affirmative, and of only about twenty-one hundred against the innovation. New Orleans will now be governed by five Commissioners, including the Mayor. As previous to this action only a few cities of over a hundred thousand population had adopted the commission form of government, the New Orleans plan, if it works well in a city of nearly three hundred and fifty thousand people, will impressively refute the theory of the opponents of commission government that the plan is good only for small cities.

Progress on the Panama Canal

Two items of news from the Canal Zone, the revision of the estimates of excavation necessary to complete the Canal, and the sinking of a section of the wharf at the Pacific terminus of the Canal, are events of importance chiefly because they may give rise to misapprehension if the facts are not clearly understood. An addition of 16,903,000 cubic yards of excavation to the estimates made heretofore is noteworthy even in Panama, where figures in the millions are common. The only important part of this, however, is the addition of 4,000,000 cubic yards made on account of the slides in Culebra Cut. Colonel Goethals is authority for the statement that this addition will not affect the prediction previously made by him that a ship could be passed through the Canal in September, 1913, a year from now. He does not mean by this that the Canal will be completed, but merely that it will have reached such a stage that it can be used. In Culebra Cut there yet remain to be dug out, including the latest addition of four million yards, about 10,500,000 cubic yards of rock and earth. Forty-two steam shovels are working on this mass eight hours a day, and are removing it at the rate of one million yards a month. This rate, if continued, would result in the excavation being completed before September next, but it is not expected that it can be kept up, because the space in which steam-shovels can work is already being narrowed, and within six months it is probable that not over half the number of shovels now at work will be digging in the Cut. If the shovels are unable to complete the excavation, it is proposed by Colonel Goethals to blast with dynamite such material as remains, as is now done continually, and then flood the trench. The excavation will have advanced to the point where vessels drawing thirty feet of water can pass safely through the Cut. The remaining fifteen feet (there is to be a forty-five-foot depth) can then be taken out by elevator dredge, and towed either into Gatun Lake or out to sea at the Pacific entrance—probably the former, since to do so would not involve the use of locks.

The Slides Along the Canal

No feature of the Canal work has caused so much speculation in the United States, nor so little on the Isthmus, as the slides in Culebra Cut. To the engineers on the Canal they represent a perfectly

natural succession of phenomena, namely, the sloughing off of banks of earth until they have reached a slope at which they will stand without retaining walls or other artificial supports. In all, about twenty million cubic yards of earth and rock boulders have moved towards the deep trench. For the past eighteen months these slides have been excavated both from the top, to lighten them, and from the bottom, to rid the Canal prism of the earth they are constantly sending down. They have apparently at last reached the angle of repose, having assumed a slope from which very little material now moves into the prism. This does not mean that they will give no further trouble, but merely that they have been conquered sufficiently to permit the completion of the excavation. When once dredges can be set at work, the excavation of the slides, if they continue to move, can be carried on for about one-third the cost of steam-shovel work. The remaining twelve million or more yards of excavation are to provide for additional dredging in the Pacific and Atlantic entrances, and for the dry dock and other terminal works at the Pacific entrance. Practically all of this is for the Pacific entrance, and will in no way delay the opening of the Canal; indeed, any ship in the Panama trade could now use the Pacific entrance. If any delay in the opening of the Canal next September may be anticipated, it will be due to the installation of steel work in the locks at Miraflores. The hanging of the gates and installation of machinery have just been begun there, and much work remains before these locks will be ready to pass ships. Colonel Goethals feels confident that all will be in readiness. On the morning of August 18 the foundation of a section of the wharf at the Pacific terminus of the Canal slid toward the channel and the floor of the wharf collapsed. A freight car, several hundred tons of merchandise, and two electric cranes fell with the floor. The cranes fell athwart the bow of the Pacific mail steamship Newport and listed it heavily to the port side, causing the freight in the hold to shift until the portholes were under water. The ship filled rapidly and sank. No lives were lost. The Newport will be raised, but about three-fourths of its fifteen hundred tons of freight are believed to be a total loss. The only significance of this accident would be to raise a question as to the foundations of the permanent structures that the Government is erecting at the Pacific entrance, such as quay walls and the dry dock. There need be no apprehension on this account. The section of the pier that slid towards the Canal was not based on bed-rock, and was not considered as part of the permanent wharfage. It adjoins the long pier of the Panama Railway, erected fourteen years ago, which is founded on steel caissons sunk to rock, and which has shown no signs of weakening. The new quay wall but recently completed at the Pacific terminus is built upon bed-rock, the concrete piers going down as much as seventy-five feet below the surface of the ground. The excavation for the dry dock, now in progress, contemplates just as substantial foundations. There is no reason to doubt that the permanent works of the Panama Canal will not lack for stability.

A Crisis in the George Junior Republic

The controversy which has arisen in the George Junior Republic is temporarily unfortunate; but in its outcome it is alike creditable to William R. George, the founder of the Republic, and Thomas M. Osborne, the Chairman of the Board of Trustees. It is unfortunate only as it may give rise to a natural misunderstanding among careless readers of the newspapers; and most of us read the newspapers carelessly. When, in 1898, Mr. George gathered at Freeville a group of boys, subsequently adding girls, from the streets of New York City, and organized them into a self-governing Republic and threw upon the boys and girls themselves the entire responsibility of making and enforcing all the local laws of the community—that is, all regulations beyond the laws of the State itself—his audacity of faith in human nature had no parallel, and in it he had little if any public sympathy. How much the extraordinary success of his experiment has been due to his personal influence as a friend and comrade of the citizens of his Republic has yet to be determined. Successful it was, so successful that, after two or three years, at Mr. George's request, it was incorporated, a Board of Trustees was organized to help guide its destinies, and Mr. Thomas M. Osborne was made its President. Ten years later, so strong had become the desire to initiate similar Republics in other parts of the country, and so urgent were the calls on Mr. George to aid in their formation, that a National Association of Junior Repub-

lics was formed, and Mr. George was made its General Director, and therefore severed his official connection with the local Republic. He remained, however, at Freeville, where was his home, and made it the official headquarters of the National Association. This was quite natural, but proved to be an error in judgment. However heartily his successor might agree with Mr. George in spirit and purpose, it was impossible that he should agree with him in all methods. He would not have been the man for the place had he not had an initiative of his own. A mere copyist is never fitted to be at the head of a novel enterprise. It was equally impossible that Mr. George could see changes in method introduced and not have some apprehension as to the results; nor could he live in the Republic, in sympathetic relations with the boys and girls who had always called him "Daddy," and avoid, however discreet he might be, their suspicion that every change in administration was a change for the worse, and that loyalty to him demanded that they should resent such changes. There are no such worshipers of tradition as uneducated children in their early teens. It is needless for us to narrate the difficulties which naturally arose under such conditions. Suffice it to say that they grew so acute that in July last Mr. Osborne resigned as President of the Board of Trustees. His resignation led to Mr. George's self-sacrificing resolve to sell his home and move away from Freeville altogether; and, as a result, Mr. Osborne will remain as President of the Board. The letters from Mr. Osborne and Mr. George, which have only just been made public, are too long for publication here. It must suffice to say that the wholly admirable spirit which both have maintained affords a happy augury for the future not only of the Freeville Republic, but also for other Republics which we hope may be established and successfully carried on in the same essential spirit. Those who have known Mr. George and the Republic which he has founded will heartily indorse the following paragraph from Mr. Osborne's second letter:

> You are not only the founder of the Republic, but your personality has been the dominant force therein up to the present time. Many will find it hard to imagine the Republic in existence without "Daddy George" being on hand to radiate enthusiasm and faith in the little "great experiment." But that very feeling—the difficulty of separating the thought of "Daddy George" from the Junior Republic—is the very reason why the step you are taking seems to me wise. Sooner or later the hand of every one of us must be withdrawn from his earthly task; and whether it is wise to withdraw it sooner, rather than wait for the inevitable summons of death, depends upon the circumstances of each individual case.

This event is, on the whole, not to be regretted. For the result will do much to determine whether the extraordinary success of the Republic is wholly due to a great personality, or whether it is due to a great principle which can be applied under other conditions and by men possessed of the spirit of Mr. George but not possessing his peculiar genius.

Abraham Lincoln's Achievements

The "Century Magazine" for September contains an interesting article, "Characteristic Anecdotes of Lincoln, from unpublished notes of his Private Secretary, John G. Nicolay, by Helen Nicolay." There is not much that is absolutely new in this article. Though some of the anecdotes are new to us, they all confirm the popular impression of Abraham Lincoln's character, and tend to intensify the admiration and affection for the great President. One incident which we do not recall to have seen before illustrates a profoundly religious trait in Mr. Lincoln's character—the trait of genuine, simple humanity. As he was leaving his Illinois home for Washington he said to the pastor of the Second Presbyterian Church of Springfield: "Mr. Hale, I have read my Bible some, though not half as much as I ought, and I have always regarded Peter as sincere when he said he would never deny his Master. Yet he did deny him. Now, I think I shall keep my word and maintain the stand I have taken; but, then, I must remember that I am liable to infirmity, and may fall." We do not think we have ever seen a summary of Lincoln's achievements so concisely eloquent as that which Mr. Nicolay's daughter quotes from her father's note-book—a summary in his own handwriting, made when writing had become well-nigh impossible for him:

Turned his defeat for the Senate into a success for the Presidency.

Took into the Cabinet his rivals, and made them his ministers and servants.

Conquered the Rebellion.

Liberated the slaves.

Outwitted all the intrigues against him in Cabinet and camp.

Gave his implacable rival the Chief-Justiceship.

Disarmed all criticism by shouldering all faults.

Consolidated his party and increased his majorities.

Held the people to their great task.

Made the strongest argument for peace and the best defense of war.

Gave in his Springfield Prayer, his Gettysburg Address, and his Second Inaugural the most pathetic and eloquent utterances of his time.

Forcible in speech and faultless in logic, he enriched the language with new thoughts, new definitions, new maxims, new parables, and new proverbs.

Was a true type and exemplar of his country, his race, and his government.

Wore honor without pride, and wielded power without oppression.

Lived like a peasant by necessity of birth and fortune, reigned like a monarch by right of representative instincts, native intellect, the wisdom of humility, and love of his fellowmen.

Died a martyr, and was wept by the civilized world.

The Krupp Centenary

The centenary of the famous Krupp steel factory at Essen, Germany, coincides with the hundredth birthday of the greatest man in the Krupp dynasty. Alfred Krupp, "the king of cannons," was born in 1812. From its small beginnings the cannon manufactory grew until now over seventy-one thousand persons are employed in it. Thus over a quarter of a million persons are dependent on one industry for work and bread. If the Krupp works are best known because of their making of cannon, their other products are not to be forgotten—rails, plates, machinery. The full reports, which have now come to hand in the foreign papers, indicate that the centenary celebration was indeed one of note. For, to mark it, the Krupp family donated no less than fourteen million marks (about $3,500,000) for various beneficial purposes: first of all, three million marks among the employees, each receiving a sum proportionate to the length of his service; then five million marks, the interest of which was to go towards sick and old-age pensions for the workmen; one million towards the expenses of the wives and children of workmen during their necessary sojourns in hospitals or infirmaries; one million for a provident fund for employees, two millions for army and navy institutions, and two millions for the city of Essen, provided that half be employed for its artistic and æsthetic betterment and that from the rest enough be taken to create a great space for sports and games. The centenary festivities were distinguished by the presence of the Emperor, his brother Prince Henry of Prussia, and other princely personages, the Imperial Chancellor, the Ministers of State, and admirals and generals by the dozen. The Kaiser's commemorative address was significant of the new Germany. He did not fail to point out that the birth of the steel factory coincided with the beginning of the German national movement which the following year at Leipsic was to shake the nation free from the oppressor. Since then "Krupp cannon have thundered over the battlefields where German unity was fought for, and Krupp cannon are the enginery of the German army and navy to-day. The ships constructed in the Krupp yards carry the German flag into every sea. Krupp steel protects our vessels and our forts." The monarch then added no less significantly:

> But the Krupp enterprise has been not only the first great German exploitation in this sense. It has been the first in Germany to recognize the new social problems and to seek to solve them. Its institutions for the care of the sick, the decrepit, and the aged, and its model dwelling-houses, have been models for other industrial enterprises to follow, and have suggested the kind of legislation to secure social justice.

A Tutor to Young China

For fifteen years George Ernest Morrison has been the London "Times" correspondent at Peking. He has been offered and has accepted the position of Political Adviser to the President of the Chinese Republic. The event is trebly worthy of note, first because Dr. Morrison is interesting, second because the London "Times" corps of correspondents has been properly distinguished, and third because the new Republic in China has appropriately laid "an anchor to windward." Dr. Morrison is still a moderately young man; he was born in Victoria, Australia, in 1862. He studied at Melbourne and Edinburgh Universities. When only twenty years old he undertook a pioneer expedition to New Guinea. The next few years saw him, now roving, now practicing medicine, in this country, the West Indies, Spain,

Morocco, and ultimately in the Far East. His celebrated walk of more than two thousand miles across Australia was rivaled by a three-thousand-mile walk across China, and then by a walk across Manchuria to Vladivostok on the Pacific. Dr. Morrison traveled alone, dressed as a native. These and Dr. Morrison's other journeys were undertaken, not to satisfy a restless spirit, but to acquire knowledge at first hand. The result, so far as China was concerned, was that he knew the country better than did any Chinese statesman, for no one of these had studied it from as many angles. One has but to read Dr. Morrison's "An Australian in China" to realize this. Little by little he came to be consulted as one who could speak with comprehensive knowledge, and he was frequently consulted, especially during the three critical years before the Boxer atrocities startled the world in 1900, and also during the anxious time just before the beginning of the Russo-Japanese War in 1904. The following year, at the Russo-Japanese Peace Conference at Portsmouth, no one among the one hundred and twenty newspaper correspondents awakened more sympathetic respect than did Dr. Morrison. The appointment of such a man is a significant sign of President Yuan Shi-kai's recognition of the fact that a young Republic like China would do better with a tutor than without one.

Is Unsightliness a "Nuisance"?

The immense growth of billboard advertising in New York City has emphasized the imperative need of regulation. But when any thoroughgoing legislation is discussed or proposed, the backwardness of New York's courts in recognizing the true extent of the police power of a city stands in the way. It is, of course, possible to regulate the billboards so far as they are dangerous in construction, or are allowed to become a menace to health, or are likely to spread a conflagration. But the real indictment against the billboard is that it is ugly, that it offends the æsthetic sense, and that it injures the city because it is unsightly and offensive. The Commissioner of Accounts in New York, Mr. Fosdick, has been impelled by the increasing moral nuisance, if not the physical nuisance, of the billboard, to make a thorough investigation into the subject; and his report, just published, is a model of what a city investigation should be. It is most especially notable because of the numerous pictures which bring the offense and ugliness of the billboard directly before the reader's eye. Mr. Fosdick points out that there are over three thousand locations for billboard advertising in New York, exclusive of sky signs; and altogether there are about four thousand facings for advertisements, while eight of the leading concerns in the business have together a capital of about two million dollars. There is a city ordinance regulating both billboards and sky signs, but some of the provisions regarding the latter have been declared unconstitutional by the New York Court of Appeals on the ground that "æsthetic considerations are a matter of luxury and indulgence rather than of necessity: and it is necessity alone which justifies the exercise of the police power to take private property without compensation." Other States and other cities have shown a more enlightened view, although the right of a city to make itself decent to the eye is perhaps nowhere so well established as it will be in the future. The New York Court of Appeals, however, in this matter as in others, has taken pains to place itself explicitly in the rear of such advance as has been made. Apart from the question of the æsthetic principles involved, Mr. Fosdick shows plainly that the law is being violated constantly and offensively, and that there are nuisances about which there is no question, which the city can and should instantly abate. As to the rest, we can only hope that the time will soon come when the law will recognize the common-sense theory that an offense to the eye is just as much a nuisance as an offense to the nose, and that the State or city must have power to promote beauty and attractiveness as well as safety and cleanliness.

Putting the Guilt in the Right Place

A Federal judicial decision which is in line with the basic ideas of social justice has just been rendered by Judge Noyes, of the New York Circuit Court. A German woman who had been made ill by eating canned meat which contained the germs of trichinosis brought suit against the great packing company in Chicago which had put up the meat. Thereupon these meat-packers, Armour & Company, set up the legal defense that they did not deal directly with the consumer of the meat, but only with the storekeeper or middleman who sold the meat to the consumer, and that the middleman must be held

responsible for damages, even although the carelessness or recklessness which brought about the injury lay with the packing company and not with the middleman. In short, it was asserted that the packer owed the consumer no duty whatever except that which we all owe to all citizens—to refrain from knowingly and willingly inflicting injury. The argument adduced to support this contention was ingenious, and had a show of precedent and analogy behind it. But Judge Noyes quickly and finally rejected the plea, and he did so in the interest of humanity and because such a contention would remove a safeguard to life and health which ought to exist. If the individual citizen is to have no remedy for poisoning caused by selling him rotten or diseased meat, merely because it has passed through the hands of a local dealer, a danger which should be slight and almost non-existent would become portentous. Judge Noyes recognized this and said: "In my opinion every consideration of law and public policy requires that the consumer have a remedy. If there are no authorities that grant one, it is high time for an authority."

The Boston Museum of Fine Arts

The Boston Museum of Fine Arts is making an important and valuable addition to its noble buildings. The contract for construction was let last April, and the work is already well advanced. This Evans Memorial Building will contain the galleries for paintings, all of which will be removed from their present position in the main building to the new addition on the main floor. Large top-lighted galleries on one side, with smaller galleries with top or side lights on the other side, will form a continuous circuit for the exhibition of paintings, while a corridor through the middle of the building will afford space for water-colors, drawings, and miniatures. On the lower floor will be the print department. This improvement will not only give additional room, but will give that room in galleries especially fitted for the exhibition of pictures. We note in this connection that the Fine Arts Museum has procured a series of forty-five water-colors by John S. Sargent. In some of these pictures Mr. Sargent appears to us to have attempted themes which can be dealt with adequately only in oils, but most of them are exceedingly beautiful illustrations of what can be achieved in water-colors.

THE PROGRESSIVE MOVEMENT

I. SOCIAL JUSTICE

The Outlook proposes, in a series of editorial articles, to interpret to its readers the Progressive Movement—a movement which has created one of our political parties and modified the platforms and principles of the other two, a movement which is more than political and more than National, a movement which is transforming the religious, the educational, and the industrial as well as the political creeds and institutions of the world. These articles will be primarily interpretation, not advocacy, but will frankly, though incidentally, indicate the reasons why The Outlook gives its support to the Progressive party in the present political campaign.

How to prevent the concentration of wealth and the widespread extent of poverty has been the theme of political students for centuries. The social injustice which this wealth concentration causes has for centuries created in the oppressed classes a discontent varying in degree from a dull despair to a furious outburst of wrath, and has aroused in humane souls a fiery indignation, expressed sometimes in fierce invective, sometimes in open war.

It is eloquent in the pages of the Hebrew prophets—Isaiah, Micah, Amos, Hosea. It is expressed in the writings of the Christian Fathers in language radical even for the radical democracy of our time. It inspired the ministry of Francis of Assisi. It sharpened the sword of Oliver Cromwell. It kindled and fed the devastating fires of the French Revolution. It gave our fathers the audacity to declare their independence of Great Britain. It was the creator of the emancipation movement in America, the West Indies, Russia.

It has in these latter days inspired efforts to discover some quick and easy panacea—in Anarchism, because government has fostered injustice; in Socialism, because capitalists have been often callous and sometimes unjust; in the Single Tax, because land tenure has promoted monopoly. The Progressive Movement of our time is one phase of this world-wide demand for an order of society which will give to all God's children a fair opportunity to live a life worth living.

This discontent is not due to "sensational journalism and unjust and unprincipled muck-

raking." Were Isaiah and Micah and Amos and Hosea muck-rakers or unprincipled journalists?

It cannot be cured by the successive failures of some rich men and the successive deaths of all rich men and a consequent distribution of their property. Rich men have been failing and dying ever since the days of Solomon and Crœsus, and still there are the two classes in society—some with incomes so great that they cannot spend them, and others with incomes so small that they cannot live on them.

Charity has done much to relieve the more distressing conditions of the intolerably poor; but it has done nothing to abolish the two-fold social evil of hungry poverty and irresponsible wealth.

The tariff has not caused the evil, and the abolition of the tariff cannot cure it. For the poverty is more abject, the discontent deeper, the social injustice greater, in free-trade England than in tariff-protected America.

The Christian churches cannot cure the evil. They can inspire the will to cure it, and wherever there's a will there's a way. But the will, once inspired, must find the way. Christianity inspires the spirit of human brotherhood. But how to realize human brotherhood in a reorganized society humanity must learn by study and experiment.

To realize this human brotherhood—a brotherhood in which every child will have a fair opportunity to grow to a noble manhood, and every man will have a fair opportunity to live a rich, free, useful, happy life, is the object of the Progressive Movement, in whatever country and under whatever form it appears. It is more, far more, than a cry for bread or work or rent or houses or employment; it is a cry of growing humanity for fullness of life. Take off these swaddling-clothes and give me liberty, is the demand of the twentieth century.

The Outlook supports the Progressive party, primarily because it is the one party which clearly sees and frankly recognizes the social injustice in democratic America, and courageously sets itself the task of studying and removing the causes which produce it. This the new party does with the intelligence of men and women of wide culture and with the enthusiasm of men and women unselfishly devoted to the welfare of their fellows. That its understanding of causes and its prescription of remedies may in some respects be mistaken is immaterial. Sincerity of purpose and courage of conviction, coupled with intelligence and an open mind, will correct such errors if they exist.

The remedies which the Progressive party proposes are, for the most part, those which The Outlook has been urging on the American public for over thirty years. Of course we welcome the party which is created for the purpose of making those remedies efficient. With most of the purposes of the Progressive party as they are outlined in its platform, and with its entire spirit as manifested in its National Convention, we are in hearty accord.

We wish to see an educational system which will educate our boys and girls for life, not merely for college, which will give as much honor and as much attention to industrial as to academic education, which will give a fair opportunity for development to every boy and girl in America, and which will do this by educating them for their life, not away from it.

We wish to see an industrial system which will give to those who carry on our organized industries some share in the profits and some share in the control of the industry; incomes so far equalized that every willing worker can earn a livelihood adequate for the comfortable support of himself and his family, and no healthy man living on an unearned income for which he renders no equivalent to society; hours of labor so adjusted that every workingman, whether he works with his hands or his head, can have a reasonable time for rest, recreation, and his home life; eight hours made the normal working day and six days the normal working week in all organized industries; laws enacted which shall make the consequences of ordinary accidents fall automatically on the industry, not, as now, on the workingmen, and which shall protect the children in their right to childhood and the mothers in their right to motherhood; and the government of the Nation and of the State equipped to protect and promote the health of the people.

We wish to see the problem of promoting our agricultural interests studied with the same care with which the Nation has studied the promotion of our mining and manufacturing interests, and more of the profits left to the farmer and less paid to the transportation systems and the middlemen.

We wish to see the railways fully recognized as highways of the Nation, and so carried on as to be of equal benefit to the

smallest and the biggest shipper; our great industrial organizations, whether of capitalists or workingmen, not disorganized or discouraged, nor made illegal, but recognized by law, encouraged by public opinion, and brought under such legal regulation and control as will make them beneficial, not prejudicial, to the public.

We wish to see a thorough reorganization of our tax methods, State, municipal, and National, so that what is now a chaos shall become a system, and so that the taxes shall be proportioned to the extent and value of the property protected by the Government.

We wish to see the past and present alliance between special interests and corrupt politicians destroyed, and government in all its phases administered for the equal benefit of the many, not for the special benefit of the few.

We wish to see the courts of justice so officered and organized that the poor man shall have an equal chance with the rich man, Ahab no advantage over Naboth, the rich criminal no immunity from punishment and no delay in receiving it.

We wish to see an end put to grants of the people's property to private owners; the mineral and forest lands and the great water powers now belonging to the people kept in their control; and measures studied for the purpose of regaining for the people the control of the public property of which they have been deprived, partly by their own carelessness.

We wish to see the people unmanacled; free to nominate as well as to elect their representatives; free to re-elect them as long as they are satisfied with the service rendered; free, either by long terms with recall or short terms without recall, to dismiss them when the service is not satisfactory; and free, when the Legislature and the Courts disagree respecting the authority of the Legislature, to decide between the two.

This is not Anarchism. The Anarchists wish for a weak government or none at all. The Progressives wish for a strong government.

This is not Socialism. The Socialists wish to abolish private capital. The Progressives wish to retain private capital, but to bring it under Government regulation and control.

Some, perhaps many, of our readers, may not sympathize with this movement. But it is at least well that they should understand it. The movement is not due to the political ambition or the political skill of a single man. It is not due to any recent stirring up of discontent, either by individuals or by events. It is a stage in the development of democracy: its inspiration, an enthusiasm for humanity; its aim, social justice for the less fortunate of mankind; its guiding principle, faith in the capacity of the people to direct safely the destiny of the Nation if the hindrances to their free control are taken away.

LETTERS TO UNKNOWN FRIENDS

Early evening. A young mother sitting before an open fire in the parlor, day-dreaming of love. Upstairs the little girl whom she has just tucked in bed. A little stirring in the room overhead, the mother's ear alert to listen. Then a patter of little feet upon the stairs and along the hall, and the mother, through the portière which separates the parlor from the dining-room, sees this childish Eve climb on a chair, take a big, rosy apple from the fruit dish in the center of the table, and patter back through the hall and slowly climb the stairs again.

It would have been so easy to stop the theft before it was completed, or detect the culprit with her booty in her hand. But this is a wise mother. She does not care to stop the uncompleted theft or to detect the culprit and compel her to a shamefaced but reluctant confession. She wishes, not to stop the child from committing a sin, but to prevent her from becoming a sinner. She wishes, not to control her daughter, but to create in her daughter a power of self-control. She wishes any confession to be not compelled but voluntary, not reluctant but spontaneous. She waits and thinks. She is accustomed to think first and act afterward. Wise mother!

And as she waits, still all alert, she hears a stirring again in the room overhead, and again the patter of little feet upon the stair and along the hall. What? Is the child going to take another apple? No! she climbs into the chair, puts the purloined apple back into the fruit dish, and through the curtained doorway the gladdened mother hears the childish voice say softly, with what was half a sigh and half a chuckle, "That's one on you, Satan." And then the feet patter along the hall and climb the stairway, and all is still. And the mother is thankful in her

heart that she did not follow her first impulse and interfere.

This true story, as it has been told to me, suggests the answer to certain questions which some of my Unknown Friends have lately put to me. For it contains four of the elements of life's continuous drama—temptation, sin, repentance, victory. The fifth element is not there—redemption. For the mother did not save the child; the child saved herself.

Temptation is not sin. The childish desire for the apple was a perfectly innocent desire. Temptation involves no sin. Gluttony is sin, but appetite is not. Stealing is sin, but the desire to acquire property is not. The child desired the apple—that was quite right. She also desired to be an honest little girl and to be worthy of her mother's approbation. That was of course quite right. She sinned when the desire for the apple mastered the desire to be an honest little girl and to be worthy of her mother's approbation.

Taking the apple was not the sin; it was a consequence of the sin. The sin began when she began to indulge in the wish to get the apple which was not hers, and which she knew her mother would disapprove her taking. It was consummated when she resolved to disobey her conscience and disregard her mother's wish and take the apple. In this resolve, this act of the will, the sin was committed. If when she got downstairs she had found that the maid had locked the apples up in the closet and there was no apple there, still she would have sinned. If she had resolved to wait until her mother went out to make an evening call and then go down without fear of detection, and instead had fallen asleep and had wakened in the morning disappointed that she had not been able to complete her purpose, still she would have sinned. A sin is completed when the resolve to complete it is made. "Sin is lawlessness." It is the conscious disregard of a higher law for the gratification of a desire which in itself may be entirely innocent. It is entirely innocent for the little child to wish the apple. It is not innocent for her to desire the apple more than she wished to obey the voice of her conscience telling her not to take it.

Being sorry for having done wrong is not repentance, though repentance involves being sorry for the wrong done. If the little girl had taken the apple and carried it upstairs, and then had begun to be afraid that the apple would be missed and she herself detected, or, without that fear, had begun to feel ashamed of herself and had even wished that she had not taken the apple, that would not have been repentance. She repented when she resolved to take the apple back and put it in its place in the fruit basket. Repentance is not feeling, though it involves feeling; it is not action, though it generally involves action. Repentance is the resolve not to repeat the wrong done, and to do all that one can do to repair its effects. No repentance is genuine which does not involve an earnest desire, and, when repair is possible, a serious endeavor, to undo the wrong committed. Peter's repentance was not completed when he went out and wept bitterly. It never would have been completed had he not accepted from his Master his recommission and gone out to acknowledge his Lord and confess his faith in him, always at the peril and eventually at the cost of his life. Judas Iscariot was sorry that he had betrayed his Master—so sorry that he committed suicide. But Judas Iscariot did not repent.

When undoing the wrong which we have done involves confession, repentance involves confession. When undoing the wrong we have done does not involve confession, repentance does not involve confession. The little girl completed her repentance when she put the apple back. She might never tell her mother of her temptation, her sin, her repentance, her victory; she might even think that to do so would seem more like boasting than confessing.

The child was a better child for her experience, and better equipped for life because she had passed through it. The mother might well feel a new pride in her little girl because her little girl had won such a victory; and the child herself might well experience a feeling of exultation in that she had won so hard a battle.

This incident may not, probably will not, suffice to answer the questions of several of my Unknown Friends respecting the nature of temptation, sin, and repentance. But it may suggest to them trains of thought which will lead them to some light on their questions.

And some light also on another question which in different forms several of them ask: Why does God allow this terrible drama of sin to go on unchecked when he might so easily stop it? Perhaps for the same reason

that the mother allowed her child to steal when she might easily have stopped the theft. The mother was a wise mother; therefore she did not interfere. Perhaps it is because God is a wise God that he does not interfere. Perhaps he is more anxious to make virtuous men than to prevent sinful acts. Perhaps he sees that the only way to make men virtuous is to let them fight against temptation, and not interfere.

Virtue is the choice of the right when we can choose the wrong. Virtue is not possible in a world in which sin is not also possible; because virtue is choosing to do the right when one is free to choose to do wrong. There is in every State in the Union a community of considerable size, the members of which work, but are not industrious; never drink, but are not temperate; do not steal, but are not honest; and attend divine service, but are not religious. It is the State's Prison. To be industrious one must be free to be idle; to be temperate one must choose not to be a drunkard; to be honest one must have a chance to cheat; and to be devout one must be at liberty not to worship.

The mother was a wise mother, a very wise mother, not to interfere, but to wait and see whether the child could win the victory over herself by herself. What she could have done and what she should have done if the child had failed raises another question. What we can do and what we should do to help one another in the battle of life, and what the Father can do and what the Father does do, are questions which I will leave to be considered in some future letter.

LYMAN ABBOTT.

THE SIGN OF THE INN

It would never have occurred to Dr. Johnson to set up the "throne of human felicity" in a hotel. In the old English taverns, and especially in "The Three Crowns," which still keeps open doors at Lichfield, it is easy to imagine the great Lexicographer laying down the law from his chair at the head of the table. Imagine the Doctor, who prescribed remedies for others which he never took himself, sitting in the corridors of a modern hotel surrounded by massive columns of artificial marble, with a gorgeously elaborate ceiling over his head, a crowd of people streaming in and out of ascending and descending elevators, boys rushing about with telegrams, and the stir of men bent on business and of women eagerly seeking matinée tickets! In such surroundings the great talker would have burst into profanity or sunk into despairing silence. In a great modern hotel personality is dissolved in a vast pool of promiscuous humanity, as in certain Oriental religions it is lost in a tideless sea of life.

The inn has individuality, and not only makes room for personality, but sets a little stage and provides an audience for it. Poets and novelists have not been slow to see its uses for literary purposes, and before the Canterbury Pilgrims set out from the Tabard Inn the ease of companionship offered by the inn had been often celebrated. Romance and crime have found lodgings at the inn, and many bold stratagems and stirring fights have made inns memorable and dear to those who love the atmosphere of adventure.

Mr. F. Hopkinson Smith had ample precedent for laying the scene of his latest book in one of the most fascinating inns in the world. There are famous inns in Normandy, but none so captivating at first sight as the inn at Dives which bears the name of William the Conqueror. From this little town that vigorous Norman set sail for England, and made himself responsible for an immense number of pedigrees, real and fictitious.

If the Barons and Knights who acquired England without the vexatious and dilatory processes of law had had lodgings in the inn which now bears the name of their daring and predatory leader, they never would have left France. Mr. Smith emphasizes the delights of the noble dining-room and the great hearth at the "William the Conqueror" in the title of his book, "The Arm-Chair at the Inn;"[1] but he does not fail to celebrate the court around which the old inn wanders and in which one can never drink his coffee without feeling that the curtain has lifted on the most captivating stage he has ever seen and that the opera is about to begin. "Spread out before you," writes this painter-romancer, "lies a flower-choked yard flanked about on three sides by a chain of moss-incrusted, red-tiled, seesaw roofs, all out of plumb. Below, snug under the eaves, runs a long go-as-you-please corridor, dodging into a dozen or more bedrooms. Below this again, as if tired out with the weight, staggers a basement from which peer out windows of stained glass protected by Span-

[1] The Arm-Chair at the Inn. By F. Hopkinson Smith. Charles Scribner's Sons, New York.

ish grilles of polished iron, their leaded panes blinking in the sunshine, while in and out, up the door-jambs, over the lintels, along the rain-spouts, even to the top of the ridge-poles of the wavy, red-tiled roofs, thousands of blossoms and tangled vines are running riot: and this is not all. Close beside you stands a fuchsia-covered, shingle-hooded Norman well, and a little way off a quaint kiosk roofed with flowering plants, and near by a great lichen-covered bust of Louis VI., to say nothing of dozens of white chairs and settees grouped against a background of flaring reds and brilliant greens. And then, with a gasp of joy, you follow the daring flight of a giant feather-blown clematis in a clear leap from the ground, its topmost tendrils throttling the dormers"—a description worth transcribing for the breath of fragrance and the charm of setting which it brings into close rooms in town.

Not far down the Normandy coast there is another inn, less picturesque in itself but more strikingly framed than that which Mr. Smith has chosen for the background of his latest book. When one goes out of the arched gateway of the "William the Conqueror," he finds himself in the heart of a little old town which is of interest chiefly because a great leader once passed that way. There is one old church of the age in which the artistic genius of the French broke into an almost riotous springtime of bloom, so richly efflorescent did stone become in the hands of builders who must have sung or prayed, or perhaps both, as they worked. And there is an ancient market, whose blackened beams and wooden columns have hummed with the gossip of peasants and townsfolk these many decades.

But the charm ends when one goes out of the inn. At Mont St. Michel, on the other hand, the spell is wholly in the setting. The inn is a matter of a plain, bare building not far inside the gate, and two or three other buildings in which the guests are lodged, up the long stone stairways of the town. In the old days the big kitchen was fragrant with those delicious odors which make the aroma of artistic cooking. The big spits were always revolving, the chickens roasting and stews cooking, which were a joy when they came to the long table in that interesting *salle-à-manger* on whose walls half a hundred French artists had left little sketches and on-the-spur-of-the-moment studies by way of saying, "Sorry to leave and coming again." There have been savory and delicately cooked chickens elsewhere, but never such stews as came from the kitchen in the days of Madame Poulard, mistress of "the glass roller and the magic hand." And then those magical omelets of which coarse-minded persons used to say that they were not omelets at all, but *soufflés* of a magical lightness. But, whatever they were, they were of a consistency which was of the soul of the egg rather than of its substance. And Madame Poulard, erect, black-eyed, handsome and smiling, was an artist in hospitality as well as in the art of the kitchen. She was a "European personage," and what a manager she was! It was as good as being at a play to sit in the little out-of-door café across the narrow street from the Poulard inn and watch her graciously welcome the pilgrims, headed by the porters who were guiding them to the rival inn, but who instantly succumbed to her charming imperiousness and became her guests, and have thanked St. Michel ever since for their good luck.

It may be suspected that although Monsieur was a stalwart and swarthy Frenchman, Madame was not only the genius but the manager of the inn, and there was a suspicion that she "ran the town" as well. If she did, it was by virtue of natural selection, for she had the extraordinary sagacity of the French woman of her type. The machinery of her government made no noise; you even kept your own account and recited the list of the nights and meals and incidentals when you left, and were very moderately charged accordingly. If you asked Madame if the inn did not lose sometimes by this system, she smiled and said that St. Michel watched over it. Many verses are written to and about her, of which one is likely to be long remembered for its pith and point:

"Joan of Arc, at point of lance,
Drove the English out of France.
Madame Poulard did better yet:
She brought them back with her omelet."

And what a view one had as he came out of his room in the *Dépendance Verte* or *Blanche* on a fine morning, and had his rolls and coffee in an arbor on the terrace! The high-built little town, half fortress and half church, was piled up around him, walled at the base and crowned by the cathedral; the sea came up softly or clamorously on three sides, and on the fourth the tide spread swiftly over the sands, or the sands shimmered in the light like a living thing; and

beyond, the fields of Normandy lay smiling in the sun, dotted with towns whose names are mellow with old association.

At Mont St. Michel one sits out of doors and "gives his soul a loose," to quote the happy phrase of a scholar away from his library; it is an inn for sunny days, not for nights before the fire. The arm-chair in which Irving sat before the fire in the Red Horse in Stratford-on-Avon almost a hundred years ago, and the poker with which he stirred the fire, are authentic relics of a visit which sent a tide of visitors from the New World to the shrine of the greatest literary tradition in England; and they are also symbols of the uses which the inn serves. The little group before the fire on a sharp autumnal night, or when the wind whirls down the chimney and goes shouting across the country, typify a kind of comfort which flies from the hotel—a coziness and sense of friendliness which one no more expects when the hall-boy takes him to No. 3,001 on the twelfth floor than he looks for good talk when he finds himself, in a moment of great haste, at a counter where the deadly "quick lunch" is provided. The most beautiful things grow slowly and require time and care, and the bloom of human intercourse is not to be found save in quiet places and out of the turmoil of crowds.

Before the fire which roars up the chimney in the Norman inn in Mr. Smith's book the men tell strange stories of adventure and draw into the circle of talk many apt illustrations from the far ends of the earth. It is, perhaps, the sense of cozy security, of the genial air of friendliness, that makes the open fire in the inn a kind of magnet to draw strange tales to itself. In the corridor of a palatial hotel a man "talks business," or, if an old friend finds him, goes out to dinner at a club where there is quiet, or the two take refuge in a theater; but in an inn they draw their chairs together and drop a score or two of years and are back again on long-familiar playgrounds. And when a group sit within the glow of the fire, every man thinks of the loveliest day he ever spent in some far-off country, or of some adventure which befell him long ago by land or sea.

The great hotel is a miracle of convenience, but there are other things in life. The Englishman who said that there was every convenience in America, but no comfort, was a superficial observer, but there is a grain of truth in his comment. The inn is deficient in convenience; the hot water comes up in a can, and one must walk up and down stairs as all his fathers have done before him; but how much comfort a real inn offers the lonely traveler, and what chances of good talk he happens upon before the open fire! Mr. Smith's delightful book ought to open the eyes of some men and many women to one of the great needs of the country and to one of the great opportunities which it offers to those who are willing to do small things quietly, and to give the wayfarer a sense of being cared for as a person and not simply as a number in the register.

PROGRESSIVE DEMOCRACY[1]

THE TARIFF

EDITORIAL BY THEODORE ROOSEVELT

I BELIEVE in a protective tariff, but I believe in it as a principle, approached from the standpoint of the interests of the whole people, and not as a bundle of preferences to be given to favored individuals.

In my opinion, the American people favor the principle of a protective tariff, but they desire such a tariff to be established primarily in the interests of the wage-worker and the consumer. The chief opposition to our tariff at the present moment comes from the general conviction that certain interests have been improperly favored by over-protection. I agree with this view. The commercial and industrial experience of this country has demonstrated the wisdom of the protective policy, but it has also demonstrated that in the application of that policy certain clearly recognized abuses have developed.

It is not merely the tariff that should be revised, but the method of tariff-making and of tariff administration. Wherever nowadays an industry is to be protected it should be on the theory that such protection will serve to keep up the wages and the stand-

[1] In a series of editorials, of which this is one, Mr. Roosevelt is repeating in essence the statement of his political faith made before the Progressive Convention at Chicago.

ard of living of the wage-worker in that industry with full regard for the interest of the consumer. To accomplish this the tariff to be levied should, as nearly as is scientifically possible, approximate the differential between the cost of production at home and abroad. This differential is chiefly, if not wholly, in labor cost. No duty should be permitted to stand as regards any industry unless the workers receive their full share of the benefits of that duty. In other words, there is no warrant for protection unless a legitimate share of the benefits gets into the pay envelope of the wage-worker.

The practice of undertaking a general revision of all the schedules at one time, and of securing information as to conditions in the different industries and as to rates of duty desired chiefly from those engaged in the industries, who themselves benefit directly from the rates they propose, has been demonstrated to be not only iniquitous but futile. It has afforded opportunity for practically all of the abuses which have crept into our tariff-making and our tariff administration. The day of the log-rolling tariff must end. The progressive thought of the country has recognized this fact for several years, and the time has come when all genuine Progressives should insist upon a thorough and radical change in the method of tariff-making.

The first step should be the creation of a permanent commission of non-partisan experts whose business it shall be to study scientifically all phases of tariff-making and of tariff effects. This commission should be large enough to cover all the different and widely varying branches of American industry. It should have ample powers to enable it to secure exact and reliable information. It should have authority to examine closely all correlated subjects, such as the effect of any given duty on the consumers of the article on which the duty is levied: that is, it should directly consider the question as to what any duty costs the people in the price of living. It should examine into the wages and conditions of labor and life of the workmen in any industry, so as to insure our refusing protection to any industry unless the showing as regards the share labor receives therefrom is satisfactory. This commission would be wholly different from the unsatisfactory Tariff Board which was created under a provision of law which failed to give it the powers indispensable if it was to do the work it should do.

It will be well for us to study the experience of Germany in considering this question. The German Tariff Commission has proved conclusively the efficiency and wisdom of this method of handling tariff questions. The reports of a permanent, expert, and non-partisan tariff commission would at once strike a most powerful blow against the chief iniquity of the old log-rolling method of tariff-making. One of the principal difficulties with the old method has been that it was impossible for the public generally, and especially for those Members of Congress not directly connected with the committees handling a tariff bill, to secure anything like adequate and impartial information on the particular subjects under consideration. The reports of such a tariff commission would at once correct this evil and furnish to the general public full, complete, and disinterested information on every subject treated in a tariff bill. With such reports it would no longer be possible to construct a tariff bill in secret or to jam it through either house of Congress without the fullest and most illuminating discussion. The path of the tariff "joker" would be rendered infinitely difficult.

As a further means of disrupting the old, crooked, log-rolling method of tariff-making, all future revisions of the tariff should be made schedule by schedule as changing conditions may require. Thus a great obstacle will be thrown in the way of the trading of votes which has marked so scandalously the enactment of every tariff bill of recent years. The tariff commission should render reports at the call of Congress or of either branch of Congress, and to the President. Under the Constitution, Congress is the tariff-making power. It should not be the purpose in creating a tariff commission to take anything away from this power of Congress, but rather to afford a wise means of giving to Congress the widest and most scientific assistance possible, and of furnishing it and the public with the fullest disinterested information. Only by this means can the tariff be taken out of politics. The creation of such a permanent tariff commission, and the adoption of the policy of schedule by schedule revision, will do more to accomplish this highly desired object than any other means yet devised.

The Democratic platform declares for a tariff for revenue only, asserting that a protective tariff is unconstitutional. To say that

a protective tariff is unconstitutional, as the Democratic platform insists, is excusable only on a theory of the Constitution which would make it unconstitutional to legislate in any shape or way for the betterment of social and industrial conditions.

The abolition of the protective tariff or the substitution for it of a tariff for revenue only, as proposed by the Democratic platform, would plunge this country into the most widespread industrial depression we have yet seen, and this depression would continue for an indefinite period.

There is no hope from the standpoint of our people from action such as the Democrats propose. The one and only chance to secure stable and favorable business conditions in this country, while at the same time guaranteeing fair play to farmer, consumer, business man, and wage-worker, lies in the creation of such a commission as I herein advocate. Only by such a commission and only by such activities of the commission will it be possible for us to get a reasonably quick revision of the tariff schedule by schedule—a revision which shall be downwards and not upwards, and at the same time secure a square deal not merely to the manufacturer but to the wage-worker and to the general consumer.

FOLLOWING THE CAMPAIGN

A WEEKLY DIGEST OF POLITICAL OPINION
AS EXPRESSED BY PEOPLE AND NEWSPAPERS

MR. ROOSEVELT ON CAMPAIGN CONTRIBUTIONS

THE Senate Committee, which has been investigating the subject of campaign contributions, interrupted its labors promptly upon the adjournment of Congress. In relation to the alleged contribution by the Standard Oil Company to the Republican campaign fund in 1904, the Committee found time to hear only Senator Penrose and Mr. Archbold. As soon as these gentlemen had testified and had made certain assertions as to Mr. Roosevelt's knowledge of this alleged contribution, Mr. Roosevelt requested the Committee to give him an immediate opportunity to appear before it. The members of the Committee, however, with the exception of Senator Clapp, its Chairman—Congress adjourning at that moment—seemed to have sudden calls which took them with the greatest expedition away from Washington. Mr. Roosevelt thereupon wrote a long letter to Senator Clapp embodying substantially the testimony which he would have given if the Committee had found it convenient to have him appear before it.

Mr. Roosevelt's letter gives the plain story of the relations of the Standard Oil Company, the Roosevelt Administration, and the Republican National Committee in 1904. It deals in the same plain way with the time-worn story of the Harriman campaign contribution in the same campaign.

In 1904 Mr. George B. Cortelyou was Chairman of the Republican National Committee and Mr. Cornelius N. Bliss its treasurer. On October 26, 1904, Mr. Roosevelt wrote a letter to Mr. Cortelyou in which he said that he had just been informed that "the Standard Oil people had contributed one hundred thousand dollars to our campaign fund," and continued: "This may be really untrue. But if true, I must ask you to direct that the money be returned to them forthwith." The next day Mr. Roosevelt sent a supplementary letter to Mr. Cortelyou requesting again that the contribution be returned without further delay. In it he said that his judgment as to the propriety of receiving or returning the contribution was confirmed by certain publications in the newspapers by the Standard Oil Company, which he had just seen, and which showed that much importance seemed to be attached to the political attitude of the company, and as well by the open and pronounced opposition of the Standard to the establishment of the Bureau of Corporations. Two days later, on October 29, Mr. Roosevelt telegraphed to Mr. Cortelyou. "Has my request been complied with? I desire that there be no delay." Subsequent to the sending of this telegram, Mr. Loeb, then the secretary to the President, called Mr. Cortelyou on the telephone, and later Mr. Roosevelt called him himself. In answer to these inquiries Mr. Cortelyou

informed both Mr. Loeb and Mr. Roosevelt that no contribution had been received from the Standard Oil Company and that no contribution would be received.

Within the past two or three days, Mr. Roosevelt's letter continues, Mr. Cortelyou has informed Mr. Roosevelt that his memory of the incident is the same as Mr. Roosevelt's, and that the information that no contribution had been received or would be received was given to Mr. Cortelyou by Mr. Bliss. This is the whole story of the alleged Standard Oil contribution and Mr. Roosevelt's connection with it.

Mr. Roosevelt then refers to the charges made by Judge Parker as to campaign contributions in 1904. In the closing days of that campaign Judge Parker, the Democratic candidate for the Presidency, asserted that Mr. Cortelyou had been made Chairman of the National Committee because, as Secretary of Commerce and Labor in Mr. Roosevelt's Administration, he had obtained secret information as to the inside affairs of great corporations which he could use to induce them to contribute to the campaign fund, and in effect that he had used such information to blackmail corporations into contributing. On the eve of the election Mr. Roosevelt issued a statement stamping these charges as absolutely false. The result of the election was the election of Mr. Roosevelt by a popular vote of unprecedented size.

Mr. Roosevelt's letter next takes up the matter of the Harriman contribution to the campaign fund. The story of this occurrence has been told again and again, and to go over it once more would be as useless as it is unnecessary. The plain fact, as shown by an accumulation of direct evidence, is that during the campaign of 1904 Mr. Harriman, who was concerned for the success of the New York State campaign under the management of his friend Governor Odell, went to Mr. Roosevelt to ask him to intercede with the National Committee to secure for the New York campaign additional funds. Mr. Roosevelt transmitted the request to Mr. Bliss with his indorsement, but when it appeared that the National Committee was unable to supply more than a small part of the money necessary, Mr. Harriman went back to New York, raised a fund among his friends, and gave it to be used in the New York campaign.

In his letter Mr. Roosevelt further describes how officials of the Standard Oil Company, a year or so after the election of 1904, came to see him in regard to the prosecutions being brought against the Standard Oil Company for the taking of rebates, as well as a couple of years later when the preliminary steps for bringing suit to dissolve the Standard Oil Company were being taken. In each of these cases Mr. Roosevelt referred his visitors to the Bureau of Corporations and to the Department of Justice. For instance, in a letter to Senator Bourne, who had arranged for a meeting between Mr. Archbold and President Roosevelt, the President wrote: "Do remember that, while any proposals they make will be considered in an entirely frank and honorable spirit, yet these proposals must be conditioned upon absolute obedience to the law and must be laid in detail before the Attorney-General and Frank B. Kellogg before it would be possible for me to express any opinion upon them." The letter continues: "I want you to be sure that the Standard Oil people do not misunderstand it and do not get the impression that it is by my desire or on my initiative that negotiations have been entered into with them by you or by any one."

Mr. Roosevelt further points out that the accusations which have been made by Senator Penrose and Mr. Archbold reflect not upon him but upon Mr. Bliss. Mr. Roosevelt expresses the highest confidence in Mr. Bliss as a business man of "stainless probity and integrity." He was a man who gave not merely of his own money freely, but who contributed "his energy, power of work and administrative ability in a way that was quite beyond price." Mr. Roosevelt declares that he does not "feel able to express an opinion as to whether or not he [Mr. Bliss] did, against my explicit direction and in spite of the assurance given me, receive any money from the Standard Oil people." "But I do feel warranted," he continues, "in saying, from my own knowledge of Mr. Bliss and of his character, that he never made any proposition of the nature of blackmail, as Mr. Penrose and Mr. Archbold say he did; and I am absolutely confident that he would never have gone into any scheme looking to the receipt of campaign contributions in return for protection or favor to the parties contributing."

Mr. Roosevelt points out that Mr. Penrose and Mr. Archbold apparently have no

idea of the infamous nature of the charge they are making against Mr. Bliss, and says: "Apparently neither of them has any idea that it is wrong for the highest Government official to blackmail corporations into subscribing to party campaign funds under the penalty of being prosecuted if they fail to do so. . . . I do not know whether to be more astounded at a United States Senator taking such a position, or at the moral callousness of testifying to it in evident and complete ignorance that any culpability attaches to it."

At the conclusion of his letter, turning to the general question of campaign contributions, Mr. Roosevelt points out that it is no longer legal to accept contributions from corporations, but declares that, aside from this fact, his attitude toward campaign contributions is precisely what his attitude was in 1904, and will not be changed. He does not believe in drawing the line against the size of the contribution. He declares that the only proper conditions are, first, that the contribution should be received "without any kind of promise or obligation, expressed or implied, being accepted only on the announced principle that the man making it has no end to serve except to assist the cause he is championing; and, second, that the money should be spent in an honest fashion and only for legitimate expenses." He refers to the proposal to limit contributions to five thousand or ten thousand dollars, and says: "If the virtue of a party is so frail that it will weaken if the contribution is over ten thousand, it will also weaken if it is under ten thousand. . . . It is morally as bad to solicit or accept ten dollars for improper reasons as ten thousand dollars." "As long," he continues, "as the expense of running primaries and elections is left to be borne by private individuals instead of by the Government, and as long as there is no limit to the total fund which can be raised, then each contributor should be left free to contribute according to his ability, if his motive is proper and is properly understood."

Mr. Roosevelt describes a number of contributions which have been sent to him personally during the past four weeks. He says:

> Among them were $10 sent to me by a woman who is a bookkeeper; $5 from a workingman, an Italian by birth, who told me that it represented two days' wages; $25 from a deep-sea fisherman, who wrote me it represented his profit on one trip, and that later he would send me the profit on another trip; $1 from an old veteran in a soldiers' home, and $2.50 from a Scotch carpenter, who wrote me that he had not been long enough in the country to vote, but that he wished to help all he could in the Progressive movement; $10 from a brakeman; about $45 from a commercial traveler, who told me it represented five per cent on his collections for a certain period; $500 from the mother of a family, which in this case, as I happened to know, meant using last fall's dresses again this fall; $1,000 from a business man in Chicago whom I did not personally know; $10 from a writer who had sold a poem on our movement for that amount; and, most touching of all, $10 from a mother whose ten-year-old boy had just died, because the boy had always admired me and read about me. These are only examples among hundreds of others of the same kind.

Mr. Roosevelt declares that he profoundly appreciates such contributions as these, and that "instead of feeling like refusing the big amounts given him by the few friends who can afford to give these big amounts, I have felt much more like returning these little amounts, which I know mean so much of self-denial to the struggling men and women who send them."

In closing, Mr. Roosevelt declares: "I shall make precisely the same return to all who contribute, and that return is to serve the whole people by striving for social and industrial justice."

He sets forth two men as representing two types among the supporters of the Progressive party, Mr. Perkins and Judge Lindsey. Of the first he says:

> During the primaries he contributed largely of his means, and still more largely of his time and executive and organizing ability; he will continue to give in the same fashion, both money and work, until election day; and not a dollar of his money and not a minute of his time will be used save in straightforward and honest fashion.

Of the second he says:

> Judge Ben Lindsey has no money to give; he has the power to set vividly before audiences the cause for which we are fighting, and to carry conviction of his and our sincerity because of the life of service he has lived. Each man is now rendering to the cause with all his soul the service which he is best fitted to render.

He concludes:

> I am profoundly grateful to both; I am profoundly sensible of the service which each renders; and each expects from me nothing whatever save that I will honorably and in good faith do my part in carrying out our covenant with the people of the United States.

We commend the reading of Mr. Roosevelt's letter in full to those of Progressive

sympathies who may have been troubled by the reckless asseverations of Messrs. Penrose, Archbold, and Company. We commend it no less to those, whether Progressive or not, who wish to know the truth and who have a constitutional objection, even in matters of political activity, to condemning any one unheard.

NEWSPAPER COMMENT ON CAMPAIGN CONTRIBUTIONS

The Archbold-Penrose allegations seem to "Life" "fine for persons who enjoy that sort of reading . . . but to our mind not very important."

But they are important to other minds. How shall a political party be supplied with the "sinews of war"? Of course it must have those sinews. The people must support the political parties.

How has this been done in the past? Let two Knoxville (Tenn.) papers state. A Republican journal, the Knoxville "Journal and Tribune," declares that "the Republican party has been buying its way into power and control with money contributed by the special interests, which it has fostered with favors and protected with legislation." Not to be outdone in honest confession, a Democratic paper, the Knoxville "Sentinel," admits that Democratic campaign funds have been "gathered from about the same sources as the Republican." The paper continues:

> The Jay Goulds and Vanderbilts gave to the Republican party because they expected favors, and to the Democrats because they wished to throw an anchor to windward and assure themselves against the utter withdrawal of favors already secured. The difference was one mainly of amount. . . . The Bryces and Whitneys got less than the Quays, but they did not go away empty-handed from the doors of the then big business.

"Scandal is lively reading, even political scandal, and doubtless the papers are justified"—to quote "Life" again—"in devoting much space to revelations, furnished primarily by one of Mr. Hearst's magazines, of details of Republican financing in the Presidential campaign of 1904." "Life" thus explains the situation:

> Mr. Hearst printed letters to the effect that the Standard Oil Company contributed liberally to the Republican campaign fund in that year. A committee of the Senate investigated, and Mr. Penrose for the Republicans and Mr. Archbold for the Standard Oil admitted that it was true. And there has been assertion that the candidate, Mr. Roosevelt, knew of these contributions and was agreeable, and wanted $150,000 more and did not get it, and for that reason persecuted the Standard Oil Company after his election.
>
> Of course this last accusation is not true. A matter of $150,000 worth of political assistance, more or less, would never have affected President Roosevelt's behavior toward a corporation. He denies that he had anything to do with this Standard Oil money of 1904, or consented to its being received, and has furnished letters he wrote about it to Mr. Cortelyou forbidding him to accept any Standard Oil money.

"But it is impiously suggested," slyly adds "Life," "that these letters were written to be filed, but not otherwise respected, and so on and so on, and, as we write, the headlines are all awhirl with accusation, denial, recrimination, alibis, and general exposure." The Sioux Falls, South Dakota, "Press" (Ind.) "commends these [the Archbold-Penrose letters] to the attention of thoughtful persons who are watching the 'invisible government' as it emerges into the light of day." The New York "Tribune" (Rep.) thus describes them:

> Mr. Archbold testifies that the Standard Oil Company did contribute $125,000 to the Roosevelt campaign in 1904, $100,000 through Cornelius N. Bliss, treasurer of the National Committee, and subsequently $25,000 through Senator Penrose. . . . Mr. Archbold has not been able to lay hand on Mr. Bliss's receipt. . . . The other Standard Oil men who can confirm the fact of the contribution and relate the circumstances should be examined. Pending such confirmation, however, there will be little disposition to doubt the truth of Mr. Archbold's statement that the $100,000 of Standard Oil money went, as is stated, into the Roosevelt campaign fund through Mr. Bliss. Mr. Roosevelt, however, denies that he knew of any such contribution, and so far there is no proof that he did. It is perfectly possible that his campaign managers, being in need of money, got it where they could without telling him anything about it. . . .
>
> It may well be that Mr. Roosevelt's attention was never seriously directed to campaign funds and their possible abuse until almost the end of his campaign, and that he then took such action as seemed sufficient to him to preserve his entire independence. In the absence of any proof that he knew of the Archbold contribution, it is not to be assumed in the face of his denials that he did know of it and that in 1904 he was and ever since has been playing a part of elaborate and sustained hypocrisy.

Just here the Tacoma "Tribune" (Prog.) remarks that "John D. Archbold says he

does not make a business of telling lies," and adds:

The record appears to show that Archbold makes a business of sending certified checks to corrupt statesmen of the Penrose type.

But a man making a campaign contribution as large as $25,000, comments the Kansas City "Times" (Prog.), "would be likely to mention the purpose of the contribution in the note accompanying the money." The paper further notes:

When Mr. Archbold made his notorious contribution to Senator Penrose, he merely wrote: "In fulfillment of our understanding it gives me pleasure to hand you herewith certificate of deposit to your favor for $25,000, and, with good wishes, I am yours truly."

If that amount really was a campaign contribution, is it not rather odd that the note didn't say so? Or if it was a contribution to the Republican party in Pennsylvania, wasn't Penrose probably all there was to the Republican party in that State?

Mr. Archbold admits, according to the New York "Globe" (Rep.), "that he paid over what he thought was a fair bribe. Penrose confesses that he was broker. Their self-painted portraits make an exhibit of crooked business-politics that answers every requirement." After this event, says the Columbia, South Carolina, "State" (Dem.)

Mr. Archbold sailed for Europe, which impresses an unprejudiced observer as an eminently sensible thing for Mr. Archbold to do.

So much for Messrs. Penrose and Archbold. Now as to Judge Parker. The New York "Tribune" says that Mr. Roosevelt's letters of October 26 and 27, 1904, which "tend to show his desire to be free from Standard Oil entanglements, . . . were written just after the Democrats had begun the attack on the Roosevelt campaign collections, and just as Judge Parker was taking the stump with the sensational charges of corruption and blackmail which he was unable to make good." In that campaign, as the Rochester, New York, "Herald" (Ind.) says, "Mr. Roosevelt was directly charged by Judge Parker, his opponent, with having been aided by corporations and individuals hoping to profit by his administrative acts if he should be elected." But to the charge of Senator Reed, of Missouri, the other day, as quoted by the Chicago "Evening Post" (Prog.), that "Roosevelt did not order Cortelyou to return the Oil Trust's money until the day after Judge Alton B. Parker had made the charge at a mass-meeting in Madison Square Garden, New York, that the trusts were attempting to purchase the Presidency for Roosevelt," the Chicago paper reminds its readers that, as a matter of fact, "the Madison Square speech . . . was not delivered until . . . five days after Colonel Roosevelt's letter ordering the refusal of Standard Oil contributions." The "Post" adds:

Nor was the question of trust contributions made an issue on October 24, as Senator Reed charges. It had been made an issue long before that date by Thomas W. Lawson in his articles on "Frenzied Finance."

From all this the New York "Globe" (Rep.) concludes thus:

When Judge Parker made the charge eight years ago that corporations were making large contributions to the Roosevelt campaign fund with the avowed purpose of buying immunity from interference, he may have had knowledge of what Archbold was trying to do. He could not have known that Colonel Roosevelt ever consented to the acceptance of a bribe. To read the motives of an Archbold or a Penrose required no keen perception. To conclude that they had been successful was an unwarranted assumption.

But this does not end the matter. "Sundry gentlemen are hinting at the contents of their sleeves," notes the Buffalo "Enquirer" (Dem.). "They aver they have much besides elbows up them." The paper continues its picturesque phrases:

Senator Penrose threatens to tell more on Colonel Roosevelt.

Colonel Roosevelt threatens to let loose more facts and fury on Senator Penrose.

William Randolph Hearst threatens to tell on them all.

As Mr. Hearst is in London, he is, according to the Milwaukee "Sentinel" (Rep.), "far enough away to survey this Standard Oil money controversy in the perspective which conduces to breadth and impartiality of view." But the Milwaukee paper adds:

The result of Mr. Hearst's present philosophical detachment will hardly please Judge Parker and other Democrats who are crying out at the Standard Oil contributions in 1904 as something peculiarly Republican. . . .

Very good. In for a penny, in for a pound, say we. Take the lid off this whole business. . . . But what a shock it will be for Judge Parker should the removal of the lid disclose the Democratic dealings with Standard Oil pointed out by Mr. Hearst.

In the result, therefore, as it affects the two old parties, honors seem to be easy, if we may believe the Milwaukee "Sentinel." A few other judges, however, indicate that danger confronts Mr. Roosevelt. On the other hand, a much larger number of papers

indicate that a triumph awaits him, due to these "exposures." An exponent of the first notion is the New York "Herald" (Ind.). It warns:

Make no mistake. The danger the third-termer is in is now more serious than any he has confronted since the night of November 5, 1904, when, having called Judge Parker "an unqualified and atrocious" liar, he took the gambler's chance that the Judge would not produce the evidence of the $125,000 contribution of the Standard Oil Company to the Republican campaign fund.

The other view is reflected by such a representative Western organ as is the Missoula, Montana, "Missoulian" (Prog.):

What a farce it all is! . . . The case reacts upon the man who started it. Penrose finds he has stirred up a hornet's nest. He discovers that he has not muddied the water sufficiently to conceal his own infamy or his vile purpose. The whole issue of falsehood is built upon the name of a dead man. Were Cornelius Bliss alive, he would not be called as a witness. In that case there would be some other dead man named as the lacking witness.

As to the dead witness, many papers have expressed themselves as does the New York "Commercial" (Ind.):

If Archbold has told the truth, and if Roosevelt and Cortelyou tell the truth, it is certain that a person, than whose reputation in the minds of his fellow-citizens none ever stood higher as a man of spotless personal integrity, was the most shameless of thieves. To protect the reputation of the honored dead, if for no other reason, . . . Theodore Roosevelt's sworn testimony under the searchlight of further probing should be had as soon as possible.

The Chicago "Tribune" (Prog.) agrees to this, as it says:

Boies Penrose, standing at the switchboard, has turned on more light than he intended. The light should be kept on. The switch should be thrown wide open. . . . The committee should be instructed to uncover the whole machinery of Standard Oil politics.

Occasionally one finds some journal—as, for instance, the Springfield, Massachusetts, "Republican"—deploring these exposures because of "the certainty that the contest could not be kept above personalities of this ugly and bitter character." To such complaints the Chicago "Evening Post" (Prog.) thus replies:

Mr. Hearst publishes a lot of letters to Mr. Archbold and to Senator Penrose showing some very questionable dealings between Mr. Penrose and Mr. Archbold. Mr. Penrose replies by a bitter attack on Colonel Roosevelt. And Colonel Roosevelt defends himself. Therefore he is to blame for the whole affair!

The "Republican" was not afraid of "bitter personalities" in the days when Samuel Bowles made it a power against human slavery almost equal to that of Greeley and the New York "Tribune" or Raymond and the New York "Times." It is getting old.

In any event, as the New York "Evening Post" (Ind.) has it:

Among the many oddities of a peculiar Presidential campaign, surely none is more odd than the fact that, at the height of the campaign, a Congressional committee will reconvene to investigate the question whether an important Presidential candidate is a truthful man or not. We state this, not as a controversial argument or as indicating our own belief on the disputed question, but merely as a fact in American history to which future students of that history will look back with astonishment.

They may, but the astonishment will doubtless be aroused by the spectacle of a Congressional committee being used for purposes of partisan "muck-raking."

These particular "exposures" will doubtless end in purifying politics; but it should not be forgotten, as the Louisville "Evening Post" (Ind. Dem.) points out, that there has been "in the past ten years a growing sentiment among thoughtful men against soliciting or accepting large contributions from great business enterprises and great business men who have an interest in legislation and who desire to have friends at court." The paper continues:

One good effect of the changed attitude of the people towards political contributions will be a radical reduction in the expense of the campaign. The legitimate expenses, so called, have been enormous; and they ought to be cut one-half. The illegitimate expenses ought to be eliminated altogether.

The Knoxville "Journal and Tribune" (Rep.) adds:

These exposures are going to have a wonderfully purifying effect upon future campaigns. The people are going to demand the publicity of every dollar expended for campaign purposes, its source, and its uses.

Finally, the Washington "Herald" (Ind.), after recounting the complaint of Mr. Archbold that, though it had contributed to the Roosevelt campaign, the Standard Oil Company was attacked during the Roosevelt Administration, declares:

The example is salutary. It ought to be a lesson to those who give vast sums of money to political committees in the expectation that indulgences will be granted them covering illegitimate acts of wickedness.

Developments like those laid bare during the present campaign must hasten an actual rule by the people themselves.

PROBLEMS OF THE HOME

DISCUSSED BY OUTLOOK READERS

Articles recently published in The Outlook on various aspects of housekeeping and home efficiency have enlisted many interesting comments from Outlook readers. We print herewith extracts from some of the letters which have been received.—The Editors.

THE HIRED GIRL PROBLEM

An article, "The Experiences of a Hired Girl," published in The Outlook for April 6, 1912, was written by a "hired girl." It was a rejoinder to the many articles which have appeared in the magazines and daily papers from the side of "the lady of the house." The "hired girl's" plea was for a more business-like system in housework.

A PURELY BUSINESS ARRANGEMENT

THE subject is too vital and time is too precious to waste upon serious consideration of the mistress who failed to furnish clean roller-towels for her kitchen, which means not only discomfort for her maids, but danger to the health of her household: nor on the one who dismisses her maid after supper "without an hour's notice, and it may be raining pitchforks, and no reason is given." . . . Neither should much gray matter be exhausted upon the housekeeper who ordered fried apples and baked bananas at the same repast at any hour, on wash-day or any day, short of the Day of Judgment. . . .

On the other hand, there are many genuine trials and discomforts which in her long service she has had to endure, such as slackness in the arrangement of the work of the house, carelessness and indifference about ordering meals and supplies, worn-out and inadequate tools and utensils, and needlessly uncomfortable rooms. . . . We need on each side an interest and sympathy which does not extend to familiarity and intrusiveness—we need a great many things—but just an occasional application of the Golden Rule of the pulpit, with less frequent recourse to the foot-rule of the school-room, would by no means prove a bad starting-point.

Flora Hale Foster.

Marbledale, Massachusetts.

HOME LIFE, NOT BUSINESS

A woman, if she knows anything of housekeeping, will realize that even in the best-regulated families changes of work have to be made, sometimes frequently—time of meals changed in order to make home comfortable for the various members of the family. It is largely due to this fact that a few "rare girls," who do not go out except at the convenience of their mistresses, keep their places. Let us be thankful that there are still a few who consider the mistress, making their time for going out conform to her convenience. These few reap their reward in having, in the long run, more time for leisure than the regulation time of one afternoon every other week. . . .

It seems to me it is just this cry of "business" that is helping to ruin the maids of to-day. They care nothing for the home; they do not look longer upon their mistress's house as their home; they simply look for the "place" in which they can do the least work for the greatest sum of money; using that money for the most fashionable clothes they can get, often spending far more than the mistress whose money they are taking.

Does the maid of to-day ever replace dishes broken, cooking utensils ruined, often after but a few times using, because of carelessness? Does she often tell the mistress that the milk has run short simply because of her neglect to put it in a proper place to keep from souring, or that the biscuits are gone because she burned them? Does it ever occur to the average maid that this waste and breakage—if housework is simply to be treated on a business basis—should be deducted each month from her wages? We all know that there are the mistresses who do deduct breakage, who give the maid an improper place to sleep in, any old chair, bed, or bed-covering; but we also know that the maid is rare indeed to find who takes care of her mistress's goods, furniture, and food as though they were her own. . . .

If any way or means could be devised to teach these house-workers that clothes that are good enough for our houses are good enough to appear outside in; that the house in which they work is to be their home, which

they are to care for as their own; that the mistress for whom they work is in most cases ready to do as much, and usually far more, for the maid than the maid does for her mistress; that we all demand respectability, and that our standards of respectability must be accepted and followed rather than theirs; and if a sufficient number of people should band together to work for themselves until maids could be made to realize these things, and to realize that every one who keeps help is not a millionaire simply because owning a house and keeping a helper—then the help question would be at least bettered.

Do away with treating housework as a business; let us think of the home side, and strive to make more home life—even at the expense of doing our own work rather than rushing into apartments or boarding-houses, sending the washing to the laundry, buying bread and cake from the baker, and all the rest of it that goes with housekeeping, when the maid takes it into her head to leave. . . .

Weston, Massachusetts. (Mrs.) S. W. MEAD.

MISTRESS AND MAID

The mistress of a home needs to elevate the entire machinery of her household by scientific methods and common sense, recognizing the same economic value all the way along the line that a thorough business man sees in the operation of his factory or the management of his office; supplying herself with all the means possible for successful results in her home affairs, just as the man of her family provides himself with all that is necessary to his business situation. . . .

However, there is another side to the question that is due to the very same causes.

In the experience of many householders we find that the girls who might make efficient domestic servants are discarding the wholesome atmosphere of good homes and a line of work conducive to their higher development to take up other employment in which they are greatly exposed to many unpleasant situations, and in which they serve merely as human machines with a very limited exercise of intelligence and practically no expression of originality or individuality. . . .

Girls who serve the public need to know that in many instances when they leave a good home for supposed higher wages in factory or store they are not only mistaken in their venture as to the economic proposition, but as to many other points of the situation.

For example, a girl of whom I have information, and who represents a large class, was well established in a fine home on a very good wage, with comfortable room, and table in quality the same as provided for the family. She had the use of the sewing-machine, and was given certain afternoons and evenings to herself. But she developed a feverish desire to go into a factory, where she could get a wage double the amount she was receiving, and she could not be convinced that she would make the change against her own best interests. The result was a total failure of her life; nothing left to speak of after paying for board and room, and broken health and final incapacity for service of any kind. . . .

Lancaster, Ohio. ELLA C. GIESY.

SCIENTIFIC MANAGEMENT IN THE HOME

In The Outlook for April 13 there appeared an article by Mr. John B. Guernsey entitled "Scientific Management in the Home," one of a series of papers on "Home-Making the Woman's Profession." It showed how the much-discussed "scientific management" could be applied to housekeeping: first, the providing of food—the purchase of materials, the preparation for cooking, the cooking itself, the service; second, the providing of clothing and shelter, the laundering and repairing of clothes, the making of beds, the cleaning, heating, and lighting of houses, etc. The article has enlisted a number of sharp rejoinders. First of all we print

WHAT A RANCH WOMAN SAYS

I am just an ordinary ranch woman, living in an irrigated section of Washington, but the article on "Scientific Management in the Home" in a recent number put me quite out of sorts, and I must speak for the average farm woman.

The article was read the evening preceding wash-day. . . .

If I had been able to make a time schedule of that day it would have shown my reason, but I had no time to watch the clock nor to write down figures. So without the figures let me tell you some of the items entering into the day's work.

Prepared breakfast—I got my wash-water on, skimmed my milk, let my little chickens out of their night coops, and looked at my incubators.

Washed dishes—stopping to pound clothes in the boiler and wait upon an invalid mother.

Began washing, which should have been finished in so many hours, but these were some of my interruptions:

Helped my sister hitch up and start for school.
Helped father look after the sitting hens and take off the chicks.
Fed chicks breakfast, filling tanks with water and boxes with bran.
Turned eggs in incubators.
Cut green feed for old hens.
Mixed bread and later baked it.
Attended to irrigating water on garden and lawn at least a half dozen times.
Three trips to basement to regulate incubators.
As many times to care for chicks.
Filling an order for eggs.
Running in to see a "brand new" baby next door and bringing away the "next littlest" one.
Calls innumerable from baby and the invalid mother, who did her best to entertain him.

That is enough without following me further. I got through the day. We all do, and many women have more cares than I.

I realize that these outside duties would not be included in the work of a maid, who could be more of a machine. Her work would be finished early and she would have considerable leisure, while I get very little. But we ranch women need the money which comes from chickens, and must do our share of the work if we want garden or lawn.

Do not these duties constitute the real essence of home-making? Could they possibly be arranged for? We never have two days alike, and always something unexpected.

While mixing my bread I made this comparison. A housewife's work is like bread; the regular duties are the moisture and very necessary, but made to be of real value when mixed stiff with interruptions, the two together making a whole which serves the family and fills its place in the community.

Grandview, Washington. A RANCHER.

NOT HER HUSBAND'S PARTNER

Having worked for seven years, combining, in a necessarily higgledy-piggledy fashion—as most housekeepers are obliged to—the incompatible functions of mother and general servant-girl, I am always on the alert for helpful suggestions looking toward a readjustment of household labor.

Mr. Guernsey's article I concluded with a sigh of despair; it seemed to me that the author utterly fails to grasp the essential features of the housekeeper's difficulties.

Let me compare his attitude of vague optimism—born, I feel sure, of total inexperience—with that of Mrs. Josephine Daskam Bacon, who published not long ago a suggestive article about home-making. Mrs. Bacon had employed a housekeeper who objected to her job with the plea that she was "always being interrupted." "But," replied Mrs. Bacon (and here comes the most astute comment I've ever read about this traditional woman's business), "that's just what housekeeping is—isn't it?—a series of interruptions."

If it seemed so to Mrs. Bacon, employing four servants and having an ample income at her command, what must it seem to the mother of three or four little children trying to do all the household drudgery and properly care for her babies at the same time?

One of the chief reasons why housekeeping cannot be put on a scientific business basis is because a house has to be run to suit individuals, and not, like other businesses, to suit the community. A home is not successful unless it does suit the individuals who live in it; but, as these individuals are bound to be different in each family and to have different tastes and habits, it would seem impossible ever to get a class of workers who would be either able or willing, chameleon-like, to change themselves radically to suit the requirements of each new employer.

Housework consists of a series of attempts to do something in an orderly, systematic way subject to constant interruptions and carried on in the midst of unavoidable annoyances and perplexities, accompanied usually by anxiety regarding money. The woman who, combining the work of general servant and mother, manages to conduct a home in any degree successfully is one of the most indispensable social units of a State; but she is—I insist upon this, and so does many another woman with whom I have discussed the subject—virtually an industrial slave.

She is not, in the proper sense of the word, her husband's partner, for rarely does he give her a fair or regular amount for her work. . . . MRS. G.

Minneapolis, Minnesota.

This letter might be an eye-opener for some husbands. Every husband ought to provide his wife with an income for the household expenses. How a woman who has to keep house without an income can manage—and there is many a woman of that sort—is a marvel. Let this wife, however, remember that housekeeping is not the only business subject to interruption and to the whims of individuals. Part of her problem is to provide regularly for the irregu-

larities of her profession. In that respect it is like every other business.—THE EDITORS.

WHY ELIMINATE THE MOTHER?

Surely no experienced and sane housekeeper would undertake to run a home along any such lines as the author of "Scientific Management in the Home" describes. . . . He eliminates from his "system" the most difficult department of all—that of the mother. Imagine John home from school demanding cookies and bread and butter beyond the allotment, Mary flatly refusing her allotment of beans and demanding extra potatoes, Jennie turning her back on the soup service for the day, and the master himself refusing to accept a warmed-over dish! And how about the unexpected guest (or guests) brought home to the unprepared mistress by that same master? Suppose Biddy declines the "discipline" and burns out the allotment of coal in a red-hot range at 4 P.M. while the mistress is busy with a visitor in the parlor, and there's a cold stove for the 7 P.M. dinner? And so on *ad infinitum* from week's end to week's end. Then the system of extra wages for every extra service; and weighing the laundry! Alack and alas! save us from the folly of the uninformed! ELLA F. PELL.

Fishkill-on-Hudson, New York.

WHY DRAW A BABY CARRIAGE BY A STEAM LOCOMOTIVE?

For the ordinary family to adopt the plan of standardization would be about as practical as coupling a steam locomotive to a baby carriage! . . .

What cook would substitute soda for baking-powder or leave out the shortening? Or what person with the most meager baking experience would possibly consume seventeen minutes in mixing up a batch of biscuits when five minutes would be ample time without any effort at standardization?

The analogy of the home to the factory is absurd. In no business are the activities of one person so varied, so interrupted, and so dependent upon circumstances as those of a housewife.

Shall we turn our homes into factories or hotels for the sake of a few doubtful dollars and cents, and thereby lose that indefinable charm of home which springs from its endeavor to minister to the varying needs of its members? The idea of having standard-sized containers for serving soup, etc., may look well in print, but it would prove wasteful and unsatisfactory. Fancy serving the same quantity to the nervous, dyspeptic father as to his sturdy son of eighteen fresh from a football game! . . .

MRS. HARRY J. DUNHAM.

Chicago, Illinois.

GAZING OUT OF THE WINDOW

I started to read what Mr. Guernsey has to say with joy that some one was advocating system in household management. . . . Its tendency is aptly illustrated in the author's sample "time study" for making baking-powder biscuits. After detailing the steps of a typical method of procedure, he points out that "time could be saved in items two, three," etc. Item two we find to be, "Stands gazing out of the window" opposite the horrible total, "one hundred and two seconds." One hundred and two seconds lost in getting those biscuits into the oven!

And for one hundred and two seconds lost, the pleasure of the eye and spirit in, perhaps, the flash of a bluebird in a blossoming plum tree; the glow of the sunset sky; a quickening breath of spring from the garden.

Is this sort of scientific management worth while? Do we wish the work in our homes to degenerate into mere cold, mechanical accomplishment of given tasks? Surely, if it were to do so, home-making would lose its most precious essence—the freedom and the satisfying possibilities of normal human work under normal conditions. System, rampant, invites us to curb that freedom and to annihilate the satisfaction of creating by reducing creation to line and rule. No more such pleasure as we have been wont to take in stooping to sniff the warm fragrance of the sweet brown loaves just out of the oven, for we should thereby lose a valuable second! . . .

Yet in The Outlook of April 6 Dr. Max G. Schlapp warns us against a very real enemy, the "tension of modern life." "Everywhere the cry is for greater efficiency. . . . All the thought, all the suggestion of the multifarious lines of human activity, teach the doctrine of maximum effort. . . . Neurasthenia comes to us by the extraordinary, ceaseless activity which these generations of men through the grind of their remorseless industrialism have made the law of life." Is not this the result which we can reasonably expect from a like "remorseless industrialism" in our homes? Mr. Schlapp's whole article is a protest against women's following this terrible pace; yet we are urged

to bring "efficiency" as the one slogan into the woman's stronghold.

Womanly instinct cries out against such a reduction of home-making to scientific cut-and-dried, system-ridden housekeeping. Let us have system, indeed, but let us remember that system was made for us, not we for system. . . .

DOROTHY WATKINS.

Cincinnati, Ohio.

THEORY VERSUS PRACTICE

I am a graduate of the Normal Domestic Science course as given at Pratt Institute, and have had several years of housekeeping, during which time I have tried, and with some measure of success, to carry my scientific methods into my home. Still Mr. Guernsey's theory of "Scientific Management in the Home" seems to me far too theoretical to be of practical home use. He writes at some length of the benefits to be derived from standardization, and suggests a series of twelve correctly planned dinners, to be indexed and served by number. This might be practical if the persons for whom the dinners were prepared did not crave variety; and, judging from my own experience, I feel certain they would soon clamor for the soup of No. 6, the entrée of No. 5, the roast of No. 11, etc. Mr. Guernsey does not content himself with a standardized dinner alone; he standardizes our breakfasts and luncheons as well. It is here I ask for enlightenment. What is to be done with the fragments of these standardized meals? Theoretically there are no fragments. Still, a home is not a hotel, which Mr. Guernsey takes for his model, and we cannot standardize the friends who may unexpectedly join us in partaking of dinner No. 10, or the members of our own family who, owing to unusual circumstances, may crave more or less than the standard portions. There is more of thought and science required to combine the unused fragments of yesterday's meal into an appetizing dish for to-morrow than in the stereotyped preparation of two standard dinners. The human body is a machine, it is true, and as such requires proper fuel, but it is a machine possessed of a personality that demands a variety of fuel. Theoretically we could live on certain proportions of proteid, fat, carbohydrate, mineral matter, and water administered like so much medicine. Practically we could not, as the tempting of the appetite is a factor that must be taken into consideration.

At the outset of his article Mr. Guernsey differentiates between the duties of a mother and a housekeeper. The duties of the latter he defines as "providing food and headquarters and a shelter for the family." The very word "family" signifies a group of individuals of differing ages and occupations. Now it is a well-known dietetic fact that different ages and occupations require different foods. How, then, would standardized meals be adapted to a family?

In another paragraph Mr. Guernsey says, "Have all accounts charged, and pay by check." He had just spoken of the advantages of wholesale trading, and in such cases it is immaterial whether cash or check is used. But the average family cannot buy meat wholesale, and here I disagree emphatically with Mr. Guernsey as to the advantage of credit. I have never known it to fail that a charge account with a butcher for a certain period is larger than a cash account for the same length of time. One does not buy with the same care or figure the cost so closely when not doing so day by day. Personally, I find a grocery bill mounts up much more rapidly when paid monthly than when paid daily.

MRS. GEORGE C. ANDREWS.

Fulton, New York.

PSEUDO-SCIENTISTS

Cooking. Among other things, Mr. Guernsey intimates that a series of tests should be made to determine under what conditions the most heat can be obtained from the least coal. If this suggestion were at all intended to be taken seriously, he should have gone further and given detailed instructions as to the method of making the tests. It is generally recognized that the determination of calorific values calls for the greater skill of an engineer. To be consistent, he should also have recommended that, inasmuch as the quantity of heat is dependent both upon the quality of the fuel and the effectiveness of the stove, all the available kinds of coal and makes of stoves should be tested. . . .

Service. While the importance of written instructions in industrial organizations is generally recognized, obvious duties are always left to common sense and judgment. . . . The suggestion that, after determining upon a standard portion to be served to each member, the housekeeper should "provide a measure of just that capacity and mark it plainly with a serial number and direct how it should be used," is carrying the theory to an absurdity. . . .

Standardization. In introducing the subject "standards of time" Mr. Guernsey intimates that, as in the control of industrial operations, so the home is confronted with the necessity for "time studies, a planning department, functional foremanship, improvements in shop methods, and an improved wage system." It should hardly be necessary to point out that this classification was never intended by Mr. Taylor to apply except in industrials where the number of workers is such that ordinary supervision cannot insure satisfactory results. Efficiency engineers recognize that in a shop employing few men scientific management, as such, is an unnecessary burden and expense. Even the Tabor Manufacturing Company of Philadelphia, with whom these principles have been worked out most thoroughly, finds that the system does not pay when the number of workmen is low, in this case approximately one hundred.

Time Studies. Theoretically, time studies can be made of the simplest tasks, but where nothing practical is to be gained they are worse than useless. Mr. Guernsey gives a typical time study covering the task of "mixing and baking ordinary soda biscuit." If an experienced housekeeper does not know with reasonable accuracy how long it should take to perform such a common operation, she is at the mercy of the cook, and no analysis of the work into seventeen distinct steps will change the situation. . . .

Selection of Workers. As to the selection of workers, since when has a trained housekeeper failed to recognize an efficient servant almost at first sight—certainly within a short time after employment? The real problem seems to be to find servants who have average qualifications and to retain them after they have been secured.

There is no question that the average household is extravagantly managed. The evil, however, cannot be remedied by pseudo-scientists.

Ellouise B. and Lauritz A. Larsen.
New York City.

MR. GUERNSEY IN THE HOUSEWIFE'S PLACE

Mr. Guernsey has undertaken to point out in a classified way the duties of the housekeeper or servant. He outlines the main features of housekeeping, such as the cooking, chamber work, cleaning house, but the thousand and one miscellaneous things that a thorough housekeeper must do he neglects to take into consideration. Even that in itself shows the article was written from a man's standpoint decidedly. How many men I have heard tell their wives that *they* could do the work in half the time; put to the test, when wife gets sick, they give it up as a bad job after the first day's trial. It is easy—on paper and for a man—to separate the duties of mother and housekeeper. Since in the majority of cases the mother is housekeeper, it becomes another matter in actual practice. Mother likes to experiment and try new ways, but if in the midst of a "time test" such as is suggested Johnny cuts a finger, or baby falls downstairs, or Susie gets into the garbage-can, or the telephone rings, or father wants a button sewed on, or the tea-kettle boils over, or a thousand other possible interruptions occur, mother's time test will wait a more convenient season. . . .

Instead of showing that time is lost making biscuit in a very inconvenient kitchen—which fact is obvious—Mr. Guernsey would materially aid housewives if he would draw up a plan for a standard kitchen, and teach carpenters how to build one. In his typical time study of making biscuit he has the poor worker "go and get" eight times out of the seventeen items, when all could have been done while sitting on a stool, without even getting on to her feet. For some reason she must stop and wash her hands in the midst of the operation, and go to the pantry for a towel—a most unlikely place. She butters the pan, which is not necessary, and leaves out the shortening entirely!

Had the mistress of that house arranged it in the building process, things might have been different. A kitchen must be arranged and planned out before being built. In this day of swinging flour-bins and built-in cupboards the housekeeper who would keep her flour in a sack in the storeroom is hopeless, so far as Mr. Guernsey's plan is concerned.

It may be interesting to hear the outcome of tests of the plan by housewives. But it would be fascinating to watch Mr. Guernsey take some mother and housewife's place for a month and work out his own plan!

El Centro, California. Emma L. Packard.

A MAN'S VIEW OF THE STANDARDIZED HOME

My own six years' experience at the boards of hotels, restaurants, and the like leads me to believe that the extreme sameness of meals

offered at such places is the strongest force in our society, aside from the natural human instincts, for heading serious young men toward matrimony.

Does the writer assume that a man of hearty appetite will be satisfied with the same number of ounces of steak for dinner after he has spent a day or a large portion of it in the open air as will satisfy him after he has been in the office for eight hours? Picture a lawyer who has worked over the points of law of a case all day Monday and Tuesday. Whatever his standard may be, he will not particularly relish a heavy steak for dinner on Tuesday evening. But suppose that on Wednesday he drives in the country all day in a cold, raw wind. When he has finished his standard dinner for that evening, he learns that not another morsel has been prepared for him. Can you conceive that man attiring himself in *negligée* costume to spend a quiet and restful evening with his family, or is the gnawing of honest and unsatisfied hunger going to send him discontentedly to the buffet for an unstinted steak and a drink to help him forget about his domestic problem?

Or let us take the case of a man who is a cog in a machine and works each day under the same kind of conditions. Is he going to have the same degree of appetite on a dark, rainy day that he has in bright, clear weather? Perhaps he will acquire a habit if fed by standard that will become stronger than changing freakish desires that arise from day to day. I am not a mechanic, but I have had some experience in running the motor of a gasoline pleasure boat. I have found that, running at full speed, I have never been able to make a certain fifteen-mile trip in exactly the same number of minutes or with the same amount of gasoline. Greatest speed and efficiency are obtained with one set of regulations under high atmospheric pressure, and another set of regulations is best for a day of low pressure. So too does the machine have to be "tuned up" one way in the cool of early morning and evening, and in another way at midday. For financial reasons only can a living human being afford to make himself less sentimental and more mechanical than a gasoline engine? . . .

Robert De Heitsch.

East Jordan, Michigan.

THE HOME AND THE CHILD

In December, 1911, The Outlook began the publication of a series of articles on the management of the home. The series was entitled "Home-Making the Woman's Profession." As opposed to the common view that the housewife's work is drudgery, the series was printed to show that there is a better way, and that, in its course, there is no more drudgery for the housewife and for the mother of children than there is in any other work. As to the children, in The Outlook for May 11 there appeared an article by Martha Bensley Bruère entitled "Launching the Child." This contribution, like its predecessors by the same author on "Home Efficiency," "What is the Home For?" "The New Home-Making," "The Cost of Children," etc., found much sympathetic and some unsympathetic reading.

GUIDING THE CHILD

Mrs. Bruère's article in The Outlook of May 11 appeals in a very intimate way to educators. Her remedy for conditions as they exist, if strictly applied, would, of course, be impossibly drastic. The risk involved in a predetermination of the future vocational environment of any child by a mentor acting for society is one which society without doubt would be unwilling to assume.

But the trend of secondary education, in the West at least, is apparently forcing the initiation of such work as is being done by the Vocation Bureau of Boston and by similar bureaus. Special vocational schools are springing up, and most high school courses are being shaped to meet near or remote vocational needs. It is thus desirable for most students, and necessary for many, to make a tentative choice of vocation near the beginning of adolescence. At present the student has no basis on which to make such a selection except the vague misconceptions of parents and teachers, his own limited personal experience, and his immature unwisdom.

A necessary corollary of the organization of high school courses along vocational lines is therefore the organization in each school system of a department of vocational guidance, which shall undertake many of the things which the vocation bureau is at present doing. . . .

Under this plan society would not say to the student through its mentor, "Here is the greatest need. You must prepare yourself to meet it." But it says, through an

intimate adviser in whom the student has confidence: "You are, or may be if you know, interested in this vocation or group of vocations. Well, the pursuit of them offers such and such rewards. It demands such and such qualities. It fulfills such and such needs of society. It will be advisable for you to prepare yourself for one of the allied vocations in this group. If you and your parents agree with me, or if I can persuade you to agree with me, such and such courses and subjects and mode of life should enter into your preparation." Or perhaps, "You want to enter that profession. Do you know that you will probably work for a pittance? That there is already an enormous over-supply of the members of that profession? That success in it requires a rugged physique and good eyesight, neither of which you possess? Or that your deep-seated habit of generously and unreservedly bestowing your confidence upon strangers would prove ruinous to you there?" If the boy, having become convinced of the force of these and other obstacles, still persists in an effort to overcome them for the sake of entering a vocation to which he is attracted, he deserves to win, and the chances are that he will, and will furnish one of the exceptionally efficient individuals of whom every vocation stands so much in need. But if he is an average boy (of whom the Lord has made so many), he will probably be diverted to a field of endeavor in which he is apparently better qualified to succeed. . . .

Gardena, California. ROBERT J. TEALL.

A PLAINT FROM FLORIDA

I am a quiet, usually undemonstrative woman, wife of one of those "eliminated men" whom "no amount of brain and muscle can lift to the point of social efficiency" . . . a workman, proud to number among his co-laborers thousands of men of splendid brain power, and as his wife I should like some one to rise and explain why, from the amount of brain and muscle necessary to follow his trade, he should not receive in return sufficient remuneration to enable him to support his family in comfort.

Why, in the name of humanity, in the name of all that is just and right, should he have long hours, insufficient pay, with no holidays? . . .

I fail utterly to see how a "spirit of hope" and "ambition to succeed" may be nourished by "grasping the Christ idea of better things beyond." Say rather, it is only the Christ-like spirit that could enable one to endure the unnecessary stress of living at the present time.

I am glad there is one woman "efficient" enough and courageous enough to present the case as Martha Bensley Bruère has done.

Orlando, Florida. LILLIAN M. HARDY.

HUMAN VS. MECHANICAL ORGANISM

To one who believes, as I do, that the family, not the individual, is the unit on whose welfare and character depend (humanly speaking) that of both Church and State, whatever affects the family life is of vital consequence. So I turned with eager interest to the first of Mrs. Bruère's articles on "Home Efficiency." Feeling that she ought not to be judged by the first article only, I read carefully—sometimes indignantly—the others. I do not wonder that, as she says, the one phrase (making efficiency depend upon income) "has been a regular Benjamin Franklin's kite to draw thunderbolts."

In her first article the nearest she comes to defining an efficient home is, "The home is a machine by which we are to return to the community what it has a right to expect from us, and efficient or not, according to its social output." She illustrates by two families of entirely different ideas of life and in very different circumstances. She commends them (rather grudgingly) that they have both "made their homes turn out the sort of product they intended," but asks, "Was either of these homes really efficient?" . . .

The Wellses have furnished the State three citizens to take the place of two; other things being equal, a gain of fifty per cent. But they have done more; they have given their children a college education, with all the opportunity for culture and wider outlook that that training may give; a gain not easily expressed in terms of percentage. The training in habits of economy and thrift is for the welfare of the State; are we not told that it is such training that has given France her recuperative power?

The other family, the Parnells, furnish the State four citizens to take the place of two, a gain of one hundred per cent; their children also have college training. In their nineteen years of home life they "have gradually changed their open prairie into fields and farms." Ought not that to count as

part of their efficiency? That they go "splashing through life, having a good time while they are at it," may be a valuable asset in and to the community. They could hardly have a good time without associating with others. The good actually wrought by their free and easy, sunshiny living, just as truly as that wrought by the thrift and economy of the Wellses, depends on the soul and spirit of the life. . . .

The home is not a mere machine; it is a living organism. I agree that it is "not a self-sufficient dissociated fact," but I do think it is efficient often "through its own internal harmony." "The kingdom of heaven is like unto leaven." If the home has in it "loyal affection, clear perception of real values, plenty of humor, and that wholesomeness of tone and spirit which breeds health, courage, and character," is it not efficient in the highest sense? . . .

ARE THE JAPANESE MORAL?

BY GEORGE KENNAN

IN two previous articles[1] I have tried to clear up two widely prevalent misconceptions in regard to the Japanese—the first in regard to their inscrutability, the second in regard to their honesty. The last misconception that I shall deal with relates to their moral code and their spiritual ideals. I have left wholly unnoticed serious misconceptions with regard to their apparently impenetrable reticence and reserve, their alleged conceit, their imitativeness and lack of invention, the mask of smiles with which they hide their grief, their aggressive ambition, the alleged looseness of their ideas with regard to relations of sex, and many more that I cannot even enumerate. But when uninformed or race-prejudiced men have piled up a mountain of misconceptions, it is impossible in two or three articles to remove them all.

There is a widely prevalent opinion that the moral code and spiritual ideals of the Japanese are wholly incompatible with ours, and that in their attitude toward foreigners, toward the morality of the individual, the rights of others, and the sanctity of the family they differ so radically from us that we can neither understand them nor enter into sympathetic relations with them. The author of "The Valor of Ignorance" assures us that "in the racially different characters of the Americans and the Japanese no harmonious similarity exists—only divergent and incompatible ideals." If, however, General Lea did not himself have the valor of ignorance, he would hardly make a statement that is so wide of the truth. The eminent Japanese Fukuzawa, the founder of a university in Tokyo, and one of the most influential educators in modern Japan, drew up, some years ago, a moral code for the Japanese which represents, probably, the best teaching of the Empire in that field. At any rate, after the author's death the code was translated into English and sent as an exhibit to the Anglo-Japanese Exposition held in London last year. I wish I had space for a complete reproduction of it; but I will give a few brief extracts covering some of the points upon which the moral teaching of the Japanese and the Americans is said to be most divergent and incompatible.

The code says: "The number of nations in the world is by no means small, and they differ from us in religion, language, color, and customs; yet they are our brothers. In our intercourse with them there should be no partiality, and no attempt at swaggering or boastfulness. Treat others with trustfulness. If you trust others, they will trust you in return.

"It is an act of humanity, and one of the highest of human virtues, to extend to others that love which we feel for ourselves; to lighten the burdens and promote the happiness of our fellow-men.

"Society having as its units both individuals and families, it should be borne in mind that the foundation of a healthy society is the independence and self-respect of the family as well as of the individual. To treat women as if they were inferior to men is a barbarous custom. Men and women belonging to a civilized society should love and respect one another as equals, each sex realizing its own

[1] "Can We Understand the Japanese?" in The Outlook of August 10, and "Are the Japanese Honest?" in The Outlook of August 31.

independence and self-respect. Inasmuch as marriage is one of the most serious events in human life, great caution should be observed in the choice of a partner. All human relations have their origin in marriage—in the loving and respectful cohabitation, till death comes to separate them, of husband and wife, neither of whom should interfere with the independence and self-respect of the other.

"It is the duty of men living to-day never to allow intellectual development or moral culture to slacken, and to improve the civilization and happiness they have received from their forefathers so that they may hand them on unimpaired to their posterity."

Such, in part, is the moral teaching of Japan to-day. In what respect is it incompatible with the highest American ideals? It may be objected, however, that such moral instruction as this is for show; that it is intended to make an impression on foreigners; and that the Japanese themselves do not take it seriously. This objection would never be made by one who really knows the Japanese, but it may easily be answered. No nation ever teaches to its children in the public schools rules of conduct which it does not itself approve, and which it regards as inapplicable to the serious business of life. The Japanese drill their children in the essential principles of the Fukuzawa moral code through eight years of public school instruction; and in the text-book which finally sums up this long course of ethical training the character of an ideal Japanese is set forth as follows:

"A good Japanese is one who fulfills all his duties to his parents, brothers, sisters, and relations; who never forgets the veneration due his ancestors; who as master is kind and considerate to his servants; who as servant is faithful to his master. He will never forget benefits conferred upon him. He will act straightforwardly in all things, scrupulously observing his agreements, and acting in a generous, large-minded way to others. He will be kind and charitable, a respecter of what is right, and full of compassion for the unfortunate. He will hold in high esteem public order, devising schemes for furthering the progress of society, and careful not to be guilty of any impropriety, even in his dealings with foreigners.

"A good Japanese develops his physical powers; stores his mind with useful knowledge; and cultivates courage, endurance, self-control, moderation, modesty, and self-examination. He forms useful habits, practices virtue, applies his mind to the practical application of learning, and devises measures of self-development and continual progress. A good Japanese thinks highly of country, and, by cultivating a spirit of loyalty and patriotism, strives to fulfill all the obligations of a good citizen. In this manner should we develop our own personality, raise families, and do all that is required of us to benefit the world and our fellow-men."

Such is the instruction given to Japanese scholars in the public schools; and yet, according to General Lea, the people who train their children in this way, and who hold up to their young men this model of a perfect character, are so different from Americans that between them "no harmonious similarity exists—only divergent and incompatible ideals."

To a dispassionate foreigner who is not blinded by race prejudice or race antipathy three of the most striking and unlooked-for traits in the character of the Japanese are sentiment, generosity, and emotional magnanimity. Before I made their acquaintance I myself thought of them as hard, practical, materialistic, unemotional, and extremely reticent in the expression of what feeling they had. But I came to know them better. Let me give, in conclusion, a few illustrations of these characteristics.

In the year 1905 the Japanese cruiser Katori visited England and had a series of gun trials off the village of Charlton Kings, near Cheltenham. The Japanese officers were entertained on shore in the house of an English gentleman named E. Boyce Podmore, and there they learned to know and love Mr. Podmore's twelve-year-old son Robert—or, as they called him, "Bob." In 1907—two years and a half later—the boy died. The Katori at that time was on the other side of the world; but her officers heard of Bob's death, and in August, 1908, they caused to be erected in the parish church of Charlton Kings a memorial window with the following inscription:

The southeast window in the chancel of this church was erected by Engineer-Captain Fujii and brother officers of the Imperial Japanese Navy, in loving remembrance of their dear friend "Bob," their companion on the gun trials of the Katori.

ROBERT BUCKLEY PODMORE
Born June 6, 1893
Died August 14, 1907
"Swift to its close ebbs out life's little day."

The memorial ceremony was attended by Captain Tochinai and Lieutenant Tanaka, from the Japanese Embassy in London, and by Commander Makihara and Lieutenant Inegawa, of the Japanese navy.

It was only an English boy that died, but his Japanese friends on the other side of the world remembered him and showed their remembrance and love in the best way they could.

On the 24th of October, 1909, a commercial delegation of business men from Osaka, headed by Baron Shibusawa, visited the last resting-place of Commodore Perry, at Newport, Rhode Island, and laid on his grave a wreath of laurel and roses, tied with the colors of Japan.

On the 28th of January, 1910, Baron Kikuchi, former Minister of Education in Japan, made a special trip to New Brunswick, New Jersey, in order to lay a wreath of flowers on the grave of Dr. David Murray, of Rutgers College, who helped the Japanese to modernize their public schools nearly forty years ago.

In a recent letter to the Rev. Henry Loomis, of Tokyo, a Japanese, after expressing Japan's friendship for the United States, said in quaint English, "We are the people who long remember the good received, and soon forget the evil incurred, if any."

But it is not only their friends whom they remember. They pay tributes of respect also to the gallant enemies whom they have learned to esteem. On the 5th of May, last year, Captain Vladimir Semenof, of the Imperial Russian navy, died in St. Petersburg and was buried in the Alexander Nevski monastery. He fought the Japanese in the great battle of the Japan Sea, when he was one of the officers of the flagship Kniaz Suvorof. He was an enemy, but he was a gallant and honorable man, and Lieutenant Tanaka, of the Imperial Japanese navy, attended his funeral and laid a wreath of white roses on his grave.

On the 27th of September, 1909, the Japanese in Nagasaki honored their dead enemies by holding a solemn religious service in front of a monument erected there to the memory of two hundred and fifty Russian sailors who, at the battle of the Japan Sea, refused to surrender and went down with their ship.

In the very first week of the Russo-Japanese War the Russian cruiser Variag was attacked and sunk by the Japanese squadron of Admiral Uriu, in the Korean harbor of Chemulpo. The Japanese raised her, repaired her, and put her again in commission. On the 1st of December, 1908, she happened to visit Chemulpo under the Japanese flag, and at the very place where she had gone to the bottom under the fire of the Japanese her new officers and men held a Shinto religious service in honor of the Russian sailors who perished when she sank. Captain (now Admiral) Takarabe, who conducted the service, said:

"The brave men who died on this ship in the fight with his Majesty's squadron did for their sovereign just what we tried to do for ours. Enemies of our country though they were, we felt in our hearts sincere admiration for their noble devotion. Happening, by the strange irony of fate, to be visiting the scene of their heroic sacrifice on board the same vessel on which they fought, how can we help being deeply touched by sympathy and respect for their departed souls?"

But the Japanese are capable of feeling sympathy not only for their enemy's soldiers and sailors, but for their enemy's spies. On the 28th of September, 1904, they captured at Yentai, in Manchuria, a Russian spy named Vassili Liubof. The spy was tried by court martial, found guilty, and shot. After the execution the officers of the Japanese army sent to the officers of the Russian army, under a flag of truce, the following letter:

Vassili Liubof, thirty-three years old, a private in the Cheliabinski regiment, disguised as a Chinese farmer, was captured by our army on September 28. He confessed to the fact that he had volunteered his services and had been sent within our picket line to ascertain the movements and disposition of our army. After trial by court martial, he was sentenced to death, and on the 30th he was executed. In communicating this incident to your army, we cannot but express the wish that your army may possess many soldiers as worthy and honorable as was this Liubof. Prior to the execution, when asked if he wanted to say anything, he replied that he had nothing to say, as he was dying for the Czar, his country, and his religion. He was then told that his parents and his wife would be informed of his unflinching loyalty to his country and of his heroic death, and was asked if he had anything more to communicate to them. He replied in the negative, and added that he was not able sufficiently to express his gratitude to us. Asking our permission, he crossed himself, knelt down, and prayed in silence. Our sympathy for this ideal soldier, in whom were embodied such loyal and grand thoughts, was inexpressible.

Such is the spirit of the Japanese samurai. Is it the spirit of all nations in the Occident?

On the 2d of October, 1780, we hanged, at Tappan on the Hudson, a British spy

by the name of Major John André. He was a gallant and accomplished officer, a poet, and a musician; and George Washington, who approved the death sentence, admitted that the prisoner was "more unfortunate than criminal." He died on the scaffold, bravely and calmly. Did the officers of the Revolutionary army, in the hot blood and aroused passion of the struggle, send a letter to the officers of the British army, congratulating them upon having in their ranks so ideal a soldier, and expressing the hope that they had many more? If so, history has failed to record the fact. We did not even give André a soldier's death, but hanged him on a scaffold, like a common murderer. I am glad to be able to say, however, for the honor of our country, that after we had won our independence, after the bitter feeling excited by the struggle had subsided, we did erect a monument to André on the spot where he was captured.

One more illustration of Japanese magnanimity, and I shall have done.

When General Stoessel surrendered Port Arthur, he asked General Nogi if he would not have the remains of the Russian dead collected from the bare, shell-plowed Manchurian hills and have them decently and respectfully buried. General Nogi replied that he would—and he did. But the generous spirit of the Japanese was not satisfied with this. At a cost of forty thousand yen, they erected a stone monument over the bodies of the Russian soldiers, and in April, 1907, it was unveiled. Most of the Japanese division commanders who had taken part in the siege were present, and General Nogi himself wished to conduct a Shinto religious service in honor of the spirits of his dead enemies. He had lost both of his sons in the war—one at Nanshan, and the other at the storming of Two Hundred and Three Meter Hill—and yet this bereaved and sorrowful father wished to honor in this way the memory of the men who had made him childless in his old age. His offer to conduct personally a Shinto service, however, was disapproved by the Russian priests who were present, on the ground that anything of the kind would be heathenish. The monument was unveiled, therefore, with the ceremonies of the Russo-Greek Church only. It bore two inscriptions, both composed by the Japanese. On one side, in Russian, were the words: "Sacred to the memory of fourteen thousand six hundred and thirty-one Russian officers and soldiers who fell, fighting bravely and loyally for their country, in the battles around Port Arthur." On the other side, in Japanese, was a single line: "Death levels all distinctions between enemies and friends."

I think there is nothing finer than this in all the history of war.

It has been said again and again, by a multitude of writers and speakers, that the moral code and spiritual ideals of the Japanese differ so widely from those of Americans that sympathetic relations between the two peoples are practically impossible, and ought not to exist, even if they were possible. United States Senator George C. Perkins, in an address first delivered, if I remember rightly, before the National Geographic Society of Washington, and afterward published in the "Independent," compared the moral standards and spiritual ideals of the Japanese and the Americans as follows:

"It is a question of the Orient and the Occident; of races so different in mental characteristics, so separated by thousands of years of development upon lines which seem nowhere to touch, so divergent in morals, ethics, and the ingrained habits of scores of centuries, that there is no attraction between them because they cannot understand each other. Each stands isolated and alone as regards the other. There are no points of contact, none of sympathy. Their ideals clash; their motives have entirely different bases; their aims have nothing in common; they are aliens to each other." [1]

I have quoted a part of this address of Senator Perkins because the opinions that he expresses are those of a score, at least, of other writers and speakers who offer to instruct the American people with regard to the character of the Japanese. How much truth is there in these statements—if any?

In 1591—three centuries and a half ago—there lived in Japan a man named Seigwa Fujiwara. He was an eminent scholar and teacher. He founded an influential school of philosophy, and he lectured for years in Kioto on the moral code of the Japanese. One of his disciples, a merchant named Teijun Yoshida, became engaged in trade in the foreign province of Annam—now a part of Cochin China—and while he was there Seigwa wrote to him as follows:

The object of trade is to enable each of the two parties concerned to obtain a share of the profits. No one must aim at benefiting

[1] "Independent," February 12, 1907.

himself alone. Profit that is shared with another may seem small, but, because so shared, it becomes great. And *vice versa;* gains that are exclusively appropriated may seem big, but they are actually small. What is profitable and what is just are in close relation with each other. Beware of bringing our national customs into contempt. If in foreign countries you come across highly virtuous and benevolent men, honor them as your own father or your own teacher. Observe the laws and customs of the country in which you live. Remember that the human race all belong to one family. Remember that virtue is everywhere the same. Though foreigners have different customs from ours and speak different languages, the reason with which Heaven has endowed human beings is theirs as well as ours. Remember how many are the resemblances and how few the differences between us and them.

Such was the moral code of the Japanese, or of their best teachers, and such was their view of foreigners, about the time when Sir Walter Raleigh was establishing colonies in Virginia, and long before the Pilgrim Fathers landed on Plymouth Rock. Which is the more enlightened and civilized view of foreigners, that of the Japanese Seigwa, who lived and wrote in the sixteenth century, or that of the American Senator Perkins, who lives and writes in the twentieth? Which is the better statement of the moral principles of trade—that of the sixteenth-century teacher in Japan, or that of certain twentieth-century captains of industry in the United States?

THE MORGUE MAN

BY LEWIS EDWIN THEISS

EVERY rule has its exception. The exception to the rule that "one half of the world never knows what the other half is doing" is found in the case of the keeper of a newspaper "morgue." He is an exception, because he knows all things about all men. He is as omniscient as Jupiter. He is as far-seeing as jealous Juno. He is a composite of the all-seeing eye, the camera, the phonograph, and the dictagraph. Nothing escapes him. He has a memory like sticky fly-paper. Nothing that comes to his knowledge ever gets away from him. He is the earthly counterpart of the recording angel. His record, like the physician's, often begins with the birth and ends with the death of a person. It is as complete as life itself. And its import is as weighty as the record of St. Peter's, for the newspaper morgue is as inexorable as the book of judgment.

The term "morgue" is newspaper slang for the biographical department. The morgue is that part of a newspaper which collects, classifies, and records facts about persons and things. It is a combined social register and rogues' gallery. It is a who's who and why, with especial emphasis on the why. It is an encyclopædia of biographical information. It is a compendium of human facts. It is a ready reference work of personal items. It is the means by which the newspaper, in times of leisure, prepares for times of haste.

Specifically, the morgue is a collection of clippings. These come from newspapers, periodicals, pamphlets, books. "Press bulletins" are to be found in the morgue. News "stories" that have been written but never published are there. Even letters, telegrams, and other communications—some of them of the most confidential nature—find their way into the morgue. All the promising news items printed by all the newspapers and all the periodicals, with some items that no one ever dared to print, are here filed away against the day when their subjects shall marry, be divorced, get arrested, or die—or in any other way come into public notice.

These various items are all safely stowed in strong linen envelopes and stored away in drawers; though in some morgues the clippings are securely pasted in books, which are kept exactly as any other library is kept. All these clippings are carefully assorted and classified and indexed and cross-indexed, so that in a moment's time the morgue-keeper can lay his finger on any one of the millions of clippings. I say millions advisedly. I mean millions literally. At the least, one hundred thousand clippings are filed away every year in the morgue of a great newspaper. There may be many more. As years

pass, these clippings become of incalculable value. Once lost, they can never be replaced. So every precaution is taken to safeguard them. Envelopes or books of clippings taken from the morgue are charged up to the reporters or others who take them, just as volumes in a public library are charged to the borrowers. In some newspaper offices the morgue man and his assistants—who sometimes number a dozen or more—work inside of steel cages, like bank clerks; while the clippings themselves are kept in unburnable steel receptacles. Easily the most valuable thing about a newspaper office is its morgue; and when fire occurs, the first cry that goes up is, "Save the morgue!"

At first blush it would seem that nothing could be easier than to cut clippings for a morgue. The truth is just the opposite. Good morgue men are like poets—born, not made. A morgue has a physical limitation. It must be kept as small as possible. Hence there must be nothing unnecessary in it. On the other hand, it must lack no needful item. The morgue man, therefore, must have the keenest kind of a news sense. He must be able to judge at a glance the potential news value of every item printed. For instance, he must know whether or not the fact that John Jones was robbed, that Sam Smith addressed the Shakespeare Club, or that Robert Robinson bought a certain painting will have any news value in future. And the accuracy with which he judges may not be apparent until twenty years later, when Jones has become Governor, and Smith the greatest embezzler of his day, and Robinson the owner of the greatest private art collection in existence, and the newspaper wants every item it can rake up about them. Being mortal, the morgue man is not infallible. So it happens that in every morgue there is many an envelope with but one clipping in it, and perhaps a tiny one at that, that the morgue man clipped in some Micawber-like moment with the expectation that eventually something would "turn up" about the subject of the clipping. Just why some of the things in a morgue should be there it is a little difficult, say, after twenty years, to tell; but you may be sure that the morgue man had a very good reason to put into the morgue anything that is there.

Perhaps you wonder what is in a morgue. It would be hard to tell. It would be even harder to tell what isn't. Anything that has ever been printed, written, or spoken is likely to be there—and perhaps some things that have only been thought. The morgue man is such a knowing individual that you never can tell. Picking twelve items at random from a big morgue, I find them to be as follows:

Cable rate cut in half.
Fogarty, life-saving cop, gets gold medal.
Gladstone's grandson and heir attains his majority.
Fifteen million dollars tax on wealth left by Harriman.
Lorimer in his own defense.
Goslin's secretary sues W. R. Garrison.
Her "man-God" self-slain.
Maybe Raisuli's dead.
Post-Office Inspector Reddy resigns.
Philadelphia's new District Attorney.
Asks court's aid in famine of turtles.
Hospital must bar alcohol.

Filed away in other envelopes are the sordid stories of Ruth Wheeler's death and the murder of Cæsar Young. Here is preserved the history of the $25,000 taxicab robbery, of the Virginia massacre by the Allen gang, of the assassination of President McKinley. The life story of Jimmy Hope, the bank burglar, is here in full. Here, too, is the story of "Little Joe" Atkinson, New York's last hangman, with his gruesome fondness for the rope with which he sent so many people into eternity—the counterpart of the awful hangman in "Barnaby Rudge." Here also are tales of Chinatown's tong wars and the story of New York's gangs and their feuds. And as an offset to all these drab chronicles the morgue tells the splendid story of the brave deeds done when the steamship Republic was sunk. Here is the tale of the Larchmont disaster and the story of those brave fishermen who faced almost certain death to save the survivors. Here is the thrilling story of the Windsor Hotel fire and of Chief "Jack" Howe's magnificent heroism. Here is the tremendous tale of the California earthquake and the brave days that followed. Here is the record of Policeman Coyne, who on a frigid winter's night jumped into the East River, sought out an unseen drowning man, and brought him to shore. Here without end are tales of murder, fire, dishonesty, love, chivalry, devotion, heroism, war—in short, of almost everything that ever happened.

To qualify for a place in the morgue one need be neither a hero nor a villain, though both are here. For the morgue is as democratic as the grave. It is the one place outside of the United States Constitution where

all men are equal. Nevertheless, the morgue is not entirely free from class distinctions. The subjects therein are divided into several classes. To begin with, there are the people who don't know they are there. They constitute a vast majority. There are those who know they are there and wish they weren't. There are those who know they are there and are glad of it. And there are those who paid to get there.

This last statement does not mean that one can buy a place in the morgue as one can buy space in the advertising columns. Far from it. Directly, one can buy one's way neither into the morgue nor out of it, any more than one can bribe old St. Peter to falsify his records. Nevertheless, some people get into the morgue by paying. But they do not pay the newspaper. A while back I spoke of "press bulletins." The hope of notoriety springs eternal in the human breast. Some enterprising persons have turned that hope into cash by "writing up" individuals who are willing to exchange real money for the possibility of being "among those mentioned" in the news columns. These little sketches, known as "press bulletins," "bio-bulletins," etc., are sent by the promoters to the newspapers. Upon request the promoters will also send half-tone cuts of the persons written up. As these sketches cost nothing and are accurate, the morgue man welcomes them.

In itself this scheme of thus writing up a person is innocent enough. It is simply a scheme to play upon vanity. Yet it may become the means of blackmail, as a certain morgue man discovered. He received one day a very flattering write-up of a prominent lawyer whom he knew well. This exhibition of what looked like vanity in a hard-headed attorney surprised him. When, later in the day, a news story came over the wires involving that lawyer's name with a woman's, he thought he saw a light. That night he met his lawyer friend at a college dinner. "What did that sketch cost you?" he asked, point blank.

"Five hundred dollars," said the lawyer.

"Tell me this," said the morgue man. "Just what did the writer of that sketch say to you? Did he intimate that he could keep your name out of print as well as get it in?"

"Yes; he said he had confidential relations with the newspapers," replied the lawyer. "And he thought I might like to make use of those relations at this time."

"Well," said the morgue man, "you've been stung. If there is any man in existence who could have that story about you killed, I could. And I could no more suppress the story than I can fly."

The next day, accompanied by a Government attorney, the two men visited the writer of the sketch. He refunded $450, the remaining $50 being allowed by the lawyer as a fair remuneration for the actual service rendered. And that service proved to be the worst kind of a boomerang. It gave to the newspapers just the biographical facts they wanted, and it increased rather than decreased publicity about the poor lawyer.

Those who would like to get their names out of the morgue are, of course, usually persons who have done something either criminal or disgraceful. Particularly would certain individuals of the criminal class like to get out of the morgue. The rogues' gallery and the Bertillon system are not more hateful to them. For no police record in existence begins to compare in completeness with the information contained in some morgues about certain wrong-doers. Some of these persons would gladly pay thousands of dollars to get their names out of the morgue; but be it said to the honor of newspaper men that such a thing as a morgue-keeper's selling out to a rogue is unknown in the annals of journalism.

To classify the various items in a morgue is, as a rule, easy enough. Particularly is that the case with the records of individuals; for all that is ever printed about the average morgue subject will slip easily into one small envelope. But here, as elsewhere, there are exceptions to the rule. So much is printed about such men as J. P. Morgan, Andrew Carnegie, and John D. Rockefeller that the morgue-keeper is put to it to know how to arrange the clippings, for the first essential of a morgue is that every clipping shall be instantly available. In the hour of stress the hurried reporter has no time to hunt through scores of clippings. He must be able instantly to lay his finger on the clipping he wants. So the morgue man divides the clippings about prominent men along different lines. Mr. Roosevelt is at once the joy and despair of the morgue man. The things that have been printed about him in the last twenty-five years—and they are all in the morgue—would make a library in themselves. There are simply pecks of Roosevelt items. As one morgue man put it, "We had to choose

between running a Roosevelt morgue with the world on the side, and a world morgue with Roosevelt on the side. We chose the latter." In order to make all his Roosevelt clippings available, this morgue-keeper classifies them as follows :

Administration.	Harriman.	Politics.
Africa.	Home life.	Pope.
Ancestry.	Labor.	Presents.
Athletics.	Mayoralty.	Race suicide.
Author.	Miscellaneous.	Railroads.
Biography.	Navy.	Sagamore Hill.
Comment.	Negro.	Spanish War.
Dangers.	Peace.	Speeches (two envelopes).
Fads and fancies.	Peace of Portsmouth.	Third term.
Hunter.	Messages.	Tours.
Governor.	Police Commissioner.	Vice-President.

But if Mr. Roosevelt is the despair of the morgue man, Mr. Bryan is a complete distraction. As a morgue man put it, "You can't classify Mr. Bryan; he is on all sides of all questions." So the clippings about Mr. Bryan are put in envelopes marked 1900, 1901, 1902, 1903, and so on.

Although the morgue is intended solely to aid the newspaper in its work, it frequently happens that the morgue is of use to outsiders. The police, both official and unofficial, are indebted to newspaper morgues for many a success. Every newspaper is glad to place its records at the disposal of the authorities; and some morgue-keepers work hand in hand with the municipal police, the secret service, and various private detective agencies in rounding up certain classes of criminals. This connection is especially valuable to the police from the fact that people will often tell to a newspaper facts they will not tell to the authorities.

Detectives from a private agency, for instance, came to one morgue-keeper recently and asked to be allowed to use his morgue. Their credentials were satisfactory, and the privilege was granted. But they could not find what they wanted. They were inclined to be "mysterious," and would not at first tell the morgue-keeper the nature of their case.

"Very well," said he. "I am willing to help you; but if you really want information, you will have to show your hand. I cannot accomplish much in the dark."

They told him that a certain man of prominence had subscribed to a biographical publication in which his own biography was to appear. The book was not as represented, however, and he refused to pay. Thereupon the promoters sued him for three hundred dollars. The money was nothing to him, but he refused to be bled. So he hired detectives to look up the promoters. The detectives were morally sure the promoters were swindlers, but they had been unable to lay their hands on a single shred of evidence to prove it. Their last hope lay in the morgue. In no time the enlightened morgue man laid before them the information they so much wanted. His cross-references showed him that, although nothing was filed away under the name the detectives were looking for, columns were on file about the man in an envelope labeled "Newspaper Grafters." These clippings showed that the man who got up the fraudulent biography had been working similar grafting games for fifteen years. When the trial came off, the defendant subpœnaed the morgue man, who came to court armed with bound volumes of his newspaper, in which appeared accounts of former swindles perpetrated by the complainant. When the latter's lawyer saw the newspaper volumes, he withdrew the suit. Thus the newspaper accomplished what the detectives could not accomplish. The grafter in question had never been arrested, and so the police had no record of him. The newspaper, however, had a complete history of his various swindles.

The morgue man and the police, it has been stated, often work hand in hand. It is not too much to say that the downfall of those crooked financial firms Burr Brothers and B. H. Scheftels & Co. was due entirely to the activities of one morgue man. From all quarters information poured in to him about the fraudulent schemes these concerns were fathering. These complaints were turned over to reporters and the frauds were exposed so baldly that the post-office inspectors were forced to take action and raid the two concerns. When the trials came round, this morgue man turned over to the Government attorneys all the mass of evidence he had collected. Everybody knows the result.

The morgue man in question got his information by "planting" fifteen or twenty "dummies" on the "sucker list." That, as most people know, is a mailing list of "easy marks," and can be found in the office of every fraudulent stock concern. Each of these dummies bought one or two shares of some cheap stock from one concern or another, and so they forever got their names on the list. Thus they received literature about every new

scheme started, and this literature was promptly forwarded to the morgue man. In that way this particular morgue-keeper is in constant touch with the stock swindling game; and he knows about every venture the promoters bring forth within a few days of its birth. All this information is filed away against the day of judgment that the morgue man knows is sure to come.

Perhaps there is no better illustration of the inexorability of a morgue than the case of one of these modern financial pirates who formerly was little short of being a real pirate. In exposing one of this man's schemes, the morgue man told something of his doings a quarter of a century previously in the South Seas. The promoter, thinking that no witness of his crimes survived, brought suit against the newspaper. One man only—and he was in Alaska—had personal knowledge of this man's crimes. That witness could not be found. But the morgue man substantiated the story in his paper so well that the paper won the suit. Thus the morgue, like a voice from the grave, spoke out in damning accusation.

The primary use of a morgue, of course, is in aiding a newspaper in its work of printing the news. In this respect the morgue has a thousand uses. Sometimes it points the way to news; sometimes it furnishes the news itself. Frequently it is the newspaper court of last resort.

Years ago, when it was believed that Marshall Field would be made a member of the President's Cabinet, that merchant prince, the Chicago papers wired their New York correspondents, was due to arrive in New York on a certain train. The city editors sent squads of reporters to meet him and get an interview. But the train came in and Mr. Field was not on it. As it turned out later, he left the train just before it reached New York to dodge the newspaper men. The papers were in complete darkness as to his whereabouts. Late in the evening one night city editor dug into his morgue until he unearthed a tiny clipping which showed that some years previously Mr. Field had once stayed in New York with a relative at a private house. "That's where he is," said this editor to his reporter. "Go up and get an interview." That's where he was, too, and the reporter got the interview. He was the only reporter in the city who found Mr. Field, and he scored a "beat." The morgue did it.

Some months ago a young man killed himself in one of New York's big hotels. There was nothing in his possessions by which to identify him. A coroner looked at the suicide and remarked that he resembled young Lord Sholto Douglas, of England, who years ago buried himself in this country. Young Douglas had once been on the stage. Two theatrical people, who, it later developed, did not know Lord Douglas, identified the body as that of the missing Englishman. Thereupon the story went broadcast that Lord Douglas had killed himself. At once the "Sun" Press Bureau was deluged by queries from all parts of the country asking if the story were true. The "Sun" reporter was not satisfied with the identification that had been made. So he went to his morgue. There he found an obscure item which gave the name of a physician who had once examined Lord Douglas for an insurance company. The "Sun" reporter hunted this physician up, and got him to examine the dead body. The physician said positively that the dead man was not Lord Douglas. Thus the "Sun" was able to deny the story that had been sent out by other news agencies. And its denial was confirmed a few days later when the real Lord Douglas was found somewhere in New England and interviewed.

In the main, however, the morgue is useful as furnishing material for biographical sketches, especially of the obituary kind. Upon the death of any person the reporter writing the "obit" has but to turn to the morgue, and, if anything has ever been printed about his subject, he will find it there. That enables him to compile a biography in short order.

In the case of prominent persons, however, the city editor dare not wait until they are dead before he has their obituary story written. That story may occupy a page, and the person may die just before press time. The city editor never knowingly runs a race with either time or death. He dodges such contests by getting ready beforehand. Hence, at the first news that a prominent person is ill, he assigns a reporter to write the sick one's obituary. At the time this article is written Dr. Mary Walker lies critically ill. To-day's news story about her is an interview which she begins by saying, "Don't write my obituary yet." Of course Dr. Walker could not know it, but her obituary had long since been prepared. This practice of obituary forehandedness has come to be

regarded in newspaper circles as a life-saver, so many persons have recovered after their "obits" have been written. The obituary of the late Senator Platt, for instance, was written ten years before his death by a man who died two years before Mr. Platt did. If a man gets well, the story is simply filed away in the morgue against the day when he shall be mortally ill. So every morgue contains the "obits" of a good many people who are anything but dead.

Forehanded as all this seems, it is not forehanded enough for the city editor. He is always haunted by the fear that something will happen and find him unprepared Even though a story is written, it takes time to put it into type; and those minutes might mean that the paper would be beaten on the story. So the obituaries of the crowned heads of Europe, of the "big" men of America—in short, of every one the world over who is prominent enough to be liable to assassination—are kept set up in type. In some offices also a half-tone of the subject is ready to go with each story. Some newspapers have enough of these "standing obits" to fill an entire issue of the paper. It needs only a flash over the wire saying a man is dead, and his life history can be on the sidewalk in ten minutes' time.

In the matter of getting out the news an ounce of foresight is worth several pounds of hindsight. The morgue man is the doctor who is responsible for that ounce. He is the journalistic specialist in prevention—the prevention of unpreparedness.

THE SPECTATOR

THE Spectator is the owner of a small domain where he spends some cheerful July days free from door-bells, telephones, and messenger boys. Here trees, shrubs, and vines respond amazingly to his casual care, though severe drought, together with absentee landlordism, causes them to look injured and in some cases to pass away.

The Spectator loves all the birds that sing or fly, from oriole and song-sparrow to the dingy swallows that circle high above the chimney at evening and build in its safe depths. In and out they fly with a sound of distant thunder, and carelessly lose their callow young down in the fireplace below, and so make the Spectator a world of trouble. Like some human beings, they appear to have broader views than family life affords, and are willing to trust their offspring to those of less important aims. To rescue these helpless, complaining mites, loud even in extreme callowness, is a thankless task. In a feathered state they dash themselves against closed windows, and are hard to catch even in butterfly nets. One returns after days of absence to find the place a House of Dead Birds, as a little child once called it. They have tried every room in vain, and for days one comes upon them in dark corners and behind articles of furniture, their sad little lives beaten out, the scheme of their existence frustrated.

While a bird-lover by nature, the Spectator has no fellow-feeling for hens. Though surrounded by them, and often vexed by their narrow-minded ways, he lives in a chronic state of forgiveness when they scratch mulch away from protected tree roots, dig up annuals, wallow in tender flower-beds, and do all the mischief possible to their limited intelligence. In common with the Indian, they recognize no private ownership of land, and are just as ready to devastate their owner's garden as the Spectator's, equally aggrieved and flustered at stick-and-stone arguments at home and abroad. So one bears with them, as with idiots, for instance, whom they closely resemble. In the long line of evolution, tremendous to thought, who can prove that the original idiot was not a hen? In many ways hens resemble certain human beings—minus intellect.

Just now the near neighbor's old speckled hen has made her usual promenade in a leisurely way among trees and shrubs, digging up recently transplanted things, wallowing in soft flower-beds, pecking at certain tender lettuce leaves long obscured with brush, but just now carelessly allowed the freedom of air and sunshine, sitting down in the bed and throwing dust over the hopeful leaves.

The Spectator, on his vine-shaded porch, stood overlooking the ruin wrought by one insignificant member of barnyard society. He might have driven her off for the moment with stones and execrations; but the process is a warm one on a sultry day, and it would have disturbed his

own permanent serenity, though not the hen's, and led her to think(?) it worth while to return to the attack when she had roused the neighborhood with her shrieks of indignation. It is never worth while to call a burglar's attention to places of deposit. So the Spectator sat down with his finger between the leaves of the book he was trying to read and watched. If there are sermons in stones, there are whole volumes in hens. This special speckled one, perhaps tired of misdeeds, but more probably hearing the dinner call, decided to go home. First she tried every picket in the fence which divided her from her kind, raising and dropping her head in a foolish way, as if the spaces might be broader above or below. To us human creatures also the untried is pregnant with possibility. But the pickets were set with precision, and, though there were many openings below where ambitious hens had at some time wriggled their unwelcome bodies through, they made no sign, nor did the other hens beyond the pale take the slightest notice. The Spectator was reminded of the father of an eminent scientist who never responded to any question that was not put in a form he liked.

The address of the speckled hen might have been unpleasing. There was a suspicious cackle from the barn beyond. It sounded like that of the Black Spanish pullet, just embarked on the grand enterprise of laying and full of the importance of the deed. Every morning she shrilly and continuously announced this most momentous event, as if she had laid a dozen Black Spanish eggs at the highest market price and dared not die with all the music in her. Bursting with the idea that the country could not long hold its own without her special brand of egg, she amuses the Spectator with her likeness to a political convention.

Our speckled hen heard and did not hear; but some vague memory was disturbed in her mustard-seed of brain, and she redoubled her futile efforts to break through. Not a picket yielded, though she batted each one. Back and forth she paced along eight, nine, ten post divisions, seeking she knew not what, but seeking just the same—a tireless shuttle driven back and forth, back and forth, weaving shadows.

The Spectator, having a larger proportion of brain, could have put his finger on a dozen dug-out holes where she could have squeezed through with little or no effort. So many of us

"fail to find
That which lies close at hand."

But unsought help is seldom appreciated even by mortals, and the speckled hen, by her very nature, would have resented any aid—any seizing of her personally and thrusting her head through with squawkings like death throes that would have called out her indignant owner. None of us like interference—butting in, in the slang of to-day—and it is doubtful if the determined hen could have been butted in (to change the tense) even for her own good with the most heroic effort. So the Spectator, with his finger still in the volume—whatever he may have been reading at the time from the table beside him—leaned back and watched. Sixty-three times, by actual count, did the hen pace back and forth, leisurely, hurriedly, madly, never giving it up, while the creatures, her relatives, on the other side took no more notice of her than if she had been a ghost. And she kept to her original limits, having a dim consciousness perhaps that somewhere between these special posts there must be an opening, because she had come through. O human reasoning! O human hope!

The Spectator went back to his reading and tried to forget, but after a blurred quarter of an hour looked up. She was still at it. The fence would not yield, neither would she. That is the one heroic quality of hen nature that the Spectator has discovered—

"A glorious firmness that her enemies call obstinacy."

Opening after opening she passed and missed, stopping to consider just beyond it. The Spectator yearned to say, as he often yearns to say to the young of his kind, "I could show you the place—you've missed it forty times, and you're going to miss it forty more;" or, "You lost your head when something cackled, and so looked the wrong way." But, as in human affairs, he held his peace, and the hen never gave it up. After an hour the Spectator came back to the book he had abandoned, and there she was—"at it again."

Just then a passing boy shied a stone at the distracted and distracting creature, which broke up the routine of her course and cleared her mind to see the opening just where she was, and without effort she slipped through.

The Spectator pushed aside his books, took up paper and pen, and settled down to a puzzling problem that he had failed to work out—a problem that had spoiled weeks of his vacation, persistently dogging his conscience,

"Deep'ning his midnights,
Dark'ning all his morns."

He had learned something from a hen.

LETTERS TO THE OUTLOOK

WHY THE HIGH PRICE OF MEAT?

The high price of meat is one of the multiplying problems of the high cost of living. And rightly it is, for in the past few days a new chapter has been written in meat history. Cattle have been sold in the Chicago live stock market at the highest price known since Civil War times, and there seems to be no immediate prospect of relief.

The packer has been unjustly blamed for the present prices of meat. This part of the high cost of living should not be wholly blamed to big business, but partly also to the man who, under the profitable conditions that now exist, does not produce meat. I mean the corn belt farmer.

The opportunity for profitable live stock production has never been equaled since time began, yet we learn that less live stock is produced from year to year, notwithstanding the unequaled prices and opportunities.

Our exports of beef have decreased enormously from year to year, and unless the American farmer awakens to the situation not another decade will pass until the South American stock-raiser will be reaping the profits that could have been left among our corn belt farmers, and would in turn have been distributed throughout our land, for the farmer buys through every avenue of trade.

The opportunity for profitable live stock growing does not seem to be fully appreciated by the corn belt farmer. He lives in States more naturally adapted for meat-producing than any other country in the world. He produces every food element necessary for the most profitable feeding. With the introduction of the silo and the greatest meat-producer among forage, the alfalfa, he holds the reins of prime beef and pork manufacture in his hand. With the silo to save tons of feed that has been heretofore practically wasted, and the alfalfa producing two to three fold over the other varieties of hay, he finds his feeding resources unequaled. Corn is his principal farm product, and is the most essential of all foods for meat-growing, and he has access to the world's best live stock markets. Yet he is contented to see the farmers of another continent reap the profits by establishing a foreign trade that he should have possessed, and is contented to market his grain through the elevator from year to year and thus deplete the fertility of his farm. No farm can continually stand the drain on its resources by incessant grain farming, any more than we can check continually on a bank account without making a deposit. And to-day the farmer is reaping the costly effects of grain farming. Our average corn yield is twenty-eight bushels per acre; it should be sixty. Our average wheat yield is thirteen bushels an acre; it should be thirty. Our average oat yield is twenty-five bushels per acre; it should be sixty.

But, in the face of these facts, the farmer is not growing live stock. The truth of this fact justly lays the blame of high-priced meat at the farmer's doorstep, and he alone can remedy it.

This condition has probably been brought about by attractive grain and hay prices in the markets of the world. Immediate profits, without concern for the future welfare of the land or coming generations, seem to have been the paramount thought of the average farmer.

The results are twenty per cent less cattle in our land to-day than ten years ago, with over a twenty per cent increase in our population. The settler has crowded the old-time ranchman from the map, and to-day but few cattle outfits of any magnitude are in existence.

The State of Iowa has more cattle, according to area, than any other State in the Union, yet her statistics show only one beef steer to each fifty-three acres of land.

Fancy veal prices have induced farmers to market their calves, not allowing them to reach maturity, which means an immeasurable loss in pounds of beef, to say nothing of the curtailment in production caused by the slaughter of young females.

Conditions, as they are brought out by men who are devoting their time to the study of the problem, point to the fact that we have not yet fully realized the seriousness of the shortage, and cannot hope for immediate relief until the farmer can get in possession of foundation stock, which must be obtained from the present crop of calves.

Pork prices are necessarily high for several reasons. They would naturally be high during the beef shortage on account of demand. But the origin was with the panic of 1907, when the hog market became so bearish that the producers lost confidence and liquidation began, resulting in the fewest hogs left for future producing known for years. Then in 1911, just as we were again getting to a normal condition, the six principal swine-producing States suffered a shortage of corn, followed by the swine plague, and liquidation to the markets and mortality again did its work, while heavy loss in the spring crop of 1912, combined with the above-mentioned causes, has kept the supply low.

The farmer is one of the most conservative persons of our country, but conditions are becoming so plain and prospects so bright for the future stockman that the consumer cannot but hope that he may become endowed with the spirit of doing his part to feed the ever-increasing millions of our land.

And those who investigate the situation will agree that the greatest of all laws, "supply and

demand," has played a greater part toward the upward trend of meat prices, and will have more part in the lowering process, than so-called "big business." A. W. T.

York, Nebraska.

THE LITERACY TEST FOR IMMIGRANTS

May I have the honor of your columns to say a few words in regard to the immigration question discussed editorially and by correspondents in your issue of June 22?

All labor leaders are agreed, so far as I know, and my acquaintance is extensive, that some substantial curb ought to be placed at once on the present enormous influx and efflux of foreign labor. And while I know of no official identified with any of the various labor organizations of the country who would take exception to your statement that the illiteracy test "would be inadequate to protect this country from [all] undesirable immigrants," I feel certain that practically all of them would be inclined to dissent from your other statement that it would not help "secure those that are desirable."

There is absolutely no question about the Immigration Commission's finding that there is an "over-supply of unskilled labor in this country," which affects indirectly, but none the less deleteriously, wages and conditions of employment in the skilled trades. For years our organizations have recognized with increasing conviction the need of just such legislation as that recommended by the Commission, and have gone on record at our conventions and before Congressional committees as favoring it, and particularly the reading and writing test, because we find that those who cannot read or write are the ones at Lawrence in the textile industries, at Bethlehem in the steel mills, and even at work in the railway construction camps, as pointed out by the Immigration Commission, that are the easiest induced to come here, to be hoodwinked into coming, to be worked at lower wages and longer hours, and that they are the ones who render conditions less safe and less sanitary, and who are used by the labor exchanges, the large employers of cheap labor, and the like to prevent an improvement of conditions commensurate with inventions and changing needs, an increase in wages to keep pace with the increased cost of living, etc.

The Commission emphasizes the fact, I believe, that the illiterate, as one would expect, are the most difficult to organize into a law-abiding union and the easiest to become the tools of violent agitators, such as have made their appearance recently, during labor troubles at Lawrence and other places.

With your statement that transient workers coming to go back with their parsimonious hoardings, unaccompanied by their families, should be excluded, and that a limit should be placed upon the number coming, I believe all students of labor conditions agree, and at least eighty per cent of the thinking public. A large number, considerably over half, I believe, would be in favor of going further for a specified time, in order to allow the forces of assimilation to relieve the situation. But the "rub" comes as to the tests to accomplish this purpose. The Republican party has declared for the illiteracy test in specific terms, and a general declaration of the Democratic party has been interpreted on the stump in a campaign or two to mean the same identical thing.

In your editorial you advocate an increased head tax, the requirement of some money in the pocket—which is law in Canada, among other restrictive provisions and orders that make our weak laws look ridiculous—a character certificate, and the limitation of numbers coming per annum. But would any one or all of these "secure those that are desirable" and keep out those that are "undesirable"? Would not any test, as a matter of fact, in academic argument, keep out some possibly desirable person? And could not even our present feeble laws, excluding merely a few of the undeniably undesirable and objectionable, be said to do this? Do they not now keep out desirable immigrants, even though the law is enforced very liberally and generously and charitably? In my experience I know of no piece of legislation that has not had brought against its enactment the charge that it would do some hardship; and nowadays we hear much said about the administration of the law by the courts being a "reproach to our civilization." But is that any reason for abolishing, as the Nihilist and Anarchist would, all government? Or for the owner of a barn, using the same reasoning, burning it to destroy the rats?

To us who make a specialty of studying, exclusively almost, the needs of labor and labor problems, the illiteracy test seems, as it did to the Immigration Commission, "the most feasible" for starting the proper regulation and control of immigration, because it would, as pointed out by the Commission, work the least possible harm and do the greatest possible good of any of the tests considered; and by so recommending it they, as I understand, did not preclude the enactment of additional and other tests, and did not mean to recommend it as a substitute for other existing as well as proposed legislation, such as you mention.

H. E. Wills,
Joint National Legislative Representative,
B. of L. E., O. R. C., B. of R. T.

BY THE WAY

The Chairman of the Association of Western Railways, Mr. W. A. Garrett, sends out a warning bulletin to shippers that all freight should be despatched as promptly as possible this autumn, for by October 25 there will be a shortage of 179,838 freight cars. This huge volume of business speaks well for general prosperity, but where is the "scientific management" of the railways?

Since the recent revelations regarding police graft in New York City a policeman has been seen to take a pear from a corner fruit-stand—and pay for it! It must be now that the year of Jubilee has come for the foreign fruit-vender.

Algiers is said to have the largest European population of any city in Africa. Johannesburg comes next, then Oran. Will the class in geography kindly locate the latter town, with its 100,000 Europeans, without referring to the atlas?

A novelty in paper goods that is rapidly coming into general use is the tissue-paper towel, which is designed to take the place of linen towels in public lavatories, railway stations, factories, etc. This is a truly sanitary device, for it furnishes every one with an individual towel, and, as each towel is thrown away after use, any possible communication of disease is prevented.

The University of Southern California has instituted a chair of automobile science, being the first university in the country to recognize the importance of the motor car as a subject of technical study and investigation from the engineering standpoint.

Dr. Roy C. Andrews, curator of the American Museum of Natural History, has lately returned from an expedition to Japan and Korea. In the latter country he traversed unexplored territory, one of the features of which was a great forest of larches and birches, through which the party traveled for three weeks.

The Sunday-closing law for post-offices recently enacted has been so far modified in its interpretation that hotels and newspapers will continue to receive their mail on Sunday, as formerly. Congressman Mann, who is responsible for the law, says that he urged it, not for religious reasons, but because he knew from personal experience that "one can get along all right without Sunday mail." But how about the young man who is waiting for that letter that failed to come on Saturday?

A commercial traveler says that he can identify members of his profession in the hotel dining-rooms by their habit of drinking their coffee "left-handed." He says that many traveling men have adopted this habit because when they drink "left-handed" they drink from the side of the cup that isn't generally used. This is one of those customs the value of which will lessen as it becomes more general—or as dish-washing becomes more of a fine art.

Spain is to follow the example of other Continental countries and become the owner of its railways. As Spanish railways have been notorious for delays and poor management, travelers will hope that the change promises improvement in service.

Apparently it is not easy to find men with ideas about fashions in women's dress, for a daily paper prints an advertisement calling for "an editor with ideas" for a "woman's magazine devoted largely to fashions" and having a circulation of nearly a million. Why not give a woman the job? A woman is just naturally full of ideas about dress, and here would seem to be the very opportunity for their expression.

Conservative Germans deplore the use of Roman characters in printing German books. An appeal for the continued use of the Gothic letter is said to have been signed by six hundred university professors and other literary and scientific men. Aside from sentimental grounds, they contend that the Gothic character is more legible than the Roman. This will seem incredible to one who compares Gothic, or Black-Letter, with Roman characters, but much must be allowed to early associations.

The new Equitable Building in New York City is to be the largest office building in the world, but this will be on account of the large ground area which it is to occupy, for the structure will be but thirty-six stories in height—only relatively a "sky-scraper" in a city which contains forty-three, forty-eight, and fifty-five story buildings.

The fastest shorthand writing ever done, so it is said, was accomplished by Mr. Nathan Behrin, a New York court reporter, at a recent contest held by the National Shorthand Reporters' Association. He wrote 278 words per minute for five minutes. This is faster than most people can talk; but then the court stenographer must be prepared to meet and "take down" the exceptional witness, with six-cylinder verbal capacity.

English actors apparently never become millionaires, if inferences are to be drawn from a newspaper paragraph which says that the estate of an English actor recently deceased amounted to $220,280, and that this is "the largest theatrical estate left since that of Toole, the famous comedian, which amounted to $399,920." Perhaps American actors are more fortunate; at any rate, we notice that the widow of an American actor has just left $75,000 to the Society for the Prevention of Cruelty to Animals, which places her quite in the class of some millionaires so far as charitable bequests are concerned.

"Close" punctuation, which consists in inserting the points frequently, has apparently gone out in the daily press, for in a New York City newspaper the other day a sentence of one hundred and six words was noticed which carried no punctuation mark except at the end. How different, this, from the typographic style in the time of Rufus Choate, that master of the long sentence, whose tribute to Daniel Webster, in a single sentence of over a thousand words, carried nearly half as many commas, semicolons, and dashes!

A new patent that will interest men who would like to discard suspenders but are not partial to tight belts is a shirt with "a plurality of lapels" which are designed to be attached to the trousers for their support. The trousers being thus held up, suspenders may be dispensed with and belts worn comfortably loose.

Apropos of shirts, a facetious subscriber announces that he has perfected a machine for stripping buttons from shirts and other garments that are sent to public laundries. "Hand work," he says, "sometimes fails to remove these buttons completely, and my machine is guaranteed to strip off all these objectionable protuberances without fail, so that the goods may be returned to the owner in the same state as when they came from the mill."

The Outlook

THEODORE ROOSEVELT
Contributing Editor

The Democratic Campaign

The State election in Maine resulted in a substantial victory for the united Republican party. Out of a total vote of about 138,500, the Republican candidate for Governor, William T. Haines, had a majority of about 4,000. His opponent, Governor Plaisted, was reported the day before election to have predicted his own re-election by ten thousand more votes than he had two years ago. The Republicans have a small majority in both branches of the Legislature. The conservatives and Progressives throughout the campaign held squarely to their agreement to make the campaign without regard to their differences on National questions, and the sole deduction to be made from the result as regards the November election is that the Democrats are relatively weaker in Maine than they were two years ago and that those Democrats who have predicted an overwhelming Democratic wave can find no support for their theory in the Maine figures. In Connecticut the Democrats have renominated Governor Baldwin with practically no opposition. In New Jersey Governor Wilson has characterized the proposed candidacy of James Smith, Jr., for the United States Senate as "the most fatal step backward that the Democrats of New Jersey could take" and of "sinister import," but as yet Governor Wilson's New Jersey adherents have not united upon a candidate to oppose Mr. Smith. It has been semi-officially announced that Governor Wilson is not "directly or indirectly to interfere in the selection of New York's Democratic candidate for Governor;" in a speech before an informal conference at Syracuse Governor Wilson said: "The only chance for a new party is that both the old parties should be discredited. One of the old parties is discredited; ours shall not be." He believed that New York would lead the way, but common report indicates that Murphy's Tammany influence is still strong in the party, and so strong a Democratic paper as the New York "World" declares that to renominate Governor Dix would be to continue Murphy's domination, asserting also that "any State ticket nominated by Murphy at Syracuse will be beaten."

The Progressive Campaign

In the Far West Mr. Roosevelt has had immense audiences in Tacoma, Portland, Seattle, and elsewhere, and there is abundant evidence of the growing strength of the new party and its ideas. Out of many notable utterances by Mr. Roosevelt on the live issues of the campaign we select one which supplements his editorial on another page: "We propose a real and not a fake regulation and control of big business, and that we are to be taken at our word. We have not hesitated to say that we favor any business, no matter how big, if it is honest. I am against the corrupt business man, not because he is big, but because he is corrupt. A big business which treats its rivals fairly, its customers fairly, its wage-workers fairly, its stockholders fairly—such a business is a help and not a hurt to the community, and it is a lamentable thing when business of that type makes common cause against us with corrupt business." Among recent announced adhesions to the new National party are those of Governor Bass, of New Hampshire, and Mr. Robert G. Valentine, who resigns the office of Indian Commissioner in Mr. Taft's Administration to take part in the Progressive campaign. In a statement accompanying his resignation Mr. Valentine says that the Republican party through its leaders have pushed aside the programme of the Progressives and as a result the Progressive party has been born and carries with it the true hope for the future. He adds: "The work of the Indian Service is from every honorable point of view a non-political work

of social service. I would not now leave it except for what seems to me a pressing obligation to take part in the larger work of the Progressive party on the same lines." Statements of contributions made to campaign funds have been made, with no startling revelations, by the National Committees of both Democrats and Progressives, while the Republican Committee stands on the letter of the law and will make no financial statement until after October 20.

Mexico and the United States

Not the least of Mexico's troubles is the dread of all factions that the United States may intervene in its affairs. This fear is not potent enough to make all Mexicans unite patriotically in putting their own house in order, but is so far prevalent as to stir up and keep awake the "anti-Yankee" feeling which has existed for years. On the other hand, American capitalists interested in Mexican industrial matters are naturally impatient to see an end put to the semi-anarchical condition which has so long existed in certain provinces. The railways and mines in particular have serious causes for complaint, and it is not surprising that the Southern Pacific road last week filed complaints with the United States Government, which could in response do nothing more than urge the Mexican Government to hasten its measures for restoring order. It is, of course, imaginable that a state of things may come to exist in Mexico which shall require intervention on our part. If it does, we must first convince ourselves, and then show the world, that those facts constitute, not an excuse, but a necessity. The tremendous task of restoring by force order in Mexico against the wishes of all Mexicans must not be taken up lightly or with the object of serving special interests. Yet whenever the situation on the border, as between the Federals and the rebels, becomes at all critical, as it has been lately, there seems to be a concerted newspaper effort to convince people that, right or wrong, intervention is imminent. Last week, for instance, elaborate and rather solemn assertions were made the country over that President Taft was about to call a special session of Congress to authorize the invasion of Mexico; the New York "Sun" asserted editorially that "pressure is being brought upon Mr. Taft to intervene;" and despatches from El Paso said, "The army officers here were jubilant to-day at the tone of the news from Beverly, hoping that intervention will come soon. They are tired of the monotony of the border vigil and would welcome intervention." However much or little there may have been in this flurry of excitement, the press of the country spoke out so clearly against sensational or premature action that nothing alarming has followed. Thus, the New York "Evening Post," after pointing out the vagueness of the causes alleged for immediate action and the calm which exists among English and Canadian investors in Mexico as contrasted with the "excited and hysterical talk in Washington," almost tearfully warns the President that "if he should intervene—whether by military action taken unconstitutionally, without the consent of Congress, or whether through action of Congress suddenly precipitated by a call for a special session—it is upon the shoulders of President Taft, and nowhere else, that the whole responsibility for the ensuing bloodshed and for evil consequences lasting far into the years of the future must actually rest." We do not imagine that the danger of precipitate action by President or Congress is just now serious, but there is always a possibility of sudden excitement growing out of a wave of anger at some real or reported wrong, and it should be made thoroughly evident that any action taken in Mexican affairs by this country must be carefully considered and understood in advance by the people as well as by the State Department and the Executive.

The Funeral of Mutsuhito

Last week Thursday at Tokyo the funeral of Mutsuhito, the late Japanese Emperor, began. The somber coloring associated with mourning in this country and Europe was replaced by brilliant hues in which century-old costumes mingled with modern military display. Official representatives from all nations participated in the solemnities. Our own representative was Mr. Knox, Secretary of State; Great Britain's was Prince Arthur of Connaught, the King's cousin; Germany's, Prince Henry of Prussia, the Emperor's brother; Spain's, Don Alfonso, the Spanish King's cousin, etc. The Emperor's body has lain in state since August 13. The casket measures nearly ten feet by five, and weighs one and a half tons. The chief feature of the first day's ceremonies was the obeisance paid to the late monarch's

spirit by three processions—that of the new Emperor Yoshihito, that of the Empress, and that of the Dowager Empress. The Emperor appeared in the full uniform of Commander-in-Chief, with black crêpe arm-band and sword-knot. The Empress and Dowager Empress, as well as all the court ladies and maids of honor, were attired in native court dress, made of hemp cloth, the upper garment being of dark brown and the skirt of dull orange. All these ladies wore their hair unbound. The music consisted of a soft dirge on instruments resembling flutes and drums. The Chief Shinto Ritualist and his assistants removed the hanging screen in front of the catafalque, proffered offerings of sacred food, and recited prayers for the dead. The most solemn act of all was when the Emperor, Empress, and other members of the royal house worshiped the spirit of the departed Emperor. A short silence ensued. The processions were reformed and the members of the Imperial family retired. The second part of the funeral took place at night, when the cortège started on its journey to Monoyama, near Kyoto, the ancient capital. Imposing as had been the ceremonial, attended by great dignitaries, at the Imperial Palace earlier in the day, the passage of the funeral car through the streets of Tokyo at night was even more impressive. Hundreds of thousands of people stood in absolute silence along the route, their silence in dramatic contrast to the appearance of the streets, brilliantly lighted by torches. Between the torches were placed large sacred trees, and at frequent intervals there were black and white cloth-covered poles surmounted by wreaths of evergreen. To the wailing notes of a Shinto dirge the coffin was wheeled in solemn procession from the main hall of the palace and placed in the funeral car. On each side of the casket walked high officials of the household carrying lighted candles, and following it were the Grand Master of Ceremonies, bearing the departed monarch's own sword, and the Master of the Household, carrying the Imperial sword of state. Then came attendants wearing hemp garments and bearing torches. Others carried drums and musical instruments of ancient types, on which they played funeral dirges. Following these walked retainers bearing white and yellow silk damask banners representing the sun and the moon. The royal family and the foreign princes and special embassies, including Secretary Knox, did not take part in this ceremony, but went directly to Aoyama. Of the significance of the startling suicide of General Nogi, the hero of Port Arthur, and of his wife, we shall speak next week. On the same day in New York City about six hundred Japanese gathered at the Carnegie Lyceum for a memorial service. The audience rose when Dr. Jokichi Takamine, the noted Japanese chemist, opened the services with a eulogy of the late Emperor. When he closed his address the curtain was raised on a portrait of the Emperor. The audience rose again while Consul-General Numano stood before the picture and read an address in praise of the late ruler. On the following night other memorial exercises for the dead Emperor were held at Carnegie Hall by the Japan Society of America, in conjunction with the American Board of Commissioners for Foreign Missions. Dr. Harris, Methodist Bishop of Japan and Korea, presided.

Arthur MacArthur

The sudden death at Milwaukee of Lieutenant-General Arthur MacArthur calls attention to a true soldier and to a great epoch. The soldier has passed; the epoch is passing. Arthur MacArthur was one of the boys who went to the front in '61. And they were boys—they were not embryo soldiers. But the man was in the boy. The seventeen-year-old lad of slight, unmilitary build, who actually induced the Governor of Wisconsin to give him an adjutancy in the Twenty-fourth Wisconsin Regiment, was the same boy who, when the regiment encountered its first stiff fight—at Stone River—and lost half its complement in the engagement, won his first spurs by an instant display of executive ability. And at Missionary Ridge, after two color-bearers of his regiment had been shot down, the boy won a medal of honor by taking up the colors, leading sixty other battle-flags up to the crest of the Ridge, and planting the colors there. He was the youngest commissioned officer in the war. He became Major and commanded his regiment at Kenesaw and thereafter. He was wounded at the battle of Franklin, and received a colonelcy for his work on that day. At the close of the war he had gained a commission as Lieutenant in the regular army; for, having proved that he was born to be a soldier, it was natural that he should pass into the military service. He spent the next twenty years fighting Indians. He became a Captain and Major in the

regular army, and when the Spanish-American War opened was commissioned Brigadier-General of Volunteers. He was sent to the Philippines, captured the town of Malate, and prepared the way for the taking of Manila. He became a Brigadier-General and a Major-General in the regular army—the youngest of our major-generals at the time. In 1899 he commanded a division, under the general direction of General Otis, against Aguinaldo's army, and later succeeded Otis as Commander-in-Chief. This campaign employed a larger army and involved more severe fighting than did the campaign against Santiago the previous year. In 1901 General MacArthur assumed command of the Department of the Colorado, from which he was transferred to that of the Department of the Lakes, to the Department of the East, and then to the Department of California. He finally became Lieutenant-General. From first to last Arthur MacArthur enjoyed the respect and confidence of his fellow-soldiers. He was a modest man, with no "frills." He was a gentleman. As a soldier, like Bayard, he was "without fear and without reproach." It seemed appropriate that death should suddenly call him while he was speaking at the reunion of his old Wisconsin regiment. The hundred comrades stood about his chair, recited the Lord's Prayer, and covered the mortal remains of the "boy adjutant" of a half-century ago with the flag he had once planted on Missionary Ridge.

Rumors of Peace Between Italy and Turkey

The reported bombardment by Italy of a Turkish town on the coast of Asia Minor calls attention to what Italy has already won from Turkey during the present war. Not only is the entire Tripolitan coast of Africa in Italy's possession, but also Rhodes and the other eleven Sporades Islands in the eastern part of the Ægean Sea. As in Tripoli, so in the islands, Italy has introduced the use of her own postage stamps, has brought thither machinery and material for deepening ports and building roads, and has begun those labors. Meanwhile Turkey is suffering from other troubles—not only the conquest of the Tripolitan coast by Italy, but also with a threatening by Russia of a concentration of troops on the Russian frontier, a similar threat by Bulgaria, and an actual mobilization by Austria. In the face of all this, Turkey's ostensible attitude is thus expressed by an editorial in the "Jeune Turc" of Constantinople:

> Let them do their worst; we will not surrender. We are quite aware that alone we have not the strength to oppose a serious resistance to a combined attack by Italy, Russia, Bulgaria, and Greece, with the assistance or connivance of other Powers. Whatever happens, the Turkish nation will not submit to a slow death by exhaustion, but would prefer to die with honor.
>
> If Europe denies our right of existence, rather than accept dishonor we shall be ready to fight in case of need against the whole world, and to sacrifice ourselves even without the least hope of victory.
>
> This is the firm decision of the Ottomans; they are watching events with calmness and serenity. Their state of mind is that of a person condemned to death, who has nothing further to fear.

This is the kind of thing which the Government has allowed to go out for home consumption. With the establishment of a new Cabinet, however, there has been a change. The venerable Kiamil Pasha, President of the Council, was recently reported as saying that "Turkey would readily accept impartial mediation between herself and Italy. We would welcome the offices of any fair-minded Power. . . ." The Government appears to have gone further; for during the past month there have been meetings in Switzerland of unofficial—so it is said—ambassadors from Turkey and Italy with the object of seeing if some means of ending the war may not be brought about. It has been repeatedly stated without contradiction that an agreement has now been reached.

A New Library Building for Harvard

Among the most valuable treasures in America is the library of Harvard University. It is not only the fourth in size among American libraries—those of Congress, of New York City, and of Boston only surpassing it in number of volumes—but it is the repository of some of the most highly prized of irreplaceable books and manuscripts in the world. To say that this great collection is adequately housed is an understatement that almost amounts to falsehood. The condition under which these books are stored has long been a reproach to the country and a source of anxious concern to the University authorities. For the better part of a generation the need of a new and suitable building for this great literary treasure has been notorious, and with every year the situation has become less and less tolerable. It is a

matter, therefore, for gratification not only to the men of Harvard but to all Americans that there is now the promise of a building in size, dignity, and, what is most important of all, facilities for the preservation and use of the books, commensurate with the great collection itself. The promised building is to be the gift of Mrs. George D. Widener, of Philadelphia, who will erect it as a memorial to her son, who with his father was one of the heroic victims of the Titanic disaster, a loyal and generous son of Harvard, Harry Elkins Widener. After his death it was made known that Harry Elkins Widener had left to the University his extraordinarily valuable and rare, though comparatively small, collection of manuscripts and books; and it was understood that there was to be built a small building, probably as a wing in a future University library building, which would serve both to meet the conditions of the will and to memorialize the giver. Now this plan is of course superseded by the immensely greater one. Some idea of the character of this building may be conveyed by the statement that it will probably exceed in cost a million dollars, that it will hold about two and a half millions of volumes, and that there will be about fifty-nine miles of shelves. It is announced in the Boston "Transcript," from which we take this information, which we are officially informed is substantially correct, that the plans have already been drawn by Horace Trumbauer for this building, that it will be erected on the site now occupied by Gore Hall, the present library building, and that ground will be broken for it "within a few days." The building will not only provide for the housing of the various collections included in the library, and for the usual catalogue and reading rooms, but also for rooms where instructors may meet their classes within easy reach of the reference books, private rooms for the use not only of Harvard professors but of visiting scholars, and other smaller rooms called "cubicles," in which a student may gather together his books for comparison and study without interruption. With this building the practical value of the library as a place for work will be incalculably enhanced.

Mental Hygiene: Its Importance

It is doubtful whether many people realize the prevalence of insanity in some of its numerous forms. On January 1, 1910, the date of the last available statistics, there were 187,454 insane persons in institutions in the United States, a number which exceeds the combined enlisted strength of the United States Army, United States Navy, and United States Marine Corps; and it also exceeds the number of students who were enrolled in all colleges and universities in the United States upon that date. The cost of caring for the insane in public institutions represents a sum which is amazing to those who have not had the matter brought to their attention. It costs a little over thirty-two million dollars a year to care for the patients suffering from mental diseases in the public institutions in the United States. This is equal to or even somewhat greater than the annual expenditure for the construction of the Panama Canal. The amount expended in 1910 for the care of the insane in public institutions exceeded the amount appropriated by Congress for the support of the Executive, Legislative, and Judicial Departments of the Federal Government. To this great sum must be added the economic loss to the country through the withdrawal from productive labor of so many people in the prime of life. It has been ascertained that the average value to the community of an adult between the ages of eighteen and forty-five is seven hundred dollars a year. Upon this basis the economic loss to the country through insanity is over one hundred and thirty million dollars a year, which amount taken together with the annual institutional cost is more than one hundred and sixty-four million dollars—a sum equaling the entire annual value of the wheat, corn, tobacco, and dairy and beef products exported from the United States. A still more striking illustration of the social and economic importance of the problems connected with mental diseases is afforded by the consideration of the situation in a single State like New York. The amount appropriated for the care of the insane during the past year in New York was twenty-three per cent of the total expenditure of the State. Compare this with the other fields of State expenditure: education, twenty-four per cent; public works and conservation, thirteen per cent; prisons and reformatories, four per cent; the Legislature, four per cent; the militia, two per cent; health and quarantine, one per cent; and care of all other wards of the State, such as the epileptic, feeble-minded, blind, crippled, disabled soldiers and sailors, eight per cent. To the layman these startling figures must give some impression of a fact which some

scientists and physicians deeply realize, namely, that modern civilization must take hold of the problem of insanity with vigor, energy, and scientific skill. The hopeful thing about what appears to be on the surface a situation of despair is that insanity is not, as our forefathers used to believe it to be, an "act of God," but is a disease which can to a very large degree be prevented and to a considerable degree cured by mental and physical hygiene.

Mental Hygiene: A Unique Exhibit

There are various agencies in existence for the study of the terrible problem briefly outlined in the foregoing paragraph. One of the best of these agencies is the recently organized National Committee for Mental Hygiene, the executive office of which is at 50 Union Square, New York City. The Committee states its chief objects to be the following: "To work for the protection of the mental health of the public; to help raise the standard of care for those threatened with mental disorder or actually ill; to promote the study of mental disorders in all their forms and relations, and to disseminate knowledge concerning their causes, treatment, and prevention; to obtain from every source reliable data regarding conditions and methods of dealing with mental disorders; to enlist the aid of the Federal Government, so far as may seem desirable; to co-ordinate existing agencies and help organize in each State of the Union an allied but independent Society for Mental Hygiene." In pursuance of the work thus outlined the National Committee for Mental Hygiene has prepared an exhibit devoted to the "hygiene of the mind" which will constitute a part of the Fifteenth International Congress on Hygiene that, held for the first time in the United States, meets on September 23 at Washington, D. C. The last Congress was held in Berlin on September 17, 1907. Twenty-seven Governments and forty-two States will be represented by delegates at the meeting at Washington, and the scientific programme will include a vast number of papers dealing with the public health. The exhibit on mental hygiene, which marks the beginning of a noteworthy movement in a branch of preventive medicine hitherto much neglected, will constitute a part of the general health exhibit of the Congress. It will be open to the public. The Mental Hygiene Exhibit presents in graphic form facts concerning the prevalence, the cause, the cure, and the care of mental diseases. It shows, in a way which the layman can easily understand, that insanity, like tuberculosis or typhoid or smallpox, can not only often be cured, but can more often be prevented. Mental disease is still too often regarded with the same fatalistic attitude with which tuberculosis was generally regarded less than a generation ago, and it is hoped that one of the results of the Mental Hygiene Exhibit will be a public awakening equaling that which took place a few years ago with reference to tuberculosis. How public-spirited citizens of wealth can help in the immensely important work of alleviating and to some extent eradicating the suffering and loss brought about by insanity is shown by the generous gift recently made by Mr. Henry Phipps, of New York, of a Psychopathic Hospital and Clinic to Johns Hopkins Hospital at Baltimore. This institution, which will soon be open, will not only treat cases of mental disorder in the earliest and most curable stages, but will enable scientists and students of medicine and hygiene to obtain facts regarding insanity as a disease which will extend the work of cure and prevention throughout the country. Here is a field which may well engage the attention of social workers and private philanthropists.

Christian Missions: Healing the Sick

We wish that those of our readers who are skeptical respecting the usefulness of Christian missions in foreign lands could and would read with some attention the annual report of the Presbyterian Mission Hospital in Miraj, India, established in 1892 in connection with the Western India Mission of the Presbyterian Church. This hospital has two permanent physicians, who are Americans; eight medical assistants, who are natives; an ordained missionary, and a number of other assistants. The motto of the hospital is, "They serve God well who serve his creatures;" and this is printed in the Indian language, and is the missionary message of the hospital to all the natives. The patients are, of course, all, or nearly all, natives, most of whom but for this hospital would have practically no opportunity for medical treatment at all. Statistics are not a very interesting way of reporting the work accomplished by such an institution as this; yet the fact that the hospital reports 13,326 total treatments at Miraj, and 37,097 treatments

including both Miraj and out-stations, with 1,700 surgical operations and 1,607 eye operations, will at least indicate to the reader the extent of the service which this Christian mission is rendering to God's creatures. In connection with this service is an evangelistic work carried on by the missionary and his native assistants, a Sunday-school taught by medical assistants, nurses, and women missionaries, and a medical school which last year graduated thirteen students, all but one of them Christians. Churchmen are sometimes accused of being narrow-minded; nor is this accusation wholly groundless. But it really seems to us that no narrow-mindedness in any ecclesiastic of any Church quite equals the narrow-mindedness of the man who scoffs at missionary work in foreign lands, in the face of the official report of such a work of helping and healing as this.

Christian Missions: Social Regeneration

The service of Christian missions in foreign lands is not, however, confined to helping and healing the body. Nor is its influence to be measured by the number of Christian converts gathered in its chapels. To repeat here what is said more particularly on another page in a Letter to Unknown Friends, what in our time we call Christianity, Jesus of Nazareth called life, or sometimes eternal life. What Christian missions are giving to pagan lands is new life, seen, it is true, in a new philanthropic spirit, but also seen in a new social consciousness, in new ideals of liberty and justice, in a new experience of reverence, founded not on fear but on love, not paralyzing activity, as the religion of fear always does, but inspiring to activity, as the religion of love always does. When a young boy, Dr. Sun Yat-sen, the provisional President of the new Republic of China, lived for a year or more in the family of a Christian missionary. During this period he studied in a Christian school, read and committed to memory much of the New Testament, overcame his native prejudices, and had his mind prepared for future study in Honolulu and in the United States. To this training may be traced the clause in his first proclamation; that in favor of religious liberty for all classes in China. With this proclamation of religious liberty came the rapid development of a new educational system, and the demand made by the progressives in China for the aid of Christians in creating a new type of school and a new educational and religious literature that will answer the demands of millions of men for a religion that will promote modern progress along all lines of life. The missionaries in China perceive with growing clearness of vision and eagerness of desire this need, and the necessity for a union of the various churches in co-operative effort to meet the need. The task is too vast for any single communion, too difficult for all of them together acting independently. Much has already been accomplished through interdenominational co-operation in educational work at large centers, but the new situation demands more than co-operation; it demands a massing, organizing, and directing of the Christian forces as one united force. The Roman Catholics, who were first in the field, have the largest following, with nearly 1,300,000 members and adherents, and more than 100,000 pupils in their schools and orphanages. They present a fairly united front. There are over seventy Protestant organizations working for a common end, but not under a common head, though with much more spirit of co-operation, looking forward toward organic combination, than in the past. In this work the Americans take the lead. About one-half of the four thousand Protestant missionaries in China are supported by the societies representing five leading American communions—the Methodist, Episcopalian, Baptist, Presbyterian, and Congregational. How to develop the present co-operation between these societies into a combination which will involve an obliteration of denominational lines and an ignoring of historical and doctrinal differences, so that they shall present to the Chinese a simple Christianity divested of its divisive difficulties, is perhaps the foremost missionary problem in the field at the present day.

Roman Catholics and Boy Scouts

The latest News Service Bulletin sent out from the headquarters of the Boy Scouts of America contains some welcome information. It is that, "as a result of the indorsement of the Boy Scout movement by Cardinal Farley in America and Cardinal Bourne in England, and other Catholics in both countries, a tremendous impetus has been given to the Boy Scouts of America by Catholic clergymen and laymen throughout this country." A troop of Boy Scouts, so we are informed, has been organized in St.

Patrick's Cathedral, New York City, to be, as Cardinal Farley wishes wherever Catholic boys are concerned, under a priest's supervision. At a recent meeting of the Holy Name Society several priests gave the movement their approval, in particular the Rev. John T. Hughes, of New Rochelle, New York. He said that he had tried everything to interest the boys, but that he could not get enough of them together to form a "corporal's guard" until he formed the Boy Scouts. Now he has a waiting list! He recommended the movement to all spiritual directors. In England the Boy Scouts are making similar progress. Bishop Butt praises them in these words:

From the Catholic point of view the Scout movement seems to me to be altogether admirable, provided always that it is carried out on the lines traced by General Sir Robert Baden-Powell. The fact that the natural virtues are taught to the boys in a most attractive way is in itself a very great good; the chaplain, being practically supreme in religious matters, has every opportunity of providing that solid, supernatural basis for those virtues which the Faith alone can supply. More than this, they find in the numberless acts of unselfishness and self-control suggested and encouraged by the Scout Law, many ready-made practical applications of the moral lessons which flow from the doctrines that it is his duty to teach. Like every good thing, the movement is capable of abuse; but I am convinced that, so long as the wisely conceived principles of the Chief Scout are adhered to, Catholics may not only safely join in the movement by establishing troops, but have everything to gain by doing so.

The Rev. Father Jarrett justly points out a particular value of the Scout Movement, namely, its appeal to the spirit of adventure in boy life:

It captivates this part of his nature (the pirate, in Robert Louis Stevenson's famous definition of a boy, "part poet, part pirate, and part pig"), and gives it a legitimate outlet without which it would turn to very evil uses.

The Scout Law also (especially now that the observance of purity has been added) is a very fair adjunct to the teachings of the Catholic Church. Without alteration, these laws can be easily taught from a Catholic point of view, and explained in the full sense of the Church's teaching. Thus is the Baden-Powell movement in our eyes perfected, and the precepts of Catholic discipline expounded in a form and at a time favorable to an eager acceptance on the part of the Scout.

Our Scientific Visitors

Several gatherings of a scientific character have attracted to this country of late many of the most eminent technical experts of the world. Especially notable has been the unusual plan adopted by the American Geographical Society, which invited some forty European scientists to make an extended trip through America as the guests of the Society. The plan will perhaps result in wider knowledge and more varied study than could any formal meeting to listen to endless technical papers. Recently the visiting scientists spent their first days in New York City; and under the guidance of their American friends studied, not merely the outward geography of the metropolis, but its topography, its building laws, the weather bureau, the geological features, the ocean borders; and in short trips to neighboring regions they even studied such questions as those of the abandoned farm and the production of coal. The entire excursion is to cover some two months, and will extend to the Pacific coast, including a majority of the States in the Union; and in every locality committees of American scientists will make this study of our country by foreigners thorough and interesting, and will see that the social as well as the scientific side is cared for. At the same time we have had in New York several hundred of the most distinguished foreign chemists, and a still larger number of chemists from our own country; altogether there has been an attendance of about three thousand at the eighth International Congress of Applied Chemistry. The official sessions have taken place in New York City; but the delegates have been invited to take part in various scientific gatherings and investigations in other parts of America. It is interesting to note that among the delegates are famous men from Japan, Germany, France, Norway, and many other lands. That the discussions have had more than a technical interest is shown by the fact that among the topics were the manufacture of artificial rubber, the "conquest of the air by chemistry" (by which is meant the substituting for the nitrates so essential to plant growth, and now growing scarce, nitrogen drawn from the air, a process which is now in commercial operation), the possibility of substituting sunlight for coal, the production of synthetic ammonia, and synthetic chemistry generally. Still another meeting of scientists from all parts of the world has been that of the sixth triennial Congress of the International Association for Testing Materials, which brought together in New York City some six hundred delegates from twenty-seven different nations. The papers before the Congress

have been read in three languages—English, French, and German. To the layman the title of the Association would indicate a somewhat limited technical field; but engineers of all kinds recognize the basic value of the scientific work it carries on, and this is indicated also by the fact that the question of establishing a uniform test for steel rails was one of those most thoroughly discussed.

THE PROGRESSIVE MOVEMENT

II—THE PARTY TEMPERAMENTS

Differences in politics, as in religion, are not wholly due to differences in judgment; they are also due to differences in temperament and in consequent habits of mind. Three fundamental differences in temperament are strikingly illustrated in the three political parties—the Republican, the Democratic, and the Progressive.

The Republican party appeals to those who are temperamentally disinclined to change. Men of this temperament are content with present conditions. Their motto is, "Let well enough alone." It is true that there are some social evils. But time and natural law will correct most of them, and special legislation can be devised to remedy the rest. Monopoly? If competition is free, it will step in to claim a share of the extravagant profits and will break up the monopoly. Concentration of wealth? Death, disaster, speculation will in time distribute the wealth. Poverty? American energy and enterprise may be trusted to secure a fair opportunity and a fair wage for most men, and voluntary charity will do the rest. Crime? Yes! There is too much crime. But we must be patient. Education and religion are the only cure, and the processes of education and religion are slow.

There are evils, it is true, but then—if this is not the best of all possible worlds, this is the best of all actual countries. Where will you find a better? The farmers are paying off their mortgages, the workingmen are getting good wages, the dinner-pail is full. If some of the men work ten or even twelve hours a day, why not? They would rather be paid for twelve hours than for eight. It is true, there has been a brief period of depression. There always will be brief periods of depression—from time to time. But it is over now. The Agricultural Department reports good crops. The country is prosperous, with promise of greater prosperity. Why agitate? Why stir up discontent? Let well enough alone.

Such is the temperament which characterizes Mr. Taft's speech of acceptance. It is the temperament which will characterize the speeches and the editorials of his party's representatives. It is the creed of the stationary. It is the philosophy of content. It will attract those of the prosperous who lack either the imagination to see the lives of the unprosperous, or the sympathy to share their burdens. There have been times when this has been an effective argument. But happily those times are in the past. A rapidly diminishing minority respond to this philosophy. It does not appeal to either the idealism, the humanity, or the enterprise of the American public.

The Democratic party appeals to those who are dissatisfied with present conditions and desire to return to the conditions of a previous age. They look to the past for their ideals; they wish to return to the simplicity of the fathers. There are men who in theology go back for their belief to the creeds of the sixteenth century, or even to those of the fourth, and regard all new doctrine as heresy; men who ride in Pullman cars, but regret the stage-coach; men who live in steam-heated houses, but think they would like to return to stoves and open fires; men with a bath-room on every floor, who love to linger over the memory of their boyhood bath on Saturday night in the tub before the kitchen fire; men who sigh for the good old times, but who would not live contented in such times now—no, not for a week!

These are extreme illustrations; but the class is large that looks backward, not forward, for improvement. The social evils of our time seem to them, not relics of an age from which we are emerging, but incidentals of a degenerate age on which we are entering. Eden is in the past; life since then has been a succession of "falls." This philosophy of regret is an inheritance from the writings of Rousseau. These reformers wish, or think they wish, to get back as nearly as possible to nature. They lament the modern city, and forget ancient Rome; regard the tenement-house as a modern invention, and know not that it existed in the first century; think the demagogue is a creation of Amer-

ican democracy, and remember not Catiline; wonder what the world is coming to with its gambling and its drunkenness, forgetting that the soldiers gambled at the foot of the Cross, and Christians in Corinth got drunk at the Lord's Table; would go back to the piety and patriotism of the early days of the Republic, when graft robbed the American soldiers at Valley Forge, and political corruption tried to drive Washington from the head of the American army.

In politics the men of this temperament desire to make the principles and policies of the fathers in 1787 the standard for their children in 1912. They are Progressives in that they desire to get away from the present; but they desire to do so by going back into the past. The Constitution of Alabama declared, for aught we know still declares, that "the sole and only legitimate end of government is to protect the citizen in the enjoyment of life, liberty, and property, and when the government assumes other functions it is usurpation and oppression." Mr. Lecky declares that this "expresses admirably the best spirit of American statesmanship." The looking-backward Progressive agrees with Mr. Lecky. He regrets to see government assuming any other functions or intrusted with any new powers. He wishes the understanding of the Constitution in 1787 to bind the Nation in 1912; tradition, not practical efficiency, to determine its meaning; the Federal Government to exercise no greater authority in a Nation of ninety millions than in a Nation of four millions. He reluctantly concedes to himself that this is not quite possible; but the nearer we can keep to this ideal the better. He was afraid to have the Federal Government undertake any supervision of the railways. He is afraid to have any commission or bureau created to exercise supervision over the great corporations. He dreads the era of combination, and desires to go back to the era of competition.

Such is the temperament which seems to us to characterize Governor Wilson's speech of acceptance. It is not extreme, for he is not an extreme man. But it regards the social evils of our time as due to a departure from the principles and the spirit of our forefathers. It proposes no definite remedies except such as are involved in a return to those principles and that spirit. This is implied rather than affirmed; but it is implied by what Governor Wilson says no less than by what he omits to say. And the temperament of a leader is always better deduced from the implications than from the direct affirmations of his speech. "The Nation has awakened to a sense of neglected ideals and neglected duties." We once had the ideals; let us return to them. We once performed the duties; let us renew the performance. We must "vindicate once more the essential rights of human life." We once did vindicate them; let us go back and vindicate them again. "Our task now is to effect a great readjustment and get the forces of the whole people once more into play." They formerly were in play; let us go back and get them into play again. Tariff duties have created monopoly. "Trusts have owed their origin and their secure power to them." Let us go back, if not to free trade, to a freer trade, and the trusts will fall. This tariff "has made the business men of one of the most virile and enterprising nations in the world timid, fearful, full of alarms." We must return to them their lost self-confidence and reinspire in them their lost spirit of enterprise.

This is the language of a statesman who is not content with existing conditions, who does not believe that the present discontent is caused by sensational journalists and muckrakers, who is not satisfied to "let well enough alone" and merely prescribe occasional remedies for occasional ills if necessity requires. He believes in forming a definite policy and in carrying it out intelligently and courageously. But he believes that the evils are mainly due to the Nation's departure from ideals which it formerly possessed and its neglect of duties which it formerly performed; that the remedy is a return to the ideals of our forefathers, a resumption "once more" of their spirit and methods, and a revival of the virile and enterprising qualities which they possessed and we have lost. Governor Wilson is called a Progressive; he calls himself a Progressive; we do not object to the title; but he is a Progressive looking backward.

And this is the temperament of his party. It will attract those who believe that present evils are due to the Nation's departure from a better life in the past, who believe in a government of limited functions and few if not feeble powers, who dread the era of industrial combination and wish to re-establish the era of competition, whose ideal it is to go back to the simple and the primitive democracy of the earlier years of the Republic.

The Progressive party appeals to men of a very different temperament. And we define that temperament with greater confidence because it may properly be characterized as the temperament of The Outlook itself.

We look forward, not backward, for the golden age. We believe in a new theology, a new science, a new sociology, a new politics. We believe that in every day walks a better to-morrow; that the world is steadily growing better, though with lapses, failures, and regressions. We believe that the commercial age is better than the military age or the ecclesiastical age; that the twentieth century is as competent to make its theological creeds as was either the sixteenth or the fourth; that the counsels of the men of this decade are better able to decide the destiny of America than the voices from the graves of the men of a century ago; that the traditions of the past are useful guides but poor governors; that the Constitution is to be considered as an instrument to promote growth, not as an impediment to prevent it. We believe that progress lies, not in going back to the past, but in going forward to the future; that the age of regulated combination is better than the age of unscrupulous competition; that fraternalism is better than individualism, a self-governing democracy is better than a democracy of self-governing individuals, and a strong government with varied functions is better than a weak government with very limited functions. And this we believe to be the temperament of the Progressive party and of its two chosen leaders, Theodore Roosevelt and Governor Johnson.

This party will repel the men of contented mind who are satisfied with the world as it is. It will repel the men who think that this is a degenerate age, and that the cure for its evils is a return to neglected ideals and neglected duties. But it will attract the men who have faith in themselves, in their fellows, and in the future; who believe that the present discontent is but the shadow cast by a splendid aspiration; in whom no apprehension is awakened by the forebodings of those who dread to cut loose from their moorings, who think no fate is worse than gradual decay certain to consume the ship that remains forever moored to the wharf, who are eager to voyage forward to meet the coming of the dawn. It is the party of life and courage. It appeals to the eager and the adventurous, and to those who, whatever their years, are eternally young.

LETTERS TO UNKNOWN FRIENDS

In your article in The Outlook of August 17, in which you give your "Confession of Faith," you make the statement that "The dogma that it is only in this life that man can repent, or mercy can be shown him if he does repent, I repudiate as unscriptural and inconsistent with faith in the Fatherhood of God and in the freedom of man." Will you please state what Scripture gives us ground for belief that there is any chance for repentance after death? If so, then why the great need of efforts to lead the unconverted to repentance and to God in this life? Also, why trouble about the heathen for their sakes or for ours, on account of the great commission, if after death we find our souls suffering on account of lack of duty neglected in this life, we can repent and be sorry and be removed to a place of joy? This would be reasonable along this line of belief, would it not? My dear son, who is thinking of being a preacher, and is now in college, says, "Why, what is the need of me preaching or father staying all his life with the heathen if they have another chance?" His father is a foreign missioner; has been for nearly forty years.

Your letter assumes that Jesus Christ came to keep us out of hell and get us into heaven. But Jesus Christ did not come to keep us out of hell and get us into heaven. He came to keep hell out of us and put heaven into us. He came to save us—yes! but from what? Pain? No! He suffered the death of the cross, and told us we must take up our cross if we would be his. What then? From punishment? No! It is doubtful if he anywhere promises his disciples escape from punishment. He came to save them that will trust in him from their sins. One Evangelist tells us that he was called Jesus because he would save his people from their sins. Another Evangelist tells us that the blood of Jesus Christ cleanses us from all sin. John the Baptist hails Jesus as the Lamb of God that takes away the sins of the world. He himself, in his last meeting with his disciples, pledging them in a cup after supper, says it is the blood of the new covenant, shed for the remission of sins. It is sin, not punishment, which is remitted or sent away; it is from sin, not from punishment, that his blood relieves us; it is sin, not punishment, that the Lamb of God takes away from the world; it is from sin, not punishment, that Jesus saves his people.

That he saves from penalty in saving from sin is secondary and incidental.

And this is the commission he gave to his disciples: Whosesoever sins ye remit, they

are remitted; and whosesoever sins ye retain, they are retained. He does not promise that they shall deliver from punishment, but that they shall deliver from sin.

Salvation is character. Understand me. I do not say salvation through character. No! *Salvation is character.*

Two counterfeiters are sent to State's prison for ten years. One has political influence, and after three months gets a pardon, goes out, and resumes his counterfeiting. The other serves out his full ten years, pays the full penalty of his crime, but becomes an honest man and comes out to live an honest life. The first man escapes punishment and is not saved. The second man suffers punishment and is saved.

SALVATION IS CHARACTER.

The word Christianity does not occur in the New Testament. The word religion does not occur at all in the Gospels. Christ's word for his gift to us is "Life" or "Eternal Life." "I have come that they might have Life, and that they might have it more abundantly." "I give unto them Eternal Life, and they shall never perish, neither shall any one pluck them out of my hand." Similarly, Paul: "The gift of God is Eternal Life."

"The fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance." That Jesus Christ might inspire in men this life he was born, lived, suffered, died. This is what the preacher of the Glad Tidings has to offer to his congregation, and the missionary to the heathen as their inheritance.

He says to them: You are perhaps agnostics. You believe that there must be some sort of intelligence behind nature, but you know not what it is. I have come to introduce your Father to you. You can, if you will, have him as your "Great Companion." Or perhaps you are afraid of God. You think he is angry with you because you have sinned. You are mistaken. He pities you because you have sinned. And he wants to help you to sin no more. Or perhaps you think it is hard to find him. You are mistaken. Turn toward him and you will find him a Father who goes out to meet you, not with punishment, not with reproaches, but with the gladness of love. Or you have thought that you must offer a sacrifice to appease his wrath or satisfy his law. You are mistaken. His is the sacrifice. It is the mother who suffers for her sinful child; the patriot who suffers for his careless country; the martyr who suffers for his age; God who suffers for his children. This is the Gospel. Not that God will let you off from punishment if you are sorry and promise not to do so any more, but that God will pour his life into you, here and now, and make you partaker of his nature, if you will let him do so.

Do you remember Tennyson's prayer?

> "O for a man to arise in me,
> That the man that I am may cease to be!"

The Gospel is God's answer to that prayer.

I advise your son to write to the Missionary Boards of the five great Protestant denominations for reports of their medical and educational work. He will find that the "life of God in the soul of man," which constitutes the Christian religion, is social as well as individual, a life of human brotherhood as well as of loyalty to the Father. He will find that the Christian missions are carrying health and healing to the body, and inspiration to the mind. He will find that they are abolishing slavery, emancipating woman, lessening cruelty to children, elevating the home, promoting the spirit of peace and good will. He will find that the Christian colleges in Turkey have revolutionized the educational system of Turkey, and the Christian colleges in China have revolutionized the educational system in China. And he will find that, while doing this, and by doing this, they have established a religion of hope for one of dread, a religion of joy for one of torment, a religion of love for one of fear. Is there, then, no future life, no eternity? Yes! but future life begins here, and we are in eternity now.

He who will study with an open mind the history of Christian missions will find that the answer to them in every land has been that so beautifully interpreted by Phillips Brooks:

> "Where children pure and happy
> Pray to the blessèd Child;
> Where misery cries out to Thee,
> Son of the Mother mild;
> Where Charity stands watching,
> And Faith holds wide the door,—
> The dark night wakes, the glory breaks,
> And Christmas comes once more."

To dispel the darkness of the night and bring in the glory of the dawn upon this earth is the mission of the Gospel.

LYMAN ABBOTT.

THE TAFT-WILSON TRUST PROGRAMME[1]

EDITORIAL BY THEODORE ROOSEVELT

DURING my Administration, and since, I have first directed and tested, and then studied, the working of the Sherman Anti-Trust Law. When I came into office that law was dead; I took it up and for the first time had it enforced.

We gained this much by the enforcement: we gained the establishment of the principle that the Government was supreme over the great corporations; but that is almost the end of the good that came through our lawsuits.

Take the Northern Securities case. Under me that suit was brought to a successful conclusion. I at first thought that we had secured a definite and real solution of the difficulties, and my opponents thought so too at first and were very sore; but in the end it proved that all we had actually accomplished was what is said above. As one of the greatest magnates concerned afterwards remarked: "Well, when the smoke cleared away, I found that whereas formerly I had to prove my ownership by one bit of paper, I now have to prove it by two."

Take again the Standard Oil decision. The Standard Oil Company was nominally dissolved as a result of the suit against it. It was divided nominally into thirty-four different companies. For a moment there was a great deal of fright in Wall Street; and under the stress of that fright the big magnates for the time being thought they would come round and advocate the policy of control I had advocated, because, while that control would really control them, would hamper and limit them, at least they thought that they would thereby escape death. Then they found that it was only make-believe death to which they were exposed. And as a result of the suit for dissolution Mr. Rockefeller's property rose in value to a higher degree than it ever had gone before, and to an already sufficient fortune he added some eighty or ninety millions of dollars, while the price of oil went up to the consumer. Men who purchased Standard Oil stock on the curb in New York tell me that the sole difference is that, whereas formerly the broker would give them one slip of paper, now he gives them an envelope containing thirty-seven slips—that's all.

You recollect Mr. Pierpont Morgan said, "You can't unscramble the eggs in an omelet." This particular instance of trying to unscramble them didn't help anybody but the owners of the eggs, for it increased the value of the eggs indefinitely and made the omelet cost more to the general public. Now our proposal is not to try to unscramble the eggs by a mere succession of lawsuits, but to exercise such administrative control by the Government as will prevent the eggs from ever being scrambled.

Mr. Wilson in a recent speech in New York said that "no body of men would have the wisdom necessary to enable them to regulate the industrial processes of the country." I was much interested in that remark because it represents the exact attitude always taken by the respectable ultra-conservative in matters of this nature. Word for word it is what some of the great railway magnates used to say before the passage of the Inter-State Commerce Law. They used to say that "no body of men alive could undertake to regulate the complicated railway business." Other big men used to say the same thing when the proposal was to establish Public Utilities Commissions.

I appeal from the prophet of to-day to the way the facts have refuted the prophets of yesterday. There is no more difficulty in regulating the Standard Oil or the Steel Corporation than in regulating a big railway. We have actually made the Inter-State Commerce Law work. We have found by the test of actual work that the way to control the railways lies through increasing the power, and especially through increasing the application of the power, of the Inter-State Commerce Commission, by regulating and controlling those railways, and not by any development of the Anti-Trust Law. Real control of the trusts can come only by the adoption of similar expedients. What I want to see done with our industrial concerns is to see an Inter-State Industrial Commission established, which shall handle the Standard Oil, the Steel Trust, the Tobacco Trust, and every such big trust, through administrative action, just as the Inter-State Commerce Commission handles the railways, and with a power extended beyond that of the Inter-State Commerce Commission.

And Mr. Wilson need not bother himself

[1] In this editorial Mr. Roosevelt follows in substance, and for the most part in form, the course of thought on this topic which he followed in his address at Fargo, North Dakota, September 6.—THE EDITORS.

about finding men to administer such a law. If he cannot find them, I can and will. I will guarantee to find men who will be able to understand and supervise and regulate the business of those great industrial corporations.

Some of Mr. Wilson's supporters have said that our proposal is to "legalize monopoly" and his to "regulate competition." On the contrary, our proposal is to abolish monopoly and to restore competition where possible, and where this is not possible then absolutely to control the monopoly in the interest of the general public. His proposal is in effect to leave the present system unchanged; and the present system has just resulted in legalizing the monopoly of the Standard Oil and Tobacco Trusts. Substantially this has been the sole result, the only result Mr. Wilson's policy would achieve. His proposal is to do precisely nothing; his proposal is to continue in exactly the same course that the Taft Administration is now continuing; for the differences between the Republican and Democratic platforms on this matter are merely differences of sound and fury, and not of sense.

Mr. Wilson's proposal is to regulate competition by "dissolving" trusts in the way the Standard Oil and Tobacco Trusts were "dissolved." You know the prayer in Wall Street now is, "Give us another dissolution." Wall Street likes to have its property dissolved in that way. Every one of those dissolutions has been accompanied by a great rise in the value of the stocks, has legalized monopoly, and has conferred upon the trust magnates the great boon of being fortified by the law in their intrenchments.

On the contrary, the proposal of the Progressives is to put a stop to the continuance of the Taft-Wilson programme of further legalization of monopoly under the guise of a make-believe assault on monopoly. We propose by administrative action to control the conditions which, if left uncontrolled, lead to monopoly. We propose to restore competition where possible. But where this is not possible, we propose to have a real remedy instead of a sham remedy.

The talk about really controlling the trusts by regulating competition merely by lawsuits along the lines of the Anti-Trust Law, or of any amendment proposed to it by the Stanley Committee or by any one else—all such talk is the veriest nonsense. The proposals in the Democratic platform, so far as they could be enacted into law, would be of no help whatever. They would not change the present situation one little bit, except for the worse.

There is not a Wall Street man engaged in big business of the kind to which our people object, there is not a trust magnate, who doesn't regard with utter derision the talk of interfering with monopolies along the lines indicated by Mr. Wilson and his supporters. The only thing they fear is the kind of regulation that we Progressives propose to give them. Mr. Wilson's proposals are entirely satisfactory to them, quite as satisfactory as the actions of the present Administration; indeed, Mr. Wilson's proposals are so vague that they can hardly be called proposals at all; and the proposals of his supporters are either impracticable to adopt, or, if practicable, would work no real change in the present conditions. Accordingly, the enormous majority of the Wall Street men who have been guilty of the obnoxious practices in connection with trusts, having given up the hope of electing Mr. Taft, are now supporting Mr. Wilson; for they dread us as their only real foes, and know that the policies advocated by Messrs. Taft and Wilson represent, not real hostility, but only mock hostility, to the big crooked trusts—although these same policies do contain a serious menace to every kind of honest business, big or little, which does not rely for protection on adroit use of the chicanery of the law.

I call the attention of those who doubt our ability to regulate big business to what has happened with the insurance companies. Nine years ago the effort was made to limit them in size, much as the Stanley Committee proposes to limit industrial concerns generally. In actual practice this worked so badly that the effort had to be abandoned. At present the insurance companies are not limited in size, but they are supervised and controlled. There is plenty of competition among them, and the policy-holders are so well protected that they are entirely satisfied, those in the big companies more than those in the others.

The sum of the matter, therefore, is this: Mr. Wilson, like Mr. Taft, has no improvement to propose in this matter, for the differences between the proposals in the Republican and the Democratic platforms on the trust question are merely differences of declamation. Both sets of proposals indicate nothing but a vague, puzzled, and hopeless purpose feebly to continue the present futile policy of attempting to regulate the trusts by nothing but a succession of long-drawn and ineffective

lawsuits; and if actually put into operation both sets of proposals would produce exactly and precisely nothing.

On the contrary, our proposals are definite and concrete, and are based on successful action along kindred lines in the past. If we are allowed to put them into action, we will immensely benefit the honest business man by making the law certain, and by punishing misconduct and not merely size; and we will effectively, and not merely nominally, curb and control the big trusts which are actually or potentially guilty of anti-social practices.

I do not wonder that, in view of these facts, every big crooked financier is against us and in favor of either Mr. Wilson or Mr. Taft, in order to beat us. I am sorry to say that the great majority of the respectable men of great wealth seem to be against us; not realizing that it is really in their interest that we should exercise supervision over the business use of their great wealth. I feel that every honest and far-sighted business man, big or little, should be with us, for our purpose is to help energy and power in business life, so long as the energy and power are used honestly and the public treated fairly; and all the secondary business men, the moderate-sized business men, should give us their hearty aid.

We are proud of the energy and initiative and success of our business men; we wish to see them prosper and build up American business to the highest pitch of efficiency, both at home and abroad, both in internal trade and in international trade. It is because we war intelligently against dishonesty in business, it is for the very reason that we efficiently oppose crooked business, that we have the right to ask the support of all honest business men; for the Progressive party in its platform offers the only really good platform that the honest business man has had offered him, and makes the only efficient proposals that any party has made for the elimination of evil business practices and the control of big business so that it shall not be used against the interest either of weaker business rivals of the employees and other wage-workers, of the shareholders, or of the general public.

THE PROGRESSIVES AT SYRACUSE

EDITORIAL CORRESPONDENCE BY ERNEST HAMLIN ABBOTT

"WHAT do you think?" a fellow-delegate asked; "would Mr. Straus be the right candidate?" Like almost every one else in the body of the hall at Syracuse, we were standing on our chairs. All about us the delegates were cheering and waving bandannas. In front of us on the platform stood the man whose name had aroused this tempest of enthusiasm—short of stature, aquiline in feature, gray with many honorable years in service of his fellow-men, manifestly astonished and nonplused by what was happening.

"I accept his word, as I accept that of Mr. Hotchkiss," was all I could answer. "He has told me, as he has told others, that if the Convention should name him it would have to reconvene and select another candidate in his place." Then both of us turned again toward that modest great man and joined once more with the rest of the assembly in expressing as best we could our praise of Oscar S. Straus for what he had done for America and for the world.

So intent on its business had this body of delegates been that not until this moment had it realized as a body what a great public servant it had as presiding officer.

It was the afternoon of Friday, September 6, the second day of the New York State Convention of the National Progressive party. Some of the delegates selected to represent their respective county delegations had been gathered in the city for several days at work in considering the many proposals for the State platform, and out of them formulating a provisional programme to be submitted to the Convention. The others had come later, and for the greater part of two days had been discussing the various questions as to candidates and platform which they would have to decide. It was a gathering of serious and substantial citizens of almost all callings. There were farmers and business men, lawyers, wage-earners, physicians, social workers, newspaper men, public officials and teachers, engineers and ministers, employees and agents of great concerns, tradesmen, merchants, men and women. In

matters of self-government New York has no high reputation as a progressive State; yet these men and women, many of them without much experience in the traditional methods of party management, were undertaking to start a Progressive party in that State on the way toward victory at the polls. The State leader, Mr. William H. Hotchkiss, Chairman of the party's State Committee, formerly a leader in the Hughes administration, and therefore well acquainted with those throughout the State who had served the cause of progress under that administration, had achieved remarkable results in organizing the new party. Nevertheless these men and women had a task before them in which precedent could give no great support. They were volunteers in an amateur fight. It is no wonder that they showed themselves to be in a serious mood as they gathered.

Then, too, at the very beginning they encountered a difficult problem. The two men most conspicuously mentioned for nomination as Governor were Mr. Hotchkiss, the State leader, and Mr. Prendergast, the Comptroller of New York City; and concerning these two it soon became evident that there was a very even division of opinion. Both men were admired and trusted; but against each there was serious objection. Many of the delegates felt, on the one hand, that it would not be in accord with sound political ethics for the man chiefly responsible for the creation of a party organization to receive a nomination at the hands of that organization, and that he ought not to be asked to accept it. In spite, however, of the fact that Mr. Hotchkiss repeatedly declared that he did not wish his name to be presented, and that he favored the nomination of Mr. Prendergast, his supporters urged his name upon the Convention. On the other hand, many delegates who felt the force of the argument against naming the State Chairman felt even more strongly that there was something characteristic of the pernicious boss system in some of the pressure which seemed to have been exerted on behalf of Mr. Prendergast, and that, moreover, in certain parts of the State, notably in the rural regions, his candidacy would not win the voters. The intense feeling of hostility to traditional political methods which was strongly predominant in the Convention, coupled with the desire for a candidate that would be regarded generally as available, made the opposition to Mr. Prendergast's candidacy formidable, though by no means conclusive, with all who shared the feeling. Opponents of the Progressive party had, moreover, attempted, by the circulation of gossip through the hostile press, to transform this division of opinion into a factional controversy. What a great majority of the delegates felt to be the greatest danger in the situation was that even if this attempt to create a factional controversy did not succeed, the effect on the public mind would be the creation of the impression that the party in its very inception was disunited. Nothing could be further from the truth. What was necessary, however, was not merely that the party should be united, but that its union should be unmistakable.

If only all the voters of the State could have seen that Convention in session, there would have been no possibility of misunderstanding. There is something in this Progressive movement—for it is more than a party—that binds people together. It is the same thing that has appeared in many a religious uprising. It is a spirit of common conviction and common determination, a fighting spirit in a moral struggle against unseen but very real powers.

It is a spirit that seems to start people singing. It drove the people of Israel to song, and we have the Psalms; it drove the early Christians to song, and we have the ancient hymns of the Church; it drove the Catholic followers of King Charles to song, and we have the lilting tunes of the Cavaliers; it drove the German Protestants to song, and we have the chorales of the Reformation. When men sing like that, their differences of opinion among themselves are not highly significant; what is significant is their agreement in faith and purpose. When men sing like that, let their enemies take warning.

This is what is happening to-day in America. To those who see danger to America in the Progressive party the songs that arise whenever a great body of Progressives meet should have a sinister sound. To those who see hope and good cheer for America in the Progressive party these songs are the proclamation of a new era. These gatherings of singing men and women are of the sort that take more pleasure in standing together against a common enemy than in any differences among themselves.

This spirit has run through all the great Progressive meetings. It was evident even

before the party as a party came into being. When the Roosevelt delegates assembled in the Auditorium at Chicago the night before the beginning of the Republican Convention and heard the leader of their forces summon them to battle at Armageddon, they spent much of their time in song. There was full warning in that music. When, after that Convention, they again assembled, this time at Orchestra Hall, and proclaimed the birth of the new party, there was something of splendor in their singing. It seemed, even to some of those present, that the spirit of unity and confidence so expressed was possibly the product of the moment, a temporary enthusiasm that could not outlast the occasion. Then, six weeks later, came the Progressive National Convention at the Coliseum, when, at the very first session, the sound of the "Battle Hymn of the Republic" started like flames from the center of the great hall and spread like a fire till it was rising from ten thousand throats.

So it was at Syracuse. From beginning to end, while the headlines in unfriendly newspapers were telling the people of the State that the Convention was finding that the various "booms" were "Stirring up Strife," that it was in a "Bitter Row," that it was "Rent by Factional Strife," that it was in the midst of a "Desperate Fight," the delegates could not keep from song, but reverted again and again, whenever opportunity offered, sometimes to adaptations of inspiriting popular airs, but oftenest to the "Battle Hymn of the Republic" and "Onward, Christian Soldiers."

Like those other Progressive gatherings, this assembly was also distinguished from the ordinary political convention by its ability to listen in silence and with attention; and at the same time by its quickness of response to the various speakers. It responded not only with applause and cheers but also with shouts of agreement and correction. For example, when former State Senator Frederick M. Davenport made his speech as temporary Chairman, he had to pause every few sentences for the applause to subside; but when he said that the two old parties were really one party and the Progressive party was therefore not a "third party" but a "second," there were instantly cries of "First! First!" As quick as his audience, he answered, "You're dead right—after November 5," and he was allowed to proceed.

When Mr. Straus, as permanent Chairman, made his speech, the delegates showed their temper in repudiating the evil and claiming the inheritance of the good in the history of the parties of the past by selecting for their greatest marks of approval his reference to "a free and unbossed convention," his joining of the names of Jefferson, Cleveland, and Lincoln, and his phrase the "Progressive Party under Roosevelt," and by doing so bore witness to their appreciation of Mr. Straus's services under both Democratic and Republican administrations in the past, and his close association with the leader of the Progressive party in the present.

During Bourke Cockran's speech the assembly showed another of the traits that seem to be common to all Progressive gatherings—interest in the discussion of fundamental principles. That speech was chiefly in advocacy and explanation of Mr. Roosevelt's plan for the popular review of judicial decisions affecting the general welfare. Dramatic and oratorically effective as it was, it was long and dealt with some matters not easily understood by one unversed in law. From first to last that audience showed that it followed Mr. Cockran's line of argument. It listened as a jury listens. In the midst of the speech there descended on the building a violent thunder-storm. The noise of the tempest buried the speaker's voice. There was a crash of glass. Some of the people sitting under the skylights raised umbrellas. There was a movement on the part of some to change their seats so as to escape the incoming rain. Some one started the band playing—to restore confidence. The big arc lights spluttered. Then the tempest quieted; the band stopped playing; the audience, without its attention distracted or its enthusiasm dampened, resumed its occupation of listening, as Mr. Cockran resumed his speech, and, so far from being wearied by the long and thoughtful address, became increasingly responsive as the speech proceeded.

Most eagerly awaited of all, however, was the speech of Governor Johnson, the Vice-Presidential nominee. Then the audience showed another of its traits. It was now a body of soldiers ready to do a chosen commander's bidding. If Governor Johnson had commanded those delegates to rise, form in line, and march out of the hall, they would have obeyed. Here is a great friend of ours, they seemed to say—a friend who is

in front fighting our battle; he has shown himself not only a great fighter, but a great general; and he will find not one of us flinching. Governor Johnson's address was that of a commanding officer to a citizen soldiery. Those who heard it will remember the substance of what he said; but they will still more distinctly remember the man—his stanch figure, his determined mouth, his rush of thought that seemed to find words ready as sharp-eyed quick messengers, his gestures with the clenched fist, and his love of combat on behalf of those whom he believed to be suffering from injustice—the overburdened man, the toiling woman, and the little child. A great many, from that day on, when they hear of social justice, will see the form and face of Hiram Johnson.

In this mood the delegates were sharply called to their chief duty—the selection of a candidate for Governor. The calling of the roll of counties began. A delegate from New York County was recognized. He plainly referred to the situation that confronted the Convention, and nominated Mr. Hotchkiss. A man from the Westchester County delegation rose and went to the platform. It was Mr. Hotchkiss himself. He declared his name was presented without his consent; he denounced those outside the Convention who had sought to be trouble-makers; and he asked his friends not to vote for him. Nevertheless the next three speakers seconded Mr. Hotchkiss's nomination. Then a delegate from Kings was recognized. He, too, referred to the situation regarding the two candidates, and nominated Mr. Prendergast. The roll was continued and a number of brief speeches were made seconding each nomination. When the roll was completed, Mr. Woodruff, of Kings, moved to take a recess. There were shouts in opposition. Insisting on a hearing, he went to the platform and explained that his motion would expedite matters.

Suddenly a tall, gaunt man in a mustard-colored suit, with a bandanna around his neck and a sombrero in his hand, ran up the steps to the platform. Mr. Straus, the Chairman, put out his hands to turn the man back. He would not go. The delegates, impatient, shouted inquiry and disapproval: "Go back!" "Sit down!" "What does he want?" After a brief consultation Mr. Straus announced: "He wishes to make a nomination." There were more shouts of disapproval. Some one called out, "Nominations are closed." "No, no," came a chorus of shouts. The delegates were insistent on one thing above all others—that the Convention should be free. That suggestion of closing the nominations at once gave the man his audience. Throwing down his sombrero, he stepped forward. Mr. Straus announced: "He may have five minutes."

In a hoarse voice, like a gruff whisper, he began.

"I have just come down from Vermont." That reference to the campaign in that State was sufficient explanation of his hoarseness. "I ask you people of this Convention to make no mistake. We want a man for Governor"—his voice could scarcely be heard—"whose name is known all over the civilized world." There were shouts and laughter. No one could imagine what the man was thinking of. "Whose name brings the tear of sympathy"—more shouts—"regardless of race, religion, or creed"—the impatience of the delegates was increasing—". . . to success and victory."

"Name your man," shouted some one from the floor—"name your man."

He named him; it was Oscar S. Straus.

The delegates were taken aback. There was Mr. Straus before them: but he had so definitely eliminated himself that no one thought of him as the man was speaking. There was a burst of applause and cheering. The man held up his hand:

"Gentlemen, heed me. . . . Make no mistake. . . . No man has had better distinction at home and abroad than Mr. Straus. I ask you to vote for him."

Even then the delegates did not think of Mr. Straus really as a candidate; but they appeared to realize then for the first time how great a man their Chairman really was. Minister and late Ambassador to Turkey, one of the chief founders of the Civic Federation, conspicuous as a friend and promoter of industrial peace and justice, close associate of President Cleveland, intimate friend and adviser of President Roosevelt, the first Secretary of Commerce and Labor—of course he was distinguished abroad and at home, a great public servant. The delegates rose in a body and cheered. As they cheered they thought. In three minutes there was no doubt as to the mind of that assembly. The delegates were marching and shouting. Mr. Straus's positive statement that he would not accept a nomination would have been final with each one of those delegates if he had

been called upon to decide the question separately; it weighed not at all with the mind of them all together. They did not know the man who had served to bring to the surface what, unknown to them, was in the recesses of their own minds. If they had heard his name—McGee—they would have been none the wiser. They simply knew now what they wanted. The cheering was incessant. Mr. Straus stood in helpless wonderment at the scene. Then he tried his gavel. Each time it came down upon the table the cheers rose like spray from breakers. Mr. Straus took refuge in the group on the platform. Mr. Hotchkiss, his face beaming with relief, tried the gavel. The delegates ignored Mr. Hotchkiss. There was no gainsaying their will. Mr. Hotchkiss, vainly trying to be heard, finally held up a sheet of paper on which, written in lead pencil, were the words, "He accepts." The news ran back from the platform like a wave. One could follow its course by the billow of louder cheering. And then the wonder of the day happened. As if by instinct, anticipating the wretched question as to race and religion that always seems to rise when a party in America names a Jewish candidate, the body of delegates as one man took up the hymn, "Onward, Christian Soldiers." The cheering ceased, and the martial rhythm of this militant hymn of the Christian Church from the throats of those delegates sounded the destruction of religious and racial prejudice in this campaign and the faith of the party in the righteousness and ultimate victory of their cause. The hymn ended, the delegates resumed their cheers—this time cheers of relief at the solution of their task; but they cheered for only a moment, for these were those formidable men and women who sing; and so once more they sang. This time arose that old Psalm tune which brought to a close the Progressive National Convention at Chicago, "Old Hundred," to the words of the Doxology.

What followed was merely the formal ratification of the real selection that had already taken place. County after county sent its representative to the platform to second the nomination of Mr. Straus, the vote was taken, and Mr. Straus was the nominee.

According to the custom begun at Chicago, the candidate was not asked to defer his formal acceptance to a later date, but was immediately heard. Mr. Straus's simple speech was characteristic of his modesty and his moral courage.

Scarcely less significant than the manner of the nomination of Mr. Straus were three other incidents of the Convention. They should be mentioned.

In the first place, when the nominations for the other offices were made, the candidates, before the delegates voted, were called by the Chairman to appear upon the platform and show themselves. It was significant of the mind of the Convention that the delegates wished to see in person the men whom they were asked to select for candidates before the people. In the case of Frederick M. Davenport, chosen unanimously to be the Progressive candidate for Lieutenant-Governor, this was unnecessary, for as temporary Chairman he was well known to the delegates, even if his name as a legislative supporter of Governor Hughes had not been familiar to them all. He, however, like all the rest, was called on to accept the nomination then and there.

In the second place, the men nominated for judgeships were notified that they, like all the others, were expected to take the stump in the campaign. This was significant of the view which the Progressive party takes of the judge as an officer who should be responsible and known to the people.

In the third place, besides adopting a platform that promises reforms to secure a larger measure of self-government and of social justice, the Convention passed a resolution creating a permanent committee to draft measures for carrying out the proposals of the platform, to present those measures to the legislative and executive authorities, and if necessary to provide, with the aid of the officers of the Convention, for reconvening the Convention itself for the purpose of reaffirming its demand. So far as I know, no other convention has ever done the like.

The Syracuse Convention, like that of the Progressive party at Chicago, makes one hesitate in declaring that the direct primary has rendered conventions altogether useless. If the Progressive party is to retain its present spirit in future years, it may not do the actual work of nominating candidates by convention, but it will surely retain the substance if not the form of these assemblages that have made the year 1912 memorable.

FOLLOWING THE CAMPAIGN

A WEEKLY DIGEST OF POLITICAL OPINION
AS EXPRESSED BY PEOPLE AND NEWSPAPERS

STATE ELECTIONS, PRIMARIES, AND CONVENTIONS

DURING the past fortnight the elections, primaries, and conventions in various States have more or less affected the Presidential campaign.

I—ELECTIONS

VERMONT

So far as may be judged by reading the opinion of the newspapers throughout the country, a principal indication of the Vermont election, as affecting the Presidential contest, is that the latter fight is to be ultimately between Mr. Wilson and Mr. Roosevelt.

As to the former's chances, the New York "Tribune," for half a century the chief exponent of Republicanism in this country, says:

. . . If in other States the Democrats can hold their vote together as well as they have done in Vermont, and if the Progressives can divide the opposition in the same proportion, they will probably give the victory to Mr. Wilson. . . .

Hence the Vermont election elicits this snarl from the Chicago "Inter Ocean" (Rep.):

Unless Messrs. Hilles and Mulvane bestir themselves at once, cease talking incompetent nonsense about "quiet" and "dignified" politics, and begin immediately a real Republican campaign, they are likely to find themselves, ten weeks hence, not only politically defeated but politically disgraced.

This is unjust to Messrs. Hilles and Mulvane, exclaims the Sioux Falls, South Dakota, "Press" (Ind.). "How can these men put on a 'real Republican campaign'? What material have they to begin such a work?" The paper answers itself:

The "real Republican campaigns" of old were indeed inspiring ones. But in those days we had Republican candidates with whom the Republican voters were in entire accord. Then we had a solid Republican party.

Messrs. Hilles and Mulvane know that no "real Republican campaign" is possible without Republican enthusiasm. To talk about such a campaign in 1912 is hollow mockery.

"In the most isolated and hidebound Republican community in the Union," namely, the State of Vermont, the Progressives "were able utterly to destroy the historic Republican majority," chronicles the Chicago "Evening Post." A Republican paper, the Minneapolis "Journal," admits that "the significant fact . . . is the apparent ease with which fifteen thousand Republicans were swung to the Progressive ticket in a staid State like Vermont." The conclusion of the whole matter, according to the Louisville "Evening Post" (Ind. Dem.), is as follows:

If for a new party, not in existence for sixty days, to enter the stronghold of the Bourbons of America, to invade a State dominated by ignorance, prejudice, and the money power, and cut down the vote of the dominant party 20,000, and to record 16,000 of these votes for the new party and 4,000 for the Democratic party, does not look like a landslide, is not a revolution, is not a popular response to a magnificent political crusade, then language has lost its meaning. . . . Assume that the Progressives are nowhere to do better than they did in Vermont—knowing . . . as we all do that it nowhere expects to do worse and nowhere can face worse conditions—assuming, we say, that nowhere it does any better than in Vermont, we must deduct from the Taft vote of 1908 forty per cent, give to the Democrats no gain, and yet absolutely wipe out of existence the administrative party, the party of Taft and Penrose and Crane and Archbold, in every doubtful State.

No; it is not the Democratic party that is about to disappear; it is the so-called Republican pirate ship that fell into the hands of the political desperadoes of 1912. It will practically disappear on the evening of the election of November 5.

MAINE

The difference between the election in Vermont and that in Maine was the difference of a union between Republicans and Progressives in Maine on State issues as opposed to the disunion in Vermont.

The New York "Sun" (Ind.) puts it thus:

At Chicago the Maine delegates refused to vote when they realized that Mr. Taft would be nominated, and upon their return home it was assumed that a Progressive State ticket would be put into the field. It was deemed, however, the better part of valor to unite with the regular Republicans upon the State, legislative, and Congress tickets, and postpone the irrepressible internecine strife between the factions until after the September election.

The Burlington, Vermont, "Free Press" (Rep.) thus describes the situation:

The Republicans of Maine have not divided as in Vermont, Roosevelt not having insisted upon a single ticket, as in the Green Mountain

State. It was represented to him that his followers controlled the Republican party there.

The Republican-Progressive union in Maine is more curtly dismissed by Democratic organs; for instance, the New York "World:"

The Roosevelt saints had no compunctions of conscience whatever about allying themselves with the Taft burglars. . . . The cohesive power of four hundred State jobs overcame all Republican dissension.

The New York "Sun" (Ind.) says:

For the Republican party the election in Maine has no National significance, at least no bearing upon the Presidential contest, because the Republicans made their campaign mainly, if not almost entirely, upon State issues, and for the additional reason that the supporters of President Taft and the Progressives buried the hatchet and patched up a truce to redeem the State administration from the Democrats. . . . What credit there may be in the election of the Republican candidate for Governor both sides may claim, but it cannot be apportioned.

Perhaps it cannot; but in the opinion of the New York "Tribune" (Rep.), the result of the Maine election is "a startling commentary on the futility and superfluousness of the third party movement." The "Tribune" declares:

The schism created at Chicago was created from the outside. It does not run deep into the State organizations, in which there are no irreconcilable differences between Taft supporters and Roosevelt supporters.

The New York "Times" (Ind. Dem.) puts it another way:

Maine is one of that great number of hitherto Republican States in which it is perfectly evident that the Republicans cannot make two piles of their vote and expect either to overtop the Democratic pile.

But let a Maine paper speak. Probably the best known is the Lewiston "Journal" (Prog.). It declares:

On National issues Maine is over thirty thousand strong for the Roosevelt policies. Please watch the Bull Moose.

But the split in the Republican party on National issues did not enable the Democrats to retain their grip on the State. Says the New York "Tribune" (Rep.):

Their vote this year fell nearly seven thousand below their vote in 1910. Democratic performance has therefore not only failed to make new converts, but has even driven away former supporters.

"It must be admitted," frankly says the New York "American" (Dem.), "that the Maine result is less decisively Democratic than Vermont's vote." It adds:

In Vermont the Democratic vote gained thirty-two per cent over 1910. In Maine the Democrats cast about nine per cent fewer votes than in 1910.

Here is what the Boston "Transcript's" (Ind.) correspondent said before the election:

The Democratic leaders of New York and other Eastern States have reported at headquarters that if Marshall is to continue denunciation of business and his threats to throw every concern into a receivership, then the East is lost to the Democracy. . . . As for Champ Clark's frigid statement about Wilson, many men here are saying, "I told you so." Their contention is that Clark will not be able to get over his grouch at Baltimore until long after the election, if he ever does.

As is natural, the New York "Times" (Ind. Dem.) compares this year's vote with that of 1908, and finds that "the Democrats increased their total vote by some five hundred, while the Republicans fell thirty-seven hundred below their total of that year." The New York "Sun" (Ind.) thus summarizes the sentiments of the three parties:

The Bull Moose people insisted, of course, that had their party had a candidate in the field, he would have drawn from the Democratic vote and made a great showing. The Taft supporters called attention to the fact that the returns showed Republican gains over two years ago, and Democratic losses by the same comparison. The Democrats drew comparison with the vote in Maine State elections in previous Presidential years, and were able to demonstrate, of course, that the Republican majority was abnormally small.

II—PRIMARIES

Three of the primaries held in the various States—those in Michigan, California, and South Carolina—may be singled out as unfavorably affecting the fortunes of the Progressive, Republican, and Democratic parties in the Presidential contest.

MICHIGAN

In Michigan, according to the Chairman of the Republican National Committee, "the Republican party polled approximately 150,000 votes, and the Third Term party made a ludicrous appearance by polling only 6,500 votes." The Cedar Rapids, Iowa, "Gazette" (Ind.), however, warns thus:

The Taft crowd points to the figures as an indication that the Wolverine State will give Taft its electoral vote. But they do not know Michigan sentiment. It is true that the Progressives polled a ridiculously small vote at the primaries; that was because there was a very general disposition to remain in the old party so far as State and county tickets are concerned. Very many of the Progressives preferred to remain regular. They will do their

independent voting in November, and there will be more than six thousand of them.

CALIFORNIA

In most States Presidential electors are still chosen by the old convention system. The new primary law of California represents a stage in the transition from that old system to a direct vote. Presidential electors of the several parties in California are now chosen by the legislative nominees of the respective parties. In the primaries just held in California the victory lay, as in the previous election, emphatically with the Progressive Republicans. The New York "Tribune" (Rep.) calls this victory "the successful misappropriation in that State by the third party of the Republican party's emblem and place on the official ballot." It adds:

Supporters of Roosevelt and Johnson have captured the machinery of the Republican organization and will use it to put in the Republican column candidates for elector who will not support the Republican nominees for President and Vice-President. Although this result was accomplished under the primary law of the State, it is none the less pure robbery. It deprives the regular Republicans of California of their right to be represented as Republicans on the official ballot; and, if not taken cognizance of by the courts, it may deprive them of their legal status as a party, leaving them without the power to put in the field a recognized Republican electoral ticket.

To all protests the Los Angeles "Express" (Prog.) makes the following rejoinder:

The Republican party in California is Progressive. It owes no allegiance to the Republican party of the Nation; and is not bound by the acts of the Penroses, Guggenheims, Barneses, and Roots. It is within the right of the Republican party of California to affiliate itself in the National campaign with whatsoever organization it chooses. Not even the most strained interpretation of the ethics of the situation can in the least impeach the integrity of the conduct of any voter, registered as a Republican, who votes for Roosevelt legislative candidates.

SOUTH CAROLINA

In South Carolina the issue was sharp-edged, as the candidates for Governor were the present incumbent of that office, Cole L. Blease, and Ira B. Jones, former Chief Justice of the State Supreme Court, who, according to the New York "Times" (Ind. Dem.), "resigned his seat on the bench to save the State from the disgrace of Blease for a second term."

But, as this journal admits, "it would appear that the State does not care to be saved." Hence the disheartenment among prominent Democratic papers of the South, like the Knoxville, Tennessee, "Sentinel," and particularly those two well-known South Carolina journals, the Charleston "News and Courier" and the Columbia "State." Concerning this latest evidence of alleged Democratic incapacity to choose a proper executive, the two South Carolina papers urge a searching investigation of the alleged "stuffing" of the ballot-boxes in the back-country counties from which the swollen Blease majorities came. But, in any event, the Knoxville "Sentinel" points out:

Victories like those of Blease of South Carolina, Vardaman of Mississippi, and Jeff Davis of Arkansas . . . almost shake confidence in popular government.

III—THE NEW YORK PROGRESSIVES AND MR. STRAUS

Of all the political conventions recently held in the United States, that of the Progressive party in New York State has attracted by far the greatest amount of newspaper comment.

As to the delegates, the correspondent of the New York "Evening Post" (Ind.), a paper editorially hostile to the Progressives, described the Convention as made up of "what under different conditions would have been the flower of the Republican party and the best element among those who constituted the Independence League." To this the Newark, New Jersey, "Evening News" (Ind.) adds:

Of course the delegates were not all unsophisticated or unselfish. There were enough of the practical and practiced element to run things in a businesslike way, but they were unable to "boss" the Convention.

So far as the great mass of delegates is concerned, the spirit shown was a desire to serve, to nominate the best men, to adopt a platform of vital issues, to strive for a closer relationship between the people and the government, and to secure for the people those things that belong to them, and of which they have been deprived by the "invisible empire" of combined business and politics.

As to being "bossed," the New York "Herald" (Ind.) had told its readers prior to the Convention that "when the time comes to name a ticket, a hand-picked one will be put over with all the celerity that could be desired." It also said: "The delegates know that if there should be a real dispute, a telegram from a special train out West will settle all differences!" But the New York "Evening Post" (Ind.), despite

its opposition to Mr. Roosevelt, is broad-minded enough to speak as follows:

The history of the nomination will go far to deprive of effectiveness with the voters—so far as the State campaign is concerned—the charge that the party is simply the instrument of Mr. Roosevelt's will. The Convention was stampeded, in quite the good old style of the most spectacular stampedes of the historic parties; but this will do the ticket no particular harm, and will do away with all possibility of drawing any parallel between its action and that of a convention whose choice is dictated by a boss.

As to the nomination for Governor, "the most surprising thing that has happened in Rooseveltian circles," asserts the Buffalo "Express," "was the nomination . . . of Oscar Solomon Straus." The Chicago "Inter Ocean," a stand-pat Republican organ, forgets that this Mr. Straus is not his brother Nathan, for it says:

In a voice husky from his exertions in herding steers in the wilds of the Bronx, "Suspender Jack" nominated . . . a gentleman of ample fortune, creditably notable for his benevolent zeal in providing pure and free milk for sick babies.

And, under the queer influences of the picturesque costume and stammering oratory of "Suspender Jack," the delegates were at first stunned and then stampeded into . . . nominating Mr. Straus by acclamation! . . . A more striking illustration of hysterical politics history does not record.

The celebrated capture of the Democratic Convention of 1896 by Mr. Bryan with his "cross of gold" speech came nowhere near it. Then the delegates took a day to try to think it over; it took five ballots to nominate Mr. Bryan; 352 out of the 930 delegates refused to the last to be stampeded. . . . With all its follies, there was in the Chicago Convention of 1896 no such self-hypnotism into hysteria as in the Syracuse Convention of 1912. And just imagine such a neurotic crowd as that making laws for a Nation, a State, or even a village!

Another Republican organ, however, the Philadelphia "Telegraph," interprets differently the manner of the nomination:

The nomination was the natural product of a wave of hysteria, which took men off their feet for the moment and caused them to do the right thing in circumstances which generally result in the wrong thing being done.

Indeed, the Philadelphia paper declares that the nomination "is so much superior to the party" that the selection "would have been impossible had anybody tried to effect it in cold blood."

The most impressive thing about the nomination is the fact that, from a wide reading of Independent, Democratic, and Republican papers, not a word of adverse criticism has been found to be leveled at the candidate himself. Even that most cynical of critics, the New York "Sun" (Ind.), is forced to admit that in the nomination the Convention "displayed a good sense and a sanity of which its earlier performances had held out no promise." It adds:

That a Convention whose sessions were marked by the petty rivalries of little men making large pretenses . . . should end in the nomination of Mr. Straus will be accepted as proof that the Progressive party in this State has enjoyed a large share of the proverbial luck of its patron saint.

The Chicago "News" (Ind.) says:

What particularly appealed to those in the Convention is the fact that Mr. Straus is a friend of humanity, an active worker on behalf of the poor and oppressed, and generally a man of high ideals. The prompt response of the Convention to the appeal for the nomination of a candidate whose name stands definitely for measures leading to the advancement of mankind was a stampede of the best sort.

Democratic papers are no less hearty in their eulogies. For instance, the Baltimore "Evening Sun" asserts:

Mr. Straus, it is hardly necessary to be said, is an admirable selection. He has served the American public in various offices, and always with distinction. He is well equipped to be Governor of the most populous State in the Union.

The Cincinnati "Enquirer" (Dem.) says:

The nomination of the Hon. Oscar S. Straus . . . was a masterstroke in politics, and will carry with it a support at the polls for the Progressive party in that State much greater than was possible without the naming of such an eminent and worthy citizen as candidate for that position.

"It is impossible to deny," says the New York "Times" (Ind. Dem.), "that the New York Progressives have made a fine beginning." The paper adds:

Mr. Straus has had a good deal of experience in public affairs. . . . Experience, by which he is well qualified for the office of Governor, is conspicuously lacking in the Progressive party. Most of its members are new to the business of politics; very few of them have had any training in a public post.

The New York "American" (Dem.) declares of Mr. Straus:

His personality suggests a standard of citizenship that is above race, sect, and party. People are bound to think of him as a man who really cares very much for human beings and for the public welfare, and as one who has ample abilities to back the interests of his heart.

Mr. Straus's achievements in the past are of a kind that will reassure people as to the worth of his services if he should be made Gov-

ernor. . . . Under three different Administrations he has been our diplomatic representative in Turkey. . . . He established the right of Christian missionaries and opened the way for Western education in the Turkish domain. He helped the oppressed Armenians. He made peace between the Americans and the Mohammedans of the Philippines. As member of the Permanent Court of Arbitration at The Hague, as Secretary of Commerce and Labor under Roosevelt, as President of the New York Board of Trade, as chairman of the momentous commission now sitting in judgment on the issue between the railroads and their engineers, as author of books on political history and religious liberty, and in many other capacities, Oscar S. Straus has always been a man of the first rate in his generation.

Republican papers are also hearty in their commendation. To take three from different parts of the country, the Waterbury, Connecticut, "American," the New York "Tribune," and the South Bend, Indiana, "Tribune," the first says:

Oscar Straus was nominated for Governor . . . by the lucky inspiration of an unexpected man, and by the quick realization of the opportunity on the part of the delegates. Mr. Straus is one of New York's best citizens, with a National reputation for honorable business success, private benevolence, and broad-minded public service.

The New York "Tribune" also prophesies:

The nomination will everywhere be regarded as creditable, and in some parts of the State will be strong. Mr. Straus is not personally well known in the rural sections, and he is not likely to be an effective campaigner, but he is influential among a large class of voters in this city, and, though he is not specially known as a radical, his standing as a philanthropist will make his candidacy pleasing to the social workers and semi-socialists whose zeal has been so manifest in this Convention.

The South Bend "Tribune" declares of the candidate:

His motives and his sincerity are beyond question. As a man he has the admiration of the whole country, and his record is untarnished.

Progressive papers are, of course, delighted. We select three for quotation, the New York "Mail," the Chicago "Evening Post," and the Kansas City "Times." The first says:

The nomination of Oscar S. Straus at Syracuse by an entirely unpremeditated stroke, and in a way which took the Convention's breath as by a glorious surprise, was only one indication of many that the Progressive movement is greater than the Roosevelt candidacy.

The Chicago paper thus comments:

The nomination of a Hebrew for this important office is in splendid accord with the true spirit of this new democratic party which knows the prejudice of neither race nor religion.

The Kansas City "Times" says:

It was particularly appropriate that a man who had presided with distinction over what has been called the "Department of Humanity" in the Federal Government should be called to the leadership in New York State of the party of human rights. . . .

But there is another reason why his nomination by such a party is appropriate. He comes of a race that has stood more determinedly for democracy than has any other people. . . .

The Progressive movement is a development of the same aspirations for justice and human betterment that animated the Hebrew democracy and the Hebrew prophets. . . .

Such a movement in the most important State in the Union is fittingly led by a man with such a heritage of democratic ideals.

So much for the man himself. But the nomination has a special significance and has already done a special service in compelling both Republicans and Democrats to search their ranks for another than a mere "machine man" to oppose the Progressive nominee. The New York "Evening Post" (Ind.) admits that "the campaign for Mr. Straus is one that will have to be seriously reckoned with, and that both of the old parties will be put to their trumps to meet."

As to the Republicans, the New York "Tribune" (Rep.) thus warns:

The character and ability of Mr. Straus are such that independent voters may easily turn to him, even though they feel that they are wasting their votes, if they are not reasonably satisfied with the alternative offered by the Republicans to the continuation of Tammany rule at Albany.

As to the Democrats, the Columbia, South Carolina, "State" (Dem.) puts the matter pithily to New Yorkers when it says:

The nomination of Oscar S. Straus means that the Democrats of the Empire State must eliminate Murphyism in self-defense.

To this the Baltimore "Evening Sun" (Dem.) adds:

With weak, machine-made opponents in the regular parties, it is conceivable that Straus might sweep the State; and, in the event of such selections, it is very much to be hoped that he would.

Thus, as the Gloversville, New York, "Herald" (Prog.) concludes:

Everywhere . . . it is conceded that the nomination of Oscar Solomon Straus . . . is the strongest that could have been made. Likewise it is conceded that the new third party . . . has set a mark which will be difficult for the Republican and Democratic parties to measure up to. . . . The nomination of Mr. Straus has placed the Progressives in the running as nothing else could have done.

A GREAT RULER

BY HAMILTON W. MABIE

This address was delivered at the meeting in memory of the late Emperor of Japan held in Carnegie Hall, New York, on the evening of Friday, the 13th inst.

THIS meeting in memory of the late Emperor of Japan is the first commemoration by the Far West of a ruler of the Far East. The image of the Oriental monarch in the Western mind has been that of a voluptuary with the instincts and habits of a tyrant, whose wise acts were performed by others and whose evil deeds were his own. Mutsuhito was as far removed from this type as Washington was from Genghis Khan. Like the great American, the great Japanese was not the exploiter but the servant of his country; frugal in the manner of his life, tireless in labor, and a scorner of those who wait to be served rather than bind on their shoulders the burdens of many. If this constancy of devotion to others, this quiet change of privilege into responsibility, with the courage and constancy to foresee and aid the rebirth of a nation, make a man great, then Japan has lost a great ruler.

When the head of a state, in a crisis in its history, has the counsel of able men, it is not easy to distinguish his work from theirs. Nor is it necessary; for great things are done by co-operation, and the making of a nation is an achievement so vast that, while individual services may have varying degrees of value, the vision and self-surrender cannot be apportioned. Japan was greatly served in her time of change, but she was also greatly led. In such a crisis greatness of nature is even more sorely needed than greatness of faculty, for through the darkness and uncertainty the faith that holds a clear purpose must move steadfast and resolute, unselfish and untiring, before a doubting people.

Of such a temper was Mutsuhito, of whose reign the whole world has heard, but of whose personal fortunes in the rising fortunes of his country it has known little. That he was of the substance of which great men are made was shown at the very beginning of his career by an achievement unique in the long history of kings. Many rulers have drawn away from their subjects and taken on the attributes of divinity, and loyalty has passed on into awe and worship; Mutsuhito emerged from the seclusion of the demigod, in which his ancestors had lived for many centuries, and became a man among men, and instead of losing the reverence of his people gained their passionate devotion.

When the boy of sixteen ascended the throne and made the first confession of his faith, in a speech as brief as Lincoln's Gettysburg address and as memorable, a curtain descending to his waist hid his face from a people who had not seen their Emperors for long generations. The voice which spoke was the voice of a demigod, but the words were those of a man filled with the modern spirit. "Let the popular assemblages be established far and wide, and let public opinion decide public questions," it said; ". . . let us destroy the evil usages of the past; let us build on the foundations of the great principles of heaven and earth. . . . We wish to bring about such changes as never were before in our country; and We ourselves shall lead the way." Never were words more revolutionary spoken in so constructive a spirit. The Emperor came out of the seclusion and mystery of the palace to become the leader of a radical reorganization of his country. It was a supreme test, and only a great nature could have met it. It was one of the most dramatic transformations in history, and only a great man could have passed through it.

When Mutsuhito ascended the throne, Japan was in the sixteenth century; when he died, Japan was one of the leaders of the twentieth century. Then she was a museum of feudal arms and arts; now she is equipped with the latest education and the tools of the latest science are in her hands. Then she was divided into feudatories, under arbitrary rule; now she is a nation, growing swiftly in strength and authority under a government as liberal as it is intelligent. Then Japan was led by soldiers; to-day she is led by statesmen, scholars, scientists, experts in every field. Never before has a nation deliberately changed its organization, its education, its arms. The appearance of Japan among the great Powers was dramatic in its suddenness; but the nation did not suddenly rise to greatness; greatness

is the product of long preparation. The soldier changed his arms, but the soldier had not been changed; a thousand years of discipline had given him the habit of courage, the habit of obedience, the passion of patriotism. The Japan of to-day is the flowering of that old Japan which hid its strength, like a Damascus blade, behind exquisite craftsmanship.

The young ruler had the great gift of vision. Standing in the sixteenth century, he saw the twentieth century; and under his leadership the nation, in a generation, traversed three centuries and stood, open-eyed, equipped and trained, on an equality with nations three hundred years her elders in modern methods. There was the prescience of genius in such a vision as this, and Mutsuhito must be counted among those rare spirits who see in advance what most men see only when it lies like a distant landscape behind them.

To him also belongs the honor of a noble hospitality of nature. For it is only a man of large heart who can make himself the servant of inspiring ideas, the executor of far-reaching plans, which others have originated. It may be that Japan owes more to the mental alertness, the clear-mindedness, of the Emperor's counselors than to his own fertility and quickness of brain; but if this be true, it diminishes not one whit his greatness of soul. The nobility of nature which receives from every source, that it may have the more to give, is rarer than the power of origination. There were far more brilliant and variously gifted men in the services of the American colonists than Washington; there was none so great as he. When, in the long future, Japan recalls the names of her emperors and of her statesmen, she will always count Mutsuhito among the greatest in both groups.

The honors which the Japanese pay to a great ancestor we pay to a great contemporary. It is easy to recognize a great man when he has become a historic figure; fortunate are we when we can lay our hands on greatness and not look on it from afar. If to step out from a cloud of incense and become a man; to put service to others in the place of their adoration; to see across three centuries and with a prophet's instinct guide a nation through tremendous changes; and, clothed with absolute power, to share that power with a nation and to work untiringly with others and for them, make a man great, then surely we may say of this man that, having left the august company of the gods, he bore himself so nobly in his journey through the world that he returned to them. He who said at the beginning of his reign, "Let us seek knowledge throughout the world," had earned the right to say at the height of his career:

"O man, look up, even in the hour of weal,
When Progress leads the nation, and revere
The grace of God that watches o'er the earth.

When hearts of men
Are cloudless, free from all defiling strain,
The mighty gods, clearly beholding them,
Fill them with their pure light."

THE REED

BY GEORGE E. WOODBERRY

As when the poet, muttering low,
Doth feel his blood prophetic flow,
And reaches with his hand
For some diviner instrument
To give the coming music vent,
My hands moved to and fro.

"O Face Divine that bent over my youth
With sweet, victorious, battle-quick breath,
Who sealed on my lips the love of truth,
And taught my childhood the lore of death,
And I caught from thy bosom the glow and the lift
Of thoughts whereon I heavenward drift,—
Spirit of Justice, purest and best

Of the powers that spring from the human breast,
What is thy will?" I murmured low.
"I see thee sweep thy robe from the land;
As one fain to go I see thee stand,
And I, too, am fain to go."

She looked as one who sees in pain
His armies waste away in vain
And from the lost field turns;
His plans o'erthrown, ambitions fled,
Glory obscured, and comrades dead,—
His bosom darkly burns.

"Thou hadst a reed," she said;
"Its notes were battle-born;
I would hear if its dumb stops keep
Some echoes of its morn.
Sing me the hosting music
Of men who march to death;
Bring me the reed of thy boyhood,—
Though it holds but a little breath,
I shall hear on its faintest flute-note
The feet of a million men;
It was a curious instrument,
And seemed both sword and pen."

I took the reed I threw away;
I tried again its music rude;
A blush came over the laurel spray,
And the eagle rose from the wood;
And the reed, as 'twere from a brazen throat,
With my boyhood breath blew a trumpet-note:

"Peace be with God! armies and fleet,
Marshal them, launch them, after my feet,
Who am gone to the field where dying is sweet!
Youth, all the land over,
Your manhood discover!
Part, maiden and lover!
Swords, over the border to the realms of disorder!
In the shadow of war sleeps the fate of all lands;
I am Justice,—the dream of the world in my hands."

"Lo!" she said, "where the loud cannon spoke for the cause,
Half over the land the silenced laws!
Shall they bind with a pact the realms abroad,
Who maintain not the bond on their native sod?
What noble assizes Americans make
With bloodhound and rifle, the noose and the stake!
The strength of his arm is the taskmaster's creed;
How long will laboring millions bleed!
They mind ill the lesson of times gone by,—
When the silence is deepest, 'ware Truth's war-cry!
And the rich man's gift with his lavish gold
Is children's children to usury sold.
War hath its crimes, which may time decrease!
The crimes universal are crimes of peace."

Like a hand-fast child I held to the flute;
Deathly wan were her cheeks;

Fain was I to be understood,
As one who stammering speaks.
I pressed the reed to my mouth;
I spent my kiss of fire;
The little stem enraptured shook
With the glory of the lyre:

"With the popular breath the planet
This way and that may roll;
I am the Master of empires,
I am the Lord of the soul.
Throne whom they will in the churches,
Crown whom they may in the school,
Who obeyeth me is the Christian,
Who denieth me is the fool.
I buried Egypt at daybreak;
I doomed Nineveh and Rome;
The starry spear of Paris
Late drove my judgment home.
With ships and arms let nations
Steel hard their cities and coasts;
One word of the lonely Truth-teller
Lords it o'er fleets and hosts.
My heralds summon Asia;
I have mined the Muscovite;
My Peace, my War, are equal powers,
The left hand and the right."

"Ah, here," she said, "how was my coming sweet,
And o'er all other lands was this land dear!
I thought to fix my everlasting seat
Hereon, and stay my world-wide wandering here."
Full heavily she leaned upon that lance
Which through the sides of nations makes its way;
Then saw I in her eyes a light advance
As 'twere the flaming majesty of day.

I blew; on that weird flute
Seemed coming from afar
The trample of all human feet
That ever trod this star;
Hard on Turanian rock,
And desert-soft on sands,
Poured the innumerable footfall
Of the children of all lands:

"Not for a single age,
Not for a favored land,
Not for a separate race,
Was heavenly Justice planned;
But destined to one fold
Of science, art, and love,
Are the wandering peoples all
And every soul thereof.
Lo! where the old East flames,
How great a light hath broke!
Lo! what a burden falls
From Allah's patient folk!

Their feet are many millions
Who toward light traveling are,
Where world-wide beams thy promise
From Freedom's morning star.
Come, though grief be thy portion,
And war thy housemate be,
Thou canst not build on less than man,
Nor man on less than thee."

I rose, still fluting in the dark,
And to her side drew nigh,
And all the while new stars were sown
In th' interminable sky:

'Through many thousand ages
May man's ideal refine!
Yet here in nature's periods
The brute shows half divine,
Who thinks that he who loves the most,
And most denies his lust,
Who giveth all and taketh naught—
Only that man is just.
And still we dream beyond this truth
What deeper glories lie;
Come, Justice, teach mankind to live,
Teach nations how to die!"

On that dark strand she bent her head full low,
Far down, and with her tears my hand impearled,
And drew it into hers, and led me forth,—
"Come," said she, "sing thy reed-song through the world."

FIRST AID TO THE HOME BUDGET-MAKER

BY MARTHA BENSLEY BRUÈRE

"I HAVE three thousand a year," writes a man from Wisconsin. "How ought I to spend it?"

A woman from New Hampshire duplicates this question, and men and women everywhere cry out for a schedule on which they can drop their money and see it run, like marbles on a bagatelle board, into the proper pockets.

When these questioning ones are financially at the lower edge of the middle class—that is, have about $1,200 a year income and the average family of three children—such a schedule is not hard to make, because it involves only the least expenditure that will insure physical efficiency. At the rate of thirty-five cents per adult man per day, they must spend $447.15 for food; shelter will cost about $144; clothes, a minimum of $100; light, heat, and other operating expenses, $150; insurance, savings, recreation, health, and the cost of keeping a child of fourteen in school instead of sending it to work, approximately $312; while about $46.85 must go for incidentals. This I believe to be the average minimum of maintaining an average family in health and decency in the United States to-day.

During the last four years some two hundred accounts of the expenditures of middle-class families have come to me. It is obvious that the general level of instruction in mathematics is pretty low. Sometimes the accounts do not balance within $300; sometimes people state frankly that they spend their incomes "probably about such and such a way." One man says naïvely:

"I notice that this account adds up $211

more than my salary, so I suppose there is a mistake somewhere."

There is!

But, in spite of the popular inadequacy in the presence of figures, *seventy-six* budgetary accounts are mathematically correct and bear the stamp of truth. These seventy-six are from every part of the United States, cover practically every occupation of the middle class, and concern no income of over $5,000 a year. That seventy-six records of this character furnish slight basis for elaborate generalization I fully realize; but the conclusions to which they lead are valuable as indicating the truth. These budgets show that families with incomes of $1,000 or below, from whatever part of the country they come or in whatever work they are engaged, average less than the minimum expenditure for health in every item. Even considering that they average only one and a third children to the family, and therefore need only $332.15 a year spent for food, they do not actually reach this food minimum by $66.75, and they average a total deficit of $72.97. Obviously, families with incomes near $1,200 a year—the line of decency which marks the entrance to the middle class—have little choice as to how they spend their money if they are to remain physically efficient. It is possible to say how their family budget *ought* to be made. No budget will make an income of less than $1,200 enough; it cannot spend one dollar twice.

For instance, take the expense account of the Caldwell family—father, mother, two children under seven—living in Chicago on an income of $1,079.50 a year, with a deficit of $191.18; the expenditures for such a family, on such an income, in such a place, according to the minimum for health, should be:

MINIMUM	
Food	$344.93
Shelter	144.00
Clothes	100.00
Operation	150.00
Advancement	312.00
Incidentals	46.85
	$1,097.78

MR. CALDWELL SPENDS	
Food	$304.26
Shelter	307.50
Clothes	115.25
Operation	185.36
Advancement	288.20
Incidentals	70.11
	$1,270.68

The most a budget can do for Mr. Caldwell is to show him how to reduce his deficit to $18.28, and point out his three lines of action: earn $18.28 more a year, work out some co-operative scheme by which the things he must have will cost him less, or give away the baby. People in his dilemma have tried all three. Mr. Caldwell, being on the ragged edge, can take a budget ready made.

When the income is over $1,200, the family has passed the line of decency and entered the realm of choice. Whether the surplus is wasted or saved *need* not affect their physical efficiency. Their budget need not say how the income *must* be spent, but will show how it *may* be spent to gain whatever special end the family has in view. It is a philosopher's stone to transmute a mere money surplus into opportunity.

For instance, Mr. French, a teacher, with a wife and two children, having an income of $3,311 a year, and living in a large Massachusetts town, sends his expense account and asks how he can save $1,000 a year. Now it is perfectly evident that he can do this, because the $2,311 he would have left is enough to maintain his family in health. Here is a digest of his expense account:

Food	$386.76
Shelter	484.32
Clothes	413.25
Operation	439.46
Advancement	1,587.21
	$3,311.00

Mr. French's children are so nearly grown that the minimum cost of feeding them is, according to our standard, $434.35, which is $47.59 more than he spends now; but this difference is accounted for by the vegetables he raises in his garden. Probably he cannot reduce his food cost further. He pays $340.32 over the minimum for shelter, $313.25 over for clothes, $289.46 over for operation, and $1,275.21 over for advancement. But in his case these minimum expenditures must be modified by the consideration of what is customary in his profession. Teachers with families average $256.76 for shelter, $206.86 for clothes, $251.22 for operation, $754.34 for advancement, and $150.50 for incidentals, with a deficit of $12.20. Mr. French already puts into savings and insurance $337.34; to increase this to $1,000 he might reduce the shelter and clothing to what is normal for his class,

and garner the $228.71 he would still need from the operating expenses of his household, or anywhere along the line of advancement, from charity or the church, recreation, travel, or gifts, or by keeping his daughter home from college.

Whether that $1,000 a year will not cost the community and himself a price he is unwilling to pay, no budget can show him. Will not his daughter's college training bring in a higher rate of interest than the bank would pay? Are not good clothes for the advantage of his family? The cost of operation could be cut if Mrs. French would do all of her own work instead of only part of it, as she does now. No budget will tell him whether it is wise for him to make these retrenchments or not. But if he considers the saving of $1,000 the most important thing he can do, the surplus above what is necessary for health, even according to the standards of his class, is there, and the budget will guide him to it.

It is a more delicate matter to adjust a family budget so that it will wipe out a deficit in happiness and social usefulness, but it can at least be made to show where the trouble lies in the case of such a family as the Wilsons of St. Paul. Mr. Wilson is a professional man, earning $3,000 a year, and there are two small children in the family. They are not trying to save more than they do, and they run no deficit; but, as Mrs. Wilson writes:

"As for advancement, you see, it is small. We have sacrificed it to the physical care of the babies. I belong to a college and study club, and my husband to a club or two of his profession, but we rarely attend, and have dropped from regular to occasional churchgoers. The children are the reason for everything we do, and the excuse for all we do not do. We have sacrificed community to individual efficiency. Is it worth while? I think so, though I sometimes chafe under it."

This is the Wilsons' budget compared with the minimum schedule and the average expenditures of their group:

	Minimum.	Average for Professional Group.	Actual.
Food	$332.15	$463.27	$445.00
Shelter	144.00	489.29	1,000.00
Clothes	100.00	252.43	400.00
Operation	150.00	393.72	550.00
Advancement	312.00	803.04	455.00
Incidentals	46.85	196.57	150.00

The Wilsons have a possible surplus of $1,800. Why should the responsibility of the way it is spent be put upon two small children without their knowledge or consent? Why should it be necessary for Mrs. Wilson to spend a lifetime chafing for things it would be for her advantage to have? Would not $700 or $800 deducted from the cost of shelter and operation give freedom and other valuable things in exchange? If the community were consulted, wouldn't it rather have some other return from the Wilsons than that they should live in even the most superior of houses?

If the spending of the surplus of a single family is a social problem, much more is the spending of the surplus of a group or profession. To determine how these group surpluses are spent I have averaged, in the tables on the following page, the cost of the different items of expenditure in the budgets I have collected both with regard to the size of the incomes and to the occupation of the father and the number of children in a family.

It must be remembered that these families with a thousand a year or less are not the immigrant families with the traditionally large number of children and the correspondingly high death rate; they are families who by tradition, feeling, association, and intent belong to the middle class.

These tables show that the amount spent on food increases from $265.40 a year for incomes of $1,000 or less, to $572.57 for incomes from $4,000 to $5,000, but that the *proportion* drops 4½ per cent for every $1,000 increase in income. The percentage spent for food is highest in the families of mechanics and clergymen, presumably because mechanics need a larger amount of food to replace their physical wear, and because the clergymen are compelled by the tradition of their calling to entertain many guests. It is interesting to find the lowest average for food in cities of from fifty to one hundred thousand inhabitants—that is, in cities large enough to have adequate transportation facilities for bringing in provisions, and not so large as to force up prices through an excessive demand. Food costs most in the smaller cities which are either metropolitan suburbs with transportation charges in addition to city prices, or which are aside from the main lines of transportation and have to pay abnormal freight rates. In other words, the cost of food, above the price paid the farmer who raises it and the butcher who slaughters it and the man who brings it to the door, is the tax paid the railways.

The average amounts spent for shelter show that people with incomes under a thousand dollars have got to be content with tenement conditions if they live in the city, or similar inadequate housing in the country, and that such shelter can be had for eleven per cent of their incomes.

A sudden jump to twenty per cent takes place with an income between $1,000 and $1,200, which is the point of breaking into the middle class, and shows how much the middle class value a decent place to live in. From this twenty per cent there is a drop of three per cent with each thousand-dollar increase in income. Clergymen average the lowest for shelter, because a parsonage is often part of their salary; and the small capitalist spends the largest percentage; but the salaried employee and the struggling professional man spend the next highest, because respectable shelter marks their place in the middle class. The percentage spent for shelter is highest in cities of over one hundred thousand inhabitants, where the high taxes send up the rents.

The cost of clothing shows the most stable percentage of all the six heads of expenditure. It varies from nine to twelve per cent for all places, incomes, and occupations, with the exception of clergymen and physicians, whose professions require disproportionate expenditure on clothes. The minimum expenditure on clothes in New York City is $100 a year, and this is less than in most other places. All the accounts I have received from families with incomes of less than $1,000 a year show less than this health minimum for clothes, the average for this group being $86.87.

It appears that the middle-class standard of living, whether in city or country, in whatever profession and with whatever income, implies between $200 and $400 a year spent for the operation of the household. The farm budgets do show a higher expenditure than this, but that is because the cost of farm labor, which should be counted as a business charge, is included under household operation. Though here is a minimum below which the charges for food and shelter and clothes dare not go, operating costs can go down indefinitely. But where people have even a little leeway they appear willing to sacrifice a good deal for comfort and convenience, for light enough and heat enough, and a chance to substitute the work

OBJECTS OF EXPENDITURE AS CLASSIFIED BY INCOME

Income.	Number of Children.	Food.	Shelter.	Clothes.	Operation.	Advancement.	Incidentals.	Deficit.
$1,000 and under	1 1-3	$265.40	$91.33	$86.87	$116.17	$286.06	$41.13	$72.97
1,000 to $2,000	1 7-10	377.38	286.81	166.05	241.52	347.19	90.57	.57
2,000 to 3,000	1 1-2	510.44	408.36	255.22	357.31	893.28	127.61	.40
3,000 to 4,000	2 3-10	587.82	440.87	514.34	330.65	1,653.25	146.96	——
4,000 to 5,000	2 1-3	572.57	522.72	419.94	263.68	2,683.15	62.50	——

OBJECTS OF EXPENDITURE AS CLASSIFIED BY OCCUPATION

Occupation.	Number of Children.	Food.	Shelter.	Clothes.	Operation.	Advancement.	Incidentals.	Deficit.
Mechanics av. inc., $1,703.67	2 1-2	$432.67	$282.00	$163.00	$204.00	$556.80	$65.20	——
Salaried employees av. inc., $1,947.63	1 4-10	458.16	379.42	209.65	243.14	634.00	39.95	$16.69
Educators av. inc., $1,959.22	1 9-10	351.74	256.76	206.86	251.22	754.34	150.50	12.20
Physicians av. inc., $2,170.00	2	467.00	357.00	369.50	378.50	574.50	23.50	——
Farmers av. inc., $2,190.06	2 3-4	374.23	315.20	223.99	479.50	707.39	89.75	——
Capitalists av. inc., $2,266.66	3-4	497.00	548.33	228.33	217.00	664.66	111.33	——
Clergymen av. inc., $2,510.33	2 9-10	617.82	231.67	520.07	274.61	784.03	128.50	46.37
Misc. Professions av. inc., $2,601.38	1 1-7	463.27	489.29	252.43	393.72	803.04	196.57	3.06
Business men av. inc., $3,343.81	1 7-10	513.89	416.92	379.14	306.84	1,670.12	56.90	——

of the laundry and the bakeshop and the clothing factory for the work of their hands. The amount of the operating costs which goes for personal service varies from $22.56 for families with incomes of $1,000 and under, to $259.09 for families with from $4,000 to $5,000, showing that only after the income passes $4,000 does the average family hire an average servant at the average price of $5 a week.

It is under *Advancement*, however, that we get the real significance of an increased income. This rises from $286.06 on a $1,000 income to $2,683.15 on a $5,000 income. The curve develops unbroken from the low-paid occupations to the higher, except in the case of educators, who are forced by the necessities of their work to spend a large amount on their own improvement.

The expenditure for *Incidentals* is a question of accurate accounting as much as anything, but the inability of people with less than $1,000 to live within their incomes, as shown by their average deficit of nine per cent, and the way this deficit shades to the disappearing point at $3,000 a year, is a significant answer to those people who insist that ability to live within one's income is purely a matter of good management, quite unrelated to the size of the income. Is there any reason to believe that men earning above $3,000 a year are more likely to select wives with reference to their housekeeping ability than those with incomes under that sum? What other explanation can there be for the fact that ill-paid clergymen in small towns run the highest percentage of deficit, while capitalists, business men, and successful physicians run none at all?

But, after all, it is the surplus, and not the deficit, that is important in these middle-class budgets. Do the various groups give an adequate social return for the extra amount of money they receive? To mechanics society gives $503.97 above the minimum for health, and it goes mostly into better housing, savings, charity, and the church. Their average of two and a half children is high for the middle class, but low for the wage-working class. The salaried employees have a surplus of $747.63, and they distribute it quite differently from the mechanics. They eat nearly $70 better, they increase their housing cost nearly $100 above the mechanics, they spend more than double what the mechanics do on clothes—the difference between the requirements of shop and office—but they also, like the mechanics, put most of their surplus into savings and insurance, even though they run an average deficit of $16.68 to do it. None of their surplus goes into increasing their number of children; on the contrary, they average about a child less to the family than the mechanics.

In the professions, where the surplus is $1,178.98, the average number of children goes up to nearly two in the family, and the bulk of the surplus of the professional group goes into better clothes—which might be called a professional requisite—and into savings and charity. In proportion, the professional men are more generous than any other group, although they, too, run an average deficit of $15.41, and spend only $243.98 for vacations, travel, education, books, and improvement in their profession—not an excessive amount, surely, when one considers how much we need better service in medicine, law, education, and from the clergy.

As a sharp contrast to the generosity of the professional men comes the niggardliness of the farmers, who give away less than three per cent of their incomes, although they average a surplus of $1,012.34. The farmers put $267.38 into savings and insurance, $15.43 into health, and $156.88 into books, education, recreation, and travel. Obviously the farmers choose money in the bank rather than college for their average of two and three-fourths children; or improvement or pleasure for themselves.

The business men have a larger surplus above the demands of decency than any other group of the middle class—$2,251.20. And $1,358.12 goes into advancement, while the remainder is distributed fairly evenly over the general cost of living. Now would it not appear that $1,358.12 worth of advancement is a social gain? But an analysis of this item shows that nearly 38 per cent of it goes for savings and insurance, 16 per cent for church and charity, while only 34 per cent ($570.41) is spent for education, books, and recreation. Business men have the choice between running an automobile and sending a child to college, and they have, on the average, 1.7 children to send. Altogether they have sufficient leeway, so that neither illness nor another mouth to feed need strike them with panic.

The small capitalists present an interesting phenomenon. They seem to be people who have backed out of life—people with small incomes, averaging $2,266.66, derived from

investments, on which they prefer to live without exertion rather than enter any gainful occupation. Certainly they make sacrifices to follow their fancies. They have fewer children than any other group, spend only $102.66 a year on service, showing that they either underpay their servants or do without them; they spend four per cent less on advancement than even mechanics, and a higher per cent on food and shelter than people who are earning approximately the same incomes; they travel little, entertain little, give little; they simply continue to exist. As one of them says:

"It had seemed to us that college-bred Americans of the Eastern States were becoming standardized, were growing into a race of clerks. . . . We honored their sturdy sense of duty, their long-enduring rectitude, the patience with which they carried a heavy load. But we had no wish to be like them. . . . We saw the people of our own age losing health year by year through overwork, under sedentary life and lack of daily exercise. We saw them growing yellow and flabby and unfit, and the spectacle didn't attract us. . . . We have dreaded the tyranny of accustomed things, the settling down of habits, the getting rooted in one place so deeply that it would cause pain to shake loose, so at intervals we have flavored life with change. . . . We have waged a running fight on monotony and routine. We dread them more than we dread sin or mistakes of judgment, for we believe that they slay the inner beauty. When they interweave themselves with the human spirit and sap it, they destroy the only living thing within us, the only gift that can create and communicate joy. . . . By knowing many sorts of persons we have hoped that we have cut a larger piece out of life than if we had stayed well sheltered in our own environment of family and education. Realization is only for personal experience, and that we were denied because of the fortunate accident of birth."

Temperamental no end! But where does it get to? It might have dropped from the lips of the eloquent vagabond in Galsworthy's "Pigeon," or be heard rising from any bench-load of the unemployed in Washington Square. Shall man return to the world the good he gets from it by preserving an attitude of mind?

There are a few who, writing more in sorrow than in anger, ask how the church and the ministry are to be supported when people contribute so little to them. It is significant that all but nineteen of these seventy-six budgets class church and charity as one, as though they did not give to religion for value received, but as a gratuity to a mendicant. Only six of the families that put the church under a separate heading give it as much as they do to charity, and three of these six are the families of clergymen.

It appears from these average budgets that society is getting a very mixed product from the middle-class homes. There ought to be a valuable contribution from them, because most of them have a financial surplus with which to make it.

A surprising amount they are putting into savings and insurance—$300.58 per family per year—equal to almost 13 per cent of their incomes. The question whether this really represents a social gain or not can be answered only by an intricate balancing of probabilities. The money they save is not idle; it is in the hands of bankers and insurance companies. Are these making a better social use of it than the people themselves would if they spent it wisely? Could the old age, sickness, and death which this $300.58 per family per year is designed to meet be provided at a less social cost than the present sacrifices that are being made in order to hoard it? Is there a relation between the fact that the middle class contribute less than two children per family and this zeal to save? Would they be willing to launch a larger proportion of children into a world that assured them a comfortable old age?

Just as the making of an individual budget is indispensable to the efficiency of the individual household, so the collection and interpretation of the budgets of large groups is essential to the discovery of our social mistakes and the means of their correction. For society needs a plan as much as the individual household, and perhaps the most important result of all budget-making will prove to be the harmonizing of our individual plans with a programme of social welfare.

THE VILLAGE AUTOCRAT

BY ANNIE HAMILTON DONNELL

"THERE! I've got that fruit-cake packed, and I miss my guess if a single crumb breaks off—good afternoon, Velona Blood! I suppose you're Velona, aren't you, behind that huge bundle! You're the seventh bundle to-day—I never saw such a day! If it's ever over—yes, yes, drop it on the floor or the lounge or somewhere. Don't tell me you passed anybody headed for me—with a bundle!"

The child who emerged from behind the pile of folded garments was giggling delightedly. "Two thomebodies, yeth thir! One wath—"

"Never mind who it 'wath'—I'll find out in a minute! Velona, you thank your ma, won't you? Not for me—goodness! For those frontier folks. Everybody's sending in *stacks* of clothes, tell your ma. Velona, Velona, wait!—Ve-lo-na!" She had hurriedly sorted the component parts of the last big bundle, and was holding up to the light a little print dress. The child came scuttering back.

"Yeth'm."

"What's the matter with this dress?—what did your mother put it in for? I guess she couldn't meant to; it's a perfectly good little dress"—the use of slang was quite unconscious—"it's your dress, isn't it, Velona?'

"Yeth'm—my third betht," glibly. "It'th me thendin' it, 'tithn't ma."

"You outgrown it?"

"Merthy, no—it'th motht thpandy new!"

"Well, you take it right home, then—tell your ma it's too good to send. Tell her just what I say. She's sent enough without it—all those flannels to cut down. I do wish I didn't have to furnish the *judgment* as well as the barrel and the work of packing it!"

"Yeth'm, I'll tell her."

Suddenly the tired and heated face of the Village Autocrat broke into twinkling laughter; it was a gracious transformation. It was resting laughter.

"Mercy! Velonie! Come back here again. That child will go home and tell *that* to her mother! I never saw anything like children. Velonie Blood, listen to me! You say this over goin' home—just this an' nothin' more. You say: 'Kate Kemp says this little dress is too good—you sent plenty without.' That's every bit of the message, Velonie!"

"Yeth'm, Kate Kempth thayth thith little dreth—"

"Run along, run along! Next lady may recite. It's you, is it, Herrick Pile? What *you* brought for the barrel?" The "next lady" was small, freckled, in trousers. He held out a pile of magazines that oddly weighted and twisted his diminutive person.

"Grandmother said *p'r'aps* they'd like some *readin'* matter," the shrill voice enunciated in breathless sing-song. "She *didn't* have nothin' *else.*" His eyes roved about the big, littered room in frank curiosity. "Because she never wears out an' I always wear *clear* out," he added at a breath. The Village Autocrat found herself smiling again. And she had thought herself too utterly fagged to do anything but cry!

"Run along. Oh, Herrie, *Herrie!* Thank your grandma. Tell her I haven't time to look, but I hope she didn't send any magazines that she could had bound. Odd numbers 'll do—I guess they'll be thankful enough for *those* out there on the edge o' nowhere! Good-afternoon, Phœbe Ann; is that a comfort you got? Well, that'll be good to use for packin'. I can wrap Josephine Pettibone's parlor lamp up in it—there, I did mean to try 'n' knock off the other two feet to it so it wouldn't tip so, but I can't *stop.* I haven't stopped since I got out o' my bed five o'clock this morning. Josephine ought to knocked off her own feet. It's got to go just as *'tis*, now. Phœbe! Phœbe Ann, thank your ma!"

"'Twarn't ma, 'twas Aunt—"

"Well, then, thank your Aunt Mary. You tell her maybe she oughn't to sent it—it don't look a mite faded."

Since early morning Kate Kemp, the Capable Woman of little Millville, had been rushing distractedly from one barrel to the other. For two barrels stood, partly packed, in the middle of her cluttered sitting-room. The one that was to go to the remote and dreary frontier home was being filled with the donations of the neighborhood. It was late this year in being despatched, and not another day must it wait if it was to reach its destination before Christmas.

Numerous frontier barrels had been packed before in this little settlement of farmers and farmers' wives, but Kate Kemp had packed them all. It had been not alone in her capacity of president of the missionary society, as well as of the neighborhood "circle"—more than in either of these capacities it had been in her twofold capacity of Village Autocrat and Capable Woman of Millville. It was Kate Kemp who always did things. It was she who made all the neighborhood decisions, and now she was settling what people should or should not send in the frontier barrel. She had her own "view-points," and they took in the whole horizon line of the neighborhood—the decisions of Kate Kemp decided. It was not to be expected that Velona Blood's mother would insist upon sending the spruce little dress her generous soul had decided to sacrifice. Little Herrie Pile's grandmother would not insist, nor Phœbe Ann's ma.

"Here 'tis four o'clock—one, two, three—thank goodness, only three! I don't know what I *shall* do, I'm so driven! Alison Seaber would say I ought to have let somebody come and help pack—let *her* come—but I'm glad enough I didn't. Nobody knows *how;* we wouldn't been anywhere now. Let me see; did I put the drawer sachet in Sam's barrel? Yes, I remember—underneath the box o' fruit-cake. I hope the cake won't taste of violet sachet powder. And I put in Gertrude's silk petticoat—I know I did! I declare I *do* think I've done pretty well to keep those two barrels separate an' pack 'em *well;* I'd praise myself if I had time. Not a thing mixed an' got into the wrong barrel; I can swear to that! Now next—next I'll finish Sam's an' Gertrude's barrel all up an' head it. The Blessed Baby's down puff goes in last; I'm not going to have anything pressing on that! It's pretty as a pink, if I did make it an' break my back knottin' it!—did its grandma love it 'itty bit? Gertrude will be so tickled! But, gracious me, *won't* that fruit-cake go to Sam's 'right spot'! It'd keep six months if he'd let it, but he won't. And those cookies of Tryphenia's won't dry in a month o' Sundays; they're *better* dry, anyway. It'll be a relief to Gertrude to have something nice cooked up. I'm going to write her to give Blessed Baby some o' the cookies—yes, it should have one, so it should! Its grandma says it can." And what its grandma said was law.

For another hour the little Capable Woman toiled. She was conscientiously careful and thorough with the frontier barrel, but it was in the big son's and big son's wife's and Blessed Baby's barrel that she packed her heart. Among the dainty and useful and toothsome things, the barrel was full to the brim.

It was when she had got to the heading-up—the Capable Woman was quite equal to heading-up—that Alison Seaber came with her dainty contribution. Alison Seaber was the Capable Woman's dearest friend and intimate. She came in freshly and springily.

"For goodness' sake, Alison, don't look so *rested!* I'm a mind to—pinch you!—yes, oh yes, I know you wanted to come and get tired, bad enough. I'm glad I didn't let you—what you got in that package in *tissue paper?* I've got Sam's an' Gertrude's barrel all done—"

"This is for the other one, Kate. I hope you've got room for this; it won't take up many inches. I've just finished the last leaf of embroidery or I'd have got it here sooner."

"For the other barrel—in tissue paper! An' tied with a pink ribbon—are you making a joke? Because I'm altogether too worn out to jo—"

"It's a little baby blanket exactly like the one I worked for Gertrude—don't you remember, Kate, with the padded rosebuds in one corner? I scalloped the edge o' this one, too—that's what has taken me so long. I thought that poor little frontier baby would like a scalloped little blanket with padded roses in one corner." The gentle voice was calmly serene.

"Alison Seaber! Well, you can carry that blanket home again! It would look in keeping, wouldn't it, with worn-out flannels to be cut down, an' lame parlor lamps! I've got some idea of harmony, if you haven't—oh, gracious, yes, I know I'm cross! I'm *ugly.* I'm so tired I can't even *stop!* But I'm not going to put any embroidered baby blankets done up in ribbons on top of a mess o' half-worn clothes—I tell you that! You'll have to pack it in a barrel o' your own—I declare if I don't sit down I shall drop down!"

The face of the other woman underwent a rapid change from gentle ire to tenderness. Alison Seaber laid forceful hands on her friend's shoulders. She even gently pushed.

"Never mind baby blankets—you're so tired, dear! You poor thing! What you are

going to do now is sit down in that chair and drink Tryphenia-tea. I'm going out into the kitchen to get her to make it, strong and hot. Two cupfuls. I'm going to turn you round back to those barrels. My dear, do you know how tired you are? Well, I'll tell you. You are too tired to *have your own way!*" Which indeed was very tired for the Capable Woman to be. She dropped into the chair, submitted to being dragged about to face the other way—drank the two boiling cups of Tryphenia-tea. While she sipped feebly, Alison Seaber did her own packing. To the best of her knowledge she put the dainty tissue bundle into the frontier barrel, slipping it out of sight underneath something soft and thick that lay on top.

"Promise me you will sit there one hour, Kate—promise! It may save your life, if it isn't too late! I'm going back home and make you something nourishing for your supper. I'm not going to ask Tryphenia to make it because then it would taste of home, and I want it to taste of somewhere else. You've got to eat every last crumb of it, too! It won't be polite if you don't!"

When she returned an hour later with her covered tray, she found Kate Kemp on her back in a darkened bedroom. Tryphenia had broken the news as she passed through the kitchen. "She's down with a nervous—headache, I mean. One of her worst, and I don't wonder! The way she's drove all day long! But she won't drive any *more* to-night, that's certain."

"Oh, poor thing! And my poor supper, too! You eat it, Tryphenia, every crumb—please. I'll go up and see Kate."

"*Me* eat—well, I s'pose I can, to save it." Tryphenia condescended. Alison Seaber went on up to the darkened room.

"That you, Tryphen—oh, Alison! Well, isn't this *bright!*"

"It doesn't look very bright to me. I'm so sorry, Kate! But on your own head be it—"

"It's on my own head all right," groaned the sufferer. "I don't care; I finished both those barrels an' *headed 'em up!* Directed 'em too—they're all ready for Enos Love to take to the freight depot. I can lie here an' take some comfort."

In spite of herself the solicitous sympathizer smiled under cover of the dimness of the place. Kate was militantly able to "take comfort" with a nervous headache if all her duties were headed up.

"Well, I'm glad you're *through*, dear—it's a perfect wonder your headache waited for you! If it had come on a single minute sooner—"

"Oh, it did. I hadn't headed the last one. I guess I directed 'em with my eyes shut! You know how everything blurs before my eyes? But I directed 'em *right*, I know that. An' they're all ready to *go*. Enos Love can—can take—oh, my head, my head! I don't care what Enos Love does!"

"Poor dear—poor dear! I'm going right out and let you go to sleep if you *can*. Tryphenia's eating your supper; I told her to. I'll see to getting word to Enos Love."

"Well, they're both *ready*, I say! I couldn't *see* the knothole in Sam's an' Gertrude's head, but I felt of it with my finger while I was directing. There wasn't any—any—oh, my head!—any *knothole*, I tell you, *in* the other one. You tell Enos Love—oh, gracious!—oh!—you tell Enos Love—"

"I'll tell Enos Love," soothed her friend, and softly tiptoed away. Out on the stair landing she waited to hear the groans diminish before she went down to Tryphenia in the kitchen. That saving soul had just finished the contents of the tray from somewhere else.

"Tryphenia, I'm some nervous myself," Alison sighed. "I am going to confess it to you, to relieve my mind—I packed something in the frontier barrel that Kate said shouldn't go."

"You didn't!"

"Yes—when she was back to. It rather scares me now, but I was brave as a lion then! I just determined that little scalloped petticoat was going! I made it—I guess I had a right to put it in. But Kate—"

"You better whisper. If she hears you she'll stagger down here an' unpack it."

"I guess probably she would—poor Kate!"

Too many days went by after the departure of the two Christmas barrels in Enos Love's express cart before news of either came back to Millville and of course to the Autocrat Lady of Millville. Kate Kemp fretted and worried in the secret inner room of her frets and worries, but she gave no outward sign. There had been time twice over to hear before any letter arrived. Then one came, and Kate put on her bonnet and went with it to Alison Seaber. She carried the

letter straight out in front of her in rather a curious way.

"Well, Kate!—well, I *am* glad to set eyes on you! You are a perfect godsend this dreary day. Here I was feeling as lonely—"

"Well, you won't be lonely now!"

"Indeed I won't! I'll make us some tea and we'll have a nice, gossipy, old-lady time. What's the matter, Kate? You look put out. Haven't you heard from Sam's barrel or the frontier one yet?"

"No, I haven't—an' yes, I have. I haven't had a syllable from Sam an' Gertrude, but you read that," extending the belated letter, "if you want to hear from the other barrel. You no need to put your glasses on—it's plain enough to the naked eye! Read it—read it, why don't you? There was a storm blockade somewheres that delayed it; you see what date it is."

She rocked continuously while Alison read. Her expression was one of neither relief nor disappointment, but curiously compounded of both.

"Well?—*well?*"

Alison Seaber's fine, gentle face was alert with excitement. She put out a hand and patted the other's knee.

"Kate, it *is* 'well.' I—like it! I can't help it—I do! She—they—were so happy over it. It breathes right out of the letter! They never *had* anything so nice happen to them before, you know they never! Think of them unpacking, Kate—"

Kate was thinking. She had stopped rocking. Red spots had blossomed faintly in her clear, middle-aged cheeks.

"Kate, you are glad too! Sitting right there in that chair this minute, you are glad! You wouldn't take back that barrel."

"N-o," the word came slowly, with difficulty.

"No, I wouldn't take it back. Yes, yes, I'm—glad. But I ain't so glad as I am ashamed! I'm so ashamed I can't hardly breathe." She laughed out suddenly—a grim little laugh enough. "An' worst of it is I don't know whether I'm most ashamed of Sam an' Gertrude getting that other barrel, or of *myself!* What you sitting there mum as a post for, Alison Seaber? If you've got anything to say to me, say it!" But she had nothing to say. She only patted in a little more friendly way. Kate's grim voice went on. "The knot-hole wasn't in Sam's an' Gertrude's head, after all; it was in the other one. I was too crazy with my head to remember which was which. That's what happened—Alison, I'm most ashamed o' myself! I thought that other barrel was plenty good enough for frontier people, an' here I am blushing for it now Sam an' Gertrude's got it. I wouldn't blushed the other way about, would I? No, I wouldn't—I wouldn't! Oh, I'm going home!" She got to her feet. "I'm going home an' be ashamed there—it's more decent." But at the front gate she swept about and went back to her friend. She stood in the doorway, a strangely diminished and humbled Autocrat.

"It would have been quite a nice barrel if I'd let folks send what they wanted to. There was that new little dress o' Velona Blood's, for one thing. An' I wanted Phœbe Ann to take back her Aunt Mary's comfort because it was too good! I was afraid of having things too good! *I* was—nobody else. What other people were afraid of was *me*—they'd have sent nice things if I'd let 'em. What is the matter with me, Alison Seaber? Why don't you tell me what the matter is?"

"Don't, Kate—don't, dear! You no need feel so *bad*. There's something the matter with all of us."

"There isn't a living thing the matter with you. You'd have filled that barrel with hand-made little baby blankets an' embroidered the corners yourself. There, I'm going home an' stop myself talking! I've got to write a letter to Sam an' Gertrude." And this time she went through the gate and down the snowy road.

Alison Seaber, left behind, sat with a thoughtful face, as Kate had left her. The letter was still in her lap. Suddenly she caught it up and sought a special place in it. "I was right, after all," she thought. "I've been worrying for fear I might have put that little blanket in the wrong barrel."

She found her special place.

"Everything was so beautiful!" she read; "so perfectly wonderful! so flavored and sweet-scented with and *stitched* with loving kindness. But right at the top I found something that filled up my heart so there was hardly room for the rest. That little, little blanket! I *know* somebody made that just for my blessed baby!" So there had been two Blessed Babies, one in each barrel! Alison's lips quivered as they smiled. "I'm somehow so certain sure! I spread it out, and the little corner was all full of soft little

flowers that somebody sat *hours* and worked. That little embroidered corner carpeted the warmest corner of my heart and fitted right out to the walls! If I could see that dear woman—"

The dear woman's head was down on the table, and Allison Seaber was frankly sobbing.

The eyes of the other woman, who was plodding rather heavily home, looked neither to right nor left. Straight ahead Kate Kemp beheld a new view. It was wider and sweeter than any her eyes had seen before. She gazed steadily and unflinchingly, though the light hurt her eyes.

Tryphenia was humming over her work; few worries assailed Tryphenia. To her appeared presently her mistress, curiously shaken and softened.

"They liked your cookies, Tryphenia. When I write I'm going to tell 'em to let the baby have one, if they ain't all gone." She was turning away, but added another word: "An' my fruit-cake—they liked that. I'm glad I put in that second cup o' raisins." This time she was really gone. But Tryphenia followed her to the foot of the stairs, waving a letter she had taken from the mantelpiece.

"You had two letters—that little Herrie Pile's a turrible fergetter. He had 'em both all the time. My! he was scairt when he come flyin' back with this one his ma'd found in his pocket!"

Kate Kemp leaned down and took the letter. "He needn't been scared," she said. But she meant, perhaps, that the little Herries of Millville need not thereafter fear her when they forgot. The letter was from "Sam an' Gertrude." It was always of the two together that she spoke and thought. Her Sam and her Sam's Gertrude—and Blessed Baby.

"'Dear Mother, I've waited all this time to think up what to say, and I haven't yet! Sam won't say a single word. It made him mad, but it didn't me, except right when we unpacked. I told Sam nobody ever *meant* to send such a barrel to any one; it was just a mistake.'"

"Yes," murmured the reader, "it was just a mistake."

"'It couldn't ever happen again in two worlds, I told Sam.'"

"No—no, it never could!"

"'So you see I stood it better than Sam—men can't stand things! I said I'd just wait and see what happened next. And while I was waiting I solved the riddle myself! Just this morning early, before light—all at once I said right out loud (and Sam and Blessed Baby both asleep)—I said, "That barrel was meant for a poor minister somewhere!" And I know it was. "And there was another one meant for us!" I said, right up straight in bed with not a soul to hear! Oh, mother, I know what a lovely barrel that other one was (if there was one really), and—mother, you listen! I'm glad it went to the poor minister's wife instead of me! I don't care what Sam is, *I'm* glad. For you see I know now how it felt to unpack this one, how *she'd* have felt.'"

"She wouldn't have—she wouldn't have, if I'd let folks alone!" this self-deposed Village Autocrat cried in defense of her neighbors. "If I'd let 'em send just what they wanted to—*they* weren't to blame. Oh, what was the matter with me!"

That afternoon arrived Alison Seaber with her thimble on. She found Kate surrounded with billows of soft, silken stuff.

"I'm making Blessed Baby's little down puff," Kate said, busily stitching. "I can't stop to say, 'Take a chair.'"

"Of course not. Give me some breadths, Kate; I came on purpose. Don't you see my thimble's all on? You going to tie it with pink?"

"Yes—just like the frontier baby's," Kate Kemp answered quietly.

BEHIND THE BARS

THE RECOLLECTIONS OF A PRISONER IN A NEW YORK STATE PRISON[1]

"IT is the sentence of the Court that you be confined in the State Prison for not less than two years and a half and not more than five years."

How often these words, or those of similar import, meet our eyes in the daily press! Sometimes we stop long enough to wonder what actually happens to him to whom they are said. True, when the culprit is a person of prominence or the offense is a heinous one, the reporters usually follow him to the prison gate, and then proceed to write lurid and usually wholly inaccurate accounts of what transpires after the gate closes upon the offender. It is the purpose of the writer to recount the actual experiences he underwent while imprisoned for an offense against the laws of the State of New York. That there may be no misunderstanding, let me say at the outset that, deeply as I regret the utterly foolish and wrong things that led me to prison, I shall always be glad that the long and weary fight in the courts was lost; that I have at least the satisfaction of knowing that for my offenses against organized society I paid society's penalty.

Never mind what I did. Suffice it to say that it was not serious enough in any way to stir the community where it was committed, but was bad enough to cause those whose business it is to enforce the criminal law to desire my company. No serious fears of arrest had ever entered my mind; so long a time had elapsed since the offense that I had come to believe myself immune from punishment. So when, on a bright summer day when the outdoor world seemed peculiarly attractive, a pleasant-spoken gentleman approached me and said, genially, "The Chief would like to see you," I was more surprised than frightened. He took me to Police Headquarters, and, after a brief interview with the Chief, in which he courteously offered to telegraph any friend I might name if I could thereby establish the fact that he had made a mistake in identity, I was locked in a room equipped with a bed, two chairs, and toilet facilities fully as good as in the less expensive hotels. There I remained for over a week, and then was taken before a local court for a preliminary hearing.

This lasted but a few minutes; the Court found "probable cause" for holding me, and I was remanded to the custody of the sheriff to await the action of the Grand Jury.

Now, for the first time, I had a taste of prison life. Theoretically a prisoner is innocent until he is proven guiity; practically an accused person who cannot give bail has the time spent in jail as an additional penalty. Only very rarely do the judges take into consideration the time so spent in meting out sentences after conviction. Confinement with nothing to do but read, play cards, eat, and sleep is infinitely more irksome than a prison term, where at least one is certain of employment during a large portion of the weary hours.

The jails of New York vary greatly. Some are indeed the last word in prison construction; others are scarcely fit for the habitation of animals—a statement fully sustained by the reports of the Board of Prison Commissioners. Happily for me, I was confined in one of the former class. Each man had a cell five feet by seven, lighted by an electric lamp, well ventilated, and with excellent toilet facilities. Between the hours of six in the morning and five in the afternoon all were given the freedom of a large corridor about twenty feet wide and ninety feet long. This afforded ample room for exercise, while six large windows gave plenty of light and air. Yet when one remembers that the time between Grand Jury sessions is sometimes six months, and that those arrested immediately after the adjournment of one, as I was, have to await the next, it will be readily seen that so long a time without outdoor exercise is more or less injurious to the prisoner. Further, many men so held are exonerated by the Grand Jury. It is therefore a gross injustice that its sessions are held so infrequently in many counties. The abolition of the Grand Jury and the substitution of trial on the formal charge of the District Attorney, a practice followed in some jurisdictions, would be a great gain.

At length the Grand Jury met; I was

[1] While the name of the writer of this article is not given, The Outlook is assured by trustworthy evidence that the article is from the pen of a prisoner and is the record of actual experience.—THE EDITORS.

indicted, tried, and convicted, which conviction was sustained on appeal. Then came the sad day when I was summoned to the bar to hear the judgment of the Court pronounced. My sentence was more severe and longer than I had expected, longer even than is now allowed by law for such an offense as I had committed, but the judge who imposed it sincerely believes that only by the most severe penalties can crime be checked. With this position many of his brethren on the bench disagree.

After sentence was imposed a deputy sheriff stepped up to me, snapped a handcuff on my right wrist, and I began the journey, the saddest any one can take, as a prisoner to State Prison. The deputy tried to cheer me, but I would have none of his comfort. He told me that I would find many kind hearts behind the gloomy walls, but his words did not allay my suffering. I knew what was before me: the lock-step, the cropped head, the striped suit, the long hours of hard, humiliating toil.

We arrived early in the morning, and as I went in I noticed another man coming out, free. I looked at him with envy and surprise. He seemed well, he had no shuffling gait, such as I had read about, and his hair was wonderfully long. We went into the main building; the sheriff unlocked the handcuff from my wrist, and said, "I wish you good luck, old man," as though I was setting forth on an altogether pleasant experience. I could have struck him for his ill-timed levity.

I was next told to be seated, and waited quite a while. Then a good-looking officer stepped up to me, bade me stand up, asked me if I had a knife, and ran his hands rapidly through my pockets and lightly over my person. Assured that I had no weapon, he told me to follow him, and we walked into an office, where a pleasant-spoken gentleman took my watch, cuff-links, and money, and required me to sign a statement that these constituted all my valuables. I was then informed that the money would be placed to my credit, and that, subject to the rules, of which I would soon have a copy, I was at liberty to spend it as I chose. Then I was told to follow the officer. We walked over to the tailor shop. Here again my name was taken, I was weighed and measured, and required to take a bath. This over, I dressed, and found that I was permitted to retain my own underwear, socks, and shoes. This was pleasing, but it did not give me half the joy I experienced when my prison clothes were handed me. They were fearfully homely and fitted wretchedly, but they were not striped; the day of the human zebra is a thing of the past. This fact emboldened me to ask when I had to have my hair cut, whereupon I received the abrupt reply, "When you need it; we haven't cropped heads for years." As we came out of the shop the officer quite unconsciously relieved me of another worry, for he said: "Keep your hands at your sides, walk with a military step, eyes straight ahead." This told me that the lock-step had gone the way of other barbaric methods, though the peremptory tone of the command left no doubt in my mind that I was now, in fact, a chattel of the State.

However, as we tramped on my guide began to give me some good advice. He warned me that if I had ever been in prison before I would do wisely to admit it at once, for a heavy penalty was incurred by lying about one's record. I told him that this was my "first trip," and he was quick to reply: "You first-timers have a snap in here; in fact, any one will get along all right if he will keep a civil tongue in his head and do his work."

At length we reached the office of the clerk, where a round of questions was put to me, which I was thankful to be able to answer without hesitation or evasion. Then we proceeded to the warden's office to meet the man who for many months was to exercise over me an authority little short of a Czar's. The "Little Father" was most kind, asked me what my employment had been and about my education. He then said: "I'll keep you in mind. We can use men like you in here to advantage." Let me pause here to say that, so far as I know, no one on the outside of the prison ever exerted in my behalf any pressure upon the warden or upon any of his official subordinates. So much is said and written about the power of influence in such places that it is a pleasure to record that the agreeable work which later came to me came without a "pull."

After the interview with the warden I was escorted to the office of the deputy—or principal keeper, to give him his legal title. I had heard much about this man and his wonderful skill in disciplinary measures and his scrupulous fairness. My first sight of him was not assuring. He sat by his desk smoking, with an expression on his face which made me feel certain that he was a

man with an ugly temper. He, too, wanted to know what I could do, and when he found I knew little of manual labor he assigned me to a shop where any man possessed of an ounce of brains could work with some degree of success. As the days went by my first impression of the deputy changed tremendously, and I came to understand that despite the grim expression he was not unkind, and that he was absolutely square towards every man. His is a hard task. On his shoulders rests the real burden of prison discipline. Every morning at eight he holds court, where the offenders against the rules on the previous day are given a chance to be heard and their punishment awarded. Amusing indeed are the explanations offered by the offenders against the rules. No wonder they try to excuse themselves! Sentence by this court entails real physical suffering. It consists of confinement in a dark cell, without a bed, the floor having many projecting bolts, making lying upon it more trying than standing up all night, and a ration of one slice of bread and a gill of water each twenty-four hours. After two or three days of such an experience the offender is likely to come out with a horror of further infraction of the rules or else in a savage and reckless frame of mind.

In addition to this physical misery breaking the rules entails other punishments. One is a loss of the commutation of sentence for good behavior which the prisoner would otherwise have earned, and a fine which is deducted from his compensation. This munificent wage amounts to a cent and a half each working day, and is paid from the earnings of the industrial department. As the usual fine is at least two dollars and a half, it will be readily seen that the violation of the rules costs a man a half-year's pay, or more.

But let no one imagine that prison discipline requires that such drastic treatment be exercised on many of the inmates. It should be remembered also that deeds which in the outside world would be thought trifles are not such in prison. To talk in the mess-hall, to whistle or sing in one's cell, to pass notes, to fail to keep step when marching, all these offenses and others entail punishment. So, when it is stated that the average number presented for trial at morning court is three, out of a prison population of fifteen hundred, the fact of the general good order will be apparent.

The next step was a visit to the chaplain, whose office adjoins the library, containing a collection of some three or four thousand books for the use of the inmates. These are distributed weekly to the cells, the men indicating by notes to the librarian the character of the books they desire to read. The chaplain of the prison to which I was committed has since left the service of the State, and the change can hardly be other than helpful. He asked me a series of formal questions, similar in character to those put to me by the clerk, then asked if I was a Catholic or Protestant, and if I played any musical instrument. With that the interview terminated. Neither then nor at any other time did he offer me any word of comfort, utter any word of cheer. I confess I was shocked and amazed, and—yes, hurt. Even though one offend against the law, one still is not altogether bereft of feeling. True, once a week a chaplain's call was held, and any man might attend it by giving his name in, in advance. This was all right as far as it went, but I am wholly convinced that when a man first comes in and the ground is fallow is the time when the chaplain should plow. No greater opportunity can come to any minister of God than to nerve his fellow-men in such extremity as are the prisoners of the State. That service should be rendered only by one actuated by no desire or aim other than to help and to comfort his suffering parishioners.

Next I went to the hospital, as scrupulously clean and as well equipped as any. Here a brief but adequate examination was made to determine if I was afflicted with any contagious or infectious disease. Happily, I was not, so the next step was to go to the shop.

Prison shops look like free shops except in one particular. Against the wall, but so situated as to command a view of the whole place, is a platform about three feet high with a high desk upon it. Here all day long stands the guard, watching his charges to see that they do not infringe the rules. When I was escorted to the shop to which I had been assigned, the officer in charge told me the principal things that would be required of me. He asked me if I knew anything of military tactics. I told him I did, and he looked relieved. Dinner-time soon arrived. We formed in company front in two ranks, counted twos, and at the command "Twos right, march," we tramped down the stairs and out into the yard. Then company after company marched through the yard and into

the mess-hall. From this only a very few are excused, and they only for the most urgent reasons. The reason for this is that having the men all together gives an excellent chance to make certain that all are there who should be. Until every man is accounted for no one may leave the mess-hall.

Seated at the tables, the men all face one way; the food is on the tables when the men arrive. My first noon in the room I shall never forget. The meal was pork and beans, a dish I never liked; and, though it was served on crockery and one might sit down in partial comfort, the vista of years of this sort of thing banished my appetite completely. After the meal each man arose, with his knife and fork in his hand, and marched out, as he left the hall dropping the table utensils in receptacles provided for them.

It was winter, so the company marched back directly to the shop. Had it been spring or fall, we would have marched up and down the yard for a half-hour, each company having its turn at this great privilege, which does as much as any one thing to send a man away, when his time for freedom comes, sound in mind and body.

After reaching the shop I was put to work. The foreman, who is a skilled workman in the sort of work done in the shop, is not responsible for its discipline, but is for the character of the product. Naturally, therefore, he sets novices at simple tasks. Such was mine, indeed.

The industrial department of the New York State prisons is extremely interesting. The law requires the State and all its civil divisions and institutions to supply their needs from the prisons as far as possible; the prisons are forbidden to sell to any other customers; and, as a result, a very wide variety of goods are manufactured. Brooms and roll-top desks, tin pans and tip-carts, boots and blankets, these and countless other articles are made. The department is run at a profit, but it is not sufficient to cover the whole cost of prison maintenance. It affords, however, I believe, the best solution yet devised of the problem of prison labor.

As I tried to master my task, simple enough, but hard for my unaccustomed fingers, the foreman whispered to me something of the life story of my shopmates. A few feet away sat a good-looking fellow in his early twenties, possessing a remarkably kindly face, with large brown eyes; yet a jury had said he was guilty of murder in the second degree. A lad, not twenty, and looking very frail, walked across the shop. He, too, had been convicted of killing a man, and was in this place for life, though he, as well as the first, might be paroled at the end of twenty years. My own fate seemed less dreadful as I contemplated the awful penalty of these lads so much my junior in years.

Theoretically, speech between prison inmates is forbidden, but, as a matter of fact, it is permitted within reasonable limits. Long conversations are not allowed, but in most shops the men may speak briefly if they ask permission first. Here, as in all other matters, a great deal depends upon the guard who has the shop in charge. Some are far more lenient than others. They have wearisome work, and the pay is poor. They receive $1,200 per annum, and they work every day in the year, Sundays and holidays included, except for two weeks in the summer, which is allowed them for vacation. When it is remembered that these are the men who are to affect for weal or woe each of the men in their charge, that they constitute for the great majority the only persons, not prisoners, to whom the inmates may speak, their responsibility is apparent. Some of them I shall always cherish in my memory as friends; others are decidedly unfit to have authority over their fellow-men.

The work in the shop jogged on. There seemed to be no disposition on the part of any one to crowd the workers. "Hard labor" is a good deal of a legal fiction except to those to whom all labor is hard.

At length the short winter day which seemed so long drew to a close, the machinery stopped, the floor was swept, the men washed up, and then had a few minutes to read or exchange a hasty word. A grim-looking man walked towards me, his hand raised in signal to the guard that he wished to speak. Then he said, "Got anything to read?" and when I said I had not, he dug out of his pocket two magazines. I thanked him, wondering what he had done to bring him to prison. I asked the foreman. "Oh, he's been a crook all his life; this is the first time they've got him, that's all," was the reply. Yet this lifelong crook had been the first to do something to make easier the path of a man he had never seen before.

At last we formed in company again and marched away to the cell-house. As we entered the large doors I saw two tables piled high with bread, from which each man

might take all he desired. But woe betide him if he took and did not eat! In State prison wastefulness on the part of an inmate is a cardinal sin. Following the man before me, I mounted three flights of stairs, and walked along a gallery until another guard indicated my cell. I stepped in and pulled the door to; he threw the bolt, and I was sealed in for the night in a room seven feet long, seven feet high, and three and a third feet wide. It was dimly lighted by a worn-out electric lamp. I took off my coat and looked at it. It was a dirty gray in color, its only distinguishing mark being a white disk on the left sleeve. This was significant, for it meant that I had never been imprisoned before, and that my record in the prison was without a blemish. Had the disk been blue, it would have meant that I was suffering a second incarceration; had it been red, it would have meant that at least twice before had I heard a prison lock thrown from the wrong side. Had it been a circle of any color instead of a disk, it would have meant that already I had infringed the rules. As the years go by a man by good behavior earns a bar for each year; and when five have been won, the five are exchanged for a star. But the disk is kept until some act of disobedience forfeits it, and then it is gone forever.

Nine o'clock came, a bell sounded, and a few minutes later every cell light was extinguished. Then night began in earnest, and into it was concentrated every form of mental and physical misery. The place was alive with vermin, and I had no sleep whatever, while with me constantly was the unavailing regret for my wrong-doing. If the sole idea of a prison is to punish, I was punished enough that night to last through time and eternity. It is fair to say that since that time white enamel paint has replaced whitewash in the cells, and that this much-needed improvement has practically eliminated vermin.

At last morning came, and at seven the guard unlocked my cell and I marched with my fellow-misdoers to the shop. Here an opportunity was given to wash, and then we marched again to the mess-hall, where a breakfast of oatmeal, skimmed milk, and coffee was given us. Here it should be said that, while the menu was monotonous, a greater variety of better-cooked food was served than in the county jail. On holidays especially a very sincere and successful effort was made to serve good meals. But breakfasts of hash, alternated with cereals, become wearisome after one has partaken of them for a year or more. It is well that it is so. Were the tables more attractive, probably other prisoners would do as an old Italian did—refuse to leave when his term had expired. He was put out by force, and then sat down on the curbstone and wept.

Breakfast over, we returned to the shop. In a few minutes "doctor's call" was announced. The phrase was a strange one. Briefly, the warden, the chaplain, the physician, the dentist, and the oculist have certain days when they may be interviewed. In each case, except the physician's, an officer is sent to each shop to get the men; they are then formed into one company and marched to the administration building, where they are halted and required to wait until their names are called. The doctor prefers to go to the shops, and, accompanied by a group of nurses from the hospital, all inmates, he hurries from place to place. Military in appearance and manner, he snaps out his questions so peremptorily as almost to terrify one into declaring himself well. But when the illness is genuine and serious, a man is sure of as careful treatment as in any hospital.

After the doctor had gone I was required to undergo the most trying ordeal of all. I was escorted to the Bertillon gallery, where I was required to dress in a suit of citizen's clothes kept for the purpose and submit to having my photograph taken, both front view and profile. Then detailed measurements of my person were made, such as the length, in millimeters, of my ears, and the distance from temple to temple, measured by calipers. Finally, printer's ink was smeared on my hands and was I required to make impressions on sheets of heavy paper, first of the whole of each hand, then of each finger. One set is sent to Albany, the other is retained in the prison.

It is not a grateful thought, when one is trying to recover one's place in the world, that, no matter how decently behaved one may be, his features and physical characteristics are forever a part of the State's record of its malefactors. Yet there is comfort in the knowledge that that fact does *not* make one a scoundrel, any more than the absence of some faces therefrom which should be there makes them good men.

The next day a pleasanter experience was mine, for some groceries I had ordered came,

and I was called to the "box office," as it is termed, to get them. This is an interesting place, for here all mail for and all mail from the prisoners is examined, each man being required to sign an authorization for such examination to avoid any controversy with the United States Post-Office Department. Here, too, all supplies bought with the private funds of the prisoners are delivered. During his first year a prisoner may purchase three dollars' worth of eatables every other month; thereafter he may purchase that quantity each month. In July, November, and December, because of the holidays occurring in those months, he may spend an additional dollar.

When the voucher was handed me to sign in receipt for the price of my groceries, I learned for the first time that I had a number. No more ridiculous statement appears in the press than that a man in prison is known by his number and not by his name. The numbers are serial; those at Sing Sing are now over 60,000, those at Auburn over 31,000, and those at Clinton over 10,000. Imagine how cumbersome it would be to employ such numbers as names! The guards would be candidates for a madhouse if such a task were theirs. John Jones remains John Jones throughout his prison experience, and only knows he has a number when he has business with the administration officers, when the number is used, in addition to the name, as a further means of identification.

The days jogged on, each like its predecessor. At first they went slowly, but, once accustomed to the routine, and with one's time occupied, it was surprising how they flew. This seems incredible, but it was strictly true in my case at least.

Sundays constituted a most unwelcome break. The familiar words of the old hymn, "Where congregations ne'er break up and Sabbaths have no end," are terrifying to the prison inmate after he has spent one or two of them behind those forbidding walls. At the regular hour the men are released from their cells and take a brief walk in the yard, followed, as on week days, by breakfast. Immediately after breakfast a mass is solemnized for Catholics by a Catholic priest. The Protestant service, conducted by the chaplain, immediately follows. Many men attend both services, for a reason which will presently appear. An orchestra, composed of inmates, plays as the men file into the chapel. When all are seated, the guards station themselves about the room, ten feet apart, the chaplain enters, passes swiftly up the middle aisle and to the platform. Divine service with an armed guard at one's elbow is not particularly comforting, yet it is far preferable to a cell. When the second service is over, the men march out and to the cell-houses, being handed a light cold lunch as they pass, which they carry to their cells. It is only ten o'clock in the morning, but the men will not leave their cells again until the following morning. Is it any wonder that they flock to church to escape for an hour confinement in a place only seven by three and a third? Occasionally real treats are theirs at the services. Some eminent clergyman or accomplished singer will give his or her talent to cheer the shut-ins. No man or woman who ever so served has failed of an enthusiastic thank you, uttered in the only possible way the men can, by tremendous applause, which is never checked by those in authority.

On holidays a still greater effort is made to make the day enjoyable. For this whatever shows are in town are relied upon to furnish an entertainment. To the credit of the generous-hearted dramatic profession let it be recorded that they never fail to volunteer, though it involve them in both trouble and expense.

I shall never forget the first execution which took place after my incarceration. The culprit was a young fellow who was guilty beyond a doubt, but that fact made the event none the less terrible. I saw the heartbroken mother as she was led away by her other children from the last sad good-by. I saw the young man himself as he was taking his final bath, the State being determined that he should be clean before being slain. Then, on a Sunday afternoon, the lights in the cells were extinguished while all the electric power was turned toward the dreadful chair, in a final test to determine if all was in order for the tragedy of the morrow. Monday morning came. It was a little after six. I lay awake on my bed, knowing that over yonder, hardly a hundred yards away, a boy was waiting to die. Then the hall lights grew dim, and every one of the fifteen hundred prisoners awake—and few were not—knew that the spirit of the lad had gone out into the unknown. Daylight came, and while the men yet marched about the yard the undertaker's wagon came, the wicker casket was taken into the death-house, to be borne forth a little later with all that was mortal of the boy of three hours before. Thus the State

teaches the sacredness of human life. If the old vindictive code must still be the law of New York, in pity's name let the executions be held where they will not be a lesson in brutality to fifteen hundred caged men.

One day, shortly after I was assigned my shop, I spoke of the city of Cleveland to a man, over forty years of age, who worked near me, and was surprised to hear him ask me where Cleveland was. I could scarcely believe that one who looked so intelligent could be so ignorant. I resolved then that, of all work in prison, I should most like to teach. So I made an application for a position in the prison school. The following week the guard told me to get my things, and I was transferred to the school-house. It has seven class-rooms, an office for the head teacher, who is a citizen, and one for the two guards stationed there. It also has a library of two thousand volumes, which is distinct from the prison library. Its books are selected to meet the needs of the pupils as they progress, and it is none too large for the use of the five hundred men enrolled as students.

School begins at nine in the morning, with classes of from eighteen to twenty-five in each of the class-rooms. They stay an hour, and then return to their shops in charge of a guard. Each man has only one hour's instruction a day, so he must study at night in his cell if he wishes to progress. After being enrolled as a teacher I was assigned to a room to observe the methods of the teacher at work, who was, as are all the teachers save the one in charge of the whole school, a prisoner like myself. The class was doing first-grade work, and was made up of Americans, Irish, Germans, Italians, and Poles. They varied in age from eighteen to fifty. It was pathetic indeed to see those full-grown men, some of them gray-haired, striving to read such sentences as "I am a man," "I see a cat," or "This is my hand." After this each man was sent to the blackboard, the teacher would dictate some simple word, and the pupil would try to form it with chalk.

After four days of observation I was given a class to teach. I found that the men were eager to learn, and that they would behave as well as pupils in any outside school. True, on one occasion, an Italian refused to recite, and, when I insisted, came for me with the expressed determination of cutting my heart out, but that is the only instance of a serious outbreak that I now recall. Even those who came to the school for no other purpose than to escape for an hour the rigor of the shop were susceptible to persuasion, and often became bright pupils. An appeal to their sense of fair play, amazing as the fact may appear to those whose knowledge of misdoers is gleaned from the daily press, was nearly always effective, and the overwhelming majority were so glad of the chance to be helped to knowledge that they needed no urging.

Having been successful with the lower grades, I was given complete charge of the higher ones. These are easier to teach. Not only are the men more intelligent, but their attendance is not compulsory, as it is upon all those who have not completed the sixth grade or its equivalent in the free world. These higher-grade men are put on their honor; no blue-coated guard stands over them. They have such studies as history, civics, and debating, in addition to the more common ones. Debating was introduced to create interest in and to teach fairness of opinion on public questions. In this aim it has been singularly successful.

I taught school for many months. During that time I found that all the teachers, even though they were prisoners, were greatly interested in their work. As a result the school is a powerful factor in imparting information. A foreigner can, if he will, secure a common school education and come forth a better man than when he went to prison. The world has at last come to the just conclusion that ignorance begets crime.

After some time I was changed to another occupation. In the offices of administration much of the clerical work is done by inmates. This work is, of course, especially agreeable in every way. It is a great economy for the State, too. Many highly competent men go wrong and are imprisoned. Their services at a cent and a half a day and board make unnecessary the hiring of many clerks. A competent office man whose moral sense is not so blunted but that he can be depended upon to do careful work is sure of excellent treatment. Naturally these places are the prizes of the prison. To gain one of them is to be envied by one's fellows. So I was a happy man indeed when I learned that I had been appointed. It is difficult for a prisoner working in one of the offices to realize that he is in confinement. His immediate superiors treat him with perfect courtesy, he has complete freedom of intercourse

with those with whom he works, and a pass that will take him anywhere he needs to go within the prison inclosure. It may be wondered if such treatment does not tend to impair the salutary lesson the man was sent to prison to learn. So far from that, I believe the precise opposite to be true. Latent in any man not hopelessly bereft of decency is a good impulse which, rightly guided, will again make a man of him. In evidence of this fact let me say that it was the proud record of my chief that no man who had ever worked as a clerk in his office had ever again violated the law. Tasks in which a man for a few hours each day may forget that he is a prisoner inspire him to look forward with hope and courage to the fight that lies ahead when he leaves prison. The hardest penalty the misdoer pays he pays after he is released. The haunting specter of his prison experience is with him constantly. He has the certain knowledge that, with very few exceptions, his fellow-men will shun him, not because he did wrong, but because he has been to prison. Anything that will help to stiffen the man for that fight, that will make him look the world in the face without flinching, is an invaluable service.

At last the time drew near when I should be eligible for parole. The parole system is so little understood, I regret to say, even by some of the judges, that it should be explained in detail. All prisoners convicted for the first time of a felony and sentenced to State prison in punishment thereof must be sentenced thereto under an indeterminate sentence, the minimum of which must be not less than one year nor exceed one-half the longest sentence which may be imposed for the crime of which the offender stands convicted. When he has served the minimum term, he is eligible for parole.

A month before my minimum expired two blanks were given me to fill out. One was a formal application for parole, the other a series of questions as to my previous career, containing space also for the names of those I was willing to refer to for a good word, and the name of the man offering me employment. No man can be paroled under any circumstances unless work awaits him on release from a responsible employer who is willing to agree under oath to continue to employ the parolee for a full year, if he shall conduct himself properly. As soon as my papers were filed the warden sent letters to my references requesting information regarding me, and an investigation of my prospective employer was made. The answers to the letters and the result of the investigation of my employer being satisfactory, I next, with over fifty other applicants, made calls on the warden, principal keeper, chaplain, and physician. Each of these officers makes a report favoring or opposing a man's parole, while the head teacher reports, in the case of those lacking a common school education on entering, what progress they have made during the prison term.

These preliminaries safely passed, we awaited the meeting of the Board of Parole, which then consisted of the Superintendent of Prisons and two citizens not otherwise connected with the prison department. On a warm summer afternoon the Board met. One by one we entered the room, were briefly interviewed, and left again, without knowing whether or not we had "passed." In a little while, however, the fortunate ones, about one-half of those that sought parole, were assembled in one of the corridors to listen to a speech from the Superintendent of Prisons, Cornelius V. Collins.

Mr. Collins is no longer in office. No possible advantage can accrue to me from saying what follows. I write it because it is due. The things that have done the most to make the prisons reformatory institutions—the abolition of stripes, the lock-step, and the cropped head, the introduction of military drill and the establishment of the school—are enduring monuments to his administration. In this last speech he struck so true a note that it will long remain in my memory. A single extract will show its character. A parolee asked: "Mr. Collins, I am paroled to go to K. My mother lives in Y, a hundred miles away. Can I go to see her?" Mr. Collins replied:

"Use your common sense. Of course you may. You may do anything that is decent and right. All that I ask, all that the State asks, is that you play fair. Be men, and you'll never have to come back here. Do otherwise, and you will. A violator of his parole promise will be followed the world over and brought back, and each one of you that is so returned hurts the chances of every man who wishes to be paroled in the future. I shall not see you again; good-by, and God bless you all." No man that heard him could for a moment doubt the sincerity of the speaker.

Now began the final stage of my prison experience, brief in point of time, but trying.

I was paroled, but my actual release was forty-eight hours away, for Sunday intervened. It was a long day. True, I had been most kindly treated; had, in truth, no word of complaint to offer; but just outside the gate, and plainly visible, people were walking about free, and I wanted to be with and of them.

Monday came at last. I went to the tailor-shop and dressed myself once again in citizen's clothes. Then, with six others, I was escorted up the yard to the clerk's office, where my compensation was paid me, and the ten-dollar bonus which the State allows was also given me. Then, after bidding the officials good-by, I walked out, free.

No, not free. Loose is a truer word, for I was on parole. So my first duty was to hasten to the town of my employment, report to my employer, an old and valued friend who still had faith in me, and get to work. I remained on parole for a year, making monthly reports to the Superintendent of Prisons, and then received my final discharge.

The parole system is a splendid thing both for the man and society. It is good for the man because, coming from a place where he has not had to be concerned about food and lodging, he desperately needs the suggestions of a kindly friend and hard work to keep his mind off himself. It is good for society because its conditions compel many men who might otherwise again offend to hew to the line of right endeavor. Some fail, but they are surprisingly few, and some of the successes are signal. It is the most salutary method of reclaiming men yet devised.

When a man comes forth from prison is the hour when he needs sympathy and help a thousandfold more than while behind the bars. He feels himself an Ishmael, with every man's hand against him. He needs a friend; a friend who will put him to work, trust him a little, and more as he proves worthy. If this article shall stir the heart of some good man or woman to feel a personal interest in some man so situated, it will not have been written in vain. Fifty per cent of the nearly five thousand men now in the State prisons of New York are easily reclaimable, and their reclamation would prove the best investment either State or individual ever made.

THE SPECTATOR

MRS. SPECTATOR has had a change of heart about Christmas shopping. The Consumers' League counts her as one of its most loyal members this year—indeed, she is some sort of an officer in the organization—and she started out last January to do her shopping for next Christmas, thus showing her zeal by her works. Christmas presents have never been a bugbear to the Spectator, because she has always done the buying for both. But he has often wondered at the whole performance—the stores blossoming out in November with outlandish and unprecedented amounts of decorative and useless stock, the rush that mounts in a vast, hurrying, discordant crescendo week by week, the final smashing chord on the day before Christmas, and the wailing diminuendo afterward as almost every one gets what he or she didn't particularly want.

Therefore Mrs. Spectator's new departure has been interesting to his mind. It began with the January sales. "Everything that is really worth while giving," she announced, as she brought her first gifts out in triumph for inspection, "is just as good ten days after Christmas, in a bargain holiday sale, as it was ten days before for twice the price. Look at this lovely leather writing-case for Aunt Emma. I looked at them before Christmas, but they were just twice what I could afford. So I got Aunt Emma a card-case, and I don't believe she cared about it. Now I have this writing-case all ready for next time—"

"But suppose Aunt Emma should die before next Christmas," the Spectator captiously suggested.

"Why, Aunt Charlotte would just *love* it! And, besides, anybody might die suddenly the day before Christmas—not to mention that Aunt Emma has a Vermont constitution and will live to bury us all; and you've often said so when I was worrying over her rheumatism."

This reasoning appearing to cover the situation, Mrs. Spectator went on and picked up some really lovely brass things at a special sale in February—the Spectator put in an urgent request for one of them as a Christmas surprise, but is still left in suspense—and, as the summer came along, the possibilities of the plan became more and more alluring. Mrs. Spectator has drawn up a long and businesslike

Christmas list, with the amount she is able to allot to each gift clearly set down, and any preferences the person may have noted. Thus:

Mary L., crazy over Russian things.
Cousin Henry, novelties.
Henrietta K., something *very* queer.
Aunt Helen, pretty fancy things.

"Then, as soon as I see the right present, I can get it; and if I don't see it, I have six months more to find it in. It's that awful last week before Christmas, when you've *got* to buy something in six days, whether you can find it or not, that makes a wreck out of you and your hopes," explained Mrs. Spectator, as she crossed off Aunt Helen with a firm pencil-stroke after attending a sale at the "Bandbox," at the little seaside place.

Every seaside and countryside now has these gift-shops. They began, *consule Planco*, by being places where local souvenirs could be bought to take to the folks at home. But now there are surprisingly interesting variations. For example, the Bandbox was selling for a few days the remnant of a collection of really exquisite fancy-work that had been on sale first at the Southern resorts in the winter. Its fragments had moved up in the early summer to this new starting-point, with prices greatly reduced, and would gradually melt away to nothing as it progressed. "The most *exclusive* things," said Mrs. Spectator. "You would hardly find them on Fifth Avenue. And the girl—she is putting her brother through college by it, and she has 'shut-ins' making the things for her, after her own designs, so it helps all around. This was made by an old lady in a Maine village, who has been bedridden for years, and her work keeps the mortgage paid up and the roof over her head."

Indeed, there seemed to be a story at the back of almost all the little summer shops and sales. When Mrs. Spectator bought a queer, pretty ring with an unusually beautiful semi-precious stone in it, she found that the young woman who sold it, with her sister, was a globe-trotter, roaming China and India every year or two to find quaint settings and out-of-the-way stones for the jewelry the two made themselves. The heavy silver necklaces, with their fringes of tiny bells and their lumps of uncut turquoise, were some of them direct from the Himalayas. The sisters had amulets and carvings and silks, and they had no New York rents to pay, so that Mrs. Spectator thus found Henrietta's present without trouble and within her price; and with it came notes of travel, so to speak, that the Spectator enjoyed extremely.

At the next summer place there was a young man supporting an invalid mother. He had been a salesman in a large novelty house, and so he opened this tiny summer shop in a tiny cottage, and his mother sat in a big chair and helped him keep store. He had every sort of novelty, and Mrs. Spectator got a steel and silver folding foot-rule that is also a cigar-cutter and a nail file, and that Uncle Henry will be lucky to get—the Spectator would have liked it himself. Incidentally, Mrs. Spectator and the invalid mother made friends, and the virtues of a good son were appreciated between them. And then there was the artist in metal, a delicate woman with slender, wonderful hands, who made jewels and did tiny pieces in beaten silver, and who did not like to make any jewelry without seeing the wearer, because "a jewel should be as individual as a portrait," she said. Mrs. Spectator became discouraged because she did not see how she could bring Lily G—— before this expert's mental vision, not even having a photograph of her at home. But the Spectator, going back later by himself, found that just the pendant that he had long wanted to have for Mrs. Spectator's next Christmas gift was now possible without bankruptcy.

Of course, in every village and along every board-walk were venders of the summer gift, useless and flamboyant as a department store Christmas assortment; and in every hotel parlor were those sales that one friend of the Spectator's calls "daily snares." But these could easily be avoided and forgotten. Day by day the names were crossed off the list, and satisfaction shone in Mrs. Spectator's eyes. "Just think of it! *No—shopping—in—December!*" she cried, victoriously. "And, really, you can spend more on each gift, because it doesn't all come at once. Then each thing has a background, too. It's *chosen*—it's an individual gift, not a mere grab in a rush hour. Just look!" This was said in the cunningest shop of all, an old fish-house and wharf, concealing in its weatherbeaten depths the spoil of a dozen European lands. Gay faïence from Quimper and Perugia elbowed Russian brasses, tiles from the Azores, and Sorrento inlaid work. A thin, tanned, wiry, wholesome New England woman was the presiding genius. She loved pretty things, she said. She preferred to use the property in this way rather than let it out for fish. Her brother was in Europe, at work in a German city. Every winter she went over to see him and his family. Every spring she brought home new spoils. She had been everywhere, seen everything, loved beauty, and chose her stock unerringly. Some of it was cheap, some choice and dear, but the note of beauty was in all. Outside in the road stood a tiny automobile. "I deliver things myself often," she said, as Mrs. Spectator hesitated over carrying a pair of carved bellows, from Florence, "and I love to

run my car. I've driven it over most of the out-of-the-way roads of Europe, getting these things."

The Spectator has never cared much for the department store. Maybe he is wrong. But a Christmas independent of the department store seems to him a delightful departure; and now that Mrs. Spectator has found out that the virtue of early and individual shopping is its own reward, he hopes that her example will spread wherever her gifts carry their message of choice and leisure. Why should any one buy sixty presents in thirty days, anyway?

LETTERS TO THE OUTLOOK

AN INDEPENDENT ON THE CAMPAIGN

[The following personal letter has come into our hands with permission to print it. We are glad to do so because it gives with lucidity, frankness, and we think with logic, an independent view of National politics notably free from any bias of personal prejudice. The letter was a reply to a friend of its writer, who in personal correspondence had given his own reasons as an Independent for supporting Governor Wilson, and had asked for the reasons which led the writer of the letter, an equally independent voter, to support Mr. Roosevelt. THE EDITORS.]

New Windsor, Newburgh, N. Y.

Dear Friend:

Be assured that I was glad to have you put the matter of your Presidential preferences in so clear and logical forms of expression.

In your premises—one and all—my agreement is virtually complete. My tendency of mind is thoroughly Democratic, and Mr. Wilson represents Democracy at its best. If I consulted my own preferences and nothing else, my choice would be that eminent "scholar in politics" and statesman, Woodrow Wilson. But preferences alone are never a true or safe guide. Frankly, if I consulted my selfish interests, in many respects Mr. Taft would please me even more than Mr. Wilson. My reason for so saying is that our small family, being (in very tiny fashion) in the capitalist class, is possessed of certain "securities" whose dividends would in my judgment be more likely to be and remain secure under a conservative or "reactionary" administration than under one radical or even sensibly progressive.

My study of economics is convincing of the deplorable results of "protection" as a National policy; but yet (most illogically), in the course of something like a century of intermittent changes of tariff, history points out the incontestable fact that prosperity has accompanied a high tariff, and that when low duties prevailed trade conditions were poor and frequently deplorable. I make no pretense of being expert as to reasons, but simply point to facts.

In many respects I agree with you as to the misfortune of reliance upon one man, and deplore the fact of the dominance of so strenuous a personality. I do not agree with Mr. Roosevelt in many of his theories of government, nor do I believe that the time is ripe for so complete a subversion of Constitutional foundations as he proposes.

Having thus expressed the *debit* side of Mr. Roosevelt's aim and ambition, let me briefly indicate the *contra credit*, justifying, as I confidently believe, the trifling support which I am giving to his candidacy. First—In spite of many items seeming wholly to the contrary, I regard Mr. Roosevelt as not only thoroughly in earnest, but honestly so. Second—Looking into the future (and a nearer future than may now seem probable), one may perceive quite clearly the advance of Marxian Socialism with immediate and enormous strides. Against this menace, which at any time may turn to Syndicalism—that is, develop revolutionary tendencies—I count the personality and policy of Theodore Roosevelt as the most available defense. I must assume, as a certainty of the future, the total subversion of all those guarantees of social order that have now for (say) four hundred years given to the Teutonic race increasing increments of liberty and happiness. In at least one country (New Zealand) Socialism is *un fait accompli*. In Germany it is probably only a question of another decade. England is on the verge of a revolt in political methods, not nominally but virtually Socialistic. With the mercurial temperament of the American populace it requires no great prophetic vision to forecast the probabilities.

Now, against this impending flood of change I regard Mr. Roosevelt and his Progressivism as—not a foil—but an ameliorator. I confidently regard his immense and powerful personality as, in the present restless upheaval, the best if not the sole defense against the swift encroachments of the power of the proletariat. I count upon this man to save us from an impending revolution. I count upon his policies and personality, not to avert the change, which will inevitably come in spite of any policy, any personality, but—in one brief phrase—to *let us down easy*, to dissipate in harmless induction the catastrophe of a war of classes.

You speak of Mr. Roosevelt (if elected) not having ten per cent of Congress with him. On

the surface this looks true. In fact, however, he will have a majority. A man who could, by mere force of character, compel the coal barons, led by Mr. Baer, to agree with Mr. Mitchell to settle the great coal strike, a man who could compel Russia and Japan to forego their quarrel and lap mild milk out of the same platter, will not be at a loss for either arguments or forces. Depend upon it, he will have the country with him, and should a combination of reactionary Republicans and Democrats undertake to thwart Progress, at the election of November, 1914, these will be sent whirling out of the House of Representatives as shreds of thistledown in a gale.

I favor Mr. Roosevelt not so much for what he favors as for what he is and for what he really represents. I make no profession of the gift of prophecy, but I believe that he will be elected; that the people will ignore old-party lines as never before. I believe that he will carry every far-Western State, every mid-Western, probably Tennessee, North Carolina and Louisiana at least, happily disrupting that "Solid South" so long a foolish sentiment and absurd anachronism.

Very sincerely yours,
WILLIAM J. ROE.

PROMPT JUSTICE

In the City Court of Montgomery, Criminal Division, over which Judge Thomas presided many years, charging grand juries against permitting evasions of the law and urging petit juries to do their duty, there has recently been a signal instance of speedy enforcement of the law. One Walter Jones, who had before killed several men without punishment and had terrorized portions of an adjoining county, against whom a charge of arson was about to be investigated by the grand jury of that county, went into a railway coach as it was slowly moving out of the station in this city, and, pushing his shot-gun through a partly open door, fired two shots into a good citizen, who was a witness against him, and killed him instantly. The grand jury of this county happened to be in session, and within eighteen hours after the murder Jones was indicted for murder in the first degree. Twelve days later he was put on trial. Within six hours all preliminary matters were disposed of and a petit grand jury selected, of which no man could reasonably complain. On the fifth day of the trial, after deliberating only an hour, the jury found him guilty of murder in the first degree and fixed death as his punishment. On the next day he was sentenced to be hanged. Of course an appeal is to be taken to the Supreme Court, which cannot be heard till December. He was assisted by powerful friends with plenty of money, aided by detectives, and represented by able counsel. This speaks well for law enforcement—so far as the lower court goes.

B.

THE PASTOR AND YOUNG PEOPLE

I have been much interested in an article in a recent issue of The Outlook by Dr. William A. Bartlett, on "The Pastor and His Young Folks," and could wish that all pastors could find, as Dr. Bartlett has, how easily practicable it is to win the hearts of the boys and girls.

May I be allowed to say that the very object of the Christian Endeavor Society is and has been from the beginning to open a way of approach from the young people to the pastor. The first Society began in just such friendly and intimate relations as Dr. Bartlett has described; and scarcely a week goes by that I do not receive a testimony from some pastor (and often from many) that through his Endeavor Society he has been able to become "chummy" with the young people, to know their hearts, and to provide for their recreations as well as for their spiritual development.

That this is not only possible but is actually accomplished in thousands of Christian Endeavor Societies where the pastor is young-hearted and sympathetically interested in the young people, is proved by these letters which are constantly coming to me, telling how the pastor goes with his Society on "hikes," umpires for them the tennis and baseball game, guides them in their reading, and is never considered an uncomfortable presence in their prayer-meeting.

I am moved to speak of this, for I find that the idea prevails in some quarters, and is intimated in Dr. Bartlett's article, that the Christian Endeavor Society is a stiff and rigid affair, with inflexible rules which are like the laws of the Medes and Persians; whereas, on the other hand, it is the most flexible organization in the Church. It can turn its hand to anything. It can undertake any new work that is desired. It can furnish any recreation for the young people of which the church and the pastor approve. It can help any good cause.

There are tens of thousands of such societies in every part of the world, and more and more the young people are coming to see what a natural thing religion is, and how it enters into every detail of daily life.

For this reason, nearly eighty thousand Societies have found their way into the churches of all denominations and of all nations, and most of them (if painstaking efforts to obtain the facts are to be credited) enjoy more than "moderately successful" meetings. These meetings are, as a rule, attended not only by the "initiated," but by many other young people who are attracted by the fact that they are not "preached at" or too obviously directed by the pastor and older people. Their religious expression is as natural an outcome of their lives as their games and sports.

BY THE WAY

The beginning of autumn was marked by extreme variations of temperature in different parts of the country that usually appear on the weather maps with the same isothermal lines. Chicago had the hottest weather of the year, while furs were being worn at Newport and a long-distance swimming contest at Coney Island had to be abandoned when the swimmers succumbed to the cold.

The sanguinary headline, "Four Die in Fight Over Car-Fare," makes the newspaper reader expect the locality of the carnage to be Chicago, New York, or San Francisco; but on reading down the column he finds that this affray took place in the streets of Genoa, Italy. Imitation is said to be the sincerest flattery, but the Old World might do better than flatter the American weakness for reckless shooting.

At the recent meeting of the Negro Business League the most striking story of financial success was that of Watt Terry, a young Negro who in 1900 went from Virginia to Brockton, Massachusetts, with a capital of fifteen cents. He worked as coachman, janitor, porter, and shoemaker, and finally became a real estate broker. In the last-named occupation his success has been so great that at the present time he reports that his income ranges from $6,000 to $7,000 per month.

If a man is an invalid, and wishes to live, give him an engrossing task to perform. This is the lesson of the last months of General Grant's life, according to Mark Twain, as quoted in "Harper's Magazine." After the General finished his Memoirs, Mark Twain writes, "the lack of any strong interest to employ his mind enabled the tedious weariness to kill him. I think his book kept him alive several months."

An "armament trust" in Europe controls the armor-plate making business, according to "Shipping Illustrated." Its profits have been so large that "it has been stated that the ordnance and armor-plate contractors could well afford to build battle-ships and engines for nothing, deducting the cost thereof from the profits on guns and armor." The price of armor-plate in this country is said to be much less than in Europe, as attested by the awarding of various contracts.

Hundreds of locomotives on the Pennsylvania Railroad are now equipped for service as fire-engines, and during the last four years these engines have assisted at extinguishing 153 fires. In one instance nine of the engines were at a fire within seven minutes.

Americans sometimes think that it is only our country that is troubled with crude art in the form of graceless statues of public men. But occasionally at least Europeans are moved to protest against similar afflictions. The statues of Björnson and Ibsen in Christiania have evoked strong protest, and a movement has been started for their removal. Björnson's son declares that the statues "look like cheesemongers who have climbed up on a pile of their wares."

A government, says a writer in the "Twentieth Century Magazine," which tells you how to carry your umbrella, which forbids ladies who wear long hatpins to enter railway trains, which fines you if you throw cigar stubs or papers on the street, which does not permit your children to make a noise so that others are disturbed—such a government does restrict individual liberty, but just as certainly it enlarges the common liberties and pleasure of everybody. The government thus eulogized is that of Germany, which the writer quoted prefers to our "go-as-you-please" system.

The record for long and faithful attendance at Sunday-school seems to be held by Samuel K. Winterton, of Keyport, New Jersey, who last week completed his fiftieth year of regular attendance at the Sunday-school of the First Baptist Church. Mr. Winterton began this phenomenal record at the age of three. The methods of attracting scholars used in this Sunday-school ought to be made known. Or was Mr. Winterton just born with the Sunday-school habit?

"The encore nuisance," says the "Dramatic Mirror," "sustained a good setback at the performance of 'The Merry Countess' on the opening night. No matter how insistent the applause, there was no repetition of the song numbers." But it is in tragedy that the encore habit scores its worst victories. Some day we hope to see a race of tragedians developed with moral stamina enough to refuse to come smilingly before the curtain when a moment before they have been swimming in tears.

An automatic speed-detecting device for automobiles which would seem to be worth the attention of municipalities that are determined to suppress speeding is thus described: Three lights are to be provided on each car—white, green, and red. At a speed of eight miles an hour the white light will show; at fifteen miles, the green; at twenty miles, the red; and at more than twenty miles an hour all the lights will flash a warning that the speed law is being violated.

The United States will this year produce the greatest corn crop on record—nearly 3,000,000,000 bushels, it is estimated. This great crop is accompanied by a shortage of farm hands, some of whom, reports say, are being offered $4 a day in certain localities.

Buyers of antique furniture are advised by "House and Garden" that it is now almost impossible to "pick up" genuine antiques in this country, as the desirable specimens are nearly all in the hands of collectors or dealers. The best plan is to find a reliable dealer and from him buy the pieces "in the rough"—that is, before any restoration has been done by the aid of paint, varnish, recarving, etc.—for it seems that even the "reliable dealer" sometimes succumbs to the temptation to furbish up inferior pieces.

A correspondent who inquires as to where the famous summary of Webster's career by Rufus Choate may be found—the sentence being omitted from some of the collections which publish the speech—is referred to "The Works of Rufus Choate," by S. G. Brown. The sentence contains 1,259 words.

Among what may be described as manufactured jokes the following from an exchange is an ingenious specimen: "If Tennyson had lived in my suburb," said paterfamilias the other night as he ruefully contemplated his gas bill, "he would never have written, 'Honor the Light Brigade! honor the charge they made!' But perhaps gas companies had consciences in his day."

The Political Campaign

Governor Wilson and Mr. Roosevelt were in the West last week presenting before large numbers of voters their respective interpretations of the issues of the campaign. In some degree there has been a sort of running debate between them, carried on with courtesy, but bringing out diametrically opposing views and theories of government. Thus, Governor Wilson having declared that "the history of liberty is a history of the limitation of governmental power, not the increase of it," Mr. Roosevelt rejoined that this "outworn doctrine . . . can be applied with profit, if anywhere at all, only in a primitive community under primitive conditions. . . . To apply it now in the United States at the beginning of the twentieth century, with its highly organized industries, with its railways, telegraphs, and telephones, means literally and absolutely to refuse to make a single effort to better any one of our social or industrial conditions." In other words, nowadays the governmental power is in the people and not in a king, and every law for social improvement, including many measures approved by Governor Wilson and the Democratic platform, involves the extension of governmental powers—factory inspection, inter-State regulation of railway commerce, pure food regulation, and numberless other now necessary things. In short, as Mr. Roosevelt said, "Every Progressive measure implies an extension instead of a limitation of governmental control." Governor Wilson has occasionally referred to the tariff and to control of the corporations as "abandoned issues"—that is, abandoned by his opponents—but it is difficult to build out of his Western speeches anything like a definite, constructive programme in either direction. The nearest to it as regards the corporations was his statement at Minneapolis: "My proposal is to change the law. We now know the facts. We know the processes by which these monopolies have been developed, and the thing to do is to make the law specifically prohibit those things, so that the man who does these things will have to answer before a criminal tribunal." Elsewhere he declared that the big combinations "are not inevitable," and characterized the Progressive proposal to control big business, as the Inter-State Commerce Commission controls railways, as a partnership in monopoly. In Sioux City he said: "I am not willing to be under the patronage of the trusts, no matter how providential a government presides over the process of their control of my life." Later Governor Wilson explained in effect that what he had said on this head referred to the prevention of the existence of monopolies rather than to the treatment of those already in existence, but he laid down no programme of procedure as to the latter. With this may be contrasted Mr. Roosevelt's statement of intention as to the trusts: "Our proposals are definite and concrete, and are based on successful action along kindred lines in the past. If we are allowed to put them into action, we will immensely benefit the honest business man by making the law certain, and by punishing misconduct and not merely size; and we will effectively, and not merely nominally, curb and control the big trusts which are actually or potentially guilty of anti-social practices." To Mr. Wilson's assertion that the Progressive plan for controlling the trusts by an Administrative Commission would give power to the trusts to fix wages arbitrarily, Mr. Roosevelt asks if the control of the railways by the Inter-State Commerce Commission has given any such power to the railways. An illustration of the practical, concrete purpose and plans of the Progressive party was seen in Mr. Roosevelt's address in Phœnix, Arizona, in which he said:

In the Nation we have the chance to set an example for all the States. We have the city of

Washington. We can make it a model city. We have Alaska as a territory in which the Government can build railways and operate them and can keep possession of the coal and water power, leasing for development both the coal and the water power on terms favorable to the people as a whole, and not parting with the fee.

If I am elected President, and have in Congress anything like a party that will support me, I shall call an extra session to be devoted exclusively to putting into Federal law every provision recommended in the plank dealing with social and industrial justice, in the plank dealing with Alaska, and in other planks necessary to round out these two.

Altogether, the discussions of the week were on the one side an exposition of theory and philosophy, on the other a declaration of purpose and action.

Mr. Brandeis on Trusts

The record of Mr. Louis D. Brandeis as a defender of the public welfare against the aggressions of the special interests has been such as to entitle anything that he may say concerning the trusts to a considerate hearing. It is not strange, therefore, that his article in "Collier's Weekly" for September 14 on "Trusts, Efficiency and the New Party" has attracted a wide attention. His defense of the Taft-Wilson method of dealing with the trusts has received a chorus of approval from journals and public men who have in times past been his severe critics. It is not easy to put the gist of a two-page article into a single paragraph. This is what The Outlook here attempts to do, adding in a second paragraph some of its reasons for dissenting from Mr. Brandeis's conclusions. His argument, briefly stated, is as follows: "Leaders of the new party argue that industrial monopolies should be legalized lest we lose the efficiency of large-scale production and distribution." Neither the Sherman Law nor its proposed amendment, he argues, prohibits mere size. A business may *grow* large, but should not be allowed to be *made* large by combination. If such combination controls more than thirty per cent of the business, it should be presumed to be unreasonable. Such combinations do not tend to promote efficiency, nor owe their existence to the desire for increased efficiency, nor their profits to superior efficiency, and no conspicuous trust has been efficient enough to maintain its monopoly long without buying up its successful competitors. These propositions are strikingly illustrated by the history of the Steel Trust. The Steel Trust paid to Andrew Carnegie several times the value of his business in order to get rid of his efficiency. They were compelled to buy him out; had they not done so, "the steel business not only of America but of the world to-day would be dominated by Andrew Carnegie." The same principle is illustrated in a somewhat less striking manner by the Tobacco Trust. Mr. Brandeis's thesis that bigness by no means necessarily promotes efficiency—"a unit too large to be efficient is no uncommon incident of monopoly"—he illustrates and enforces at some length; for these illustrations and enforcements the reader must be referred to the article itself. The conclusion to which Mr. Brandeis would lead his readers—a conclusion emphasized by an editorial in the same journal—is that the only way to get rid of monopoly is to assume that any organization which controls thirty per cent of the business is a monopoly, and proceed to take legal measures to dissolve the concern, unless it proves that it is not a monopoly.

The Outlook on Mr. Brandeis

Mr. Brandeis's statement that "leaders of the new party argue that industrial monopolies should be legalized, lest we lose the efficiency of large-scale production and distribution," appears to us an extraordinary misinterpretation of the position of the new party. A person, whether individual or corporate, possesses a monopoly when he is able so to control the market that he can determine prices, quality of goods, extent of output, and conditions of the workingmen under his employ. The Taft-Wilson plan for preventing such monopolies is to bring legal proceedings against the corporation and compel its dissolution and the re-establishment of competition. The plan of the Progressive party for preventing such monopolies is to take away from the person, whether corporate or individual, these powers, perilous alike to the liberty and to the commercial well-being of the community. It proposes to say to the person, whether corporate or individual, You shall not control the prices, we will control them; you shall not deteriorate the quality, we will punish you if you do not keep the quality up to our standard; you shall not impose on your working people any conditions you like, you shall provide such wages, hours, and conditions of labor as we pre-

scribe; and under these conditions you will not be able to limit the output, because competitors will be able to come in and provide supplies; and if you attempt to prevent competition by rebates on the railways, underselling your competitor in one market and making up the loss by overcharging your customers in another market, and similar methods, you will render yourself subject to punishment. The attempt of Government to dissolve the Standard Oil Trust and the Tobacco Trust, after years of expensive litigation, has shown the futility of the Taft-Wilson plan for dealing with the trusts. The success of the Government in putting a stop to rebates on the railways, in determining the prices which they may charge for freight and passengers and in directing the kind of service they must render, in preventing the adulteration of foods and medicines by manufacturers, in supervising and regulating the business of the banks, and in other analogous forms of regulation, has proved the success of the plan proposed by the new party. We confess that it seems to us a curious and even a humorous argument in behalf of the Taft-Wilson plan—a statement quoted by Mr. Brandeis with his approval—that "had the United States Steel Corporation not been formed about the time it was—some ten years ago—the steel business not only of America but of the world to-day would be dominated by Andrew Carnegie." In that case, what would Mr. Brandeis have done? Would he have dissolved Mr. Carnegie? Or would he have put him in prison for conducting so big a business? What the new party would have done is entirely clear. It would have said to Mr. Carnegie, You may go on with your business so long as you conduct it subject to the regulation of the Government, make goods which conform to its standard, pay wages and provide conditions which are satisfactory to its supervising Bureau, charge no greater price for the product than the Government regards as just, and take no illegal measures to crush your competitors. There is no proposal to form a partnership between the Government and monopolies, or to legalize monopolies by the Government. There is a proposal to *destroy* all monopoly, not by destroying big business because it is big, but by taking from all business, through administrative regulation, all power to create a monopoly, no matter how big the particular business under consideration may be.

Governor Wilson and Mr. Murphy

Ever since the meeting of the Democratic State conference on September 12 in Syracuse, where Mr. Wilson, the Democratic nominee for the Presidency, met Mr. Murphy, the Democratic boss of New York State, and Mr. Dix, Mr. Murphy's candidate for renomination for the Governorship, the question of the relation of Mr. Wilson to the bosses of his party has been a topic for live discussion. At that time Mr. Wilson was put into an embarrassing position. His opposition to boss rule is well known. Much of his support comes from that element within his party and among independent voters which regards it as unpardonable for a public man to have any relation whatever with one who is reputed to be a boss. Some of the newspapers have even gone so far as to regard it as an ineffaceable stigma upon a man to allow a boss to shake hands with him. In the face of this sentiment among his own supporters, Governor Wilson, according to the New York "Evening Post," "shook hands with Murphy in the Onondaga Hotel, in the presence of a hundred men." Followers of Mr. Murphy arranged to have Governor Wilson and Mr. Murphy sit down to lunch together. By rising from his seat Mr. Wilson avoided being photographed with Mr. Murphy. Altogether it was uncomfortable for those supporters of Mr. Wilson who dread, on his behalf, any contact with a boss of Mr. Murphy's standing. It should be remembered, however, that even though Governor Dix, whom many of these same independent Democrats and other independent voters ardently supported two years ago, is the favorite of Mr. Murphy, he is the Governor of New York State and an official leader of the Democratic party. It is to be remembered also that Mr. Murphy himself is a recognized official of the Democratic party, the most powerful leader of his party in the State, and one of the most powerful Democrats in the country. If Mr. Wilson is to have any relations with his party in New York State, he cannot ignore those whom his own party has selected among its chief representatives. To do so would be equivalent to an assumption on his part of the power of political excommunication. There are some men whose notorious corruption exposes them to the ostracism of decent citizens, no matter what their office: but the public official who should go about constantly ostracizing every man whom his

followers might find personally or politically distasteful could hardly carry on the public business. We do not see what else Mr. Wilson could well have done at Syracuse without assuming an attitude towards Mr. Murphy as uncompromising as that which Mr. Roosevelt took towards Senator Lorimer; and it is very doubtful whether Mr. Wilson could take such an attitude towards the party leader in New York State without more personal evidence concerning Mr. Murphy than is available. The incident at Syracuse illustrates the difficulty which confronts Mr. Wilson or any other leader opposing the bosses of his own party. Governor Wilson has creditably resisted the efforts of the former boss in New Jersey to return to power in the State, though it has been impossible for him, as it would be impossible for any one man, to destroy the boss system by which this boss retains local ascendency. So, in the Nation, Mr. Wilson, as even his most bitter political opponents will acknowledge, will not be personally dominated by any boss; but nothing that he can do can prevent whatever success the Democratic party may have from bringing accession of power to the Democratic bosses.

Governor Wilson on Law Enforcement

Lawlessness is often said to be a characteristic American trait. Certainly Americans have still much to learn concerning respect for law and constituted authority. The Rosenthal murder case in New York City is an example in sensational form of a state of affairs that is by no means confined to New York City. On August 27 a petition signed by the representatives of the Anti-Saloon League, alleging that violations of the law in the city of Newark, New Jersey, could not be punished because of the inactivity of public officials, and even because of barriers placed in the way by men in public office, was presented to Governor Wilson. It was furthermore complained that disorderly resorts thrive because of an understanding with the police and with political rings. These allegations were set forth in detail and were supported by evidence. It happens that the law of the State of New Jersey does not give to the Governor of that State the power which Governors of other States possess of removing corrupt or negligent public officials. It would have been easy for Governor Wilson to have explained to the Anti-Saloon League his powerlessness in this matter, and even to have found fault with the signers of the protest for appealing to him. Governor Wilson, however, did not retire to this refuge. On the contrary, he acted in accordance with his belief that an executive has duties other than those technically granted to him by law. He wrote a letter which was sent to the Mayor and to the Chief of Police of Newark, and to the District Attorney and to the Sheriff of the county. With each copy of this letter he sent a transcript of the evidence that had been submitted to him. In the course of his letter Governor Wilson said that this evidence means, if it means anything, that the police and civil authorities "not only connived at the lawlessness, but in some instances countenanced it in person." Governor Wilson says that it may be that this evidence can be successfully rebutted, but that it is so strong, direct, explicit, and shocking that it is his duty as Governor to call the attention of his officials to it. He refers these officials to the law which provides that if any municipal officer in authority is notified by the Governor of the existence of notorious and open violation of the law, neglect on the part of such officials to take necessary action will be regarded as a misdemeanor. He reminds these officials that their attention had already been called to the alleged violations of law in certain places which he specifies, and that no action had been taken. The most significant sentence in the whole letter is the following: "I have no means of enforcing this advice under the laws of the State except public opinion; but that is a very powerful and prevailing force in our day." In this action Governor Wilson has set an example which can be cited to shame many a cautious and timid executive who finds comfort in the legal limitations of his own office.

Mayor Gaynor on Law Enforcement

In contrast to the letter of Governor Wilson with regard to the enforcement of law is a letter made public last week written by Mayor Gaynor, of New York City. This letter was evoked by the incidents and the public feeling consequent upon the famous Rosenthal murder case. The death of Rosenthal, the gambler, the charge, sustained by evidence, that this murder was brought about by the police system for the purpose of preventing interference with the profitable partnership between police officials and professional gamblers, and the activities

of the District Attorney, which were by no means assisted by the Mayor, have stirred public sentiment and have finally led the Mayor to this defense of his police policy. The letter is a long one and contains much of Mayor Gaynor's characteristic philosophizing and intimate disclosures of his own reflections. He declares at the outset that "what have purported to be the secrets of the Grand Jury room have been fed to the press from the District Attorney's office," and that "many think that the fullness of time has arrived for the Governor of the State to take action in this matter." The Mayor says that, in spite of efforts, the discipline of the police force has not broken down. He enumerates some of the things that he claims as reforms of the police during his administration: First, suppression of the unlawful mistreatment of citizens by the police. Second, putting an end to the practice of arresting people on petty charges, and substituting the practice of taking their names so that they may be summoned to court later. Third, stopping the practice of photographing all arrested persons and confining it to those convicted of serious offenses. Fourth, preventing the police from taking sides in strikes and labor disputes. Fifth, abolishing the special police, who were public officers under the direction and pay of private persons. Sixth, exterminating saloon graft—the extortion of money from the saloons by the police in return for permission to violate the law. On this point the Mayor writes at some length. He claims that "the result has been a general closing of all bar-rooms in the city on Sunday." He admits, however, that it is not easy to prevent the sale of liquor in "inner rooms." Seventh, the ending of police raids without warrant. Eighth, reorganization of the detective force. Ninth, the organization of a special force to deal with gambling. This the Mayor discusses at length, and explains that he has tried to be patient with the outcry caused by the disclosures of the gambling situation. Tenth, the entire eradication of all graft in appointments and promotions. Eleventh, dealing "as best we can" with unfortunate women. In the course of this section the Mayor expresses his opinion with freedom, and quotes from Lecky. Mayor Gaynor concludes by declaring that New York "is the most decent and orderly large city in the world." The conditions in the Police Department are being subjected to two investigations—one by a committee of the Board of Aldermen, the other by the Grand Jury. The public will not decide to agree altogether with the Mayor until the results of these investigations are known.

The End of the Cunningham Coal Claims

Thirty-three claims to coal lands in Alaska, known as the Cunningham claims, were the occasion of bringing on the celebrated Pinchot-Ballinger controversy that finally resulted in the discrediting of Secretary Ballinger as a safe guardian of the people's property and his resignation from the Cabinet of President Taft. These claims have now been finally canceled by Mr. Ballinger's successor, Secretary Fisher. In rendering his decision upon appeal, Secretary Fisher says that in his opinion "the findings of fact and the conclusions both of law and fact of the Commissioner, as expressed in his opinion in these cases, are correct;" that the consideration of the appeal "has in all respects also the effect of a rehearing of the case;" and that the decision will be carried into immediate effect. Since the decision was announced, the Register and Receiver of the Land Office at Juneau, Alaska, has, by order of the Acting Commissioner of the General Land Office, placed on record the cancellation for fraud of the Cunningham claims. The money which the claimants have already paid to the United States Treasury—amounting to a little more than fifty-two thousand dollars—is forfeited, and can be restored only by act of Congress. Although some of the claimants undoubtedly may have been innocent of any wrong intent, they cannot expect to secure reimbursement; for in a matter of this sort the innocent investor must take the consequence if he intrusts his money to those who are willing to take chances with the law. Although these claims were not themselves the sole cause of the acute controversy that proved so disastrous to Mr. Taft's Administration, they furnished the center about which that controversy chiefly revolved. Mr. Ballinger's whole temperament and attitude was fundamentally opposed to the Conservation policy which he was expected to carry out. A subordinate in the Land Office, Mr. Glavis, became convinced that Secretary Ballinger was not protecting the people's interest in these coal lands as he should, and he laid evidence of that fact before the President.

Because he did so he was dismissed from office. Thereupon the whole controversy broke out. It became a public scandal. President Taft allowed it to pass out of his control and to become the subject of a Congressional investigation. Thereupon Mr. Ballinger's attitude, not only as to coal lands, but also as to the preservation of water power, as to the reclamation service, as to the whole subject of Conservation, was disclosed. Not only that. President Taft and his Attorney-General, Mr. Wickersham, were shown to be taking Mr. Ballinger's part in a way that aroused public indignation. From that time on President Taft was clearly separated from the whole progressive movement that had become so vigorous and effective under President Roosevelt, and it became clear that the consequent split would result either in the elimination of President Taft and his allies from the Republican party, or in the rise of a new party wholly progressive in spirit and in purpose. The Cunningham claims, therefore, have a peculiarly interesting relation to the political history of the United States.

General Nogi

Japan has been greatly bereaved by the death of her great Emperor and by the death of her greatest soldier. The story of the suicide of General Nogi and of his wife has profoundly moved the nation, and has impressed the whole world as not only a dramatic but a significant event. General Nogi was a great Samurai, bred in the practice of the ancient Japanese knighthood, and nobly illustrating its virtues. He had served his country with an unselfish devotion. From his youth he had borne hardships and great sorrows with the stoicism of his ancestors; the winner of some of the greatest and most fiercely fought battles of modern times, he had ascribed all his victories to the influence of the spirit of his Imperial master; and when that master died, in accordance with the ancient habit of the Samurai, he committed suicide in order that the Emperor might not go alone on his journey. With his going the old order in Japan reaches a dramatic end; it is possible that never again will the ancient custom of suicide as a matter of personal loyalty be practiced by a great leader. General Nogi's death brings out very strikingly the sincerity of his loyalty to the old ideals of Bushido—the Samurai code of honor, courage, loyalty, courtesy. It also presents in a very dramatic way the contrast between non-Christian and Christian ideals. In the hour when a great ruler dies the Christian world would hold it to be the duty of a great soldier to stand in readiness to serve his country in a new crisis. The difference between the two conceptions is strikingly brought out by placing General Nogi's deed beside the words of Abraham Lincoln at Gettysburg:

> It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain.

Italy and Turkey

Last week, according to the despatches, the bloodiest battle of the Italo-Turkish war was fought. It occurred near Derna, a port on the Mediterranean coast. The Italians lost over sixty killed and double that number wounded, but the Turks and Arabs left over eight hundred dead on the field—some say a thousand—and there were at least a thousand wounded. The Turkish resistance was strong enough to withstand for four hours the superior Italian artillery, supplemented by brilliant bayonet charges. Finally the Mussulmans fled in disorder. Such an affair is in sharp contrast to the negotiations for peace which have been in progress in Switzerland between Italian and Turkish Ambassadors. One of them, Signor Pietro Bertolini, ex-Minister of Public Works in a recent Italian Cabinet, is thus reported: "The negotiations are proceeding favorably, and I hope they will soon be successfully ended. I cannot, however, discuss the proposed terms. The Italian delegates have full power to conclude peace here in Switzerland. The long delay in the *pourparlers* has been the result of the necessity in the earlier stages of referring the more important questions to headquarters."

The "Moral Mandate" of the United States

During the past fortnight the presence of American troops in Nicaragua has had the desired effect of checking the revolution. There were, however, numerous rumors of attempts on the part of "emigrados politicos," or agitators from other countries, to enter Nicaragua and join the general tumult. The Nicaraguan Govern-

ment, therefore, asked the Central American republics to enforce with strictness the Washington "Conventions," or general treaty of 1907, by which, under the protection of the United States and Mexico, the various Central American states undertook to prevent meddling in each other's affairs. In particular, the five republics agreed to regard every measure tending to alter the constitutional organization of any one of them as a menace to the peace of all; to forbid political refugees from residing in districts bordering on the country whose peace they might disturb, and in general to provide that each government should not use any of its territory as a base of such operations against a neighboring government. To this end they pledged themselves to apprehend and bring to trial every person who, in any republic, should initiate or foster revolutionary movements against any other republic. Finally, they agreed that no one of them should intervene on either side in a civil war in any other of their number. With reference to the above, the Hon. Huntington Wilson, Acting Secretary of State, issued the following note of instruction last week to the American Minister at Nicaragua. It was also placed in the hands of the rebel leaders in the Nicaraguan revolt, and telegraphed to every American Legation in Central America:

> Under the Washington conventions the United States has a moral mandate to exert its influence for the preservation of the general peace of Central America, which is seriously menaced by the recent uprising; and to this end, in the strict enforcement of the Washington conventions and loyal support of their aims and purposes, all the Central American republics will find means of valuable co-operation.

America's purpose, the note declares, is to foster true constitutional government and free elections; and to this end it will support established governments against revolutions based upon the selfish designs of would-be despots and not upon any principle or popular demand. Force will be used, if necessary, in maintaining free communication with and to protect American legations—a policy already adopted in San Domingo and Panama. As regards Nicaragua in particular, our Government expressly discountenances any "revival of Zelayaism"—defining that term as "a régime of barbarity and corruption"—and "will lend its strong moral support to the cause of legally constituted good government for the benefit of the people of Nicaraugua, whom it has long sought to aid in their just aspirations." After recounting the perils to American planters and business men in Nicaragua, and the appeal of the Nicaraguan Government for support in the protection of American life and property, the note declares that "the revolt of General Mena, in flagrant violation of his solemn promises to his own Government . . . without even the pretense of contending for a principle, makes the present rebellion, in origin, the most inexcusable in the annals of Central America." Whether it be so or not, it is interesting to note the opinion of ex-President Estrada, of Nicaragua, as reported by the New York "Times," concerning our "moral mandate:"

> "Without the active help of the United States Government Nicaragua will never thrive."
>
> "You mean a sort of American protectorate?" he was asked.
>
> "Yes," he answered without hesitation. "A protectorate along the lines exercised in Cuba and Panama, without, of course, impairing sovereignty. We want the United States Government, whether it be Republican or Democratic, to keep an eye upon us, supervise our elections, and, in a word, to become the arbiter and judge of our destinies."

The College and the Feud

When the attention of the country was directed to the survival of the feud by the tragedy in a court-house in western Virginia last spring, The Outlook emphasized the fact that, as the feud is the product of peculiar social conditions, while the sheriff was needed, the school and college applied much more radical remedies; and it emphasized the work of Berea College as a prime force in the destruction of the feud. It is a significant fact that, when a feud breaks out, the number of students in that college from the section in which blood is shed receives almost immediate addition. Mountain mothers are anxious to get their sons out of the way; and Berea eradicates the feud spirit. The three million mountaineers who still live largely in the past differ from the descendants of the other colonists at the time of the American Revolution chiefly because they were cut off from communication with the rest of the world; and a college is a prime element in the re-establishment of the lost connections. Berea does a noble work at home, but is not content to teach the students who live about her campus. The College teaches over the whole territory through its extension work. Early in July the superintendent of that work started out with two wagons.

He is an Englishman whose father was a member of Mr. Spurgeon's church, and he has been a peculiarly successful preacher to the mountaineers. He was accompanied by a mountain boy notable alike for his athletic vigor and his Christian spirit, and by a man well qualified to interest the people in singing. So Berea on wheels invaded the mountains, gathering the people together, giving popular talks, using the stereopticon, giving instruction in the rotation of crops, sanitation, the organization of public schools, and other subjects which may help the people in the elementary work of modern social organization. It is rough, elementary educational work which is done by these apostles of Berea College in their mountain wagons; but it is work as dignified and worthy as that of the most advanced university; and it is a fine illustration of the democratic faith which holds as its fundamental creed that there is nothing too good for any man who wants it and will use it.

Philippine Commerce

The commerce of the Philippines for the fiscal year, which ended with the beginning of July of this year, is the most remarkable in the history of the islands. The total foreign trade amounted to a quarter more than for any preceding year. In particular, the exports were twice as large as the maximum exports for any year prior to American occupation. Among articles exported, copra now occupies first place. Copra is the native name of the dried kernel of the cocoanut, one of the principal articles of export from the islands of the Pacific. For many years hemp has been the leading export from the Philippines; it now falls to second place. Sugar occupies third place, and the amount exported last year was the greatest of any year during American occupation. The fourth article in point of value is tobacco, manufactured and unmanufactured. The amount exported last year was about twice as much as for any other year before our occupation. The total imports were not only twice as great as for any other year prior to American occupation, but considerably more than twice as great. Of the imports, nearly one-third represent shipment of American goods from the United States. As to this trade with the islands, the significance of last year's figures is seen in what they tell, not only of the commercial benefit accruing from American occupation, but in particular of the benefit coming from the new relations of the past three years. Not only were Philippine purchases from the United States more than fifty times the average annual purchases prior to American occupation, but they were four times larger than the purchases from the United States in the years under our occupation before the Tariff Act of 1909 provided for practical freedom of commerce. The American occupation of the Philippines is thus seen to have been of commercial and material as well as of educational and moral benefit.

The American Prix de Rome

The lucky young Frenchman who gains the Grand Prix de Rome is a hero in the eyes of his countrymen. And not only this, but the advantages which flow from that truly "grand prize" are a very distinct help to the holder, especially in the early stages of his art career. For four years we have had an American Prix de Rome, namely, competitions instituted throughout the United States in architecture, sculpture, and painting. The successful competitors have been sent for three years to the American Academy at Rome, with an annual subvention each of one thousand dollars. This year's scholarships have just been awarded. Over a hundred young men competed—seventy-one in architecture, eight in sculpture, and twenty-three in painting. And, what is more, the applications were received from widely distributed parts of the country, Louisiana and California being represented as well as the Eastern and Middle States. The winner in architecture is Kenneth E. Carpenter, of Boston, twenty-eight years old. He studied at the School of Design in Providence and at the Massachusetts Institute of Technology, and has had five years' office experience. The winner in sculpture is John Gregory, of New York City, thirty-three years old. He has worked in the studios of Rhind, MacNeill, Borglum, and Herbert Adams. He also studied five years at the Art Students' League in New York and three years at the École des Beaux Arts in Paris. The winner in painting is Eugene F. Savage, of Chicago, twenty-eight years old. He studied at Gonzago College and at the Corcoran Art School, Washington; also at the Art Institute and the Academy of Fine Arts at Chicago. These three young men will now be members of the American Academy at Rome. To be admitted there the applicant must have shown distinct scholarship or artistic

ability. The Academy's competitions are open to all. During its short existence it has instructed more than seventy students, and a large proportion of them have already obtained high rank in the world outside.

SEPTEMBER 22, 1862

The twenty-second day of September marks an epoch second only to the fourth day of July. On the fourth day of July the American people declared themselves free. On the twenty-second day of September the American people declared the enslaved Negro race free.

For the Emancipation proclamation was as truly the act of the American Nation as the Declaration of Independence was the act of the American Colonies. In issuing the Emancipation Proclamation Abraham Lincoln acted for the American people as truly as did Thomas Jefferson in drafting the Declaration of Independence.

Mr. Lincoln had long contemplated the emancipation of the slave. For some months he had made it matter of conference with his associates in the Government. On the 13th of July, 1862, he declared to two of them, Seward and Welles, that emancipation was a military necessity: "We must free ourselves or be ourselves subdued." Nine days later he read a draft emancipation proclamation. And yet he waited two months after that before he issued it. Why did he wait?

For two reasons.

One was Mr. Seward's suggestion: "Postpone its issue until you can give it to the country supported by military success, instead of issuing it, as would be the case now, upon the greatest disasters of the war." What was substantially a victory of the Union forces at Antietam removed this objection and afforded the occasion which Mr. Seward wished for.

The other objection was the one which Mr. James Ford Rhodes has interpreted in his "History of the United States:" "Lincoln must satisfy himself that public opinion at the North would sustain him in the action. . . . Was the sentiment of the plain people, the mass of steady Republicans and war Democrats, ripe for an edict of freedom?"

Not until Mr. Lincoln had settled his doubts, not until he had come to the conclusion that the plain people of the North would see the issue as he saw it, was he ready to speak the decisive word. An edict from the President unsupported by the people would have been as futile as General Fremont's proclamation of freedom in August, 1861, which Mr. Lincoln ordered withdrawn. "I do not want," he said to a body of petitioning clergymen, "to issue a document that the whole world will see must necessarily be inoperative, like the Pope's bull against the comet." When he issued his proclamation of emancipation, it was not inoperative. For the people of the North spoke through him when he spoke.

This proclamation of September 22 was the announcement of the decision; the later proclamation of January 1, 1863, put that decision into effect.

Two qualities combined to make Abraham Lincoln a great President of a self-governing Republic. He could wait patiently for the people's will, and could act vigorously in the execution of that will.

He was attacked by political opponents as a "dictator," as an "imperator," as a "despot," a "usurper," a "man ruthlessly trampling on the Constitution, the laws, and the rights of the people of the country."

He did not impose his will upon the people. He did not assume the power of a dictator. He did not act in lieu of the people. A leader of the people, a teacher of the people, he was also the voice of the people. Their will was expressed in his action; and that it might be expressed in his action, he waited till their will was formed.

But this waiting was never the waiting of timidity. He waited for no command. He understood the people, and by his action interpreted their will—a will formed but not expressed. There was no clause in the Constitution authorizing him to issue an emancipation proclamation. There was no act of Congress authorizing him to issue it. There was no election giving him a mandate from the people.

But when he acted, the people approved. Critics there were in plenty, to demand a Constitutional clause, or a Congressional act, or a popular election. But the people ratified the act of their great leader. He had understood them. He had acted for them. They made his act their act.

The emancipation of the Negro race was the act of the American people. The greatness of Abraham Lincoln was the greatness of a statesman who could lead them to that act, who could understand their unexpressed

will calling for that act, and who dared to do the act in their name and on their behalf.

THE PROGRESSIVE MOVEMENT

III—WHAT IS THE CHIEF ISSUE?

In one of his recent speeches Governor Wilson declares his belief that his platform and that of the Progressives are substantially identical. He says:

I don't find any great difference between my table of contents and the table of contents of those who have voted with the Republican party and are very much dissatisfied with the way in which the Republican party has rewarded their confidence. They want the same things that I want, and I don't know of anything under God's heaven to prevent our getting together. We want the same things, we have the same faith in the old traditions of the American people, and we have made up our minds that we are going now to have the reality instead of the shadow.

There are many Americans, and probably not a few readers of The Outlook, who agree with Governor Wilson, who think that the difference between the two parties is a difference between Democratic Progressives and Republican Progressives, that the division is rather between two leaders than between two political purposes.

For two reasons The Outlook cannot share this opinion. Governor Wilson, in a paragraph in the same speech from which we have quoted above, indicates one of these reasons. Speaking of the combination between corrupt capitalists and corrupt politicians, he says:

I had occasion to test the power of that little group in the State of New Jersey, and I had the satisfaction of discovering that I had been right in supposing that it didn't have any power at all. It looked as if it were intrenched in a fortress, it looked as if the portholes, as if the embrasures of that fortress showed the muzzles of guns, but, as I told my good fellow-citizens in the city of Newark, all they had to do was to rest a little weight upon it and they would find that the whole thing was a fabric of cardboard.

Mr. Bryce, when he wrote his "American Commonwealth" in 1888, did not entertain Governor Wilson's happy optimism respecting bossism. He devoted five chapters to a description of machines and bosses, and one chapter to "the war against the bosses." He sums up his history of this war in the following terms:

The struggle between the professional politicians and the reformers has been going on in the great cities, with varying fortune, for the last twenty years. As illustrations of the incidents that mark it will be found in subsequent chapters, I will say only that, in the onslaughts on the Rings which most elections bring round, the reformers, though they seldom capture the citadel, often destroy some of the outworks, and frighten the garrison into a more cautious and moderate use of their power.

And he quotes Fernando Wood as saying that such reforms compel the bosses "to pander a little to the moral sense of the community."

American history does not justify Governor Wilson's optimism; it does abundantly justify Mr. Bryce's grave estimate of the peril to the American Republic from machine and boss rule. Washington did not find this "invisible government" a fabric of cardboards in the American Revolution, nor Lincoln in the Civil War, nor Cleveland in his fight against Tammany, nor the men of honor in their two years' campaign to rid the Senate of Lorimer, nor the reformers in the municipal campaigns in Boston, New York, Philadelphia, Cincinnati, and Chicago, still going on. Honesty is going to win; but not without a hard battle. And the question before the voters is a twofold one: partly personal, Are Roosevelt and Johnson, or Wilson and Marshall, the better fighting men? partly political, Is the Democratic party, with its past history and its present local leaders, or the Progressive party, with its leaders and its purposes, the better army to which to intrust the campaign?

The Democratic party evidently regards this issue as one of secondary importance. In its platform it treats the revision of the tariff as the immediate and primary issue of the campaign. It charges the unequal distribution of wealth, the existence and extent of poverty, the exactions of the trusts, the high cost of living, all to the protective system. Abolish the protective system; then concentration of wealth, distribution of poverty, trusts and commercial conspiracies, the high cost of living, will all disappear. What it says in its platform respecting labor legislation is a quotation from former platforms; what it says respecting social injustice is mainly a demand for law reforms which will rid the present legal system of delays, expense, and uncertainties; what it says respecting the power of the Federal Government to protect from injustice emphasizes primary dependence on the States; and the only remedy it proposes for boss rule is the offer of the Democratic party "as an agency through

which the complete overthrow and extirpation of corruption, fraud, and machine rule in American politics can be effected."

And this remedy is proposed by a convention in which Murphy, Taggart, and Sullivan held no insignificant power, and it was voted for by them.

The Progressive party puts the revision of the tariff in a subordinate place. It does not attribute either the concentration of wealth, the existence and extent of poverty, the exactions of the trusts, or the high cost of living to the tariff. In its opening sentence it declares that "political parties exist to secure responsible government and to execute the will of the people." And it justifies its existence as a new party on the ground that from these great tasks both the old parties have turned aside. "Behind the ostensible government sits enthroned an invisible government, owning no allegiance and acknowledging no responsibility to the people. To destroy this invisible government, to dissolve the unholy alliance between corrupt business and corrupt politics, is the first task of the statesmanship of the day."

With this definition of the first task of the statesmanship of the day, Theodore Roosevelt is in hearty accord.

It is well at times to see ourselves as others see us. We quote from the London "Daily Mail" an interpretation of Theodore Roosevelt's purpose and policy furnished to its columns by an "Anglo-American" whose personality is unknown to us:

> What Mr. Roosevelt represents and appeals to above all things is the awakening conscience of the American people that for them the problem of problems is to make democracy real and to save their system of government from the grip of predatory interests. The principle which he has again and again claimed to be championing is the right of the people to rule. He wishes to convert this right from a theory into an operative fact.

The Democratic party regards the revision of the tariff as the *first* task of present statesmanship. Governor Wilson agrees with his party in this estimate. The Progressive party regards the destruction of the invisible government which has taken the place of popular government as the first task. Theodore Roosevelt agrees with his party in that estimate. Governor Wilson thinks the unholy alliance between corrupt business and corrupt politics a house of cards which a breath might blow over. Mr. Roosevelt thinks it the chief peril to the American Republic.

On this question The Outlook agrees with the Progressive party and its leader, and differs from the Democratic party and its leader.

Which is the most immediate and most important task of present statesmanship, the revision of the tariff, or the substitution of a real for a sham democracy, a visible for an invisible government? This is the question first in time and first in importance for the American people to decide in the coming election.

It is the first in time because we must decide *what* we wish to do before we decide *how* we will do it or *to whom* we will intrust the doing of it. It is the first in importance because in order to decide to whom we will intrust a task we must decide what is the task we will intrust to them.

Those who think the first task of present-day statesmanship is the abolition of a protective tariff, and that with its abolition special privilege, trusts, and corrupt politics will fall of their own weight, should vote for the Democratic party. Those who think that the first task of present-day statesmanship is to abolish invisible government, and put the power in the hands of the people that they may do their will with tariff, trusts, and every other public concern, should vote for the Progressive party.

STIRRING THE WILL

The familiar prayer in the Episcopal Prayer-Book for the Sunday before Advent, "Stir up, we beseech thee, O Lord, the wills of thy faithful people; that they, plenteously bringing forth the fruit of good works, may by thee be plenteously rewarded; through Jesus Christ our Lord, Amen," goes to the very heart of the religious life; for the root of that life is not in the emotions, nor in the intellectual convictions, but in the will. This prayer, recited for many generations, has given its name to the day on which it is used, and "Stir-up Sunday" is a phrase which conveys a challenge.

Most men, when they feel deeply, give their emotions some form of expression; but expression is largely a matter of temperament. It is not a test of religious experience, nor is it, as it has sometimes been thought to be, the conclusive evidence of a changed nature. It is often the accompaniment of the change, but it is not the change itself. For this reason the dramatic and spectacular repentance of the

criminal or the man of evil life is always looked upon with more or less suspicion. There is a sound instinct in the demand that a great sinner shall prove the reality of his repentance by his full and sincere recognition of the enormity of his offense; and when a man feels profoundly rather than dramatically the enormity of his sin, he is likely to flee from the public gaze and to seek in silence and solitude a place of penitence. The great sinner who takes the newspapers into his confidence when he makes an "about-face" is often sincere; but he is rarely a man of deep feeling or of a clear-cut conscience. The transition from a life of moral anarchy to one of submission to the Divine Will is sometimes dramatic in its suddenness; but it is rarely used as dramatic material by a man of deep experience and sincerity.

Many people are troubled because the life of faith does not lie before their feet defined by sunshine; others doubt the reality of their surrender to the Divine Will because their emotions are not touched and life does not become instantly "one grand sweet song." This means generally that emotion is not the natural expression of their temperament. Religion is not a reality in a man's life until it takes hold of his will; and a man becomes a Christian, not when he says, "I feel" or "I believe," but when he says "I will." For it is only as a man wills to make his belief a part of his life that he passes out of the region of intellectual assent into the region of vital religion.

He who is doing the will of God persistently in the face of uncertainty and, for long periods, without joy, is the kind of Christian of which this world stands in sore need. He will never betray his trust, nor faint by the way, nor lose himself in the mists and fogs of changing opinion. He has the virtue of a soldier—he obeys orders. It is never a question with him whether orders are agreeable or not; whether he is getting the recognition he deserves; whether he is passed over and other men are promoted. It is only a question of his understanding his orders and obeying them.

In these agitated and critical times Christians may well pray for the descent of the Spirit on all the churches, and for the coming of one of those great waves of devout feeling which sometimes pass through society. But the emphasis of its prayer ought to be on the words, "Stir up, we beseech thee, O Lord, the wills of thy faithful people."

PRACTICAL PROGRESSIVE POLITICS

Chauncey M. Depew is quoted as having once said, "Party platforms, like train platforms, are made to get in on and not to stand on." That remark, doubtless uttered in jest, contained nevertheless a cynical statement of truth as to the status of party platforms and party pledges under the old political order.

If the National Progressive party in the State of New York, at its State Convention in Syracuse on September 5 and 6, had deliberately sought the most effectual way of differentiating itself from the old-party attitude with which the voters of the Empire State are familiar, no more decisive method could have been devised than the creation of a permanent Legislative Committee to work all the year round for the fulfillment of the platform pledges. In this way the New York State Progressives differentiated their work from the old order of convention procedure, not merely in the form and contents of their platform as adopted, but also in their attitude towards that platform after it had been promulgated as a covenant with the people.

Long after many of the incidents of that dramatic convention shall have passed from memory, the so-called "separate" or supplemental resolution reported from the Platform Committee, and adopted immediately following the adoption of the platform itself, will be recalled; for it marks a distinct step forward in making party organizations responsible for the fulfillment of party pledges and in giving the rank and file of party workers an ethical obligation that only pledges which are meant shall be made and that pledges which are made shall be kept.

The platform itself was in terms a "covenant with the people" as to a series of definite and understandable propositions, and its adoption was followed with the passage of a resolution which has already been twice referred to in The Outlook, and which we here give in full:

> We, the National Progressive party of New York State, to provide for the carrying out of the pledges of the platform heretofore adopted, do hereby resolve:
>
> (1) That a committee of nine members be created by this Convention, such committee to be appointed by the permanent Chairman, with the advice of the Chairman of the State Committee, to be known as the Legislative Committee of the National Progressive party in the State of New York, and to have the power to add to its

membership six persons, who may or may not be members of this Convention.

(2) That the said Committee be authorized and directed to draft such bills or amendments as, in its discretion, will carry out the pledges of our platform, and to appear as the representatives of this Convention and of our party in this State before the legislative and executive branches of government, for the purpose of demanding that the pledges of our platform be enacted into law.

(3) That this Committee hold office until the convening of our next State Convention, and that it be empowered to fill any vacancies in its membership caused by death, resignation, or otherwise.

(4) That this Committee have power to do whatever is necessary and proper for the carrying out of these purposes.

(5) That when this Convention adjourns it do not adjourn without day, but with the understanding that at the call of the State Committee, upon the recommendation of the Legislative Committee, it may be brought together again for the purpose of reaffirming our demands as the Progressive party in New York State, or for such other business as the Convention may elect.

This action was thoroughly in accordance with the spirit of the new party. It was an action of which politicians of the old order would have been incapable. It was a voluntary acceptance of a continuing party responsibility at which politicians of the old school would have stood aghast. As a "doubting Thomas" still in Democratic ranks said after the adoption of this resolution, "These people must mean business; they certainly have their nerve with them, to undertake to stand by their platform that way. They can't be thinking about the possibility of failure." That cynical comment expressed the exact truth. The resolution crystallized the sentiment of men of affairs thoroughly in earnest. These men probably knew little about "practical politics," so called, but they did know a great deal about what the party had pledged itself to, and how great is the need for the actual, immediate carrying out of those pledges.

Thus it comes about that, whether or not the Progressive National ticket wins or loses, whether or not the Progressive State ticket in New York wins or loses, whether or not the next New York State Legislature is Progressive, or still Tammanyized and Barnes-bossed, there will be found in the State of New York an alert, aggressive, earnest body of men, "on the job" all the year, for the creating of sentiment and the formulating of suitable legislation for the carrying out of the excellent pledges of the Progressive platform —a document which Governor Wilson, with characteristic and commendable candor, has called "an admirable platform," deserving of the careful consideration of the leaders of the other political parties. If any voter anywhere is inclined to doubt whether the Progressive party is a permanent affair, or is merely an uprising for one campaign, the creation of this permanent Legislative Committee in New York, following action looking to similar ends in Pennsylvania, should be sufficient to show that the Progressive party is the permanent and effective exponent of the new political order.

An interesting feature of the New York situation is that the appointment of this permanent Committee will fall to Oscar S. Straus, the Progressive nominee for Governor, in conjunction with State Chairman Hotchkiss. The appointments will be made in the course of the campaign, and the committee will proceed with its work irrespective of the result of the campaign. Funds for the legitimate expenses of the Committee will be provided from the funds of the party—and what higher and more privileged use of party funds could there be than the carrying out of party pledges *after election*, rather than merely using them to *obtain office* before election? Mr. Straus will take pains to secure men of intellectual vigor, moral force, and representative standing, so that the Committee may at once become a civic force such as the commonwealth of Barnes and Murphy never knew before. No action taken by the Convention is deemed by him more significant and more important.

There is no reason why this method of enforcing a platform should not become a party custom followed by every State Convention.

A CRUSADE FOR QUIET

There are many discomforts in this world which cannot be removed; there are others which are entirely unnecessary and are permitted to exist simply because people are ignorant or indifferent, and among these is the increasing discomfort of noise.

The volume of unnecessary sounds which devastates the peace and quiet of the world, and which is beyond question a source of physical injury, has been augmented by the intolerable screeching of the battalions of automobiles which now fly over the country in all directions; and this increase of noise comes

at the very instant when men, women, and children are beginning to live out of doors and to gather up the manifold resources of the out-of-door life. Now, when the closed window has become an anachronism and in health and disease alike the open window is one of the most efficient forms of remedy, the ears of the sleeper and the sufferer are assailed by hideous noises, for which there might be some justification if they were necessary, but which are for the most part entirely unnecessary.

Conditions favorable to rest and sleep are fundamental rights of individuals everywhere, if there are any fundamental rights. They have a direct relation to sanity, happiness, and life, as physicians have been proclaiming for years past and health boards are beginning to recognize.

Every great city sounds its own note. In Paris that note is staccato; the crack of the whip is the keynote of a mighty volume of sounds, which seems to break and distribute itself in high notes which tear the ear. London, on the other hand, has its own characteristic "central roar"—a vast volume of sounds, which has something of the mass of a great wave. In Naples, if one happens to be above the city, there are many sounds, but they are all human; the voices of men, women, and children singing in the narrow streets, or the far-carrying Italian voice in talk. One is interested because the sounds are social; in the other great cities the sounds are unsocial. New York is no noisier than some other cities, and American cities are not noisier than many of the Old World cities.

At the moment, the roar of the trolley car is perhaps unavoidable, although even that ought to be remedied in time, and the rumble of many trucks must be endured for a season; but the movement of the automobile is practically noiseless; and the use of its horn, often neglected where it is imperatively needed, is frequently used in pure vindictiveness. People have endured these sounds because they have supposed that they were inevitable; but, as a matter of fact, most of them are avoidable.

Berlin, for example, is not only a great city in terms of population, but it is also a great city in terms of manufacture and business. It has become one of the most active cities in the modern world; but the ears of the residents of Berlin never hear a steam whistle, a huckster's cry, the rattle of wagons, or the shriek of a locomotive. Indeed, so advanced is the civilization of Berlin that piano-playing is not permitted before a certain hour in the morning nor after a certain hour at night. What has been done in Berlin can be done in Boston, New York, and Chicago, and must be done before many years, if these cities are to consider themselves civilized; for the measure of civilization, according to a high authority, is the respect paid to women and the minimizing of noise.

When we pass beyond the semi-barbaric stage of municipal government and realize how unscientific and unintelligent the government of many of our great cities still is because they are conducted along political and not along human lines; when we understand that a city is a great home and not merely a political entity, we shall have city governments which will make the health, comfort, and happiness of the people objects of prime interest.

Mr. Edward S. Morse's recent address on "The Suppression of Unnecessary Noise" ought to have National circulation. Mr. Morse has more than once appeared as a teacher of civilization. What he had to say, for instance, about Japanese manners had a bearing on this country even more important than the influence of Japanese art. Mr. Morse points out the fact that the factory whistle, which a great many people suppose is a necessary evil—a nuisance which must be tolerated because it is essential in calling together great numbers of workingmen—is really a useless nuisance; the signal for beginning work is not the whistle on the roof, but the starting of the engine. Many of the largest factories in the country use no whistle or signal of any kind. The army of five million railway employees is not summoned by air-piercing sounds. They come to their work by the clock. And that intolerable development of savagery of modern machinery, the siren, has no justification whatever. If it is necessary to make a loud noise—and the cases in which that necessity arises are few—there is no reason why the noise should not be musical. To the lover of beauty one of the saddest things in the modern world is the siren which is sounded every morning on the lower part of the Grand Canal in Venice.

A number of the large cities in this country have already abolished the blowing of steam whistles and the ringing of bells at the freight yards; and it is well known that most of the disturbing noises made by locomotives

are made because it gives the engineer pleasure to make them. Several years ago a gentleman who has a large place on one of the railways running out of New York found the blowing of the locomotive whistles an intolerable nuisance. Trains passed his house continuously day and night, and very few passed without a prolonged screech. There was no necessity for the noise; and upon investigation it was found that an engineer had a grudge against the man and had passed the word on to make him as uncomfortable as possible. There is no better class of men than the engineers; but some of them are fond of noise; others like to notify their friends when they are passing at one o'clock through small villages, or signal to their families; some undoubtedly use the whistle and ring the bell for the sake of variety. But it is perfectly safe to say that at least eight-tenths of the use of these implements of aural discomfort are simply expressions of individual taste and inclination. The same thing may be said of the use of the automobile horn. In many cases it is absolutely essential, and in those cases it is often neglected; but an automobile is an intolerable nuisance in many places simply because of the unnecessary noise which it makes.

We are rapidly succeeding in getting a rational Fourth of July. The country nowadays roars more gently with cannon, the sharp reports of the pistol, the irritating explosion of innumerable firecrackers, or with the dull, heavy reverberation of bombs. We have discovered that there are ways of keeping the National holiday which we need not borrow from the lower classes of the Chinese. What we need now is a National crusade for quiet. It is not a matter of sentiment, nor even a matter of comfort; it is a matter of sanity, of thoughtfulness for the sick, and of decent consideration for the nerves of a nation.

THE MINIMUM WAGE

EDITORIAL BY THEODORE ROOSEVELT[1]

MR. WILSON has distinctly stated in his speech of acceptance that he does not regard the Democratic platform as a programme. We Progressives are more fortunate. For we regard our platform as a very practical programme, and we intend to put it into effect if the people give us the power.

Mr. Wilson, while expressing general approval of the Progressive platform, has made specific mention only of those parts which he condemns. Among the things which he condemns is our minimum wage plank.

As reported, he states that he opposes this plank because he thinks that employers, if such a law were enacted, would reduce the wages of all their employees to the minimum prescribed by law. Such a fear is so groundless that I do not believe it would be expressed by any man who has studied the conditions of life and work at first hand among the workers. The objection is purely academic; it is formed in the school-room; it will not have any weight with men who know what life actually is. Those employers who now pay their lowest-paid employees a starvation wage prove by that very fact that they are paying to all their employees the very least that they can get them to take. They have already brought them down as far as possible; if it were possible for them to reduce the wages of their higher-paid employees, they would do so. It is a wholly needless apprehension that they have let any wages stay up by an oversight and would reduce them to a minimum only in case the minimum for the poorest paid were raised by law above the starvation point.

The minimum wage plank is peculiarly in harmony with the general spirit of the Progressive platform. The portions of that platform dealing with social and industrial justice are meant especially to help the men and women who are wage-workers in industrial pursuits. The promises of the platform are specific and reasonable. They are promises which can be kept, and which will be kept if power is given to the Progressives. We stand, in the Nation and in the several States, for the abolition of child labor; for the reduction of hours of labor for women in industry to eight a day; for workmen's com-

[1] This editorial repeats in substance what Mr. Roosevelt said on the Minimum Wage at Spokane, Washington, on September 9.—THE EDITORS.

pensation laws; for laws guarding the health of workers in factories, and protecting them against accidents to life and limb; for laws securing proper conditions of life to wage-workers; for laws providing that in continuous industry there shall be one day's rest in seven, and three eight-hour shifts a day; and for a law establishing a minimum wage for women workers. No proposals such as these are to be found in the platforms of either of the old parties; and no such platform, we believe, would be or could be enacted into law by either of the old parties.

The Progressive proposal regarding a minimum wage is not an ultra-radical one. It is both modest and conservative. We do not at the moment take up the question of a minimum wage generally; we know that in all matters like this it is necessary to proceed slowly so that we may test each experiment, and then, if the test is successful, proceed further along the same line. The men and women who framed this plank and who advocate it have studied the conditions of life and labor among girls and women in industry and know the dreadful suffering and misery, know the crime and vice, that are produced by a wage that is insufficient to enable the girl or woman to keep body and soul together in surroundings of ordinary decency. Any man who goes to the night session of such a court as the Jefferson Market Women's Night Court in New York City, and who follows up some of the cases brought before that court, will soon learn for himself just what misery and immorality are produced among women when they receive less than a living wage. We are faced with the actual fact of doing away with heartbreaking misery which now exists in the concrete, and we are not to be frightened from our purpose by suggestions of a purely academic kind, however well meant they may be, as to highly improbable possibilities. We intend to put a stop to the misery which now actually exists, and we believe that the minimum wage plank is a humane, practical, and effective method of attacking that misery.

We shall sedulously safeguard the rights of property and protect it from all injustice. But we hold with Lincoln that labor deserves higher consideration than capital. Therefore we hold that labor has a right to the means of life—that there must be a living wage. I doubt whether the protection of the workers from the evils of overwork, unemployment, sweat-shop wages, and child labor will really enhance the cost of production; but, in any event, I would rather see the cost of production enhanced than see it kept low by underpaid labor, physically and morally unhealthy and socially unstable. For, as the great scientist Huxley has pointed out, a society based on such labor, whatever temporary success it obtains, must in the end fall, through hideous misery and degradation, to utter ruin.

I believe that Mr. Wilson, whose sincerity of conviction in this matter I do not for a moment question, and the other worthy and respectable men who in the name of conservatism oppose the minimum wage plank, are misled by the fact that they get their information from study of the laws laid down by political economists who wrote when all social and industrial conditions were utterly different from what they have now become. Under present industrial conditions, to leave wages in all cases to free competition must sometimes mean that under the pressure of the competition the freedom left to the laborer is only the freedom to starve outright or else to starve slowly by accepting a wage insufficient to sustain life as it should be sustained. We in this democracy must shackle force and cunning and fraud alike, and we must not permit the weak to remain at the mercy of the strong who are also brutal.

The men and women who are broken by the hard strain of modern industry, and are driven lower and ever lower until they accept wages which will not allow them to be decently fed and clothed or comfortably housed, cannot render to the community the services which should be demanded of all American citizens. Idleness is a curse and hard, reasonable work a blessing. But wearing overwork, long continued, destroys the body and the soul, and under-payment will achieve the same end and more rapidly.

It is bad enough to exploit men, but it is inhuman to exploit women in such fashion as to force them to sell their labor power at a wage which reduces them to a condition incompatible with the public welfare. I am not at the present time going beyond what the platform of the Progressive party has announced; whether ultimately we shall or shall not do so is for the future to decide. But most emphatically I am standing for the announcements in that platform, and in my judgment one of the best things in it is the declaration for a minimum wage for women workers.

FOLLOWING THE CAMPAIGN

A WEEKLY DIGEST OF POLITICAL OPINION
AS EXPRESSED BY PEOPLE AND NEWSPAPERS

THE PROGRESSIVE PRESS

LAST week the New York "Press," until then a Republican paper, announced that Henry L. Einstein, sole owner of the paper since 1895, had sold it to Frank A. Munsey. Mr. Munsey is the owner of five magazines—the "Argosy," the "Scrap Book," the "Cavalier," the "All Story Magazine," and "Munsey's." He owns the Washington "Times," the Baltimore "News," the Boston "Journal," and the Philadelphia "Evening Times," all of them Progressive in politics. He began as a publisher in 1882 with the "Argosy." He announces that the New York "Press" in future will support the Progressive party and its National and State tickets. The purchase is the result of an attempt on the part of the adherents of the Progressive party to get control of a morning newspaper in New York; the party had an evening paper, the "Evening Mail," but, in order to reach morning readers too, Mr. Munsey has bought the "Press." We quote from his statement:

The "Press" recognized in the inception of the present political fight that President Taft's candidacy for renomination was a mistake and insistently maintained that if nominated he could not be elected.

The logical and honest thing, then, for this newspaper to do under the conditions in which we find ourselves is to support Roosevelt, who can be elected and whose election would mean the continuation of a tariff that protects the American wage against the cheap wage abroad—the continuation of a tariff that makes it possible for our industries to compete with foreign industries and that protects our markets from the onslaught of foreign invasion.

The "Press," therefore, under my ownership will stand for American prosperity and American industries, which, after all, are the bread and butter issues of the campaign. These will be as safe in the hands of Roosevelt as they would be in the hands of Taft—as safe in the Progressive party as in the Republican.

A tariff that will safely cover the difference between the cost of production abroad and at home and will amply protect our markets from foreign invasion is a high enough tariff. A tariff in excess of this is too high and should be reduced.

The "Press" will stand for this view of the tariff, as it will stand for the protection of the American wage against the cheap wage of Europe, as it will stand for industrial evolution and social justice. It will, too, contend for and fight for whatever makes for genuine progress and genuine betterment of life among all our people.

The comment of Republican and Democratic journals on this event is interesting. As to Republican papers, the Waterbury, Connecticut, "American" may be quoted as an example of fair-mindedness. It admits that "the purchase of the New York 'Press' . . . has considerable significance."

In New York City, as the "American" says, "the Roosevelt cause has been handicapped by lack of a newspaper organ, the only paper in New York City which stands for Roosevelt being the 'Evening Mail.'" And yet:

It cannot be, of course, claimed that the Roosevelt side has gone unrepresented in New York. As a matter of fact, Roosevelt news has been featured more than the news of either of the other two candidates for the Presidency. His speeches have been reported fully, and thus his presentation of his side has been as forceful and complete as possible.

But, on the other side, the Waterbury "American," as a "regular" Republican journal, points out that "the anti-Roosevelt newspapers have constantly answered him," and it adds that they "have constantly made conspicuous his various inconsistencies and insincerities."

If they have not convinced Bull Moosers, these newspapers have at any rate given them a lot of food for unpleasant thought, have undoubtedly aroused a lot of questionings among conscientious Bull Moosers as to whether they were following conscience or not in following Roosevelt. A paper that can editorially answer these disquieting questions with Roosevelt arguments will be of great use, if not in converting others to Roosevelt, at least in keeping conscientious Roosevelt followers true to their leader.

As to Mr. Munsey's statement concerning "the bread and butter issues," another Republican paper, the Burlington, Vermont, "Free Press," opines that "the people are not sure about this." It explains:

During the administration of President Taft the whole country has gradually recovered from the effects of the Roosevelt panic, and every time a man puts his hand in his pocket he realizes that the prosperity now being enjoyed is without a parallel in a Presidential year. Not even a National election has been able to stop it.

When, therefore, Mr. Munsey tries to make people believe that business, industry, and labor would be as safe under Mr. Roosevelt as under

Mr. Taft, he is challenging personal experience as well as political and financial history whose accuracy cannot be questioned for a moment.

The New York "World" speaks for the Democratic press:

Mr. Frank A. Munsey, purchaser of the valued "Press," becomes our esteemed contemporary at once, not so much by reason of his ownership of a newspaper as by the singular frankness of the avowal of his purposes.

"With no political or personal ambitions to serve," Mr. Munsey's principal aim, as he says, is the election of Theodore Roosevelt. . . . Incidentally, he wishes to preserve "a tariff that makes it possible for our industries to compete with foreign industries."

Recognizing in Mr. Munsey one of the largest stockholders in the Steel Trust, we should have had serious misgivings about this enterprise if he had not at the outset disarmed us so completely. He enters upon metropolitan journalism with the first-rate essentials to success, which are honesty and courage.

The welcome which we extend to him is the more cordial because he does not afflict us with any persiflage about the rule of the people, social justice, or Armageddon and the Lord. Rural tories, closet philosophers, and doctrinaires, exhibiting the peculiar traits of the crook and the jackass, do not trouble him. He goes straight to the point.

In an issue of the "Press" some days after its purchase, the paper thus defines its convictions in an editorial entitled "Six Hard, Cold Facts:"

Fact one—Taft cannot be elected.

Fact two—Roosevelt can be elected.

Fact three—Wilson might be elected.

Fact four—The election of Wilson surely means tampering with the income of the business man, the wage-earner, and the rest of the American public.

Fact five—It is up to the American voter to defend his income, upon which must always depend his outgo.

Fact six—The only way for the American voter to defend his income is to prevent the election of Wilson by voting for Roosevelt.

WOMEN IN POLITICS

For the first time in this country a woman is to be a candidate for Presidential elector. She is Mrs. Florence Collins Porter, of Los Angeles, California, and, so it is announced, will be one of the electors from that State on the Progressive party Presidential ticket in November. Speaking of that party, the New York "Times" (Ind.) remarked recently that it "has gone further than either of the other two parties in giving women the chance to do active campaign work."

This party strongly urges the granting of woman suffrage, and women have been elected to the National and State Committees. Miss Eleanor [really Miss Alice] Carpenter and Miss Frances A. Kellor are in charge of the Bull Moose Campaign Bureau, and they have a corps of assistants.

"Women already have been organized to help along the Wilson campaign," we are informed by the same authority:

The Woman's National Wilson and Marshall Organization has been hard at work. . . . Mrs. J. Borden Harriman, the chairman and founder of the organization, is at her desk every day, and a corps of women workers are doing everything possible to convince voters all over the country that their interests will be best served by the election of the Democratic ticket.

"With the appointment yesterday of Miss Helen Boswell and Miss Mabel Boardman to responsible positions in the management of the Republican National campaign this fall," announced the "Times," "the last of the three important political parties has recognized the value of women as vote-getters. From now on the three parties—Republican, Democratic, and Progressive—will compete in efforts to interest the women to get out and work hard for their respective candidates; and from now on the women in authority at the various headquarters will have much to say regarding the campaign."

Hence, concludes another New York City Independent Democratic journal, the "Evening Post," "with Miss Jane Addams and Miss Carpenter on the Bull Moose side, with the offer to Miss Boardman to take care of women voters for Mr. Taft, and Mrs. J. Borden Harriman in the field for Governor Wilson, it is plain that the National chairwoman has arrived on the scene." The "Post" continues:

The politicians have suddenly found out that women vote in six States; that there is an insistent demand for suffrage among them in every other State, and that they have become a political force to be reckoned with. We may take it for granted, therefore, that the chairwoman has come to stay; that henceforth work among the women voters will be as regularly part of a Presidential campaign as among Italians, or German-Americans, or Negroes.

In almost the same words, the New Orleans "Item" (Ind.) comes to the same conclusion, namely, that "this sudden request for aid from these notable women is due to political exigencies." The paper declares:

Conventional stump speakers and hysterical spellbinders may do to round up the male

voters, but they are worthless in trying to make converts of women, who in this present age have taken the bit in their teeth and are doing their own thinking without any outside help.

We may therefore take it for granted that the woman political worker has come to stay. . . . No doubt politics will be cleaner and less corrupt with her coming.

Miss Boardman, who, as is well known, is President of the National Red Cross, declined the position to which she had been chosen because she did not believe that any one whose name had been closely associated with any great non-political work should permit the use of his or her name when such use would carry more or less the influence of the organization with which the person was identified. For this reason Miss Boardman held that Miss Addams, of Hull House, Chicago, should not have identified herself with any political party.

Some newspaper comment agrees with Miss Boardman's position; other comment does not. That of the Baltimore "Evening Sun" (Ind. Dem.) both agreed and disagreed:

Miss Mabel Boardman, with characteristic good sense, declines to act as Chairman of the Republican Woman's Advisory Committee. As President of the National Red Cross she could not afford to allow that great organization to be even remotely associated with partisan politics. In spite of her friendship for Mr. Taft and sympathy with his cause, she feels it her duty to hold aloof, not to take any active part in the campaign. Her atttiude indicates excellent judgment, and emphasizes her devotion to the Red Cross.

But Miss Boardman's criticism of Miss Jane Addams is not altogether justified. Hull House, Miss Addams contends, "has little value to the community save as it has been able to express certain principles, and thus it has always stood for freedom of speech." Hull House is a result of Miss Addams's agitation for better conditions, and not the cause. Before Hull House was erected she was an ardent advocate of woman suffrage, the prevention of child labor, and similar causes. While her course in plunging into politics may not be commended without qualification, Miss Addams does not stand in precisely the same position as Miss Boardman. In this particular case Miss Addams has the best of the argument.

Miss Addams's own reason for seconding Mr. Roosevelt's nomination is found in her speech at the Progressive Convention:

Measures of industrial amelioration, demands for social justice, long discussed by small groups in charity conferences and economic associations, have here been considered in a great National Convention, and are at last thrust into the stern arena of political action.

A great party has pledged itself to the protection of children, to the care of the aged, to the relief of overworked girls, to the safeguarding of burdened men. Committed to these humane undertakings, it is inevitable that such a party should appeal to women, should seek to draw upon the great reservoir of their moral energy, so long undesired and utilized in practical politics.

As to this, "Life" remarks that Miss Addams's support "is much respected and carries weight," but adds:

We suppose her mind has never dwelt very much on the expedient limitations of governmental supervision of human affairs, or on the consequences in the long run when they are exceeded. If a programme that, on the face of it, promises to better the lives of workingwomen in Chicago looks good to her, we must respect her approval of it as far as it goes. Probably the facts of life as she has seen them have left her lukewarm, at most, in her disapproval of Socialism, and she accepts Mr. Roosevelt's bountiful offer without much scrutiny either of its implications or of its guarantees.

In a later letter published in the New York "Tribune" (Rep.) Miss Boardman redefines her position:

There are multitudes who indorse the causes for which Miss Addams stands, but who do not indorse the platform or the candidates she advocates. In appearing before legislatures and Congressional committees, who represent all parties, to advocate the prevention of child labor, the betterment of working-girls' conditions, and similar causes, Miss Addams has had not only the utmost freedom of speech, but the equally important freedom from active party alignment that might prejudice her hearers and injure her cause.

No party has a monopoly of virtue. These great moral questions, for whose furtherance the country owes a debt of gratitude to Miss Addams, should not be handicapped by the limitation of party affiliation or trammeled by becoming involved in the bitterness of controversies over candidates and utterly irrelevant policies.

"From a part in the old political intriguing and maneuvering," concludes the Chicago "Evening Post" (Prog.), in approving Miss Addams's course, "such a woman might readily abstain. But to ask her to take no part in a movement directed toward the ends to which she has so nobly and unselfishly devoted her life would be to imply that she had been only playing with these ideas, and that she had no great concern in putting them into effect."

In commenting on Miss Boardman's declination to serve, the Newark, New Jersey, "Evening News" (Ind.) calls attention to the connection of women's political activity with the woman suffrage movement:

The Progressive party has already declared its allegiance to the eventual extension of the

suffrage. . . . To those who desire the suffrage the prospects of their cause probably seem much brighter, and there is no disguising the fact that, whether for good or ill, the extension of the suffrage to women appears to be considerably nearer than it was six months ago.

In a speech at St. Johnsbury, Vermont, Mr. Roosevelt recently said:

The Progressive party is the one party which, since the war, has dealt with real issues, and those real issues affect women precisely as much as men. The women who bear children and attend to their own homes have precisely the same right to speak in politics that their husbands have who are the fathers of their children and who work to keep up their homes.

In a later speech at Spokane, Washington, Mr. Roosevelt spoke as follows:

The argument that participation in politics will take woman from the home is just as well grounded as it would be to say that men should not vote because it would take them from their business. It is not so much that women need to spend time as political workers as that they need to work out the questions connected with our Government, and then take the right action at the polls.

But, objects the Chicago apologist of Republican stand-patism, the "Inter Ocean," "the time which women would spend in voting, or even in acquiring the information they might deem necessary in order to vote properly, is not a main ground of objection to woman's suffrage. No one imagines that women could not easily take the time to do that, if they chose to do so."

It is not because woman's suffrage will take woman's time from the home that intelligent people oppose it. It is because it will tend to take something else from the home, something as infinitely precious as it is practically indefinable, something in the immemorial relation of man and woman that the modern family can ill spare.

It is because it will tend to introduce into the home, where spheres should be defined and whence every source of discord should be relegated as far as possible, a fruitful cause of vain contention, a dangerous source of futile friction, and, even at the best, a latent menace to domestic harmony.

It is because it will tend to take from the home the old ideal of the womanly woman, equal to man but different, and to substitute therefor the ideal of the mannish woman, the woman who thinks she can only show her equality with man by doing the things that men do, the foolish woman who thinks that an empty ballot can add dignity to the divine mystery of motherhood and influence to the irresistible charm of wifehood.

The arguments for and against woman's political activity are thus summarized by two influential journals, the Philadelphia "North American" (Prog.) and the Louisville "Evening Post" (Ind.). The first asserts:

Great mothers give to the world great sons and daughters. No degree of amiability, of kindliness, of gentleness, of mere goodness with which nearly all mothers are stamped by virtue of their motherhood, will suffice in imparting character to a child, to give that child the strength and the self-reliance and the sense of freedom that is needed for each citizen in an ideal democracy. The mother herself must be free and must realize her freedom if her sons and daughters are to be truly free. The mothers of this Nation must be genuinely a part of its democracy if it is to be a true democracy.

Again, it says, "Women must be emancipated."

Luxury and ease and peace, if bought at the price of freedom, may be as deadly to the motherhood of democracy as are industrial oppression and economic tyranny.

Without much fear of contradiction, the Louisville paper asserts:

We have not become a unisexual race. The race is still composed of man and woman. These two constitute the unit, and society still promotes efficiency in all of the activities of modern life by a division of labor between man and woman.

Woman's influence is great and on society greater than ever before. Her obligations are great to the family and to the community. . . .

The "Post" even asserts that "woman has already been emancipated," and adds:

She is as free to-day and as untrammeled as man. In her own field she is absolute. Outside of it she is and will ever be secondary. Men and women have been emancipated together. They have shared together in all of the benefits of modern civilization. They have been fitted by these benefits for better service. Each generation marks progress in the amelioration of the conditions of men, women, and children, else our civilization is a failure.

Finally this authority declares that "freedom is not a thing of itself to be desired." It thus describes the word:

Freedom implies the greater activity of man's natural forces, and a wiser application of all of his energies, truer views of life, higher efforts and broader visions. If freedom means simply a refusal on the part of women to live a normal family life, a refusal to perform the duties inseparable from the laws of existence, the household cares and activities, then freedom itself may be the greatest curse that can fall upon women. Self-reverence, self-knowledge, self-control—these three things men, women, and children seek, and without them they are poor indeed.

THE BLINDFOLDED GODDESS

BY MARY WILLARD KEYES

WITH DRAWINGS BY WLADYSLAW T. BENDA

"A LETTER from America for you, Isaac."

The old man who sat in the corner by the stove took the letter eagerly. Holding it close to his eyes, he commenced reading it.

"Are you not going to let me hear it also?" asked his sister Marta in a querulous voice. "Not that I expect it will be any better than the others."

"Yes, yes; you shall hear it. Listen:

"'Dear Father—I hope you are well. Aunt Marta and Cousin Isaac also and the children. We often think of you in our old home in Warsaw and wish we could see you but it would be strange for you here, and you would not be happy in America, it is all so different from your home. If you were not so old, you might come. But we must give up that thought. Perhaps I will visit you in a year or two if I can leave my business. The clothing trade is very good at this season. We are all doing well. You would certainly like to see us in the house we have here. We keep our carriage and we ride in the Central Park. Shendela and Rebecca and little Yetta take music lessons. They are like you, they love the violin and the piano. All the children but only Moses are musical, and Moses has high marks in school. I send you a money order. It is all the change I happen to have by me at the moment. When you receive this, you may think of us in the feast of the Passover. Rebecca and our children send their love to you. With love, from your son,

"'MORRIS ZAKOVITZ.'"

After a silence old Isaac said, "It is well that they are prospering."

"How much did he send you?" queried Marta, sharply.

"It is twenty rubles. He said it was all he had by him at the time of writing."

"And last time it was how much?"

"Twenty rubles."

"And the time before that?"

"The same. He knows my wants are not many. There are five children, and it costs a great deal to live in New York."

"Yes," sneered Marta, "it does cost a great deal to keep a carriage and drive in the park. And violins and pianos for three children! And music lessons! Silk dresses, too, I've no doubt, and plenty of meat and

good wine! But the old coat and the old hat for the father left behind, and a bit of black bread for him! Morris is a good son since he went to America, truly!"

"Yes," asserted Morris's father, stoutly. "Yes, he is a good son. Perhaps he has forgotten how it is in Russia now he lives in a free country. I, too, would go to free America if I were younger."

"If I was a man, I'd go, whether I was old or not," declared Marta. "If I had a rich son, would I live here and work and make my old sister work for me, and my nephew give me a house? Isaac has six children, but he can look after his old uncle. Morris has five, but he can send no more than twenty rubles once in three months. He is rich and proud. He has rich friends. He is ashamed to have his fine friends in America see his poor old father."

Much as he longed to see his son, it is doubtful if Isaac Zakovitz would ever have left his corner but for Marta's goadings.

And now he was going. He had his passport and his letter of credit. A small bundle contained all his goods.

"Take enough for the voyage only," advised Marta. "Why should you hinder yourself with old clothes when you can soon have fine new ones in America?"

His violin was not left behind.

On the deck of the steamer that carried Isaac up the harbor stood a hearty young German. He had been in America before.

"*Heil!* old Frau Liberty," he saluted. "I seen you before, and I know you. I know just how much to believe in you. Liberty—to slave in a factory! Liberty—to sicken in a dark tenement! Liberty—to get bare living wages in a coal mine. That is what you give to enough of us. You stand at your front door and don't know what is going on in your house. You should have your great eyes covered with a great bandage."

"Still, you seem to be coming back to try again," suggested a neighbor in the crowd.

"*Richtig.* There is always a chance. Once get a start! Your grandchildren may live on Fift' Avenue! No laws hold you back. It is not so bad, but, all the same, I would like to see that old lady there with her eyes well tied up, and then she would not look so much like she would show you into her *Vorzimmer!*"

Isaac Zakovitz had been patiently miserable throughout his voyage. In all his wretchedness he had had only to touch the letter in his bosom to feel comforted. He did not doubt that his son would be glad to see him, though he had not apprised that son of his coming. He was entirely confident of a glad and warm welcome awaiting him. He thought with pleasure of seeing the children—Shendela, Moses, Rebecca, and Yetta, and a six months' old baby he had never seen who bore the strange "American" name of Eleanor Frances, after some rich American friend.

The steamship had sailed up the bay in the morning, but it was late afternoon before the barge to which Isaac had been transferred left him at the barrack-like Barge Office on Ellis Island. The weary official, leaning over a counter, had uttered the same questions that day in twenty different tongues. Toward five o'clock he glanced at the little, stooping, long-bearded figure before him, and commenced in Yiddish:

"How much money have you?"

"I have five rubles."

"No money! Do you know we deport people who have no money? You are too old to earn your living." He indicated to Isaac a portion of the bare wooden hall barred off from the rest and filled with a collection of human beings, old or diseased or penniless, all with aspects of misery and fear.

Old Isaac perceived them with terror, and understood only too well.

"But I have a son," he cried. "See! Here is my letter from my son."

"Is he waiting for you outside?" asked the officer.

"He does not know I am here. I have made for him a surprise. But he is rich! He will take care of me and I will be no burden to your country. Do not—*do not* send me back to Russia."

"Where does he live? How will you find him?"

Isaac brought out a worn piece of folded paper and displayed his son's address, at the same time boasting, "My son keeps a carriage and drives in the park."

The interpreter shot one searching look at the letter and another at Isaac; but in that patient face he discerned only what he so often saw—a blending of weariness, anxiety, and hope. He motioned the old man on to the next official, having given about one

ISAAC BROUGHT OUT A WORN PIECE OF FOLDED PAPER

minute and forty seconds to the consideration of the immigrant Isaac Zakovitz, from Warsaw, Russia,

After being shoved here and there, on cars and off cars, his strength nearly spent, his mind quite dazed, Isaac at length found himself on a horse car. Something made him feel strangely at home. Opposite sat a patriarch almost his counterpart, and several others in the car wore the high hats and long coats with which he was familiar. Also the women and young men were of a type he knew well.

"You have just come to America?" His vis-à-vis had crossed to him.

"Yes," he said, "from Warsaw."

"I am from Kiev. If I had lived in Warsaw, I would never have left to come to this New York. They do not murder us in Warsaw. Have you friends here?"

"Yes; my son. I have come to surprise him. He thought the journey would be too hard for me, but, behold me! He will take care of me and I shall do well. Is this place far from here?" and he showed his tattered scrap of paper.

Isaac's new friend peered at it and read out, "'127 Hester Street.' No, we are nearly there. I myself live not far from Hester Street, and I will go with you."

Isaac gratefully acknowledged his kindness and thankfully let him appropriate his heavy bundle as they left the car. Something like a shock came to the old man as he looked around him in the street. The buildings all about were tall, built of brick and trimmed with stone. They seemed new, and appeared rather fine to him. But the glimpses he caught of their interiors showed them very mean and squalid, and the street itself was unspeakably dirty. The crowds that surged by, filling all the space not occupied by push-carts, was a poorly dressed, a dingy, and a ragged crowd. There was no sign of any park.

They made a turning. Isaac's friend was by this time supporting him with one arm. Wonderful is the power of endurance in the Jewish race. But for this race heritage the old man would have fainted long before, for he had been standing, on the steamer deck, on the barge deck, or in the Barge Office, most of the time since morning. And now he began to think the limit of his strength was reached.

All at once he heard music, blatant and

rollicking music. He struggled to make his way through a crowd of children around a hurdy-gurdy, dancing by pairs on the sidewalk and in the street.

"Here we are," said the man from Kiev. "This is 127 Hester Street."

"No!" in distress from Isaac. "No! it cannot be. My son would not live here. My son is rich. He keeps— Oh, I can go no further!" He sank on to the doorstep.

"What is your son's name?"

"Morris Zakovitz."

A few inquiries were made. Then a shrill cry arose from the children.

"Yetta Zakovitz! Yetta Zakovitz! Here's an old man wants your father."

One of the little dancers detached herself from the crowd and ran up.

"I don't know him," she said. "What does he want?"

But Isaac knew his granddaughter.

"Little Yetta," he whispered, "I am your old grandfather. Don't you remember Aunt Marta and grandfather in Warsaw? Take me to your father."

Five-year-old Yetta handled the situation with composure.

"Moses," she bawled, "here's our grandfather. You come and take his bundles," and from somewhere Moses did appear. The two children helped the old man to rise. Leading him by the hand, Yetta piloted him through a hallway, numbers of children trooping after. Out into a courtyard they came, then into another building, a rear tenement, up the stairs, up, up, up—not so far in reality, but seeming endless to him who had begun in Warsaw two weeks ago the journey of which this was the finish. Somewhere in the darkness of the hallway Moses, by instinct, found the door handle. "Father!" he shouted, with a full sense of the import of his news; "Father! here's grandfather!"

And, after all, it was Mrs. Zakovitz who fainted. Her husband caught his father in his arms and laid him tenderly on the bed in one corner of the kitchen. Few words were spoken, and tears flowed freely down the faces of the men as well as of the children. Yetta revived her mother, and Moses, shutting the door with difficulty against those who pressed around it, placed his back against it. As the mother began coming to herself, she commenced wailing, "Oh! why ever did he come? Why did he come? Why didn't he stay in his good house in Warsaw: He will die here!"

"Hush!" said Morris, roughly. "Do you want to kill him *now, to-night?*" Then to his father: "Poor father! We thought to keep it from you. To myself I said: 'I will make the old man happy. I will write to him that all with us is fine, just as he hoped.' I sent every penny I could spare, and went without food and clothes, and then I was sick. And I thought, 'Never shall I see my good old father's face again, but he will be glad if he thinks we are prospering.'" Then, after a silence broken by sobs, "But I *am* glad to see your face, my father."

"You have been sick, Morris?"

"Yes. I could not find work one time. The children cried with hunger, and it drove me wild. I am better now. I have work— not steady. If I can keep up, I will find something in the end. God help us!"

It was indeed a very carnival of sadness. A neighbor sent in some wine, and the old man drank a bit, but the bread and garlic the others were having for supper he refused. Moses was despatched with the dozen coats his father had just finished stitching. The other children stood around gazing at the old man, who lay in the corner with his eyes shut. Suddenly he opened them.

"Little Yetta, come here," he whispered. "Bring me my violin."

It was put into his hands. With shaking fingers he undid its cover, and brought out five little packages.

"This for Moses," he said, with a wan smile, "this for Rebecca, and Yetta, and the baby. But where is Shendela?"

"Shendela's at music school. She is very late," explained her father, as the children were too absorbed in their new gifts to answer.

"Then *that* is true? The other children, play they also?"

"Oh! you shall hear! 'Becca, take grandfather's violin and play for him."

Rebecca seized the violin lovingly, tuned it, and played a simple air quite correctly. At that moment Moses returned.

"Look!" he cried. "Behold Shendela!"

"Behold our Shendela!" exclaimed father and mother in amazement.

There she stood, their oldest daughter, a pretty, self-possessed girl of eleven. Her bushy curls were neatly tied with a broad red ribbon, her short dress was of spotless

"WHERE SHENDELA HAD PAUSED HE TOOK UP THE THEME"

white linen, her shoes and stockings were new and neat.

For a moment the children stared, speechless. Then a hubbub began.

"What for a dress has Shendela!"

"Oh, ain't she beautiful!"

"Oh, don't Jenny look handsome!"

"Where did you get them?"

"*I* know. Miss Parker give it to you. Hurrah for Miss Eleanor F. Parker!"

"Be still, you," urged the father. "Remember your grandfather. Tell us, my Shendela, the good news."

"Sure I will," she replied. "Look here." She held up two dollar bills and a fifty-cent piece. "That's what I have earned this week. I earned it giving lessons to the music school, and Miss Parker says I am a good teacher. I am patient with the little ones. Miss Parker says I must not eat garlic any more and I must have neat clothes. She got me these. By and by I pay her back for them. I will earn ever so much money. Miss Parker says we must move to a better tenement—"

"Oh, yes!" cried Mrs. Zakovitz, sarcastically; "we'll move on to Fifth Avenue tomorrow."

"Here is a note for father," Shendela went on, breathlessly. "She's found a job for him. Her tailor wants a finisher, and Miss Parker has found out from the boss that father does the work fine. Only we've got to move to where it's clean, and she can let us have the money till we save enough, and—"

The voices broke out again, and tears of joy came to wash away the traces of the tears of sadness.

"And that isn't all, though it's the best," the beaming little messenger continued. "We're all going to play in a musicale, us children; little Yetta, too. Yetta's going to play 'Reverie' on the piano. A great lady is going to sing. She was to the music school this afternoon. She sings at the Metropolitan Opera-House. I had a love on her at once. Miss Parker said to me, 'Play that thing I like so much to Madam—' I forgotten her name. So I played this. I can't never remember where I learned it, it was so long time ago. You know it, father."

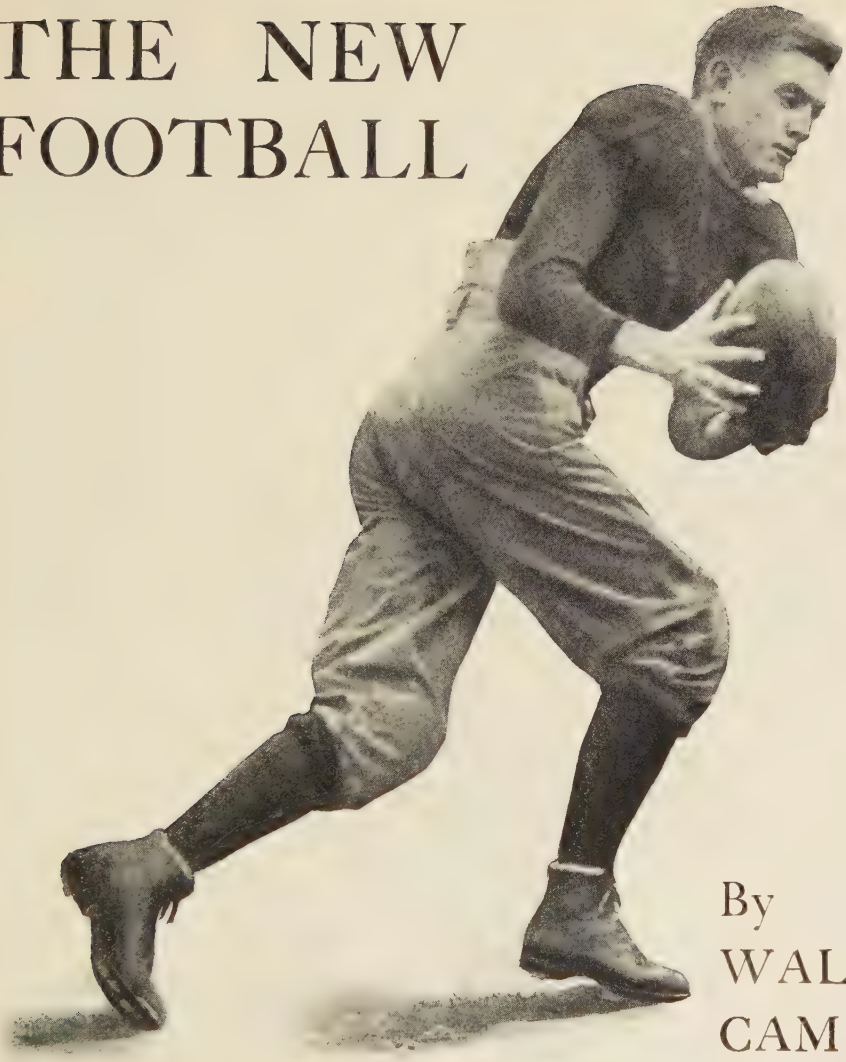
And Shendela raised her violin to her shoulder and commenced a sad strain in a minor key. It wailed and rebelled and then it became patient again.

"Hold! Shendela!"

For the first time the young girl noticed the presence of the newcomer. Of all the children she alone had a clear remembrance of him. Not yet greeting her, old Isaac stood upon the floor. He raised his violin, and where Shendela had paused he took up the theme. She accompanied him, but presently he carried the music on where the child could no longer follow. Its mournfulness turned to triumph, its patience to solemn joy. Life returned to the limbs and animation to the weary face of the tired traveler.

"*I* taught you it, Shendela," he cried. "You heard me play it when you were a baby, often. It is my own song, a song of the Jew in Russia. When I was a young man, I made it. But never after I grew older did I play the ending. I despaired. I said, 'Never shall we be free. My grandchildren, perhaps, but not I.' Yet now, courage! For even I am come. The road to freedom is here. Little Shendela shall show us the way. Come to your grandfather, little Shendela."

THE NEW FOOTBALL



By WALTER CAMP

SOME years ago Mr. J. Low, who edits the "British Annual Golf Book," in reply to a criticism as to the poor wording and inconsistency of the golf rules and the suggestion that a code be drawn up in simple form by some expert, confessed that a committee had already attempted this, and that the criticised code was one upon which the committee had had such suggestions, and those suggestions had been by no lesser light than the Honorable Mr. Balfour.

So it has been proposed for a year or so now that the American football rules be placed in the hands of a professional codifier. The truth is that a few years ago Mr. Hall, the present chairman and the editor, felt that such a plan might bring out greater simplicity, and therefore placed the matter in the hands of one of the most expert law codifiers in Boston, and the present rules, with the exception of those which have been added the last two or three years, are the result of the work of that professional codifier.

It seems comparatively easy to a man to understand the game of golf or the game of football, but when the attempt is made to put in words the exact rules that shall govern all cases, to draw up in plain language and little space a simple code, the difficulties begin. When any body of men undertake this, they find it more difficult than is at first assumed; and if any man should stand with his code before a gathering of some three hundred officials and coaches and see whether any

AMERICAN FOOTBALL

THE "SCRUM" AT ITS FORMATION—ENGLISH RUGBY

flaws can be picked in his code, he would face the same situation that the football committee faces annually, and he would realize that a complex game entails complex rules.

In fact, that is actually the difficulty with the game, for it is one which involves so many situations that there can never be anything but a long code of rules. But, some one contends, why not return to the simple English Rugby? Now the simple English Rugby is not as simple as it was, and, more than that, the English Rugby is played on tradition rather than on rules. It is only necessary to quote one of the best British writers on Rugby football to demonstrate this conclusively. He says: "There are only two methods of playing the scrum to-day, and they are heeling out or wheeling the scrum." He further continues: "Both of which means are illegal under the rules, but no team would stand a chance that did not practice them."

The American rules, although they have been cumbersome, raised little difficulty either in the minds of players or spectators until the introduction of the twenty-yard zone.

It is needless to go into explanation of this, but a sufficient suggestion of the difficulties which its introduction (with the forward pass) entailed can be gained from the following: After the Rules Committee had completed their work and the results were turned over to the editor as final, he wrote to members of the Rules Committee who had voted in favor of this measure, asking each for his ruling on a play that must come up frequently in the game. The replies were diametrically opposed. The editor then tested two other cases, with similar results. This was no fault of the gentlemen who answered these questions, but the fault of the introduction into the game of a practically unrulable proposition. By unrulable, in this case, is not meant that after months of experimentation a rule might not have been framed that would cover the exigencies that might arise, but that the introduction of such an element would, for a time at least, involve complications that would result in the above situation.

Starting, then, with the confession that the game is such that the code will always be long and complicated, is it possible to answer the criticism that has been made for the last two or three years, that American football had ceased to be a game of play and had become a game of rulings? Such criticism has been fair, and can hardly be answered when considering the play of the last year or two. Nine-tenths of the people seated in the huge stands have been unable to understand the rulings and penalties of this twenty-yard zone and forward pass. Officials have gathered at the interpretation meeting in the fall and have made every effort to aid each other and the players in making the rulings as clear

as possible, and I believe that captains and players have gone whole-heartedly into the game with a desire to clear up misunderstandings and play the game on its own merits. Yet at the games the people on the field, officials, and coaches have been mystified many times. Now, no game is certain of having satisfactory and proper rulings if at least one-half of the spectators who look on do not understand what is fair and what is foul, and are not competent to judge whether the rulings are correct or not.

So much for the rules and their situations. Now as to the actual play. American football made its way into the hearts of the people of this country largely through the running game, and the other games which involve kicking have never, in this country, attracted the attention of American Rugby. This is the game that developed from the time when Yale and Princeton played at the St. George Cricket Grounds at Hoboken before a crowd of three hundred spectators, most of whom came in through a hole in the fence, to a contest where now a stadium seating forty thousand people is inadequate and there are probably forty thousand more who would be glad to pay their two dollars for a seat could such a seat be obtained. For the last two or three years the running element in the game has become less, and its consistency has practically disappeared. Much of this comes from the forbidding of pushing and pulling the runner, a method which had been very strongly developed in the game. But pushing and pulling the runner had produced mass plays of a serious nature so far as accidents were concerned, and it is a fact that no one of those in authority would ever consider taking any chances of a return to that kind of mass play by permitting once more pushing and pulling.

Now, it was necessary for the Rules Committee to increase, in some measure at least, the consistency of the running game, and at the same time to reduce very materially the complications introduced by the twenty-yard zone protection to the forward pass. In the interests of the game of football, if the critic will bear in mind the distinction between the harmful mass play, which had become a serious menace to the sport, and the kind of play known as line plunging, we shall have a fair view. A mass play in its worst form consisted of a body of five or six men closely locked together, with the runner in their midst, which struck with great force a single player in the opposite line. In the line plunging game of the present day the line plunger has no one behind him to assist

SPILLING A MAN ON A FORWARD PASS—NOW FORBIDDEN

him. He may have two or three men ahead of him, and he may repeatedly plunge into the line, but this is not mass play, and as long as the pushing and pulling is left out there is little danger of mass play. Bearing this distinction in mind, those who will witness the game this fall should not confuse the line plunging which will be done, and in which men like Wendell, the Harvard captain, are exceedingly good, and mass play, which was the old form of compact bodies of men crashing their way through a special point in the line.

In detail the Committee has answered the criticism by the following comparatively simple changes. They have allowed four downs in which to make the necessary ten yards gain. This is an increase of the number of downs, and, while under the old rules it was necessary to make an average of three and one-third yards to the down, it is now necessary to make but two and one-half. This will be a very marked aid to the running game. It is perhaps possible that it may be too marked an aid, and another season this may be altered to twelve yards in four downs, or eleven yards in four downs, either of which will be easily measured in case it should seem wise to curtail somewhat the line-plunging system. Second, the forward pass has been allowed across the goal line. It seems to the writer that the other provision would have been sufficient addition to the power of the attack for the first year, and it would still admit of one of the most exciting incidents in the game, namely, the heroic stand of a team on the defense when forced down on to their own goal. There will no longer be anything of this kind in the game, as the back-field men will be forced away from the rush line by fear of the forward pass, and, whether the attack finally uses that or the running play, there will be no spectacular feature in the effort of the one team to get over the line and of the other to meet that attack and hurl it back. The value of the touch-down has been increased from five points to six, so that a touch-down is equal to two field goals, and after the goal has been kicked from the touch-down the value is one point greater than the two field goals. In case of a touch-back the ball is to be put in place from the twenty-yard line instead of the twenty-five-yard line, and on the kick-off the ball will be kicked from a point sixty yards away from the goal kicked at, instead of fifty-five yards as at present. A bounding ball cannot score a goal. The field is shortened ten yards in order to give room for the forward pass over the goal line. The twenty-

THE PUSH AND PULL PLAY—NOW FORBIDDEN

yard zone is entirely abolished, and with it the office of one of the officials, namely, the field judge. The intermission between the first and second and the third and fourth periods is reduced from two minutes to one minute, and the number of men allowed to walk up and down the side line, which two years ago was five and last year was three for each side, has now been reduced to one.

We shall know more about these rules after they have been in operation a season, but they represent at least the honest and sincere efforts of the Committee to meet in every possible way what have seemed, after a fair trial for two years, the difficulties that have presented themselves.

Now, while no one can predict exactly what these changes may produce in the way of a game, for rule changes in football have ever been productive of certain unexpected results, it is of interest to make a few predictions as to the possible extent of these changes. First, considering the four downs, as already stated, where formerly it was necessary to gain an average of three and one-third yards to the down, that distance is now shortened to two and one-half yards. Many are inclined to believe that this will bring the game back to the old running play to such an extent that we shall see a team progressing steadily from its own twenty-five-yard line down to a touch-down. This may prove true, but without pushing and pulling it cannot bring in the old distinctive mass play, and there are many good critics of the game who believe that the elimination of pushing and pulling is a greater loss to the running attack than is made up by this extra down. Perhaps it is fair to conclude that a team will gain ground with some measure of consistency (if there is an average well-developed attack) in the line plunges. But that it will eliminate the attempts at runs off tackle, forward passes, and kicking seems to be a too extreme view, and the majority believe it will only give the necessary consistency to the running play. One of the important changes also favoring the attack is bringing the ball out only to the twenty-yard line instead of the twenty-five-yard line from a touch-back. A good deal of consideration was given to the proposition that the ball be brought out only to the fifteen-yard line, but this seemed too great a change to make at one step. The side on the defense had been released from danger too readily under the old rule, and the attacking side has never had the just reward of getting the ball up into the opponent's territory, for when it could be brought out to the twenty-five-yard line from a touch-back it practically eliminated for the defenders all danger unless there was a strong wind blowing against them. This may have tempted teams to try the field-kick goal even more recklessly. But standing against this is the increased value given to the touch-down. With a certainty that a goal kicked from a touch-down may not be tied by two field goals, the team is pretty sure to make a very determined effort to score a touch-down if there is any chance of doing it. A very necessary alteration was one which provides that a ball striking the ground after the drop or place kick may not score a goal. This has not been a usual occurrence, but it happened in two instances last season that a ball kicked so as to strike the ground in the field of play bounded over the goal and thus scored.

The shortening of the field by some ten yards seemed advisable after the rule was made allowing a forward pass to cross the goal line, for without this provision the fields would prove dangerous when a space ten yards behind the goal line was made live territory for the forward pass. Theoretically this shortening of the field should make scoring slightly easier. Probably in practice it will be hard to tell the difference.

Permitting the forward pass to be in play across the goal line, as stated already in this article, loosens the defense quite materially when the ball gets within the twenty-five-yard line. It will also increase quite materially the strength of the offense, for the back-field men must look out for the forward pass, and thus will be unable to back up the line as closely as they have done under the old rule.

The abolition of the twenty-yard zone will make it much simpler for the officials and for the players, besides taking away a feature that was always puzzling to the spectators. It is this elimination of the twenty-yard zone that makes it possible to do without a field judge, his duty of timing going to the head line-man. It is evident that the forward pass may now be made so that the ball may travel any distance up the field without being rendered illegal, as it was formerly when it went a greater distance than twenty yards. The on-side kick is entirely abolished, as it was considered distinctly too dangerous, men often running violently into each other in the attempt to secure the ball. This may have some effect in the way of per-

HURDLING—A DANGEROUS STYLE NOW FORBIDDEN

mitting the side receiving the kick a greater latitude of judgment. As to giving the backfield men the privilege of blocking the ends when these men run down the field under a kick (formerly they could not be blocked within the twenty-yard zone), this will give an opportunity for the return to the game of one of the prettiest and most spectacular features, namely, the running back of the kick by the man receiving it. Under the rules which prevailed last year, there was very little of this kind of work, because the ends were protected for twenty yards and thus secured such a good start that the man in the back field had little chance of getting under way for anything like a good run.

The provision that the ball, when kicked off, is to be placed sixty yards away from the opposite goal is due partly to the shortening of the field and partly to the desire to avoid the break in the play which becomes necessary when the ball is sent across the goal line from the kick-off. The players are all keyed for action at the moment of the kick-off, and there is always a disagreeable sensation incident upon the waiting to have the ball brought out for the kick-out after it has been sent across the goal line. As the kick-off is usually made against the wind, it will take a good kicker to send it across the goal line from this greater distance, and, more than that, the opponents will have a better opportunity to run it out if they decide to take the chance. It should also be noted in this connection that the unfairness noticeable in the rules last year which made it possible for the winner of the kick-off to have it at the beginning of each half has been rectified. In the second half the loser of the toss made in the beginning of the game has the choice of the kick-off or goal exactly as has the winner of the toss at the beginning of the first half. The shortening of the two minutes intermission between periods to one minute is merely to expedite the play and not have the men stand around and take cold or get stiffened up; and the further step of cutting down the number of men allowed to walk up and down the side line is a move for greater simplicity.

Upon the whole, it may safely be said that every change made by the Committee had a very definite weakness of the game in mind, and yet the alterations are along conservative rather than experimental lines. Moreover, whether they hit exactly the points desired, they are designed to be productive of further information rather than of complications, and it is certainly fair to say that the rules had become over-complicated and the play had taken on a similar character, which lent itself to contention and misunderstanding rather than definite, clean-cut rulings. Now all we can do is to await the test of this fall's play.

DR. THOMAS BROWN McCLINTIC

A HERO OF PEACE

BY ALFRED C. REED

UNITED STATES HEALTH SERVICE

PERHAPS no other attribute of human intelligence commands the respect and reverence of civilized man so instinctively as the chivalrous devotion, be it to person or principle, which reckons death a mere incident, and makes no count of personal loss or glory. Greater than the mighty men of war are the heroes of peace, who, counting death or victory but steps of progress, have faith in human destiny and courage to do a great work in simplicity and quietness.

For many years past in the States of the Rocky Mountains there has been known a strange disease, which every spring has claimed a fresh and increasing toll of victims. Rocky Mountain spotted fever was first noted in the Bitter Root Valley in Montana in 1873. Up to 1902 about two hundred cases were observed, and in recent years it has spread to adjoining States, until the entire Rocky Mountain division is affected. The mortality of the disease varies inexplicably from 90 per cent in Montana to 2 per cent in Idaho. Its greatest virulence has been in the Bitter Root Valley, along the eastern slopes of the magnificent snow-clad Bitter Root Mountains. A wide,

pleasant valley is here, fertile and inviting, with a river running through it. The eastern side, from the river to the rolling foothills, is populous and prosperous. The western slope, from the mountains to the river, has been a dangerous pest spot. The explanation lies in the wood-ticks. They infest the entire valley, but only the ticks on the slope of the western mountains are infected with the virus that causes spotted fever. These wood-ticks attach themselves to live stock, as well as to rodents, such as gophers, squirrels, and rabbits. If infected, they transmit the disease to human beings through their bite.

Tick fever is an overwhelmingly severe disease. It has many points in common with typhoid and typhus fevers, and at one time was supposed to be akin to Japanese "river sickness," the Tsutsugamushi disease. It has been studied for over a decade by skilled observers, especially in the United States Public Health Service. In 1911 the Montana State Legislature made an appropriation for continuing the work which had been begun by Dr. Ricketts, and Passed Assistant Surgeon T. B. McClintic, of the Public Health Service, was sent to the Bitter Root Valley. After familiarizing himself with the conditions, Dr. McClintic decided on two lines of procedure—the eradication of the wood-tick, and the laboratory study of the disease. The tick season is chiefly in April and May, when the snow is melting, and at this time each year spotted fever appears. In Dr. McClintic's own words, "It was decided to select a limited area in one of the worst infected territories, and to put into operation the best known methods for the eradication of the tick. An infected area of eight square miles was selected near Victor, Montana (in the Bitter Root Valley). The work was carried on at Victor from May until August, when the laboratory side was continued in the Hygienic Laboratory at Washington." The eradication of the tick was accomplished in the selected district by dipping domestic animals and stock in an arsenic mixture, and by killing wild mammals.

Dr. McClintic soon became the leading authority on tick fever. He did valuable work in search of a curative or preventive serum. In March, 1912, he was married to Miss Theresa Drexel, of Washington, D. C., and soon thereafter returned with his bride to Victor in readiness for the tick season. In midsummer he was taken sick with the disease which claimed his life. No case of spotted fever has developed in the Bitter Root Valley this year. Dr. McClintic had driven the pestilence out. But as it went, it struck down the man who had conquered it.

Thomas Brown McClintic was born December 27, 1872, in the mountains of Bath County, Virginia. His ancestry was of clean, strong stock. In 1896 he graduated from the University of Virginia in medicine, and the following year became an interne in the Marine Hospital at the Port of New York. After a year he was appointed an acting assistant surgeon, and did quarantine duty at the Cape Fear Station. In 1899 he was commissioned an assistant surgeon in the Public Health Service, and was soon put in command of the Cape Fear Quarantine. Three years later he was sent to the Hygienic Laboratory at Washington, and received a thorough training in pathology and bacteriology, taking up also the investigation of various public health problems. After two years he was ordered to Tampico, Mexico, to study yellow fever and prevent its introduction into the United States. After another period in the Hygienic Laboratory he was sent to the Marine Hospital at San Francisco. At the time of the great fire at San Francisco he was serving as medical officer on the United States revenue cutter McCullough, and rendered conspicuous service in the care of sick and injured. The next three years were spent in quarantine duty and cholera prevention in the Philippines.

Many times has the hand of epidemic disease struck amid the ranks of its foes. Yellow fever, smallpox, typhoid, plague, cholera, they have taken their toll. But the ranks close up, and the fight goes on to make our country a cleaner, better, safer place for man to dwell in.

"ALLOW ME TO PRESENT TO YOU THE PRUNE CHAMPION OF 1910"

PARTICULARLY PRUNES

ANOTHER INCIDENT IN THE CAREER OF PETE CROWTHER : SALESMAN

BY ELMER E. FERRIS

WITH DRAWINGS BY G. C. WIDNEY

"WELL, what's on your mind to-day, Pete?" greeted Sam Cartright, of the grocery firm of Cooper & Cartright, as Pete Crowther stepped into the store and shook hands.

"Prunes."

"Prunes?"

"Prunes!"

"What about prunes?"

"I want to sell you some."

"Oh, come, Pete! Why not a barrel of granulated sugar?"

"Because sugar isn't prunes."

"No; but prunes is prunes."

N'ot unless they're Aragon prunes."

"Aragon?"

"That's what. We've got hold of the best line of prunes in the country and are putting them out under our Aragon brand, and that means class. See?"

"Oh, well, you know we buy our line from Bond-Mathews and—"

"Sure; and I'm not trying to get your general line. This is something special. That's why I'm here."

"You'll have to excuse me to-day. I'm mighty busy; besides, we've got all kinds of prunes—enough to last two months."

"Smith wants to talk to you over the 'phone about those new delivery wagons, Mr. Cartright," interrupted Jim Sanders, the head clerk.

"Come in some other time, Crowther; I can't spare a minute to-day," and Cartright hurried away.

"What are you trying to put over on Cartright?" inquired Jim.

"Prunes."

"Prunes?"

"That's what—prunes."

"You've got your nerve, all right."

"Sure; I need it in my business. Have a cigar, Jim?"

"Thanks. I'll smoke it after dinner."

"Say, Jim, I'm going to sell Cartright some prunes, and I want you to get on to my scheme for pushing them," and Pete unfolded to Sanders the salient points of his plan.

"Not a bad idea," admitted Sanders, "but you'll never sell Cartright a bill of prunes to-day."

"How's your prune trade, anyway, Jim?"

"Nothing to brag about; Cartright said yesterday that it isn't what it ought to be. Well, good luck to you, Pete," and he turned to wait upon a customer.

"What, still here?" exclaimed Cartright, half an hour later, as he encountered Pete at the lower end of the store.

"Still here. I know you're busy to-day, but then you always are. I've got a great scheme here, Mr. Cartright, and I want you to know what it is. You'll be interested whether you buy or not."

"You don't mean to say, Crowther, that there's anything new in prunes?"

"Exactly that. In the first place, just take a slant at these prunes," and Pete produced his sample. "Aren't they the goods, though?"

"Specially prepared for samples," grinned Cartright.

"Nit—taken right out of stock."

"A fine prune, all right," admitted Cartright.

"The best prune ever grown in the Santa Clara Valley," asserted Pete. "And, say, I want to show you something; let me have one of your best imported French prunes—a St. Julien." Pete took out his knife and cut the two prunes open, and then drew a magnifying-glass from his pocket. "Now take a squint through this glass, and notice that this Aragon prune has got the same fine soft fiber as that French prune, and it's got just as rich and nutty a flavor, too. It's this way: The owner of the prune orchard where Aragon prunes are grown is the best prune expert in California. He sent to the Loire Valley in France and imported prune slips, from which his orchard was raised. Aragon prunes are really St. Julien prunes grown in the Santa Clara Valley. We've got the whole line, and they don't cost you any more than ordinary California prunes."

"Oh, we've got enough good prunes. The problem is to sell them."

"Precisely; and that's where my scheme comes in. The fact is that not one store in a dozen is doing the business in prunes that they ought to. Is your prune trade what it ought to be?"

"It might be better, but then we can't take the time from other things to push prunes."

"What's the matter with letting us push them for you?"

"How?"

Pete produced a card. "You see, Cartright, one reason why prunes are in bad is because there are so many poor prunes on the market. They set the pace. Nobody is trying to brace up the reputation of good prunes. It's time to say a word for them, and here you have it. How's this for a song-and-dance on prunes?" and he handed the card to Cartright, who glanced it over. It read as follows:

WHY YOU SHOULD EAT PRUNES

(1) Because they are richest in food value of any fruit.

(2) Because, when properly prepared, they are the most appetizing and satisfying.

(3) Because they have a distinct medicinal value. They exert a direct and beneficial action upon the liver.

(4) Because they are cheapest of all saccharine sub-acid fruits.

WHY YOU SHOULD EAT ARAGON PRUNES

(1) Because they are specially grown and packed for Dodd, Garrells & Co., at the best prune orchard in the Santa Clara Valley, and put out under the well-known Aragon brand, thus guaranteeing their quality. Aragon stands for quality.

(2) Because they are equal to the best imported French prunes, and yet sold at the price of common prunes.

(3) Because Aragon prunes are rich, sweet, plump, and luscious—in a class by themselves.

HOW TO COOK ARAGON PRUNES

Cleanse thoroughly, soak in water ten or twelve hours, adding a little granulated sugar when putting to soak, but not much, as Aragon prunes are rich in natural fruit sugar. After soaking let them "simmer" on back of stove. Do not boil them. Boiling prunes will spoil them. Keep lid on. Shake gently—*do not stir*. When tender, serve cold with prune juice and cream.

"I'll leave it to you," commented Pete, "if that description of Aragon prunes doesn't make a man want to eat a prune; and, say, that statement about prunes being beneficial to the liver is straight goods. People fall for the health racket nowadays. That one point alone makes that card a center shot. Another thing that gets prunes in bad, they aren't cooked right. Most cooks make a mush out of them, but when they are cooked according to that card they come up so plump and fresh that a dish of strawberries ain't in it; and you know how women bite when you show them a recipe."

"What of it? We couldn't keep a boy at the door handing out these cards—we have too many other things to do."

"Sure, and that's where we help out again. We are going to put these Aragon prunes, at the start, into only two stores in a town; one of them a regular customer—Price's, in this town—and the other not a regular customer. Of course we want to get you people, but if you don't take them I'll get them into Thomas's; he's working up a cracking good business, and he's out for new schemes. But suppose you put them in; we'll have you and Price each give us a list of fifty families and we'll send a boy around and deliver a half-pound package of Aragon prunes at each place. One of these cards is in each package. See? They'll be snapped up good and plenty. People like to get something for nothing. Then we send you with each case twenty-five paper bags with 'Aragon Prunes' printed on the outside. You wrap the prunes up in these bags. We also send a quantity of these cards and you slip a card into the bag. That's all you do extra, and the prunes will do the rest. Then, besides, we send you three or four big cards a foot square, printed the same as these cards, only in larger type, and you put one in your show window and hang one or two up. How's that for a scheme to jack up your prune trade? But that isn't all. We go one better. We send, free of charge, a twenty-five-pound case of prunes wrapped up in half-pound packages with a card in each package, and you hand them out to customers who ought to use prunes, but don't. All this time the prunes will be getting in their work, and, believe me, the Aragon brand will give tone to the deal—the people in this town are getting wise to the fact that Aragon means class. The scheme is a winner, Cartright."

"How do you sell them?"

"Nine and a quarter. How's that for a price?"

"The price is all right. What's your proposition?"

"IF THOSE PRUNES DON'T MOVE I'LL COUNTERMAND THAT SECOND SHIPMENT AS SURE AS GUNS"

"They come in twenty-five-pound cases. We want a thirty-case order."

"What, seven hundred and fifty pounds of prunes? Not on your life!"

"Why not?"

"It would overstock us. We've got a good supply on hand now. No, we can't make a deal to-day. Come in some other time."

"See here, Cartright, this scheme will work, and I'll take a chance along with you. I'll split the shipment. I'll send fifteen cases now and the other fifteen in sixty days; and say, if the thing doesn't go, you may countermand the second shipment. We will be taking more chances than you. Look at the advertising we do on it. What do you say?"

Cartright thrust his hands into his pockets and meditated. Pete pulled out his order-book.

"All right, send them along; but see here, Crowther, if those prunes don't move I'll countermand that second shipment as sure as guns."

"Sure; but, you take it from me, they'll move. Much obliged, Cartright. Good-by."

"Good-by."

During the next few weeks Pete devoted his spare time to a prune propaganda. He handed prune cards to conductors, brakemen, hotel clerks, and proprietors. He gave them to fellow-drummers with the request that they call for Aragon prunes at hotels and eating-houses. He employed small boys at ten cents each to hand cards out along the main streets. He left cards upon hotel desks, writing-tables, and store counters. He sold a bill of Aragon prunes to the two leading grocery stores in nearly every city along his route, and left a trail of prunes and prune cards across the State and back. Within sixty days mail orders commenced to pour in, and, as a result of the campaign, Dodd, Garrells & Co. shipped over 30,000 pounds of Aragon prunes into Pete's territory within three months. The firm closed a contract for nearly the entire output of the prune orchard, and made these prunes a permanent feature of the Aragon brand.

The time was drawing near for the annual banquet which Dodd, Garrells & Co. were accustomed to give to their traveling force. Mr. Dodd and Mr. Garrells were in conference over the programme. "Why not have

a toast on 'Prunes' and get Crowther to give it?" suggested Dodd.

"Do you think he'd do it?"

"I'll speak to him about it."

A week later, when Mr. Dodd broached the matter to Pete, he promptly balked. "Why, I never made a speech in my life," he protested.

"You needn't make a speech. Just give them a talk on salesmanship and specialties, and particularly prunes."

"What! me tell men like Fordham and Parsons and those other fellows how to sell goods? Nit. Get Parsons to do it. He's a star salesman, and he can talk."

"See here, Pete, you are getting to be the best specialty man on our force. You are making our Aragon goods jump. Specializing is a very important thing in our business. The men all know what a record you've made on prunes. Several of them have asked me how you do it. I'd like to have you talk about it—not a speech, you understand, but just a plain talk in your own way. I would consider it a favor. Think it over."

The upshot of the matter was that Pete was on the programme for a toast on prunes. Mr. Dodd acted as toastmaster. When introducing Pete, he called attention to the circumstances that had precipitated the prune campaign. "When we loaded up so heavily with those prunes last fall, it looked for a time as if we were badly overstocked. To be sure they were choice prunes and the price was right, but, as you all know, it became necessary to do something unusual to make that stock move. You salesmen all helped out, but I don't mind telling you that nearly all the special features of that selling scheme were originated by Mr. Crowther, and I might also say that during the past three months we have shipped 32,400 pounds of Aragon prunes into Pete's territory, and so allow me to present to you the prune champion of 1910."

When Pete arose to speak, he was greeted with a volley.

"Ladies and gentlemen," cried Parsons, "We have with us to-night—"

"Pete's here because he's here, because he's—"

"Oh, cut it out! Give Petey a chance."

"What's the matter with Pete?"

"He's all right."

"Who's all right?"

"Pete!!"

This reception was precisely what Pete needed to put him at his ease. "Go to it, gents," he grinned, "but I'll come across with some prunes. You watch out. When the old man—that is, Mr. Dodd—asked me to go on this programme, I said, 'Nix, I'm no orator;' but he said I needn't make a speech. He just wanted me to give a little talk, so that's what this is—a game of talk. Now about that prune business: I've noticed that one danger in selling goods is that after a man gets a trade worked up he's liable to get into a rut. It's easy to just go around and take an order for what a customer wants, and then beat it to the next one. When a man gets into that habit and stops working new schemes, he begins to let down and loses interest in his job. It's a big thing in salesmanship to have your job look good to you. People like to deal with a man who's stuck on his job. Salesmanship is a corking good job so long as a man's trade keeps growing. There's always more fun while you're getting a thing than there is after you've got it. When a man stops growing—no matter what he's at—his job begins to look punk. I know a couple of fellows that go out over my territory—good salesmen, too—who have stopped going ahead, and every time I meet them now I notice that they've got a grouch on—always kicking about traveling being a dog's life, and all that kind of stuff. Now one of the best ways to beat that is to specialize. A man that keeps specializing is always digging up something new and interesting about goods and—"

"Anything new and interesting in prunes, Pete?" called Parsons.

"That's what. I'll pass the prunes around in a minute; but I was going to say another thing about specializing—it's one of the best ways to work up new trade. In every town there's one or two good stores that you can't sell. Somehow you get in bad and can't make a dent in them. It's easy to pass those places up, but a man never gets anywhere by quitting. Now the best way to jimmy into places like that is to tackle them every little while on some Aragon specialty. Here's a case that's in my mind: a store out on my territory—Cooper & Cartright—the best grocery in town. I don't know why I never could sell Cartright. He's a good fellow and always treated me white, but always turned me down. He's stuck on buying from Bond-Mathews. Well, I used to drop in there about every other

"WHILE HE'S LOOKING AT IT YOU GIVE HIM THE RIGHT KIND OF A SPIEL ABOUT THE PRUNE ORCHARD"

trip and give him a holler on some special thing in Aragon goods. It took me four years to break in there. I finally downed him with those Aragon prunes, and he's been selling stacks of them since; and now he has put in Aragon olives and Aragon baking-powder. I'll get him on the whole Aragon line yet, and that's the beauty of specializing. One reason why the wholesale grocery business is such a bully proposition is because it gives the best kind of a chance to specialize. You can trot out a new specialty every two or three months, and as soon as you dig up the facts about an article it gets mighty interesting. The facts about anything are always interesting. You take a prune. In some ways it looks like a yellow dog—everybody takes a kick at it. But one day I went with my wife to an art gallery. I don't know anything about art, but I saw a picture there painted by one of these big artists—I've forgot his name—a picture of a barefooted boy and a yellow dog, and, say, I couldn't take my eyes off that dog. 'Cause why? Because he was the real thing. Now if an artist can make a yellow dog as interesting as that, why can't a salesman do the same thing with a prune? You take it from me, he can if he'll go to it and get at the facts. I sent out to California and got some photographs of the prune orchard where they grow Aragon prunes, and I found out about the man that grows them, and, say, he's the best prune expert in California, and he imported the real St. Julien prune slips from the Loire Valley in France, and his orchard was grown from those prune slips. The fact is that Aragon prunes are St. Julien prunes raised in the Santa Clara Valley, and they've got these Imperial prunes and Hungarian prunes and Italian prunes skinned to a finish. 'Cause why? Because they're softer and plumper and have a higher percentage of fruit sugar. Believe me, it's as interesting as a detective story. And do you gents realize that Aragon prunes have got a lot of proteid in them and that—"

"Hold on, Pete—proteid?"

"Sure; proteid is the nourishment stuff in food. If it wasn't for the proteid in it, your food would be nix. That's why prunes fill you up so quick—they're full of nutri-

ment. Then, too, prunes are rich in properties that stimulate a man's liver. Prunes are the best kind of a liver tonic."

"Sure about that, are you?" called one of the men.

"Sure. I've tried it, and look at me. Prunes are the healthiest kind of a breakfast food. Caruso eats prunes for breakfast every morning, and see what a robust—"

"How do you know he does?"

"I saw it in the papers. But I don't have to prove it by me and Caruso. I know a doctor that's a food specialist and I was talking to him about prunes. He's the man that put me wise to that proteid thing. I showed him that prune card, and he said that the statement there about prunes being good for the liver was correct. Another thing the Doc. said: he went on to explain how there's some kind of connection—I don't know—between a man's ideas and his insides that's got a whole lot to do with the way they work. He said that if a man believes that prunes are good for him and he eats prunes, why they will make him feel better, anyway, and so it's a good thing to circulate those prune cards, no matter how you look at it. The more prunes people eat, the better for them—that's what the Doc. said—and so when a man specializes on prunes he's a public benefactor. See?

"Another thing I did. I got a magnifying-glass. It beats the band how everybody likes to look at things under a magnifying-glass. If you cut open an Aragon prune and get a buyer to look at it through a magnifying-glass you'll get him going, because the prune has got a soft, meaty, chocolate look that makes a man want to bite right into it; and while he's looking at it, if you give him the right kind of a spiel about the prune orchard and tell him what a rich, sweet, nutty flavor an Aragon prune has—"

"Did you say nutty?"

"That's the word—nutty; and it's a good word to use when you talk prunes—everybody likes nuts—why, you'll get his goat.

"One thing more. I want to say one or two things about the Aragon brand. The more I think about that brand, the bullier it looks. I've got a friend who's a Christian Scientist, and the other evening he tried to make me believe that there isn't any such thing as a thing. He claims that there isn't anything to it but what's in a man's mind. Of course that's all tommy-rot, because you can see a thing and feel it, and so of course it's there and it's a thing. If it was all in your mind, you couldn't bump up against it. But, all the same, there's something in his proposition, because ideas have got a whole lot to do with what's in goods. You take a prune. Now of course there are different kinds of prunes. Some are small and hard and sour, and others are plump and soft and sweet; I guess a Christian Scientist would admit that when he's buying some, anyway. But take a good prune, and what is it? Show it to one man, and he will say that it's nix—a second-class boarding-house thing, not fit to eat, and that's what it actually is to him because that's his idea of it. Show the same prune to another man, and he'll tell you that it's a rich, succulent proposition, because his idea is—"

"What's that succulent?" called Parsons.

"It's a word I saw in a fruit-grower's circular, and it looked good—sounds kind of juicy—so I copped it. But I was going to say that a good prune is only half of the case. You've not only got to have the right prune, but your man has got to have the right mental slant at it. What a prune really is depends about half on what's in the prune, and the other half on what's in a man's cocoanut. See? Now that's where brands come in. That's why Aragon is such a big thing in our business. We've been yammering away on the Aragon brand until we have got people to see that the word Aragon means something choice and fine. Just standing all alone, Aragon means class. That idea is in people's heads. Now you take a case of good prunes and put the Aragon brand on it and there you've got the prune and the idea hitched up together. That's why Aragon prunes are the best in the world. And right here I want to say that one reason why we are the people is because Dodd, Garrells & Co. are the Aragon house, and you take it from me—"

The rest of Pete's peroration was lost in a tumult of applause, in the midst of which he wiped the perspiration from his face and took his seat.

"That was a mighty good talk you gave us, Pete," said Parsons, after the banquet, as he shook Pete's hand in congratulation.

"Thanks. How's everything going, Parsons?"

"Oh, business is fair, but I've been a little off lately—a nasty pain in my back."

Pete bent over and spoke confidentially into Parsons's ear. "It's your liver; eat Aragon prunes," was what he said.

HEADING TO VOL. LVII, PUNCH, 1869. DRAWN BY CHARLES KEENE

THACKERAY'S PUNCH-TABLE TALK

BY E. V. LUCAS

ILLUSTRATED WITH ORIGINAL DRAWINGS LENT BY THE PROPRIETORS OF "PUNCH"

THE history of Thackeray's connection with "Punch" is well known. He began to contribute in 1842, when he was thirty-one, the paper having been founded in 1841; he joined the staff at the end of 1843, and remained actively upon it for eight years, contributing, among other things, the "Snob" papers, many of the Ballads (including that famous warm-hearted one in praise of the Punch-Table itself, "The Mahogany Tree"), and a variety of other matter, even to satirical art criticism. He left the inner staff, owing to differences into which there is no need to enter here, in 1851, but continued to write occasionally until 1854. Yet, although Thackeray ceased to write then, he did not sever his social connection with the paper at all, and frequently joined his old friends at the Table at the weekly dinner till within a few days of his premature death, often either suggesting the cartoon or materially assisting in planning it.

THACKERAY'S MONOGRAM CARVED ON THE PUNCH-TABLE

In 1858 a new recruit came to the paper in the person of Henry Silver, then a young lawyer of thirty, to take the place left vacant by the death of Douglas Jerrold in 1857, and Silver kept a record of each dinner that he attended and the best things said there, for twelve years, until, in 1870, he too retired.

Silver died in 1910, leaving a seven-figure fortune, which the papers were so tactless as to describe as that "of a 'Punch' contributor," but which, I need hardly say, did not represent his earnings as a comic journalist; and leaving also to the proprietors of 'Punch' a large collection of original drawings by Leech, Tenniel, Keene, and other of the paper's artists, together with his Dinner Diary. It is this Diary which now lies before me and

yields the present crop of Thackerayana, which, if not of the highest value, have an interest inseparable from any words spoken by that shrewd and benignant great man at his ease among colleagues whom he trusted.

Before, however, we come to the Diary proper, it would be well to survey the staff in the year 1858, when Silver began to take notes. The editor was Mark Lemon, the corpulent and genial, who had controlled it from the first number—July 17, 1841—and who must always be considered its father. At any rate, be the "onlie begetter" who it may—and there is a certain mystery surrounding its birth—it was Mark Lemon's personality which more than any one's determined the personality of Mr. Punch. In 1858 Mark was forty-nine, with twelve years of life before him, and this Diary reveals him in a very pleasant light as a simple, jovial, kindly, philanthropic, busy man of the world, and a devoted husband and father. It is evident, also, that he had much tact. His contributions to the conversation are chiefly reminiscences of the earlier days of "Punch," of the stage, and so forth, but he says a few good and many sound and serious things, and occasionally brings stories of his children, as when he tells of one of his little girls saying to her sister, who wished to keep her out of the drawing-room, "Let me go in; I've as much parlor blood as you."

Next to Lemon in authority and resourcefulness was his deputy, Shirley Brooks, whom the Diary shows us to have been a less simple soul than Mark—very ready with anecdotes, puns, witty criticisms, improvised burlesques, and good suggestions for cartoons; a *viveur*, and a good deal of a cynic. Brooks was then forty-two, and had been on "Punch" only seven years. Like Lemon, he was a very versatile and industrious man, and could turn his ready pen and astounding memory to anything. But neither was more than a journalist; nothing that they wrote lived after them. Shirley Brooks is, for the most part, a brilliant commentator, interjecting single remarks, but he has stories too, a little sardonic or destructive as a rule, as when he tells of the Yankee who refused to allow his wife to bring their children to see him hanged. "What a shame!" she replied; "just like you, never letting them have any pleasure." Brooks had many interests, and one week writes off to Augustus Egg, the artist, a suggestion for a picture: Dr. Johnson in his night rambles putting pennies in beggar boys' hands as they lay asleep on doorsteps. If this was not worked upon, it should be.

Shirley Brooks was to succeed Mark as editor in 1870, and Tom Taylor was to succeed Shirley in 1874. Tom Taylor in 1858 was forty-one, and had been on "Punch" since 1844. He was less nimble in fancy than Mark or Shirley, but was more solidly grounded than either, and not only was known by his dramas and adaptations, but had been Professor of English Literature in the London University, and was art critic of the "Times." He, like Lemon, is chiefly reminiscent, and brings accounts of dinners he has attended and men he has met. But he has a few stories, one of which is of a child asking to be allowed to wear his drum while saying his prayers if he promised not to think of it.

An older hand on the paper than Taylor was Horace Mayhew, brother of Henry Mayhew, who had been in at the birth with Mark Lemon, but was now living in Germany and devoting his time to the literature of philanthropy. Horace in 1858 was forty-two, and had just come into money which enabled him to take life easily and treat his "Punch" duties rather lightly. He was known as "Ponny"—supposed by Silver to be derived from pony, Mayhew having acted as Mark Lemon's pony or sub-editor, for some years. He could be argumentative and provocative, but that was when he had dined particularly well. One of the neatest puns in the book is his. Percival Leigh had been to Southampton, where he had played skittles in an alley decorated with portraits of the Muses. "The motto," said Mayhew, "should be, 'Descend, ye Nine.'"

Percival Leigh, known as the "Professor," was trained for a doctor, and at Bart's had had as fellow-students Leech, Albert Smith, and Gilbert à Beckett, all on the staff of "Punch" in their time. Leigh joined the paper soon after it started in 1841. In 1858 he was forty-five, and he lived until 1889. The Diary makes him a rather precise, if not dull, talker, and fond of serious discussion. Leigh and Leech were not only old friends, but they had collaborated, before "Punch" was started, on the "Comic English Grammar" and "The Children of the Mobility."

Next, the two artists; for there were but two at the Table in 1858. Chief of these was John Leech, who, born in 1817, had

MARK LEMON, THE FIRST EDITOR OF "PUNCH"
Pencil drawing by W. H. Margetson

been at Charterhouse with Thackeray (although much his junior). He joined "Punch" when it was three weeks old, and was its greatest draughtsman for many years. He was now forty-one—too near the end of his short life, and beginning to be the victim of those street noises which accelerated his death. The "Diary" shows him to have been less genial and tolerant in conversation than with his pencil; but he was of the greatest use in discussing the cartoons, although it was urged against him that his disapproval of suggestions was too drastic; a "Juggernaut," Keene later called him. Leech's conversation is largely critical, but he has stories now and then, very much in the vein of his social

WHAT HAPPENS AT OUR WEEKLY MEETING WHEN T. T. (TOM TIB) EXCEEDS A CERTAIN LIMIT. (HE ALWAYS DOES)

Drawn for "Punch" by Du Maurier in 1866

jokes in the paper. One, for example, is of a little girl who was asked why she was so affectionate to her aunt, almost more so than to her mother, and replied: "Oh, mamma, of course I love you best, but then I must be civil to aunt because she spreads the jam."

Next to Leech, John Tenniel, the only member of the staff at that time who is still living. Sir John joined "Punch" in 1850, and passed into honorable retirement in 1901. He is now (1912) in his ninety-third year. The Diary records few of his remarks, but shows him to have made excellent suggestions for pictures. He and Leech hunted together a good deal.

The proprietors were William Bradbury, grandfather of one of the present heads of the firm, and Frederick, or "Pater," Evans, whose daughter married Charles Dickens the younger. There is no Evans in the business to-day.

As to Silver himself, who, like Thackeray and Leech, had been educated at Charterhouse, he seems to have been a very modest, quietly observant young man, with a useful knack of writing whatever was wanted on the rather more substantial side—such as theatrical notices, and so forth. His chief contribution to the paper was a comic history of costume, illustrated by Tenniel. His printed work contains nothing so good as some of the impressions of personality in this Diary.

Such, then, was the staff of "Punch" in 1858, when Silver's Diary begins; but it is with these men only in relation to Thackeray that we are concerned. The Diary records many amusing things said by them; but, for the most part, these are anecdotes, puns, and repeated jests. Able as they were, and, collectively, powerful as they were, each is dwarfed in the presence of Michael Angelo Titmarsh.

In 1858 Thackeray was forty-seven and the author of "Vanity Fair," "Pendennis," "Esmond," and "The Newcomes." "The Virginians" was now appearing serially. He had still to become editor of the "Cornhill" and to write "The Roundabout Papers" and "The Adventures of Philip." In the summer of 1858 the unfortunate quarrel with Edmund Yates had begun, and was still in progress. Yates had written in a periodical an account of Thackeray which Thackeray thought not only unjust but too personal. Thackeray also thought that only

by being a member of the same club (the Garrick) as himself could Yates have obtained some of his data, and he therefore demanded Yates's expulsion. Dickens took Yates's side, and the "Punch" men naturally took Thackeray's; hence to a large extent the regrettable hostility to Dickens which continually appears in the Diary, but of which I say little or nothing. Rather let us remember and again remember what each man said of the other in moments of calm detachment, and particularly Thackeray's tribute to Boz:

> I may quarrel with Mr. Dickens's art a thousand times; I delight and wonder at his genius; I recognize in it—I speak with awe and reverence—a commission from that Divine Beneficence whose blessed task we know it will be one day to wipe every tear from every eye. Thankfully, I take my share of the feast of love and kindness which this gentle and generous and charitable soul has contributed to the happiness of the world. I take and enjoy my share, and say a Benediction for the meal.

The situation was not made less difficult by the circumstances that Mark Lemon and Dickens had been close friends and Evans was the father-in-law of Charles Dickens, Junior. Also that Bradbury & Evans, after having been Dickens's publishers, were about to start a rival to "All the Year Round" called "Once a Week."

We meet Thackeray at the Table first on October 21, 1858, the dinner being at the Bedford in Covent Garden; and he is at once kind to Silver and takes champagne with him. To have been at Charterhouse was a main road to the heart both of Thackeray and Leech. Thackeray "makes a cheese Devil to wind up with. Talks of Mackay [Charles Mackay, the song writer, now forgotten] and his liking for Kitawba wine; and says his poetry is like it—sparkling but not so creamy as Moore's champagne or so sound as Scott's claret." Brooks makes some reference to the "Hoggarty Diamond," whereat Thackeray "challenges him to champagne and inquires after his health and family's. Thackeray says that Leech has the best beer and claret in London. Wishes for a cottage like Macready's, the walls hung with caricatures and cuts from 'Punch:' there would he end his days."

On December 15, 1858, it is discovered that an article in the preceding number, entitled "A Hall of Dazzling Light," describing Evans's Rooms under the name of "Bivins's," was by Charles Dickens, Junior, and is voted an imitation of Sala. Thackeray describes Sala's style as "Dickens and water." The name of Sala, I may say, often crops up in these pages and always leads to an argument as to how clever he is. One or two of the staff seem to have been a little envious of his success.

On December 22, 1858, we find a guest at the table—Sir Joseph Paxton, the great gardener and builder of the Crystal Palace, who was always welcome. "Plain-spoken man," says Silver, "and drops an H occasionally; but clearly a clear head and not a bit stuck up." Sir Joseph (who was born in 1801) confesses to having drunk in his time "enough champagne to wine the road from St. Paul's to Hammersmith."

On January 19, 1859, "Leech applauds the 'Saturday Review' for cutting up Jerrold." Mark Lemon defends Jerrold, and in parting says to Silver, "I don't like to hear

A STUDY-PORTRAIT OF CHARLES KEENE
Pen drawing by the artist himself

him ill spoken of; he was always kind to young men and gave them a helping hand." Among the stories of Jerrold, a few of which are recalled whenever his name is mentioned at the Table, is his remark to some one who said that when Thackeray was in Rome they tried to make a Roman of him, "They should have begun with his nose." It is needless to explain that Thackeray's nose was broken when he was at Charterhouse, but it is not so generally known that that is why he gave Titmarsh the names Michael and Angelo, after the great artist, who also had this disfiguration. Thackeray and Jerrold seem not to have been on the best of terms. One reason given in this Diary is that the sight of Jerrold eating peas with a knife got on Thackeray's nerves.

Thackeray comes in again on January 26, and at the Table receives and corrects a "Virginians" proof. He tells Silver it will inform him of the name of the head master at Charterhouse a hundred years ago—Dr. Crucius. Owns to having been flogged, and says it "hurt like hell."

On February 10 there is talk of books. Shirley wonders if reading books which one hasn't time to read on earth will form one of the joys of paradise. Thackeray says that a man who produces cannot hope to read much. He then describes a German pianist guest of his who threw his best cigars on the fire, saying, "We pays duppence for a zigar like zis at Brussels."

On March 2 Thackeray is present to eat a haunch of vension, but has to leave at nine to "go to a tea-fight at the Bishop of London's." Thus do the gods interfere. But before he goes he has the opportunity to "laugh consumedly" at a joke of Shirley Brooks which I cannot possibly print, and to make a few kindred ones himself, and to say to Silver: "I went to Charterhouse the other day. Hadn't seen School come out since I left. I saw one little fellow with his hands behind him and a tear on his cheek, and two little cronies with their arms round his neck, and I knew what had happened and how they'd take him away and make him show his cuts." Mr. Spielmann, in his "History of 'Punch,'" quotes nearly the whole of this entry, the only extract from the Diary that has previously been made.

There is then a long interval, and the next dinner to be described is January 18, 1860, when the news is brought that 80,000 of the first number of "Cornhill" under Thackeray's editorship have been sold.

On February 1, 1860, Leech tells of treating his little girl to a shillingsworth of Punch and Judy. "Doorsteps and pavement instantly crammed. Where *do* the children come from?" Considering how Leech suffered from street organs, this encouragement of the itinerant entertainers was very brave and good of him. He goes on to tell of the time when he was in a debtor's prison. He once saw "a few boys having a holiday—being taken to see a gentleman arrested." Percival Leigh sold lithographed caricatures for him. "Leech used to kiss female prisoners through the bars."

On February 8, 1860, we have the début of Charles Keene at the Table. Keene was then thirty-six, and had drawn for "Punch" since 1851; he was destined to be a pillar of the paper for thirty-one years. Sir Joseph Paxton was present, and Mark Lemon, when he asked him to champagne, was accused of "fawning on the aristocracy."

On February 15 Thackeray appears again, and the guest of the evening is the Rev. S. Reynolds Hole, afterwards Dean Hole, and a famous rose-grower. Thackeray had received £50 for a lecture at Liverpool, and put it into ten dozen of port. "Laid in 200 dozen of claret last year at £5." After dinner he goes first to the Geographical Society's, and then to Lord Cockburn's, the Chief Justice.

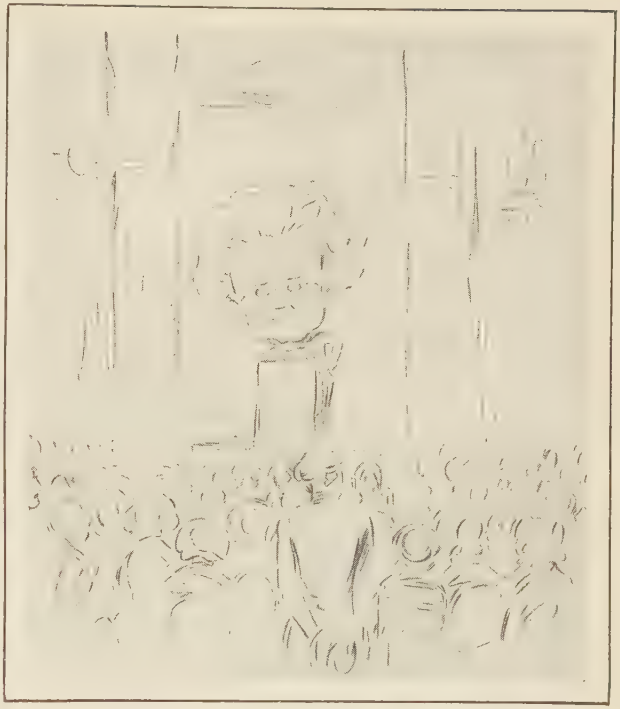
On March 14 there is talk of Samuel Rogers. Leech calls him roundly a humbug, but Tom Taylor denies this. He tells of dining with Rogers and old Maltby: "*petit diner et pas d'erreur*—3 smelts for fish, and all on that scale;" and goes on to imitate Rogers's toothless tones saying, "I'm an old man and have a small voice; and if I don't say ill-natured things sometimes I shouldn't be listened to." Also says that when Rogers told Maltby that somebody actually asked if his name was Rogers, Maltby inquired, "Well, and wasn't it?" obliviously repeating the offense. This, by the way, was William Maltby (1763-1854), the librarian of the London Institution for many years, and the lifelong friend of the banker-poet.

On April 11, 1860, Thackeray, having got rid of No. 5 of the "Cornhill," is thinking of running over to Paris for a day or so. "He gives *kudos* to 'Gryll Grange,' by Peacock. Written by a gentleman, he says. Adds later that he would like to have four sheets a year to write, and no more." Then, "he would write *such* letters to ladies." Thack-

eray pens a poetical inscription in "The Virginians" to Peter Rackham (a financial friend of Bradbury & Evans who was present at the dinners now and then); but Silver gives only this:

> ". . . different opinions
> . . . about 'The Virginians.'
> Accept the book, dear friend, and if you find it
> Pleasant to read . . . I hope you'll bind it."

On October 16 Thackeray was not present, but there was talk of him. Taylor thought him the most miserable of men, mentally as well as from almost constant pain. Thackeray, I might say, was subject for years to internal spasms which caused him both agony and anxiety. Leigh likens him to Swift—"despises Vanity Fair [the place, not the book], and despises himself for taking pleasure in it." Lemon tells of Thackeray at a dinner given to Dickens, when John Forster, with whom Thackeray was on very bad terms, said, "Here are our two greatest writers. One extracts good from evil, and the other finds evil in everything that's good."



A LECTURE BY THACKERAY IN 1857
Pencil sketch by John Leech

On October 30 the staff discuss school-boy ethics. Tom Taylor holds that every one has stolen when a boy. He himself stole his schoolmaster's apples. Leech is indignant, and says, "God forbid my boy should steal." Taylor tells of Sala leaving lodgings at Erith suddenly, after ordering a beefsteak pudding for dinner, and returning six months later with the remark, "Is that pudding boiled yet?"

On November 6 Thackeray is present again and quotes these lines as a sample of rhythmical ingenuity:

> "Let some intelligent officer be sent to the front.
> Hardman, step forward, said Sir Hussey Vivien, K. C. B., and bear the battle's brunt."

In a conversation on which great man of the past one would soonest meet, Brooks, Leigh, and Silver say Dr. Johnson, and Thackeray chooses Scott—"that dear old Sir Walter." He adds that Byron was a "raffish snob."

On November 20 Thackeray is troubled by a little coolness shown him by one of Dickens's children. "Let fathers hate each other like hell, but why need their children quarrel?" he says. He denies that it is natural for rival writers to be enemies. He calls Tennyson "the greatest man of the age: has thrown the quoit furthest." Brooks thereupon remarks that "Vanity Fair" ranks higher than anything of Tennyson's, and asks, "Would you change your reputation for his?" "Yes," says Thackeray; but is not believed. Scott as a poet then crops up and is praised for stirring the blood. "But," says Thackeray, "I don't want to have my blood stirred;" and afterwards, "Thank God that the world is wide and tastes are various, and whatever mental food be offered, there are sure to be customers."

On December 4 Thackeray tells of his mother-in-law giving him claret *à six sous*, and now drinking wine of his at seven shillings a bottle. His daughters, too, are "terribly matured in their taste."

On December 11 he remarks to Leech, "How happy we were this day forty years ago, breaking up at Charterhouse!" Remembers Leech at six and a half in his form: Master Bush just like him. Leech tells how he has

been " coaling the waits " from his bedroom window, and says he would like £1,000 and a country life. " Couldn't do it," says Thackeray. Dickens, some one says, made £10,000 by his readings alone in 1860. Thackeray says that he himself made only half that altogether, and it is suggested that Leech should read publicly the lines under his drawings.

The following week—December 18, 1861—the prevailing topic is the death of Prince Albert. Some one says that Sala has received £100 from Smith & Elder for a trip to Genoa to make a " Cornhill " article, and Thackeray adds that it is for the " Genoa-wary number," which is a fair sample of many outrageous puns that I have omitted.

On January 8, 1862, Shirley Brooks tells how he once danced with Grisi: " like waltzing with a whirlwind." Thackeray and Leech recall old Charterhouse songs.

On January 15 Leech describes Manning's execution, which he saw, and tells of Calcraft, the hangman, saying of a hanging, " No, sir, I wasn't altogether pleased with it."

On January 29 Brooks tells of Rossini's being sent for to Louis Napoleon's box and apologizing for his frock coat. " No need of etiquette between sovereigns," was the reply.

On February 5 Silver is asked by Thackeray if he recognizes his daughter in the person of a pineapple from Pernambuco—" *Pinus silvæ filia nobilis.*"

On February 19 there is talk of Bill Jerrold. " He writes well and looks well," says Thackeray. " But his plays have all been damned," says some one. " Yes, he's a damned clever fellow," says Thackeray; " now I could never get a play damned."

On February 26, 1862, Mark Lemon tells that he once dreamed a play, sprang up and sketched it, and got £100 and a violent cold. Keene says that he often dreams usable " Punch " jokes. " Thackeray tells of how he went to Bristol as a boy, with his father, the General, and his mother with her diamonds, and they went gorgeously to the play. And next time he went he was an actor himself, lecturing on the Georges." " Leech piteous in his complaints of the organ men. ' Got up twice the other night to send them away. They're killing me! The only way to get sleep is to get into a train and give the guard half a crown to keep the door locked. Silver laughs and Tenniel laughs, but it's no joke indeed.' "

On March 5 Leech says something lenient about Mormonism. " Aha," Thackeray replies, " I dine with you sometimes, and can tell [your wife] your horrid thought. I'll be your haunting demon." Later, Shirley quotes from " The Shabby Genteel Story " the saying that somebody spoke so satirically that nobody could understand him. " Bless you, Brooks!" says Thackeray.

The next week, March 12, Thackeray brings news. He has left the " Cornhill." Smith, " a noble, generous fellow," says he, but wished to have a co-editor and not a sub. " Fact is, Thackeray doesn't do editor's work, which is to read and judge, not to write. . . . Thackeray has built his house, costing £5,000, out of his two years' savings, nearly. Leigh tries to make him hark back—only a slight difference and might be adjusted. Thackeray says Lucas [editor of " Once a Week "] pitched into him for trying to get ' Once a Week ' artists to work for ' Cornhill.' Keene refused. Thackeray thinks Free Trade is the right policy in literature and art. Man takes his work where he's best paid for it. Thackeray likes his ' Lovel the Widower,' and Smith doesn't. Acted it at Kensington the other night—his daughter Minnie good and Morgan John O'C. as footman." Mark Lemon then discourses of editorship, and says that Thackeray's name made " Cornhill," but Thackeray says it was " Framley Parsonage."

Later Thackeray says that John Forster cuts him, but " he can't be savage because it was Forster who brought Dr. Eliotson to him and saved his life." Envying Brooks his ready pen, Thackeray says it takes him " two days to think of a ' Roundabout,' and one day to write it. Writes best out of his house: anywhere except at home." Elsewhere Silver says that Thackeray writes *currente calamo*, and hardly makes a correction. Dickens, on the contrary, almost rewrites, with interlineations.

On July 9 Thackeray has the staff to dine with him in his new house at Palace Green, Lucas, of " Once a Week," and a nameless young man, a friend of the family, being also present. Thackeray's spoons are much admired, especially a Dutch one, with a chain on a leg, which he bought for £4 at The Hague, and saw one like it in the Strand marked £12. " Gilt foliated mirror frame, £30, very handsome," Silver records. " Queer old pictures—Dutch fighting piece—portraits, etc." Thackeray says they were

all " made out of his inkstand ;" and adds that, when he married, he and his wife looked at a house in Brunswick Square and found it too dear at £80.

On July 16 Lemon tells of a French duelist shooting a young Englishman after 1814. An Englishman in the green-room, hearing the story, goes out and returns in three days, saying, " I've shot that Frenchman." Thackeray says he met the Englishman in Paris. (Silver queries if it were Captain Gronow.)

On September 18 Thackeray is " brimming with bad jokes," but none are quoted. On September 24 Mark Lemon " talks of pawnbrokers dining together and pledging one another." The " Telegraph " has announced in its fashion columns that " Mr. Thackeray and Mr. Leech and the remainder of the Rothschild family " are at Folkestone, and this leads to much chaff.

On October 8 Thackeray says Mrs. Yates (*née* Elizabeth Brunton, the actress, and his enemy's mother) was his " boyish love." Talks of old farces, etc. Mark Lemon says that " Punch " was never so prosperous as now, in spite of the plagiary of " Funch," as Thackeray calls " Fun." Keene thinks that " Punch " some day will be drawn with a nimbus—St. Punch.

On October 29 there is a discussion on life and its pleasures. Mark says that duties are worth living for. There is more happiness in helping others than in living for one's self. Brooks denies this. Thackeray says " that when he was on his deathbed (as he thought) he was perfectly content and happy. He is not deterred from wrong-doing by fear of a future state, but by feelings of present disgrace and dishonor." Later Thackeray " tells how Forster was annoyed by his hit at him in ' Esmond ' as ' Mr. Addison's man,' Dickens being Mr. Addison."

On November 26 Thackeray says " he feels a sort of στοργή [natural affection] when he reads his daughter [now Lady Ritchie]'s ' Story of Elizabeth.' She has all my better parts and none of my worse." Brooks admires her pure English and likens her to Minerva from the brain of Jupiter. Thackeray says his feeling is shared by his mother, who says she can't read his books—" as many others do," he adds. Leech sleeps at his new house at Kensington for the first time to-night. (6, The Terrace, Kensington, which Silver afterwards took. It is now shops.) After Leech has gone Thackeray " writes the Lord's Prayer in the size of a threepenny bit, drawing the crown and 3 in center, and gives it to Mark Lemon with lines around it—

> " ' Dear friend, I've writ this little page
> When one and fifty is my age,
> etc.'

In walking away, I talk of reading John Wilson's ' Life ' (Christopher North), and admire his manliness in turning to work when he lost all his fortune ; also his thrashing the tinker, etc. Thackeray dissents. Says John Wilson did nothing worth record, and the effect of the Life on him [Thackeray] was to make him tell his daughters, ' Mind, no biography '—of himself."

On April 1, 1863, Thackeray says he writes when he sits down to write ; as soon as he gets his nose to the desk his ideas come. Later he defends Colenso and denies the creation in six days. But on this point, as we shall see, he changed his views. " Jonah and sun standing still he views as fables."

On April 15 Leech tells of his rushing out of bed to silence what he thought were Volunteers, who were playing in a public-house near by. " We're Foresters, sir," said one. " Then why the devil don't you go and play in a forest ?" Leech asked.

On May 27, 1863, Thackeray says that he once told his daughters that he wished they'd take the Bear, at Esher, for a home. Breakfasting at Gladstone's a few days before, he met an American lawyer and thanked him for a press which had warned him to change his investments.

It was on June 17, 1863, that Sir Francis Burnand ate his first dinner as a member of the " Punch " staff, on which he was to remain so long, succeeding Tom Taylor as editor in 1880. Thackeray was not present ; but on June 24 he was, and very full of suggestions for a cartoon about sweating in dressmakers' shops. Said that, to avoid any such result, his daughters always ordered their dresses a month in advance.

On July 8 Leech tells how he has had to buy a wheelwright out of his shop at the back of his house, owing to the noise.

On July 22, 1863, the staff are again Thackeray's guests at Palace Green. In addition to Thackeray there is a barrister cousin from Canada named Beacher, and a Southern American named De Leon who had described blockade-running in " Cornhill ;" but nothing much is recorded of the evening, except that there were turtle soup, turbot, curried lobster, venison pie, cold beef, jelly bloat-

ers, and ice-cream after cheese. Thackeray confessed to a fear of burglary and American Share confiscations, and was insisting on £100 for each "Roundabout" in consequence.

On August 12 "the old Yates row crops up and Thackeray fires at Horace Mayhew and says, 'Damn it, you fellows still seem to think it was because of his attack on my nose that I fell foul of him. I don't care a damn for my nose. He imputed dishonorable conduct to me, and for *that* I got him kicked out of the Garrick.' 'With your strength you might have been more generous,' says Horace, and Thackeray blazes up and finally bolts"

On December 2 Thackeray chaffs Mark Lemon about a mistake in his novel "Wait for the End," when he makes term time at Cambridge in September. Lemon tells them that Weaver in the novel is Webster, the actor, and Stella is Mrs. Mellon. Says Mrs. Mellon often used to come to him and say, "I think So-and-So should have those lines to say; they'll be more effective so than if I say them." Never knew any other actor to do this. Rupert Melville he meant for Edmund Kean, who used to attend The Harp by Drury Lane and stand twenty glasses of grog to poorer actors, many of whom drank themselves to death. Later the Table falls again upon a Colenso discussion, Thackeray contending for the six days as stated by the actual Word of God.

On December 9 Thackeray is late, as he "could not resist the tripe at the Reform Club." A week later he is present again, but for the last time, and "pitches into Mayhew because his [Thackeray's] two guineas to the Julian Patch subscription is entered as coming from Arthur Pendennis. Says he particularly begged that his name might not appear: 'They'll be at me again, those damned penny-a-liners.' Horace explains, and says the case is really a deserving one. 'Very well, then, I'll give you a fiver besides, in my own name,' says Thackeray. Tells also of one or two fellows who have extracted fivers and tenners from him at his house, and at his Clubs, and in the streets, and in the Parks. In fact, his purse is never safe." Again Colenso breaks in. Thackeray says: "We have God's own word (in his commandments) that he made the world in six days, and yet geologists tell us it took millions of years to make. *Quien sabe?*" And these are his last recorded words at the Punch-Table.

Thackeray died on Christmas Eve, 1863, and Mayhew brought the news to the "Punch" dinner towards the end of the evening, and, according to the late Frederick Greenwood, they all joined in singing "The Mahogany Tree." The effect must have been overwhelming:

"Here let us sport,
Boys, as we sit;
Laughter and wit
Flashing so free.
Life is but short—
When we are gone,
Let them sing on
Round the old tree."

Mayhew led the song. I cannot conceive how he ever got through.

"Evenings we knew
Happy as this;
Faces we miss,
Pleasant to see.
Kind hearts and true,
Gentle and just,
Peace to your dust!
We sing round the tree."

The week following, the day of the funeral, there was no dinner. Silver says: "I never felt a loss so much, except of course those of my relations. And yet I was not privileged to rank myself as more than a casual acquaintance. But his kindliness extended to the smallest of his visitors, and he never snubbed one or ignored their presence. What the loss must be to his old chum and schoolfellow Leech, who can pretend to estimate? . . . The loss is a national one, but the nation cannot judge how his family and his friends feel it."

On January 12, 1864, "Leech says, 'Thank God, we sha'n't have to go round with the hat; his daughters will have £1,000 a year between them.' Says he can't sleep without dreaming of poor Thackeray—been sleeping alone, so disturbed is he." Leech survived his friend only a few months, dying on October 29, 1864, aged forty-six. Both lie at Kensal Green, and Shirley Brooks was buried near them.

On November 7 Leech's successor, George Du Maurier, took his seat at the Table. And so the world goes on.

THE HOUSE IN THE WOODS

BY LOUISE BOYNTON AND GEORGIE BOYNTON CHILD

AT the Housekeeping Experiment Station we are not concerned, except indirectly, with the theory of the housekeeper's problem. Our care is the concrete man or woman whom changing economic conditions have pushed to the wall. Now, to-day, harassed heads of families are forced to ask themselves the pressing question, "What are you going to do about it?" On the spirit in which this question is answered depends the future of these families, of their children—I might almost say the future of America, since the class that is being pushed to the wall is, of all classes, the most numerous and the most characteristically American.

The work of the Station is best described by giving the experience of certain families whom we have been able to aid in working out their housekeeping problems. In all cases the remedy is the same in principle. It involves *mastery* of impossible conditions. The servant problem, the faulty construction of houses, the inadequacy of utensils, are chosen as points of attack merely because, under present economic conditions, it is in this department of life that certainty can be substituted for uncertainty, a sure control for accident.

A physician and his wife were among the first to come to the Experiment Station to inquire into the secrets of housekeeping efficiency. They had ample means for the little family of three, consisting of father, mother, and one child. Yet the wife's strength and the husband's income had been strained to the breaking point by the increasing difficulties of housekeeping.

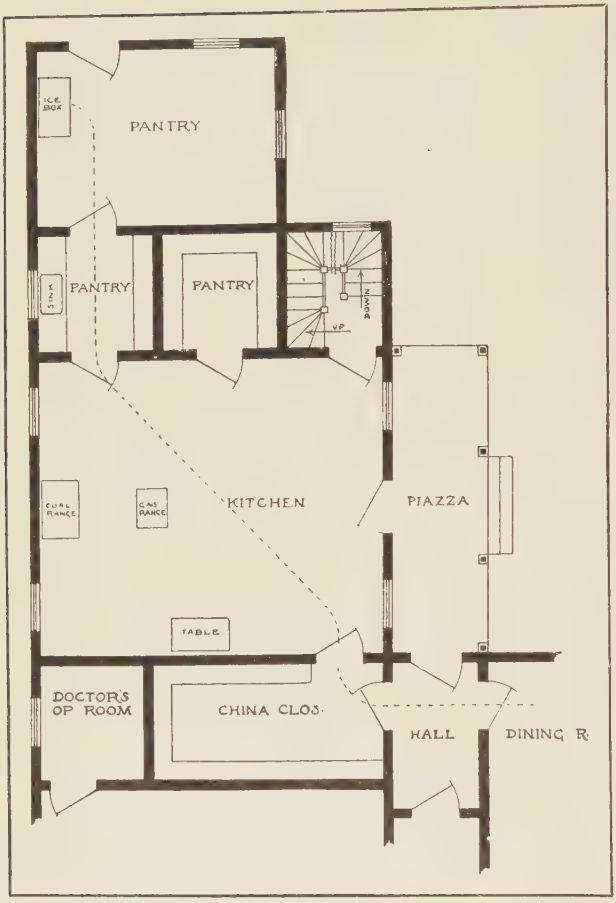
They lived in a New England mill town, in a rambling, badly planned house, which they had been obliged to rent because it was the only one in the neighborhood suited to a physician's needs. It was very expensive to keep up, both from the point of view of repairs, heat, light, and coal, and because of the number of servants required. The doctor's family, living very simply, had kept three—a hired man, a cook, and a second girl. This meant a cost of nearly $2,000 a year in servants' wages and board. To secure good servants and to maintain a spirit of co-operation and mutual helpfulness among the three had always been difficult, but for the past year it had been impossible. Seven cooks had come and gone during the winter. There had been three new housemaids. Finally the man was dismissed and a married man engaged who lived in his own home. This simplified somewhat the daily problem of his board and washing. On the other hand, a certain amount of lifting, fetching, and carrying which the resident hired man had done now fell upon the cook. Whether for this or for some other reason, the difficulties of the cook proposition increased. The most serious feature of the situation was the incompetent and constantly shifting cook.

The accompanying ground plan shows some of the more obvious defects of the doctor's house from the point of view of housekeeping efficiency. The kitchen was separated from the dining-room by a butler's pantry and hall at the west end. Opposite these, at the east end, were three other large pantries, which all had to have a weekly cleaning and daily care. Each of these pantries was in use, with no thought whatever of economizing steps. Flour and meal were kept in one place, utensils in another, the kitchen sink and certain of the cooking dishes in still another, preserves down cellar. The ice-box was in the outer pantry, thirty feet or so from the kitchen table and double that distance from the dining-room.

In addition to a gas range in the kitchen there was an old-fashioned coal range, requiring six hods of coal a day. This was felt to be necessary because the hot water for the house depended on it. There was a second coal stove down cellar in the laundry. All the china was kept in the butler's pantry and had to be carried to the dining-room every time a meal was served.

Owing to the exigencies of the servant problem Mrs. H—— spent the greater part of her life in the kitchen. She was continually obliged to supplement the efforts of an incompetent cook, to break in a new one, or—with such help in saving steps as she could get from the second girl or man—to tide over an interregnum.

"I would often be so tired at night that I could not sleep for hours," she said. "In addition to everything else, the telephone,



OLD ARRANGEMENT

Note the long walk between the ice-box and dining-room, and how many steps that involves six months of the year. The kitchen sink is also very far from the work-table and fifteen feet from the stove. Also the enormous waste space occupied by pantries

which was in the front part of the house, rang four or five times an hour throughout the day. It seemed to me I was always flying from some pie-baking crisis in the kitchen to the telephone, or rushing from the telephone back to the kitchen and my burning pies. And the kitchen was a horror with its bare floors and dilapidated walls. No amount of scrubbing or cleaning ever made the place attractive."

It was evident that most of the trouble of this family resulted from the inconvenient arrangement of the kitchen and pantries. After the doctor and his wife visited the Housekeeping Experiment Station they were able to work out a plan which obviated these serious drawbacks. The butler's pantry, on the west side of the kitchen, was discontinued as a pantry and the larger part of it made into an operating-room for the doctor. The china, which had formerly been kept there, was divided. Platters, pitchers, and serving dishes were moved to the kitchen. A new china closet was bought for the dining-room in which to keep all dishes that did not need to be warmed. The ice-box and kitchen sink were brought in from the outer pantries and placed against the west wall of the kitchen near the dining-room door. A wide drain-board was put on either side of the sink. Above the sink were shelves for the serving dishes and for all kitchen supplies in daily use.

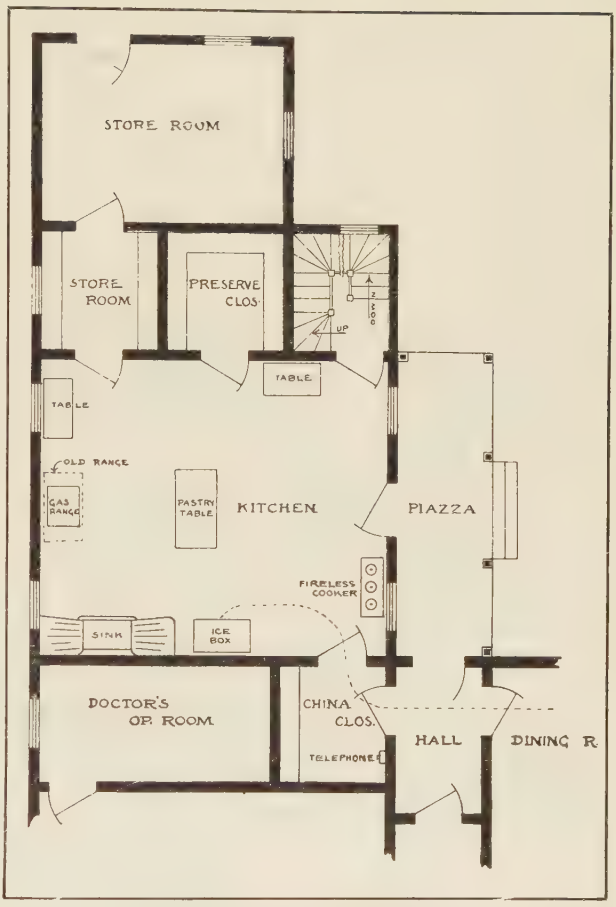
Instead of depending, as before, on both a coal and a gas range for cooking, the coal range was bricked up and discontinued. The hot-water boiler was connected with the laundry stove in the basement, and a radiator was placed in the kitchen to furnish heat in winter. The pastry table and drain-boards were covered with zinc. A clean-looking light-gray linoleum was laid on the kitchen floor. The walls were painted light gray, with a darker gray for trim. The big outer pantry was abandoned and closed up. The two remaining pantries, freshly painted like the kitchen and covered with linoleum, provided ample storage space for all reserve supplies and provisions, including preserves, which were brought up from the cellar. The telephone was placed in the passageway between the dining-room and kitchen, and was made into a desk telephone. Finally, the most essential of the labor-saving devices were bought: a vacuum cleaner, a fireless cooker, an egg-poacher, steamers and casseroles, the new type of handle mops, and a white-enameled hospital wheeled car.

These improvements cost $300. As a result, the family gets on very comfortably with one girl and a laundress hired in by the day. Even without a girl the mother can avoid getting overtired. As the saving amounts to sixty dollars a month, besides an annual saving of sixty dollars a year in coal, she has an ample margin for housekeeping expenses and can make things easier for herself in many ways hitherto undreamed of.

In a word, Mrs. H. no longer lies supine while the Juggernaut rolls over her. She is riding in the car with her hand on the steering-wheel.

Family number two lived in a suburban village an hour's journey from New York. There were two little children, three and five years old. The parents were enthusiastic young people, both college graduates, willing and able to work as well as to think and plan. On the husband's salary of $2,000 a year they were able, with great care, to live in a good village neighborhood, to maintain its standards, and to be well dressed. But they could not save a cent or take any helpful vacation trips. The outlook for the future frightened and discouraged them.

They were advised not to make any change in their standard of living, but to study the expense account. This soon showed a disproportionate outlay for kitchen coal and servant's board and wages—an outlay resulting in no comfort. The girl at $16 a month was not competent enough to perform unaided a single household duty. Yet, as they were living, a maid of some sort was necessary in order to economize the housekeeper's time and strength.



IMPROVED ARRANGEMENT

This plan shows the "business end" of the doctor's house. The ice-box is now near the door leading to the dining-room. It is within easy reach of the pastry table. The sink is within three feet of the range and five feet of the pastry table—an ideal arrangement

A still more important consideration was that these items were beyond the housekeeper's control. In other ways she could be a little lavish or cut down expenses with a corresponding result to the family in comfort or economy. The kitchen expenses varied with the wind, which in different quarters drew more or less heat "up chimney," or with the disposition of the maid, who was more or less destructive and wasteful.

For an initial outlay well within two hundred dollars this family was enabled to dispense with the coal range and the incompetent maid, and thus to put the kitchen on a par with the other departments of household expenditure which are subject to regulation and control.

Changes were made in the arrangement of the kitchen and dining-room in order to concentrate the work and save steps. As there was no gas in the house, an oil stove was substituted for the coal range and a water heater attached in the laundry. Labor-saving devices were bought, also a good outfit of heating utensils for use on the dining-room table.

An itemized list of the cost of improvements and utensils is given on page 201.

These improvements so greatly lightened and facilitated the housekeeping that the young wife can now more easily accomplish single-handed her cooking and the daily care of her home than she could previously do with the help of a girl. She gets her regular work done by noon each day. This includes making a dessert and preparing the vegetables for the night dinner. The husband lunches in town, so she and the children have a light luncheon and rest from one to two. By three o'clock they are all dressed

and ready for a walk. They stay out an hour. The hour from four to five is devoted to sewing or emergency work. At five the children are given their supper and put to bed. By six the mother is ready to prepare dinner, which, with the help of the fireless cooker and steamer, can easily be ready in half an hour. The table is set with doilies, which are attractive, and also save the care of table linen. These as well as the china can be of the finest, since there is

NORTHWEST CORNER OF OUR REMODELED KITCHEN

Note how conveniently arranged this cooking corner is. The sink is only a few steps from the stove and pastry table. The cabinets for the kitchenware are within easy reach. Just beyond this is the refrigerator; above the refrigerator are all the utensils and materials for bread-making. The wheel car stands near the sink waiting for its load of dishes for the dining-room

now no fear of the heavy-handed maid.

Even more impressive are the results obtained by labor-saving equipment in the department of so-called heavy work. A woman is hired two days a week to do the laundry work and cleaning. All these tasks are accomplished by noon of the second day. In the afternoon the woman takes care of the children while the mother goes out calling or into the city for a matinée. Often her husband can join her, for it is always arranged that this respite shall fall on Saturday. These weekly recreations are an important element in the success of the new system.

The financial advantages of the changed plan of living are not imposing, but are sure and satisfactory. The first year our young couple paid for their new equipment, enjoyed their weekly outings, and saved $100 in cash. The saving now amounts to about $300 a year, outside of the modest annual allowance for rec eation. The greatest advantage by far is the greater independence and dignity they now enjoy and an increased sense of the value of their family life.

A third case that came to our notice illustrates the advantage there may be in a complete change of base. Two artists, husband and wife, were struggling ineffectually to live in New York on a joint income of $1,200 a year. They were neither young nor old. They had not "arrived" professionally, but neither had they given up hope of success. Their whole aim was to secure living conditions suitable for work and growth; but in New York they were never able to get any one thing they needed except at the expense of something else equally important. The result was intolerable crowding—crowding in material ways, crowding of the mind and spirit. They were more and more conscious of acting in obedience to some outward pressure rather than to the subjective prompting of will and ambition. This, they fully realized, was the beginning of the end unless they could secure better conditions, could obtain a fresh outlook.

ANOTHER CORNER OF THE KITCHEN

The wheel car is shown on its way to the dining-room. The three-hole fireless cooker has proved one of the most satisfactory aids to the new housekeeping

Their chief necessities were light and air, suitable workrooms, and a quiet neighborhood. They did not need to live in the city, but simply to be within reach of its stimulus and opportunity.

For $25 a month, the price they had paid in New York for one room, they found a small but attractive country house with ample space about it and decided possibilities. The only problem was to make it efficient for purposes of practical living. They were well accustomed to chafing-dish cookery and all the various short cuts of a cramped existence in town. They had excellent taste, and both were uncommonly ingenious and skillful at doing things with their hands.

Fee for altering kitchen	$10.00
Advice in working out problem	10.00
Linoleum, best grade, for kitchen	16.00
Two coats shellac	2.00
Laundry heater and jacket	15.00
Plumbing changes	3.50
Blue flame oil stove to replace range	12.00
Fireless cooker	12.50
Washing machine and wringer	12.00
Vacuum cleaner system run by water power	67.50
Pastry table and shelves	8.00
Electric iron	4.50
One-burner alcohol stove for table use	2.50
Coffee percolator	4.50
Electric heater to heat water on table	3.00
Wheel car	5.50
Dish-dryer	1.50
Good floor mop	1.00
Total	$191.00

WHAT ONE FAMILY SPENT TO SECURE COMFORT

Under these circumstances, after carefully examining the plans of the house, we suggested an outlay of about $400, to be spent as follows: $150 for a simple but satisfactory hot-water heating system, which the husband installed himself; $11 for an alcohol stove and oven for cooking; $14 for alcohol lamps; and $53 for jacketing the laundry stove to connect with a hot-water boiler. The balance of the $400, approximately $150, was spent for necessary furniture and mattings, paint, putty, and stain. By staining their furniture and decorating their walls themselves they got admirable results even with this very small outlay.

They liked their house, and, learning it was for sale at $3,500, arranged to buy it on a building loan basis, the $25 a month to apply on the purchase price. As this involved certain overhead charges not contemplated, and as their budget must include frequent trips to town, their margin was small. It would be truer to say that they had no margin at all at first. And much of their work would have seemed to most of us impossibly laborious. They managed their laundry work, except collars, without outside help, made their garden and cared for the yard, mended and painted the fence, and eventually painted the house itself. These tasks, performed in peace and freedom and the open air, were looked upon as a healthful recreation.

At the end of the third year they were well and happy, had paid for their equipment and furniture, and had an equity of $600 in their house. Best of all, they had regained the feeling of growth and development within themselves. They had substituted for the old bondage a stimulating sense of self-direction.

I offer no apology for these plain and homely details. Common life is apt to be plain and homely. We are all vitally concerned every day of our lives with a thousand petty affairs which do not matter, except that they are ours and we must attend to them. That which greatly matters is the aim, the attitude of mind—whether we live our days in a spirit of bondage or whether we rule our conditions.

Two ships are rocking on the tide. Neither for the moment is getting anywhere. But one is adrift, rudderless. The other is in charge of a captain whose hand is on the helm, who knows why he is there and where he is going. The point I wish to make is this: In times of stress or transition one ship is very like another as far as appearances go. They look alike and behave alike. Much that happens to one will happen equally to the other. The difference between the two—a difference past all calculation—is in their ultimate fate.

HOW HARRY EATS

THE BULL MOOSE

SOME OF HIS AMIABLE QUALITIES

In a recent issue of the New York "Independent" the Rev. W. J. Long published an article on the Bull Moose in which he discusses with somewhat labored sarcasm the adoption of a figure of the bull moose as the emblem of the Progressive party, and incidentally contradicts some alleged misstatements made by Mr. Roosevelt regarding the habits of the bull moose in his forest haunts on this continent.

A correspondent of The Outlook, writing from her camp in the Canadian woods, sends us an interesting account of some of her experiences with bull moose, illustrated by photographs, which we reproduce not only because of their special value to readers interested in natural history, but because they correct some of Mr. Long's misinformation. As a sincere student of natural history we think he ought to be among the first to welcome this correction. Our correspondent writes from New Brunswick, Canada, under the date of August 15. —THE EDITORS.

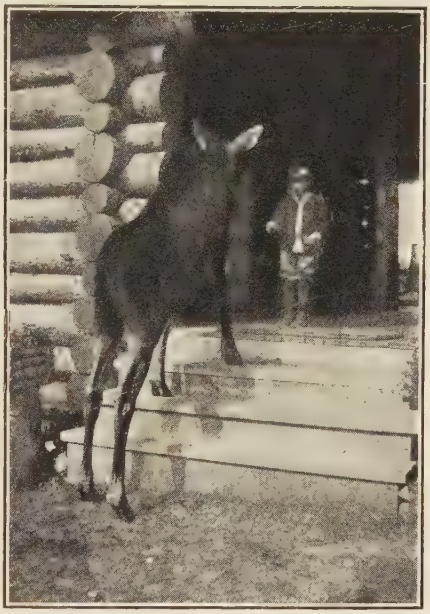
WE see many moose in these forests sixty miles from the nearest town, and our cameras have made a great many records of them.

Mr. Long's article, you may remember, consists largely of contradiction of Mr. Roosevelt's statements in his volume "The Wilderness Hunter" concerning moose. I quote from Mr. Long's article one such charge of inaccuracy:

> Our authority [Mr. Roosevelt] declares that the legs of a bull moose are so long and his neck so short that he must go "down on his knees" to crop the tender grass or to get a mouthful of snow to quench his thirst. This delusion was already hoary when I first found it in the geography. The bull moose does nothing of the kind. If he wants to crop or drink, he simply spreads his fore feet and bends his head, as any one may see who will follow a moose for an hour without trying to kill him.

We, too, have seen bull moose spreading their feet and cropping rather short growths; but we have also seen them *on their knees* very frequently, that they may eat

morsels close to the ground. And they not only kneel, but they walk along on their knees from one bit of food to another, retaining that position quite a long time.



HARRY MAKES US A VISIT

Perhaps we feel especially familiar with the table manners of moose because of one incorrigibly tame specimen which haunts the camp. He is a young bull about as large as a good-sized horse. He has been named Harry. His first appearance at camp occurred last year, during the severe blizzard, when he took shelter upon the porch of the cabin where the guard and his wife slept. He had to be chased away from the door daily, as he prevented exit from the cabin; yet still he lingered near. His curiosity about everything at the camp was quite mule-like, and he has a scar on his nose now from suddenly sniffing at a saw while it was in use. Harry upset many of our moose theories. Mr. Long says: "Perhaps the most noticeable quality of the bull moose is his shyness. He avoids the crowd and eschews excitement of every kind. When you find him, you must be very still, else will his native modesty take him away out of your sight." Surely Harry's characteristic was not "shyness," nor did he "avoid a crowd and eschew excitement." A dog chased him away and he kept to the woods thereafter until summer, when this camp opened to its fullest activity, and Harry then came around again, acting as if he wanted to miss nothing. The sawmill noise attracted him; so did gasoline engines; and he has even looked in at the main camp window to lend an ear to the phonograph.

Another peculiarity of the beast is his unselfishness; for, having discovered this camp and the only other within miles, and having enjoyed the atmosphere of both, he has brought in another bull moose—slightly his senior—and has shown him the sights. This friend we have named Larry; and he visits us occasionally, but he is not nearly as tame as Harry. The latter will eat from one's hand, and grunts with satisfaction if he is patted. There are about twenty people at this camp and the same number at the one near by, so that forty people have had this moose experience and are in possession of photographs illustrating it. I inclose several, thinking possibly that you might like to publish them and thereby confirm Mr. Roosevelt's statement of the kneeling method of eating as well as of the tameness of certain specimens of young moose.

HARRY WAS VERY MUCH PHOTOGRAPHED

Next year this camp may have to be fenced off from the mainland, so that Harry and his friends may not get in, for all realize the cruelty of allowing him to become too tame.

G. S. T.

THE NEW LITERATURE

A MONTHLY REVIEW BY HAMILTON W. MABIE

"Who reads Byron any more?"—
Shut the door,
Momus, for I feel a draught;
Shut it quick, for some one laughed.—
"What's become of
Browning? Some of
Wordsworth lumbers like a raft."

"What are poets to find here?"
Have no fear:
When the stars are shining blue
There will yet be left a few
Themes availing—
And these failing,
Momus, there'll be you.

SO writes Mr. Robinson, a man of New England birth and Harvard education, and sings in his own key and after his own manner with the quiet assurance of one who knows that, although everything has been said, everything still remains to be said.

There is nothing new under the sun, declares the man of the world who sees everything and understands nothing—"the cynic knows the price of everything and the value of nothing"—and the poet, the man for whom the world is part of the universe, calmly goes down the road threading his way through the crowd singing about things that were old ten thousand years ago, and are so new this morning that the poet finds it difficult to keep his feet on the ground. If one were searching for a real synonym for the fresh rush of life in the world, he would find Shakespeare; if he were looking for an example of old, stale, and unprofitable things, he would find it in some morning newspaper.

There is always a new poetry except in those brief periods when society tries to fool itself with things and put ideas under lock and key. Byron's verse was new, and so was the verse of Shelley; and Keats, whose brain hummed with the tunes that made the morning of time beautiful, was as new as Shelley, who stood on old things only long enough to spread his wings for daring flights into the future. It was a very new kind of poetry which found its way to a few readers and later to the heart of the world in the little book, so highly prized by collectors, printed at Kilmarnock in 1786; but it was not newer than the slender book of "Lyrical Ballads" which announced the rebirth of poetry in England.

When "Thanatopsis" appeared in the "North American Review" in 1817, it was so novel in its quality that it marked the beginning of American poetry; and "Israfel" was of a beauty so fresh that it was startling. "The Mystic Trumpeter" and the "Hymns of the Marshes," to say nothing of many later songs, gave the familiar old world a morning air. There is nothing new under the sun until the man of imagination arrives, and then everything has the morning air on it. Sometimes the form is new, but it is not the novel form that makes new poetry. Whitman set great store by his rejection of what he regarded as the conventionalities of verse-making, but whenever the groundswell of the passion of the comradeship of democracy or the surge of the elemental movement of things lifted his long, unrhymed lines to the level of great poetry, he evoked the splendid effects of the oldest rhapsodists in their inspired moments. His professionally new poetry is often a dreary procession of unrelated objects.

Nor does novelty of theme make poetry new; one may write about the telephone, wireless telegraphy, and the aeroplane with realistic accuracy, and be as stale and unprofitable as the latest celebrant at the classic altars; while a song about Endymion may stir the pulse like a cry from the future. Poetry is new by virtue neither of its themes nor of its form, but by reason of its freshness of feeling, its energy of imagination, its vitality of phrase. The newness must be in the heart and brain of the poet, not in his tools. As a rule, the poetry that sets out to be new

is depressing reading, and there is a great deal of it; but the poetry that conveys the surprise of the poet as the new day breaks on his imagination is like a spring in a dry and thirsty land.

It is easy to count fifty poets in the younger group; thirty-seven are represented by selections in the book called "The Younger Choir" (Moods Publishing Company, New York), and several well-known names do not appear; among these are Mr. Percy Mackaye, Mr. Robinson, Mr. Hagedorn, Mr. Neihardt, four of the most promising; and in addition the writers of the poetic drama must be taken into account. If one adds the older poets—Messrs. Woodberry, Van Dyke, Riley, Johnson, Carman, Roberts, Santayana, Miss Thomas, Miss Guiney, Mrs. Van Rensselaer, and others—it is evident that Mr. Viereck was well within the truth when he declared that "American poetry needs missionaries in America no less than in Europe," and that there are half a hundred poets in this country who strike their own notes.

For twenty years the country has been too busy to take account of its poetry; but now that it is learning that wealth without poetry is weariness, and that the divorce of the senses from the imagination is a spiritual scandal, and a breeder of material scandals as well, it may turn again to the singers who have neither feared nor flattered it, but have refused to be blinded by its prosperity or confused by its resounding activities. The new poetry is refreshing reading, not because it is great, but because it keeps the old loyalty to the things of the spirit. It has long been the fashion to classify the American with the Phœnician as a born trader and an ingrained materialist. International judgments, as a rule, are worthless for lack of knowledge; but it is surprising that none of the critics of this temper has taken the trouble to read American poetry, which is one long protest against every form of materialism.

And the younger poets are even more outspoken than the older poets. The sense of the inhumanity of some forms of the social order of the time gives their verse the same quality of passion which swept Whittier and Lowell in their time. The pictures of bitter poverty, of crushing toil, of heart-deadening misery, have been drawn with uncompromising realism by Mr. Masefield, the English poet. No one can read his "The Everlasting Mercy" without flinching a little from the hard literalism of the details; poverty is an old theme with the poets, but even Hood's "Song of the Shirt" does not sound the note of hopeless misery as it is sounded in "The Widow in the Bye Street." Another English writer, Mr. W. W. Gibson, gives us short, dramatic pieces in a different key; they are wholly modern in theme, with an almost journalistic nearness to present conditions; their restraint, their appealing simplicity, their trust in the potency of the fact to tell the story, are the virtues of ancient poetry. It is quite probable that these English poets stand too near their themes, and that their work lacks the element of permanence because it lacks perspective. But if it misses fame and gets only reputation, it does not lack the moving appeal of the great cry of human need:

"All life moving to one measure—
Daily bread, daily bread—
Bread of life, and bread of labor,
Bread of bitterness and sorrow,
Hand-to-mouth and no to-morrow,
Dearth for house-mate, dearth for neighbor.

Yet, when all the babes are fed,
Love, are there not crumbs to treasure?"

Among the younger American poets Mr. James Oppenheim has listened to this cry with a responsive imagination. His work is very uneven; some of it has the air of straining after newness, and discards the old felicities without putting fresh power in their place. He seems to be saying to himself, as do Mr. Kauffman and Mr. Underwood, "Go to; let us make the new poetry out of hand." This attitude brings strange phrases, halting rhythms, unpoetic words, to their service, but neither the inspiration nor the art without which there is no poetry. But Mr. Oppenheim and Mr. Kauffman have other and happier moods when, forgetting theory and thesis, they write with deep feeling and fresh phrase and produce poetry which is new but not strange; which is vital and convincing, without the self-conscious pose which makes the poet a preacher of doctrines rather than a teacher of truth. In Mr. Kauffman's impressive lines entitled "He Shall Rise" there is unmistakable strength:

"Not risen yet, but soon to rise! The world is
sick with hope deferred,
But down the ladder of the stars there comes
the whisper and the word;
The few are deaf, the many hear and silently
make straight the way,
Who toil through all the dreaming nights and
dream throughout the sodden day.

A score of years or but a year; what matter
to their farther gaze,

Wherein, as in their Lord's, an age of years is as a week of days?
And when, in an immortal spring, beneath untroubled Easter skies,
Upon a kindlier earth at last—at last To-morrow's Christ shall rise!"

And there is equal strength in Mr. Oppenheim's "Saturday Night:"

"O Dream-World lights that lift through the ether millions of miles to the Milky Way!
To-night Earth rolls through a golden weather that lights the Pleiades where they play!
Yet . . . God? Does he lead these sons and daughters? Yea, do they feel with a passion that stills,
God on the face of the moving waters, God in the quiet of the hills?

Through one another—through one another—no more the gleam on sea or land,
But so close that we see the Brother—and understand—and understand!
Till, drawn in swift crowd closer, closer, we see the gleam in the human clod,
And clerk and foreman, peddler and grocer, are in our Family of God."

The feeling and vigor of these lines convey a large meaning; but there is, and there always will be, a poetic and a prose vocabulary, and the zeal of the poet must not consume the singer to such a degree that he loses the sense of selection; nor, it may be added, that he loses that saving grace of common sense which is as necessary to the artist as to the man in the street.

The iconoclasm of Mr. Underwood's "Iron Muse" (G. P. Putnam's Sons, New York) and of "Americans" has a journalistic rather than a militant ring, and is more suggestive of exploitation than of the far-flung line of battle in the eternal struggle for freedom. Not only have the themes a reportorial up-to-dateness, so to speak, but one gets the feeling that the author has sent his Muse out into the streets and tenement-houses as a city editor gives the reporters on the staff special assignments to "write up" a murder, a fire, or a riot, and the Muse goes forth and does the best she can with such subjects as "The Old Grad," "The Strap-Hanger," "The Commuter," "The Photographer," "The Fan," "The Chauffeur," "The Private Secretary," "Central," "The Typewriter." There is poetry in all occupations if one puts imagination into his work, but the method of minute cataloguing is more suggestive of a business directory than of a register of stars; and if the poetry of "mean streets" is to be written, there must be stars overhead. There is, in a word, too much of petty realism about Mr. Underwood's verse; and, it must be added, there is too little of that humor which, in seeking after realism, saves a man from falling upon mere literalism. There is real descriptive power in many of the lines in "The Strap-Hanger," but the opening is discouraging to those who cordially recognize Mr. Underwood's genuinely human impulse.

"It's the greatest hold-up ever"

gives little promise of the gleam of poetry on the closing verse:

"Through the reek and dust are drifting, heaven while we dream.
For the night is slowly lifting. Somewhere shines the gleam.
Still God's multitudes are marching. Somewhere far away,
Past his Subway's gloom o'erarching, dawns for all His day."

Mr. Underwood believes that poetry must be brought closer to modern life, and that nothing human is alien to it; and this is not only fundamentally true, but precisely what poets in every generation have done. But, in rendering its great service to humanity, poetry must not take on the very prose which it is striving to illumine. Mr. Underwood has too much of the poet in him to ignore this elementary truth; and when he has had his fling, so to speak, he will hearten the marching hosts of his time with real music. He has already finely said of poetry:

"It shall stand as the mountains shall stand
Like the visible stairs of the skies;
All the beauty and breadth of the land
They gather and raise as they rise.

And the fire that in millions of hearts flamed hopeless shall triumph in Thee.
And the choir that in silence departs shall aspire to the soul's symphony.
And the wave of all life and its arts shall leap higher toward its heaven to be."

When Mr. Robert Haven Schauffler's "Scum o' the Earth and Other Poems" (Houghton Mifflin Company, Boston) appeared, the poem which gave the slender book its title probably made many people aware for the first time of the picturesqueness of the Bohemian, Polish, and Slovak immigrants as they group themselves on the piers of New York, as Mr. Pennell's etchings made many people see for the first time the striking lines of the great modern business buildings. These strangers at the gate were shown in the large fellowship of humanity for which this country stands, and clothed with the dignity of seekers after that better fortune which lies far more in moral and intellectual opportunity

PERCY MACKAYE

HERMANN HAGEDORN

ROBERT H. SCHAUFFLER

JAMES OPPENHEIM

FOUR YOUNGER AMERICAN POETS

than in the chances of money-making. The passion for humanity is in this fresh, unhackneyed verse, but, although there is some crudity, there is no strain after newness. There is something pleasantly familiar in the work of Mr. Robinson and Mr. Hagedorn; but it is the presence of old and lasting elements of human interest, not of old-time ways of speech and points of view. These young poets are both university-bred, and have not discarded the traditions of their art; but they are distinctly of the new age, and life has brought its problems home to their imaginations. They are concerned, however, less with the problems of social condition than with the problems of the soul, and more with individual experience and the ultimate goals than with collective experience and imminent change. Mr. Robinson's "The Town Down the River" is a finely imaginative rendering of an age-old mystery in terms of fresh imagery; and his shorter poems included in the volume having that name, which sometimes give one a faint suggestion of Browning, pay the reader the compliment of assuming that he shares with the poet the power of imagination.

College verse has rarely risen to the level of Mr. Hagedorn's "A Troop of the Guard" (Houghton Mifflin Company, Boston), read at Harvard on a recent Commencement day; a poem which has the freshness of the gallantry which pulls rein on the edge of the charge that it may hear for a moment the clamor of cries for help, and feel the fierce passion of young idealism to be up and away. This poem, with its bugle note, recalls Sydney Smith's spirited counsel: "Whenever you hear of a good war, go to it." So long as youth is ready to go to the good wars, there will be good poetry. This ringing note is struck more than once in the verse of this young poet:

"Let the battle be grim and a thousand assail us—
By the sun that has led us, we still will defy!
Though the fight go against us, our hope shall not fail us.
Though we die in the striving, we'll laugh as we die."

Other of Mr. Hagedorn's poems appear with "A Troop of the Guard."

Those who heard Mr. Percy Mackaye read the spirited lines of his ballad "Ticonderoga" at the Tercentenary celebration three years ago will not forget the skill with which the historical background was sketched, nor the picturesque quality of the verses in which the place and the day were celebrated. Like Mr. Robinson and Mr. Hagedorn a man of university training, Mr. Mackaye shows breadth of intellectual interests and a strong historical instinct. His imagination has an epical quality, and he has written poetic drama with lyrical as well as dramatic feeling. There are passages in "The Canterbury Pilgrims," a comedy, which have a Chaucerian freshness and freedom. This young poet gives the impression of possessing larger resources than he has yet used; and his materials are not yet completely mastered. His genius still outruns his art, and lacks organization. But Mr. Mackaye has given ample evidence of large ability and high ideals both personal and artistic, and time and patience will bring the clear and well-knit structural quality which his work sometimes lacks.

Mr. Niehardt was hailed at the beginning of his career as a disciple of Whitman, and there were signs of early intimacy between the two; but the young poet has studied under older and wiser teachers, and his latest book of verses, "The Stranger at the Gate" (Mitchell Kennerley, New York), is a notable advance in artistic power and skill. There is no lack of freshness in the verse; indeed, freshness of feeling and diction is its special quality, but there is less evidence of the pose of professional newness, less striving for effects and far greater success in securing them. The theme of these latest songs is motherhood, and rarely has the ancient mystery of birth been celebrated with such a sense of its universality and such deep and tender feeling for its sanctity.

Those who care to take stock of the new poetry will find it in twoscore slender books and in two or three volumes of selections. It is well worth studying, not because it is great—though some of the poets may grow to greatness—but because it is high-minded, like the poetry which preceded it; because it shows that the soul of the country is awake; and because there are in it both promise and achievement. It is clean poetry; it has not fallen into the slough of eroticism which dulls the senses, blurs the vision, and blights the inspiration. One feels in it the new passion for humanity which heralds a rebirth of freedom in the modern world. Much of it is crude, but so are all beginnings. It must not be over-praised, but it ought to be recognized. The people who do not know their poets have ceased to hear the voices of their own souls.

THE OLD GATE AT MUNICH. PRESERVED BY THE CITY PLANNERS AS A CENTER OF CIVIC BEAUTY

CITY SENSE

BY FREDERIC C. HOWE

AUTHOR OF "THE CITY, THE HOPE OF DEMOCRACY," ETC.

SECOND ARTICLE

CITIES THAT THINK

NO Baedeker is needed to assure the traveler that he has entered a new country as he passes from Holland, Belgium, or France into Germany. If he enters at Cologne, Düsseldorf, or Frankfort, as many wandering Americans do, he comes at once to one of the most finished as well as most highly organized cities of the modern world. Here along the river Rhine cities have sprung up with the rapidity of American growth. Here is industry like that of Cleveland, Detroit, or Pittsburgh; here are iron and steel, machine, tool, silk, woolen, and chemical industries that have made the German name the nightmare of England. Here are cities that might be like our own factory towns. They might be dirty, ugly, and unkempt, in need of a Survey to awaken the people to the horror of their slums, the backwardness of their schools, the poverty of parks and play places, the lack of beauty and charm. These cities might be the breeding-places of millionaires and paupers, breeding-places quickly deserted by the former as soon as some motherly trust relieves the maker of the burden of further care.

But these German towns that have sprung into being since the Franco-Prussian War are not like Pittsburgh, or Cleveland, or Buffalo. Their millionaires do not hasten to Berlin or Paris to escape the dirt and smoke which their mills create. They remain at home, and, if you happen to be a guest of the city, they devote themselves with pride to showing

FROM A STEEL ENGRAVING BY JOHN A. LOWELL
BANKNOTE COMPANY, BOSTON. COPYRIGHT 1906

THE GATEWAY OF WASHINGTON IS PROBABLY THE

you why their city is the most attractive and livable city in Europe. And they do this with every show of reason. For these cities are examples of what can be done with a factory city. Certainly they do more for their people than any cities I know. And they are reaping annual dividends on their investment in the stream of travelers that comes to them, not only for the pleasure they offer, but to remain there and build factories and adopt them as a place of residence.

The railway gateway of a German city is a symbol of the whole. It is like the portal of a cathedral or the towered gate of a mediæval town. It is imposing, commodious, commanding. Millions are spent on stations by the Government. The German city would be ashamed to have its gateway anything else than imposing. The station at Frankfort cost $9,000,000, and it was built when Frankfort had less than half the present population of Cleveland, whose railway station would be a disgrace to a German city one-tenth its size.

In front of the station is the station place, the *Bahnhofplatz*. In the foreground is a garden surrounded with clean, well-paved roadways for traffic. Here street railway lines from all over the city converge. Round about the *Bahnhofplatz* are hotels, restaurants, and shops, all of uniform height and in harmony with the station itself. The open space is usually a half-circle. Out from it, like the ribs of a fan, broad streets radiate to different sections of the city.

Such are the railway stations of Frankfort, Dresden, Düsseldorf, Nuremberg, Hamburg, and Cologne. They are city centers, focal points of traffic. Through them the city's life surges. There is no dirt, little noise, less confusion. There is dignity and comfort. Obviously, the city's gateway, the railway station, is under public control.

The portal of the modern German city is the twentieth-century adaptation of the old city gate that is still preserved in Munich, Düsseldorf, and elsewhere. It is treated with studied care. It is the city's most conspicuous point. Therefore it should be beautiful as well as convenient.

We have made a beginning of building gateways in our cities. The Union Station at Washington is of commanding size and classic design. It opens into a spacious formal plaza, which at night is brilliantly lighted. In the distance the Senate building and Capitol rise on Capitol Hill. The intervening space has been razed of buildings, so as not to obstruct the vista. The transportation system of the city radiates from this center.

MOST MONUMENTAL OF ANY CITY IN THE WORLD

The gateway of Washington is probably the most monumental of any city in the world. It is worthy of the capital of the Nation.

The new Pennsylvania and Grand Central Stations in New York are also of splendid proportions. But, with few exceptions, our railways have permitted the cities to shift as best they can, with unsightly, inconvenient, and inadequate stations.

Cleveland has grouped its public buildings so that the Union Station will open into a mall six hundred feet in width and a fifth of a mile in length, running to the business center of the city. The station is to open on a wide plaza flanked on either side by the Court-House and City Hall. In the foreground is a long formal garden terminating with a vista of the Federal Building and the city Library. Experts have planned similar gateways to Rochester, Buffalo, and other communities.

Germany builds her cities as she builds her stations. They are designed by master builders, by city planners, engineers, and landscape artists. They are planned for people, for business, for convenience, comfort, and beauty. They are consciously designed for people to live in. The city is an extension of the home. Nearly every German city is being built from center to circumference. It has its building director or town planner. This explains the wondrous charm of the Rhine cities, of Charlottenburg, Dresden, and Munich. They are planned as is a great estate, and built as is a modern office building.

This study and control of the physical foundations is what most distinguishes the German city from our own. City planning is Germany's greatest contribution to the municipal problem. It is not the honesty of her officials, not the trained experts who serve as burgomasters; it is the recognition by everybody, from Kaiser to citizen, that the city problem is a physical, not a political, problem; it is this that marks the cities of the Fatherland from those of the rest of the world.

City planning in Germany is an art. There are experts who make it a profession. They go from city to city to confer with local officials on definite problems. They lay out suburbs, plan city centers, locate public buildings, docks, and harbors, and give advice as to building and land restrictions. They compete with plans on some big undertaking, and are recognized as essential aids in the administration of a modern town. There is a permanent school of town planning in Berlin. Another has been opened in Düsseldorf. A large literature has made its appearance. Town planning expositions are held at which

HOHENZOLLERN BRIDGE ACROSS THE RHINE AT COLOGNE

"One stands before the approachcs of some of the bridges crossing the Rhine as before a cathedral"

exhibits are presented from all over the world. Such an exhibition was held in Düsseldorf this summer.

Germany realized before any other country that the city is a permanent thing, realized that the city will grow in the future as it has in the past; and, realizing these facts, it has determined that the city shall be built with an eye to the future.

There is a keen rivalry among German cities. The struggle is not for bank clearings, factories, and business, as it is with us, so much as in city building, in the promotion of the arts, beauty, and comfort. Cities vie with one another for tourists, for residents, for business. They compete by offering advantages of all kinds for living, for industry, for education. The professional expert burgomaster has something to do with this. He wants to make a showing. Mayors are ambitious to be called to other cities. But this competition among cities is, I think, largely due to the community itself, to a quite general appreciation of the personal as well as the commercial value of beauty, convenience, cleanliness, and order. The German people seem to have a vision of the city as an agency of prosperity and welfare for all classes, rich and poor alike.

The city of Düsseldorf is an example of the way German cities view themselves, of how they are developed by their expert professional mayors. Some thirteen years ago Dr. Wilhelm Marx was called to be Mayor of Düsseldorf. It was then a city of about 130,000 people. It lies on the river Rhine, not far from Cologne, in the heart of the industrial region of western Germany. The cities of this section are Cologne, Essen, Duisberg, Barmen, and Elberfeld. All were struggling for position, for wealth. Düsseldorf was not unlike Cleveland, Milwaukee, Detroit, or a score of American cities twelve years ago. It was not unlike a hundred American cities to-day. It might have been as uninteresting, disorderly, dirty, as our own cities. It might have neglected its opportunities. But Dr. Marx appreciated that Düsseldorf could become great, could compete with other cities, only through the action of the city itself. He increased the debt enormously. He acquired the street railways, gas and electric lighting undertakings; he made them as perfect as they could be made. He planned the growth of the city for fifty years by laying out streets, parks, and building sites far in advance of the boundaries. He engaged the city in all kinds of big un-

THE NEW CITY HALL IN DRESDEN
An impressive example of city building

dertakings, in the purchase of land, of great woods and parks, in making a continuous parkway on both sides of the Rhine. In twelve years' time he made Düsseldorf the "garden city" of Germany, probably the most finished city in the world. It now has 325,000 people. The German Steel Trust has made it its home. Other industries have chosen it because of its advantages. People come to Düsseldorf as a place of residence. It is a center of arts, music, and education. It is one of the show cities of Germany to which travelers come from all over Europe and America.

Having done this, Dr. Marx retired at the end of twelve years of service. Dr. Oehler, of the near-by city of Crefeld, was chosen by competition to carry on his programme, to which the city is enthusiastically committed.

Düsseldorf is now one of the most perfectly planned cities of the world. It is a show city, like Mannheim, Charlottenburg, Dresden, and Munich. It has been built as an individual would build a home; as the German princes laid out their capital cities. It was, and is, a factory town. But it is as beautiful as Washington.

When I first knew Düsseldorf, twenty years ago, the banks of the Rhine were low-lying marsh land, uncared for and unsightly. They were like the water-fronts of many American cities. The city reared stone embankments to retain the river. Within the embankments it made land and laid out parks, esplanades, and playgrounds, as is being done along the lake front in Chicago. The Rhine promenade runs for miles along the right bank of the river, while upon the opposite side a long shelving beach was converted into a place of public recreation. At one end of the city the Kaiser Wilhelm Park was planned. Some distance from the river bank the Provincial buildings were erected, commanding a fine uninterrupted view. In front of them are a formal garden and playground. Farther on is a permanent art exposition building in which annual exhibits are held.

Here the Düsseldorf School of Art is encouraged. As a permanent endowment of the Art Exposition the city manages a splendid hotel. From the park the embankment narrows into an esplanade like that of the river Seine at Paris or the Victoria Embankment of London. On the top is a drive and promenade way. Steps lead down to landing-stages for passenger boats and pleasure craft. Business is not permitted to

impair the use and beauty of the river front for pleasure and recreation.

Farther on is the municipal harbor, built at a cost of $3,500,000, in order to encourage river traffic. It trebled the trade of the city in a few years' time. The docks are equipped with the most modern electric and hydraulic devices for the economical handling of freight. There are public warehouses of all kinds connected with the harbor on one side and with railway spurs on the other—all under public control and ownership.

Docks and harbors, railway tracks, promenade ways, and parkways—all are designed as a unit. They are built for commerce, for beauty, for people. There is no dirt, no confusion, no smoke. As in all German cities, the water frontage is prized and protected as one of the most valuable assets of the city.

The water approaches to the average American city are unsightly. They are given over to railway tracks, to shacks, to factories. Rarely are they beautiful. Rarely are they of any value except for limited trade and commerce. With the exception of New York, Baltimore, and New Orleans, none of our cities have made any serious effort to use their water frontage for the community, while along the Great Lakes the harbors are for the most part the private possession of the railways and the Steel Trust. From Duluth to Buffalo the Government has spent tens of millions on harbor improvements which have contributed but little to the development of competitive traffic. It would seem reasonable to insist that, before any expenditure is made by the Government, the city or the State should first make provision for the freedom of the harbor from private monopoly.

Germany owns her steam railways, and operates them to encourage industry, commerce, and export trade. Rates are fixed with these ends in view. There is no conflict between the cities and the railway administration. The railway is not an eyesore, a source of annoyance, dirt, and smoke. It is part of the city plan. Terminals, tracks, and stations are built into the city just as are the streets. They are subordinate to the community. Terminals are located at convenient places. Sidings are built where needed. The railways are connected with the docks, harbors, and waterways so as to encourage traffic and reduce cost. Every possible facility is afforded to industry to make the railways serve.

In Düsseldorf, Cologne, Frankfort, Charlottenburg, and elsewhere, we were shown how these German cities lay out suburbs and build streets; how they study the foundations of the city as an architect studies the foundations of a structure. Cities appreciate that the land of the city's site must be controlled. The land speculator cannot develop his property as he wills. He can only plat it as the city decrees. The city, not the owner, determines the style, width, direction, and place of streets. It does the building itself. It puts in the sewers, pavements, sidewalks, and almost always the water, gas, electric lighting conduits, and street railway tracks when the street is built. The cost of the street is charged back against the owner, to be paid by him in easy installments.

The land around Munich has been planned on paper for fifty years' growth. The street plan is recognized as controlling the life of the city. Streets control the business. They are designed to facilitate traffic by the shortest possible routes. They control comfort, convenience, pleasure. The nature of the territory is studied, and the uses to which it would naturally be put. Streets control the health and housing of the people; so the city plans its streets to prevent the evils with which we are familiar. Streets are the circulatory system of the community, and they are designed accordingly.

This appreciation of the permanence of the city and the necessity for the control of its physical foundations is part of the conscious building of cities. This explains the beauty, charm, and orderliness of the German city. Municipal ordinances decide whether land shall be used for residences or industry. Factories are compelled to locate on that side of the city away from the prevailing winds. Residence districts for workingmen's houses are determined in the same way as are the sites for residential villas. And each district is laid out according to its particular use.

The area of the city is divided into building zones, in each of which the percentage of land that may be covered by buildings is fixed. In Ulm the lot area in the new building sections is distributed as follows: fifty per cent is reserved for front gardens, thirteen per cent for rear gardens, seventeen per cent for streets, while only twenty per cent can be built upon. Mannheim is divided into three zones. In the business section sixty per cent may be covered by buildings, which may be five stories high. In the next

GARDEN CITY COLONY FOR WORKMEN, NEAR DRESDEN

HERE ARE INDUSTRIES THAT HAVE MADE THE GERMAN NAME THE NIGHTMARE OF ENGLAND. THEY MIGHT LOOK LIKE OUR OWN FACTORY TOWNS—BUT THEY DO NOT. GERMAN CITIES ARE BUILT FOR FIVE SENSES RATHER THAN FOR BUT ONE

outer zone fifty per cent may be built upon, with space between each building; the limit of height is three stories, and the building area is much smaller. In the residence district of Cologne fifty per cent of the land must be free. The building line is also fixed a certain distance back from the lot line. This insures harmony in house frontage. Houses and business blocks may not exceed in height the width of the street. In certain sections houses must be a certain distance apart. This insures light and air. It prevents congestion. It guarantees the city against the disease-breeding conditions of the slums.

This control of the land and streets is the most important feature in city planning. Schools of planners have arisen with very divergent ideas about street styles. All of the planners repudiate the American rectangular block type of streets. They are rarely permitted except in limited business sections. They are monotonous, cold, and uninviting. They are not even suited to traffic. One school urges spacious streets, like those of Washington. It designs thoroughfares with long swinging or serpentine curves, so as to secure vistas to house fronts. Another school breaks up the street arrangement by making the streets very irregular. It tries to reproduce the picturesqueness of the sixteenth-century city, of which Nuremberg and Rothenberg are the best examples. The aim is to make streets cozy and comfortable, to adjust them to living, to domestic use.

Provision is made for broad boulevards and *Ringstrassen* to serve as radial thoroughfares. They are parked in the center as promenade ways. The street car tracks are sodded to keep down the dust and noise. There are bridle-paths and broad sidewalks. These boulevards bring the parkways into every part of the city. At frequent intervals there are gardens and playgrounds. They are designed with great variety. Some of them suggest the Italian, others the English, garden. There are retiring spots for the family to gather, for the pedestrian to rest.

Some German cities lay water, gas, and other service pipes under the sidewalks instead of in the center of the roadway. This is done to protect the pavement from being torn up to get access to the service mains. The pipes are laid in galleries, and, while the initial cost is somewhat heavy, there is ultimate economy in repairs to the streets. Private corporations, of course, are not permitted to interfere with the roadways or to tear them up at all, as is done in this country.

There is beauty in everything. For beauty the city spends generously. Bridges have commanding approaches. They are adorned with statuary. One stands before the approaches of some of the bridges crossing the Rhine as before a cathedral. River banks are laid out with elaborate care. Clock towers are located at street intersections. Along street railway lines are comfortable waiting-rooms. Street signs and electric poles are artistically designed. Telephone and telegraph wires are placed underground. In some cities trolley spans are hung from the sides of buildings by rosettes. Business signs and billboards are controlled or prohibited altogether. Announcements are limited to public kiosks, from which frequently papers are sold. Almost every large German city brings its parks down to the business district by its *Hofgartens*, city centers, or *Ringstrassen*, while the market grounds, city halls, plazas, and station places are made as attractive as possible. Beauty is not an end in itself. It is merely incidental. It is taken as a matter of course in all public work. The German city is built for five senses rather than for but one.

Many expedients are adopted by cities to encourage beauty in private work. Paris abates part of the street tax to owners whose structures receive official approval. In Brussels and Copenhagen medals are awarded to architects for the finest building of the year, while in Paris prizes are given for the best street façades. House fronts are ornamented with window-boxes, and some streets present the appearance of a continuous hanging garden. Good architecture is given public as well as private approval.

There is competition in big city-planning projects. Berlin and Munich have recently awarded substantial money prizes for plans of city rebuilding—for the development of the suburbs and for city centers. The plans of Munich cover an area adequate for fifty years to come.

France and England have caught the spirit of Germany. Town planning has been made compulsory in these countries by legislation enacted in 1909. Now all French cities must be laid out in a comprehensive, far-sighted way. America, too, has felt the inspiration of Germany. We have begun to think in city

terms, to build for beauty, to plan cities. This awakening is, I think, the most encouraging sign in the whole municipal movement. For it is a social awakening, a recognition of the necessity of controlling property. Nearly a hundred American cities have undertaken planning projects of more or less ambitious proportions. A large number of them have employed experts to aid them.

As yet city planning in this country is limited. It is confined to city centers, to the grouping of public buildings, to the opening up of boulevards and parks, to the Haussmannization of old sections of the city. Chicago has planned a much more comprehensive scheme, covering the whole city. Boston is working on a great metropolitan plan. Ohio, Wisconsin, and Michigan have enacted legislation giving cities power to plan suburbs. And the movement is only a few years old.

RAILWAY STATION IN DÜSSELDORF

Düsseldorf might have been as disorderly and dirty as our own cities, but under the guidance of Mayor Wilhelm Marx it became, in twelve years, probably the most finished city in the world

More than a century ago Washington was planned, as all cities should be planned, by Major L'Enfant, who was employed by the Federal Government. It was laid out for a hundred years in advance of its building. With untouched sites to build upon, and with the example of Washington before them, American cities should have been the best-planned cities in the world. Yet not a single American city followed the example of Washington, with its spacious dignity and beauty. Instead of that, our cities adopted the checkerboard street plan of Philadelphia or left the planning wholly to individual landowners. This failure to anticipate the future is the most costly of all our municipal failures. Our neglect of the physical foundations makes our cities ugly, monotonous, and lacking in beauty. Even to-day we are neglecting our suburbs, and permitting ring after ring of mean streets to be laid out by private builders. A little foresight could make our surroundings beautiful. We should appreciate the fact that cities will continue to grow in the future as they have in the past. We could easily prevent the reappearance of old abuses by merely laying out the suburbs as the Germans do, by purchasing open spaces for parks, playgrounds, and sites for public buildings in advance of their need, and by treating city planning as worthy of as much care as the building of our sewers.

City planning is a larger programme than streets, parks, or playgrounds. It is more than the city beautiful. In Germany city planning involves the building of workingmen's homes. Almost all of the larger cities have built municipal or co-operative houses

for the relief of the housing question. Germany, like England, has reached the conclusion that the building of houses to be purchased with safety as an investment by private capital does not meet this problem by the erection of model apartments which rent at from four dollars a month upwards and which contain every convenience as well — the private tenements, moreover, with kindergartens and play places in the open courts in the center. Germany has not solved the housing problem, which is very acute in all her industrial cities, but the cities and municipal organizations aided by the insurance funds of the State have made a beginning and have pointed the way by which it can be solved. The housing of the people is part of the science of town planning. So is the development of steam and street transportation, as well as railway and water terminals. Street railways, gas, electric light, and water are treated as the tools and agents to be owned and operated for service, comfort and convenience. Harbors are planned and waterways used with the same motive. All along the Rhine, as on the Seine, and even inland cities like Berlin and Leipsic, utilize waterways for carrying on a tremendous traffic. The banks of streams in Berlin and Vienna and inland lakes, like the Alster at Hamburg, are jealously preserved and made as beautiful as possible.

Beauty is joined with utility in everything. The ugly is not tolerated. Frankfort found it necessary to improve some of the medieval streets in the center of the city. It did it with reverence. It reproduced the overhanging upper stories of the old houses from which the crooked streets were preserved. Cities mountain the old gates and towns dear with harmonious structures, as in Munich. In Nuremberg and Munich new housing projects in the suburbs are designed to reproduce the old type of houses with projecting upper stories, such portraiture and fantasy like those of mediæval times. Opera houses, theaters, music halls, public gardens, bathhouses, and pleasure places all these are part of a comprehensive plan and are located in the best place. They are maintained by the city as necessary functions of a well ordered municipal life.

In Germany the municipal problem is a personal rather than a material problem. What is believed to be possible with men rather than with instruments. City administration is personal, paternal, political. It does not deal much in things. They have a definite municipal programme of building. They want the individual to give wider latitude to private business, irrespective of its effect on the rest of us. We permit land speculators, builders, and manufacturers to do pretty much as they will and the courts recognize as valid the attempt to control their business.

The German city possesses this. It thinks of all the persons of tomorrow. As well as to-day, of landowners as well as householders, of consumers as well as producers. It seems always to be thinking of the community. The important city is run for certain businesses, each of which has a recognized standing above and superior to the rights of all of us. This is the chief failure of American cities. This is our most serious weakness. The failure to control property in the large is of the community has saddened the American city. Not until we begin to think in new terms and until we appreciate the necessity of controlling [illegible] can we hope for a big municipal life.

IN THE PUBLIC EYE

A FIGHTING PROGRESSIVE

THERE are not many public men who evoke both fear and affection. Some men who have great strength of mind and will are leaders because they can drive their opponents before them. Such men, however, usually inspire in their followers no deeper feeling than respect. Other men who have winning qualities of manner and personality are leaders because they inspire in their followers a loyal affection. Such men, however, may even disarm their opponents by their own amiability, but they do not cause their opponents any great concern. The man who commands the affection as well as the respect of his coadjutors and allies, and at the same time can put fear into the heart of the foe, is a rare sort of leader.

This is the kind of man the Progressive party has selected as its nominee for the Vice-Presidency.

He is one of the best-hated men in America. He earned the hatred of some men by the way in which he prosecuted corruption as attorney for the public in a California court room. The man whose place he took, Francis Heney, had been shot down and almost mortally wounded while he was conducting the prosecution before the judge. Hiram Johnson concluded the case successfully. As a consequence Abe Ruef was sent to jail and wealthy corruptionists were forced to loosen their grasp.

Then Hiram Johnson was chosen first as the Progressive Republicans' candidate for the gubernatorial nomination; then, after a struggle of nearly half a year, as the Republican candidate for Governor; and finally, after another bitter fight against the worst forces in the State, as Governor.

Under his administration the State of California experienced the greatest change in the fundamental character of its government that any State of the Union has probably ever undergone in so short a time. Not long ago notorious because of its subservience to one of the worst forms of oligarchy, the rule of a railway corporation, California has now become a pioneer in the development of self-government. This change has involved a renewal of the State Constitution. And through it all Governor Johnson, with a strong hand, has held the State on its course. How he has led his forces of construction was told by Mr. William Kent in The Outlook for the 10th of last February.

At the same time he has made the great majority of the people of California his loyal and affectionate friends. The feeling toward him is that of a body of soldiers to such a general as Sheridan.

At the Republican National Convention last June Mr. Johnson was an effective leader of the forces that were fighting against the group of men in control of that body. The delegation from his State was from beginning to end eager in its defiance of them; and it was one of the delegations to suffer from the methods those men employed. With the rest of the California delegation, Mr. Johnson wished to repudiate the Convention as soon as it was shown to be in the control of that group. Other counsels prevailed; and it was decided by the protesting delegates that the fight for their principles should continue, without an overt act of repudiating the Convention until every resource had been exhausted. Here it was that Mr. Johnson proved his capacity as leader. Without changing his opinion as to what was the wiser course, he accepted the decision of the majority, and with power and effectiveness acted as a field officer in the struggle according to the prevailing plan. And when, in the course of that stubborn parliamentary battle, he appeared before that body, which he regarded as already fraudulent in its very constitution, he made a speech on behalf of

HIRAM W. JOHNSON

the protesting delegates that will never be forgotten by those who heard it. Even the most unfriendly among his auditors could not deny the power of his incisive words, uttered with a voice that expressed in its very tones indignation under control. The next time that he appeared in that place was somewhat more than six weeks later, when he was summoned before another great body of delegates, and, standing beside Theodore Roosevelt, announced his acceptance of the Progressive nomination for the Vice-Presidency.

His power with men can be readily understood by those who heard those two speeches. Whoever hears him, whether he agrees with him or not, cannot doubt for a moment that here is a man who knows what he thinks, who means what he says, who wills what he sets his hand to, and who feels strongly and deeply; who counts as his own foes all whom he recognizes to be the enemies of the people, and who commands the loyalty of others because of his own loyalty to the cause he espouses.

Hiram Johnson has the distinction of being selected for the Vice-Presidency on account of his fitness for the position of President. Ordinarily, in American history the man chosen to be ready to take the President's place has been chosen without regard to his fitness for the Presidency. Each of the two traditional parties has been divided into two factions—the one conservative, the other more radical or liberal. The candidate for the Presidency being chosen by the dominant faction, the candidate for the Vice-Presidency is chosen in order that the other faction may be placated. Thus the candidate for the Vice-Presidency is usually not merely a colorless man, who, though belonging to the minority faction, is tolerably liked by the dominant faction, but also one who, by the nature of the case, cannot be expected to carry on the policies of the man whom he may at any time succeed. The Progressive party, by the very circumstances of its origin being free from this division into two diverse parts, has selected as its Vice-Presidential candidate one who stands for the same principles and policies as its nominee for the Presidency. The Convention that chose Hiram Johnson believed, in the words used at the time, that he was fit not only to be President, but to be a great President.

A BORN DEMOCRAT

The Democratic candidate for the Vice-Presidency is Thomas Riley Marshall, Governor of Indiana. In some respects Mr. Marshall is a counterpart of Mr. Sherman, the present Vice-President and Republican candidate to succeed himself. Both men

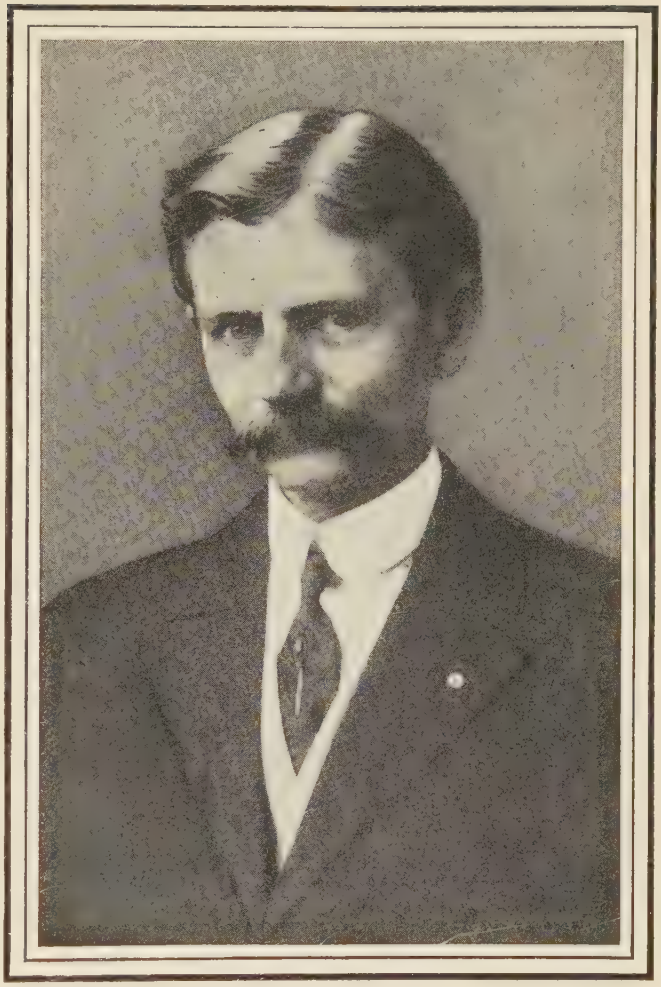
belong to that old-fashioned school of rather rhetorical politicians who are inclined to "point with pride" or "view with alarm."

Of the two, however, Mr. Sherman has a tendency toward being taciturn; Mr. Marshall, on the other hand, is a good deal of a talker. But how epigrammatically he talks! For instance, the other day, in speaking of the tariff as a burden on the many and a benefit to the few, he said: "It is no part of government to boost one man and boot another."

Again, "A dollar is so clean that an infant may cut its teeth upon it."

Again, "Democrats, like poets, are born, not made."

There is also a homely, homespun fervor about Governor Marshall's speeches. Not only has he an unusual capacity for phrase-making, of stating truths concisely and sententiously, but he effectively unites candor with fervidness. Finally, he understands how to "size up" a political situation. For instance:



THOMAS R. MARSHALL

The voter who cannot satisfy himself this year is indeed censorious. Eliminating the verbiage of platforms, taking their substance and viewing the candidates placed on them, the voter who believes that the cost of production at home and abroad should be equalized to the manufacturer of this country, and who wants an oligarchy to rule, may vote the straight Republican ticket.

The voter who believes in a similar protective theory, but who prefers to an oligarchy that the President shall be the state, may vote the Progressive ticket.

The voter who believes this Government should be turned into a socialism may vote the Socialistic ticket.

The voter who thinks that church and state are not separate in America, and that the people have a right to settle religious questions and to determine by ballot what is good and what is bad, may vote the Prohibition ticket.

All those who insist that it is not the business of government to equalize the cost of production at home and abroad to the manufacturer until it equalizes the difference in the purchase price to the consumer at home and abroad, who believe that the only equalization justifiable in our Government is the equalization of opportunity, who think that public office is a public trust, who do not believe that disgruntled and defeated politicians are genuine reformers, and who think that reformers are not born with sore toes, may vote the Democratic ticket.

Politically, Mr. Marshall may be termed a Jeffersonian individualist. But he is something more, for he describes his party's purpose as follows: "To give every man his chance in life, unhampered and unaided by legislative enactment. That means the use of powers never contemplated by Jefferson."

Governor Marshall does not take much stock in the opinion of Progressives that the people do not rule as they should. "The people do rule," declares the Governor, "and

JOSEPH MOORE DIXON

always have, and can have just the kind of government they want"—the view of a political optimist!

Mr. Marshall is a native Indianan. He was born at Manchester, Indiana, in 1854. He is a graduate of Wabash College, an institution of which he is now a trustee. He practiced law at Columbia City, Indiana. Three years ago he was elected Governor. In appearance he is a typical American. Quick, alert, nervous, with all his senses on tap, he seems thoroughly alive to all that is going on; and he inspires those about him, without distinction of political party, with his conscientious conviction of duty and his entire courage in doing it. Despite certain personal and political limitations, the Democratic party might, in its search for a Vice-Presidential candidate, have gone very much farther and fared very much worse.

DIXON OF MONTANA

When, late last winter, Progressive Republicans all over the country had made unmistakable their demand that Mr. Roosevelt should let his name come before the Republican Convention, and Mr. Roosevelt consented, an unprecedented situation was presented. Many of the delegates to that Convention, mainly in Republican States, were, for the first time in American political history, to be chosen by popular vote at Presidential preference primaries. It was therefore necessary that the Progressive Republicans should be organized in some way, and justify their demand by their votes at the primary polls. Committees were formed in various States, and also a National Committee. It was soon made plain that the Progressive leaders of the party would have to initiate and carry through a campaign; and equally plain that in that campaign one speaker was essential in every State—Mr. Roosevelt himself. No such task had ever been undertaken before. All the National party machinery was in the hands of the opponents of the Progressives. On the part of the Progressives it had to be an amateur fight. The very proposal of this campaign elicited from the regular party leaders and from many newspapers all kinds of jokes and jeers.

It was at this time that Senator Joseph M. Dixon, of Montana, was selected as Chairman of the National Roosevelt Committee and manager of the Progressives' campaign. What was accomplished during that campaign is a matter of history and needs not to be rehearsed here.

Then, after the Republican National Committee, in control of the opponents of the Progressives, had done what they could to

frustrate the results accomplished at the primaries, came the Republican Convention. There Senator Dixon again showed his executive power. It is hard to imagine the extent of the labor involved in this whole struggle. Before the Convention was concluded it became evident that the struggle was not yet ended. If the Progressives were to win their fight, they saw that they must form a new party. That meant that the fight would have to be renewed on a larger scale, and that a new organization would have to be built up throughout all the States of the Union. Senator Dixon, who had borne the brunt of the executive work for four months, never wavered. He turned to the task ahead of him as if he did not know what it involved. In less than six weeks he was at the head of a fighting organization that represented every State but one in the Union; and almost exactly seven weeks after the Republican Convention assembled in Chicago, he called to order in the same city and in the same building another—the first National Progressive Convention.

The whole country knows what the spirit of that Convention was—knows of its moral fervor, its earnestness expressed in the singing of the great assemblage, and as much in its willingness to sit silent and listen as in its songs. The whole country does not realize, however, how much the spirit of this Convention is due to the ability of Senator Dixon, not only in calling upon the right sort of men and women to aid in the organization of the new party, but also in the tone which he gave to that Convention by his words as he called the Convention to order and summoned its members to the serious duties before them.

When Senator Dixon has anything to say, he says it in a vigorous Western fashion, and there is no mistaking his meaning. He never says anything, however, unless he has something to say. It is what he does that counts; and he does it in a quiet, resolute way—and then there is no mistaking his determination.

Senator Dixon is forty-six years old—young for a Senator. In the Senate he never has gone to the extremes that two or three of the more impetuous of his colleagues have reached. He has simply followed his convictions. And now that his convictions involve a laborious work promising much sacrifice and no material reward, he keeps following them in his hopeful, engaging, efficient way.

A FIGHTING DISTRICT ATTORNEY

A mere glance at the portrait of Charles S. Whitman will convince any keen observer of human character that the District Attorney of New York County possesses at least one of the essential qualities of an efficient prosecutor of lawbreakers—the fighting quality. There are other essential qualities, too—a thorough knowledge of the law, a familiarity with court procedure, an ability to discriminate between the good and bad in human nature, and the possession of high standards of civic and social morals. These qualities District Attorney Whitman also possesses in a more than ordinary degree; but it is the fighting function of the public prosecutor, the determination to protect the community from the vicious and criminal, not merely by defensive methods, but by offensive methods, which have enabled District Attorney Whitman to do more than any one other single public official to expose and bring to punishment the foul and barbarous group of grafters who have been preying upon New York City through the Police Department. To cope with men of this type, who do not scruple to commit the most dastardly murders, requires the kind of moral and physical courage that will fight and fight hard against overwhelming odds. It is peculiarly fortunate for New York City that it has a man of this type in the office of District Attorney just at this time.

Charles Seymour Whitman was born in 1868, the son of a minister of the Congregational Church. His father was a graduate of Williams College in the class of '54. Judge Whitman was a graduate from Amherst in the class of 1890. On graduating from the law school of New York University in 1894, he immediately began to practice law in the city of New York. After eight years of private practice, he entered the public service in 1902 by becoming Assistant Corporation Counsel of the City of New York, to which position he was appointed by Mayor Low. During Mr. Low's administration he also acted as the Mayor's legal adviser, and he was finally appointed by Mayor Low to be a City Magistrate, an office which had been so often belittled by the character and conduct of some of its incumbents that Judge

COPYRIGHT BY AMERICAN PRESS ASSOCIATION

CHARLES SEYMOUR WHITMAN

Whitman's friends regretted his acceptance of the position. But he had the wise judgment to perceive that a city magistrate who regards his office as a public trust can perform both useful and important services for the community. While a city magistrate he originated the Night Court, by means of which those persons who are arrested for alleged misdemeanors at night can be arraigned at once without detention in the police station. The Night Court, which has been very successful in promoting both efficiency and justice, has gone far to destroy the extortion which used to be practiced by professional bondsmen. Judge Whitman's efficiency as a city magistrate is attested by the fact that the Board of City Magistrates, strongly Democratic, elected him as President, although he has always been strongly Republican.

From the Board of City Magistrates Mr. Whitman was promoted by Governor Hughes in 1907 to be a judge of the Court of General Sessions, and his record on the bench was an admirable one. It is this service as a city magistrate and on the bench of the Court of General Sessions that has given him the title of Judge—a title which is in common use among his friends and associates, although his present office is not a judicial one. In 1909 the opponents of Tammany Hall united in a Fusion movement in which Mr. Otto T. Bannard, the well-known Republican banker of this city, was nominated for Mayor. Judge Whitman was named as the Fusion candidate for the office of District Attorney. Mr. Bannard was defeated for the office of Mayor, but Judge Whitman was elected District Attorney by a plurality of about thirty thousand in a county which is normally Democratic by from fifty thousand to seventy-five thousand. The record of his administration has been an admirable one, both as regards the type of men appointed as his assistants and deputies and as regards the spirit which animates their work. He has not only made it his business to prosecute criminal violations of the law with vigor and without fear or favor, but he has undertaken to promote justice as well as to prevent crime. "On the theory that he is a prosecutor and not a persecutor"—we quote from a recent legal publication—"he has determined to correct certain abuses in the police courts of New York City through which impecunious defendants suffer. His plan is to send a representative of his office to each court, with instructions to see that all defendants get a square deal. If the testimony warrants conviction or holding for a trial in higher courts, the District Attorney's representative will serve as a prose-

cutor ; if it is insufficient, or if there are irregularities in court procedure, he will act as counsel for the prisoner."

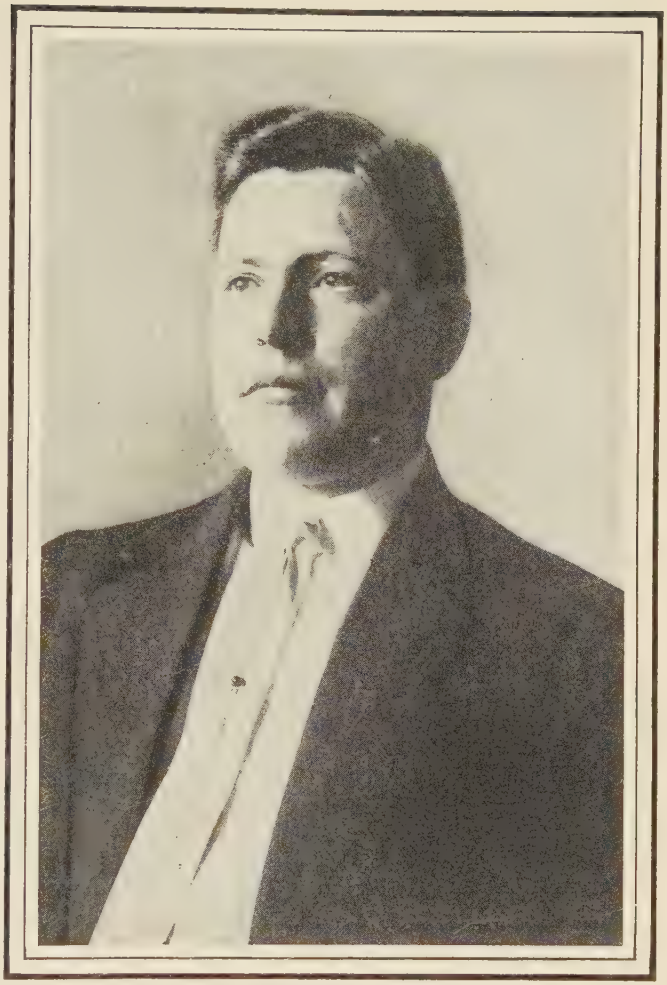
We hope to see Mr. Whitman's term of public service long continue. If the citizens of the city of New York or of the State of New York are wise, they will see to it that a man of his acquirements, character, and experience is not dropped from the public service because of their lack of appreciation.

THE INVESTIGATOR OF THE NEW YORK POLICE

"Tell us of your early struggles, Mr. Buckner."

"No garret story, please. Until I came to the bar I did stenographic and secretarial work—but was well paid and had lots of fun out of it."

In this fashion Emory R. Buckner, who has recently been made chief counsel to the Committee of the New York Board of Aldermen that is investigating New York police conditions, met the newspaper demand for "copy"—one of the great tests of character for public men. His answer discloses a healthiness and honesty and humor which are of the essence of the man. His career through college and professional school was the experience of many men, and he did not propose to capitalize it beyond its true value of good sense and industry and sound ambition, nor yet mar its wholesome enjoyment by retrospective self-pity.



COPYRIGHT BY AMERICAN PRESS ASSOCIATION

EMORY R. BUCKNER

At thirty-five Buckner has a big opportunity before him, but only the superficial observer thinks that the capacity and character that are intrusted with the constructive solution of the most far-reaching problem of New York City is a birth, or perhaps even an accident, of the moment. In truth, Buckner is a philosopher and knows that luck, or opportunity, or whatever you call it, is the "x" of a human equation ; but he had prepared himself to meet it when it came. He is a Westerner, is Buck (as his familiars call him), but he has an appreciation of the complexities and subtleties of life that would jar Henry James's simple conception of that traditional gentleman. He has, too, the ardor and effective self-confidence of a Westerner, but to call him breezy would only disclose the ignorant smugness of the critic.

With a rare gift for distinguishing the essential from the immaterial, a telling forensic talent, a mind at once subtle and robust and capable of sound generalization, with a strong joy for battle, the law has claimed him as her rightful own.

Leaving Harvard Law School in 1907, he came to New York largely because life has always seemed to attract him most along the lines of greatest resistance. The professional

opportunities and not merely the occasional heavy professional returns draw so many men of high talent to New York. There, intellectual interests and the play of forces receive their best satisfaction. No one knew better the hazards and cruelties of New York. No place can be more obscuring or isolating; and, as he himself has said, New York is not the least like a slot machine where so much talent and industry are put in in return for compensating reward.

But New York needs the talent of men like Buckner—at least as much as they need its opportunities. He came to New York City just at the time that Henry L. Stimson, the present Secretary of War and then United States Attorney, in his efforts to have the public interests as effectively represented as the large private interests against whom the Government was proceeding, reorganized the District Attorney's office through a group of young men, most of them recent graduates from our law schools, to whom the stimulus of public spirit made an especial appeal. This opportunity for giving his talent the direction of service inevitably attracted Buckner. He is singularly free from cant and untainted by any notions of self-righteousness, but the Government service released both his effectiveness and his enthusiasm. The public service as at present organized naturally devolves great responsibility upon the young and even inexperienced. Buckner was equal to the responsibility and grew under it. He distinguished himself especially in the fraud prosecution against the Sugar Trust. The work he did in the office of the United States District Attorney, confirmed by his subsequent career, led Mr. Stimson, a restrained and conscientious critic, to write to the Aldermanic Board that no better-equipped counsel, for his years or beyond, could be chosen than Buckner.

In 1910 Judge Whitman, the present District Attorney for New York County, took Buckner from the Federal office and made him one of his senior assistants in the County District Attorney's office. The great volume and variety of litigation in that office gave practice to the innate powers of Buckner, and he became widely recognized at the bar as an advocate of power and purpose and a cross-examiner of rare skill. His experience as Assistant District Attorney of the county likewise gave him intimate contact with the various police problems of the city in their relations to the complex question of prostitution, gambling, and the maintenance of public order.

Buckner has been but few years at the bar, but he illustrates anew that, in the growth of strength and insight and power, events and intensity of experience are more important than years. As a lawyer he has burning enthusiasm and consuming devotion to his cause, but marked generosity to his opponent; and he is a partisan only of Truth. His humor, his perspective, a sense of the congruities of things, and sympathy with life's incongruities, add poise and judgment to his effectiveness.

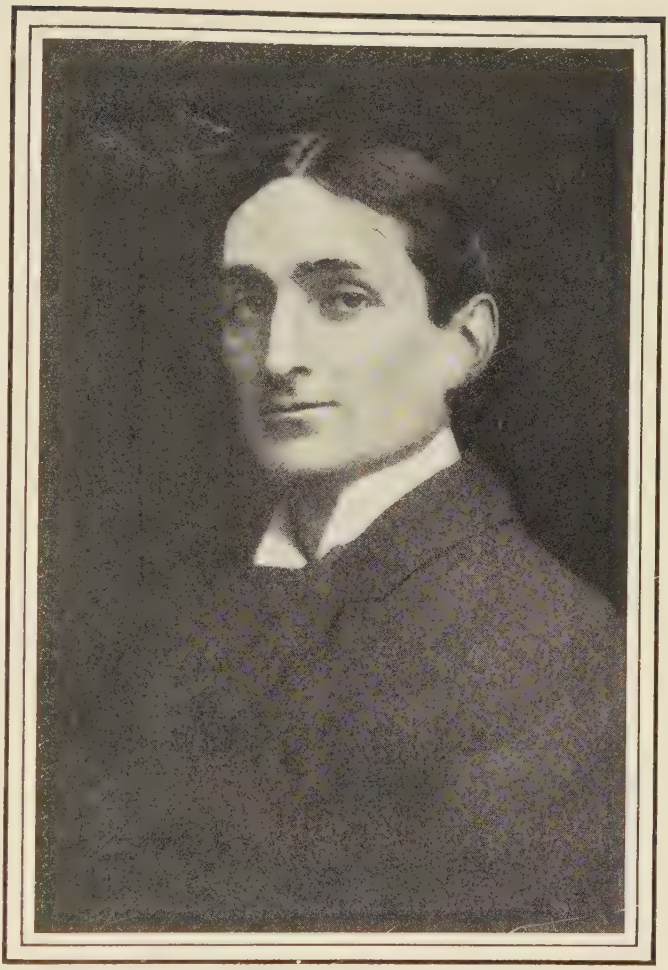
When the Committee of the Board of Aldermen charged with the investigation of the police situation came to select its chief counsel, it was realized that the work called for strong constructive qualities and robust character, and it was only natural that Buckner should be urged upon it on all sides. Relentless in his search for truth, uninfluenced by the insidious and subtle deflectors of purpose, keen in diagnosis and sound in counsel, he is not one to tear down merely to destroy. A gigantic task confronts the Committee, and the greatest burden, of necessity, will fall upon its chief counsel. For the New York police situation, in a word, discloses widespread public disbelief as to the honesty and efficiency of the force. The problem has done much toward the undoing of every Mayor in our time, and since Roosevelt no Police Commissioner except Bingham has added to his reputation in office. Permanent reforms can come only from a patient and thorough ascertainment of the causes underlying the present conditions. Thus the problem far transcends the ephemeral and dramatic features of graft and vicious crimes of violence. These have aroused public interest to a high pitch, which it is natural to expect to spend itself before long. In the meantime the Aldermanic Committee will patiently labor at the task which, largely under the guidance of its counsel, it has mapped out for itself, of presenting to the city of New York a constructive programme of police administration. In this task the Committee and its counsel needs and should have the strength of public support and interest.

Not so long ago, at dead of night—that solvent of truth—two young men were dream ing dreams of youth. The long silence was at last broken by one of them: "Buck, you seem to be thinking hard." "I was think-

ing," replied the other, "of the great fun in conducting a public office solely for the public welfare."

A BUSINESS MAN IN POLITICS

The Democratic campaign is being largely managed by Mr. William Gibbs McAdoo. Hitherto Mr. McAdoo has not been particularly well known in a political capacity. But he has been very well known in his capacity of initiator of a singularly efficient transportation system, namely, the so-called "Hudson Tunnels." He is president and director of the Hudson and Manhattan Railroad Company, which operates the tunnels under the Hudson River and New York City. The first tunnel was completed eight years ago. They were opened for traffic in 1908.

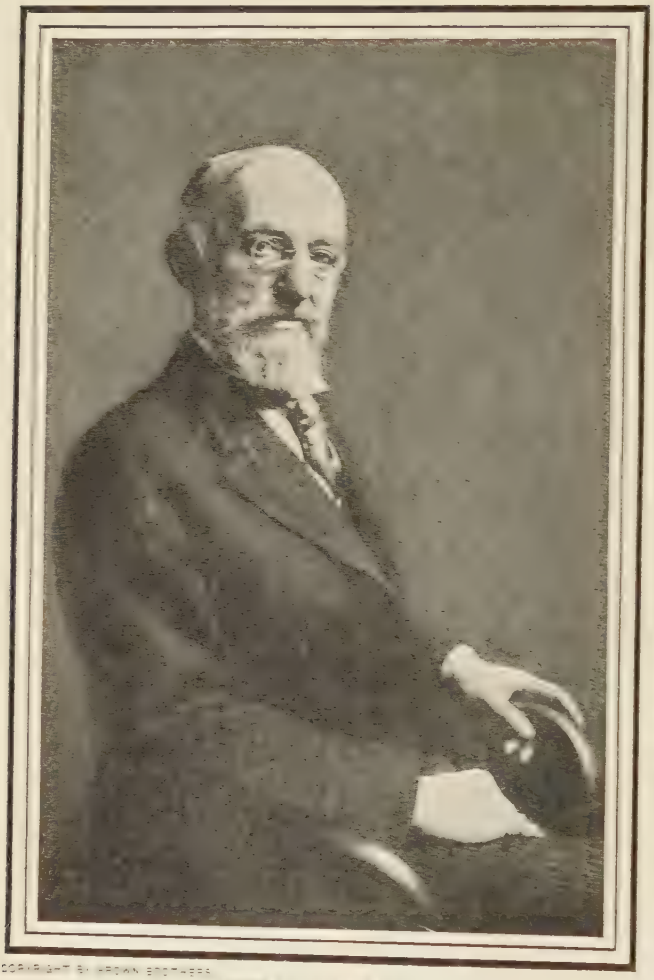


WILLIAM GIBBS McADOO

In 1910 Mr. McAdoo made an offer to undertake the operation of an underground subway system in New York City, and to provide fifty million dollars for its equipment —when it had been built by the city at a cost of a hundred millions—and to divide the profits from the operation of the system equally between the company and the city. This offer, although it was not accepted by the city, resulted in such a breaking down of the walls of monopoly as to bring about the present plan under which the underground system has been financed and operated, for it forced from the Interborough Company a far more advantageous offer than it had ever been willing to make before; and it also showed that private capital was not afraid to undertake the operation of a second subway system.

In the conduct of his own company Mr. McAdoo has made an enviable reputation because of his vigorous assertion that his company will be "run," not along the old brutal lines of "The public be damned," but along the better lines of "The public be pleased." That the public is pleased was conclusively shown recently when the rates of passenger fare were slightly raised without encountering serious opposition.

In his rôle as a political manager Mr. McAdoo has been so far chiefly remarkable for his suggestion that the banks of the country should become agencies for the collection of campaign funds, not only for the campaign expenses of the Democratic party, but also for those of the Republican, Progressive, or any other parties. Many bank and trust company officers still regard this suggestion as rather chimerical, although others profess willingness to accept such subscriptions. The funds contributed in this way would probably go chiefly to the country banks, for the reason that in the large cities practically all the persons who would contribute small sums are members of the various political organizations, and would pay over their



COPYRIGHT BY BROWN BROTHERS

OSCAR S. STRAUS

money to the treasurers of the local bodies. In addition, it is believed that a good many banks in the smaller communities would take up the scheme for the sake of the advertising and the publicity to be got from it. In his opinions as to political prospects Mr. McAdoo, as a Southerner—he was born at Marietta, Georgia, in 1863—has a native buoyancy and touch-and-go. The New York "Times" correspondent at Indianapolis quotes him as saying there: "I am just an ordinary business man with small knowledge of politics, and have not therefore had time to develop the gift of prophecy. Now, there are Hilles of the Republican Committee and Perkins of the third termers, who are veterans in the game, and will doubtless laugh if I essay the rôle. However I must learn, and I understand that one of the first things to do in politics is to be bold in the alluring field of prophecy; so this is my qualifying round: I prophesy that Wilson and Marshall will carry nearly every State in the Union."

OSCAR S. STRAUS

Whatever course the political campaign in New York State may take, it is safe to assert that the Progressive candidate for the Governorship will hold throughout the respect of all parties and all factions. His worth has been so thoroughly proven in the past and his character is so highly esteemed by men of all races and party affiliations as to make anything else unthinkable. Six years ago, when Mr. Straus entered Mr. Roosevelt's Cabinet, The Outlook declared that his most eminent qualities were a generous enthusiasm, a broad spirit of humanity, and practical common sense. Added experience has increased his broad sagacity and his knowledge of men and affairs. The other day at Syracuse, when the Progressive Convention was at an apparent standstill, not because good material was lacking, but because there was an even balance between two excellent candidates, the happy solution of turning to Mr. Straus as to a man whom all knew and trusted had but to be made when the whole body of delegates seized upon it with such unanimity and enthusiasm as have rarely been seen in a public meeting. And the day after, the most bitter anti-Progressive newspaper in New York admitted that the campaign for Mr. Straus was one to be reckoned with seriously, and that in selecting a man with "an honourable record of public service as well as an unblemished character" the Progressives had taken "a position of undeniable strength." Mr. Straus stands pre-eminently for the idea of fraternalism: he is a Jew proud of his race and an American devoted to his country. When the Convention sang "Onward, Christian Soldiers"

after his nomination, it was not a bit of fun, it was a heartfelt recognition of the brotherhood of citizenship.

Oscar S. Straus was the son of a Bavarian merchant who was driven to America because he loved liberty; in his early life as a Columbia College student, a lawyer, and a merchant, Oscar Straus had the spirit of good citizenship always as his guide. Since he came into public life he has served under four Presidents; under Cleveland, McKinley, and Taft as Minister and Ambassador to Turkey, under Roosevelt as Secretary of Commerce and Labor. Only those who are acquainted with the secrets of international diplomacy know fully how great his services were in Constantinople; he stood firm as a rock against the evil Sultan of the old era and for American rights and American dignity. A fine outcome of Mr. Straus's diplomatic career has been his advocacy of international peace and his wide comprehension of the trend of the world's advance in arbitration and mutual effort. Here and in matters of State and city reform Mr. Straus has always shown skill in adapting means to ends, moderation but persistence in urging reform, and a sane, strong desire for the general good. He has a keen sense of humor, is extremely clever in the art of putting things, and is both courageous and courteous. Men both like him and have faith in him.

The latest instance of Mr. Straus's public usefulness is the service he is rendering as a member of the board of arbitration which is considering the claims and counter-claims of the Eastern railway engineers and their employing companies. The fact that the other members of the board have urgently requested him to continue the work without regard to his nomination as Governor, and that he has cheerfully yielded to their request despite the new and onerous responsibilities just undertaken, illustrates both the value of his services and his unostentatious devotion to duty.

That Mr. Straus has qualifications unusually varied in their nature, and such as might superficially be regarded as antithetic, was formerly expressed in these pages in the following sentences: "He belongs socially to the wealthy commercial class, but sympathizes with the democratic movement; he is a reformer and also a sagacious politician; he is a Hebrew and an American of Americans; he has vigorous convictions and tact in maintaining them; he is a defender of American labor and has a hospitable welcome for the immigrant; and he has maintained with a militant courage American rights in Turkey, and yet is a lifelong advocate of universal peace."

THE SPECTATOR

THE Spectator is fond of pageants. If he had lived in "the spacious days of great Elizabeth," when pageants had a popularity resembling those of moving pictures at present, he would have spent all his spare time in going to them. So when, one morning in Salem, he found that Marblehead was advertising a historical pageant for that day and the next, he promptly boarded the trolley car that runs past the wonderful crenelated and castellated Salem station, and began a journey to the past.

The pageant was to be at Hathaway Field—a name to conjure with. But while the Spectator yearned to hie him to Hathaway Field, he had not the faintest idea where it was, nor the hour for the performance. By long experience, he supposed it to be, probably, half-past three in the afternoon or thereabouts, which left ample time for lunch at a well-remembered restaurant on Fort Beach—a restaurant running out over the water, and making a specialty of fish dinners. Filled with joyous anticipations of a delightful day, the Spectator left the trolley in the center of Marblehead and sought out the Lee mansion (where the pageant committee had its headquarters, and tickets were on sale), only to have his pleasant plan receive a solar-plexus jolt. The pageant was not to be in the afternoon. It was an evening affair, with only one matinée, and that the next day. There was not even a dress rehearsal that afternoon—it had been held the day before. Now the Spectator had to be back in Salem by eight that evening, pageant or no pageant.

The situation was hopeless—but the fish dinner was still left. The Spectator turned down the narrow street, and threaded the maze of

ancient houses and modern gift shops which equally allure the summer tourist. Here was an unconscious little old cottage, set among branching gnarled apple trees, with flower beds fenced in by a low board coping from the sand paths, and blossoming riotously with a rainbow of phlox, tiger-lilies, hollyhocks, sweet alyssum, nasturtiums, larkspur, and dahlias. Next to it came a shingled cabin, rustic to an unprecedented degree, and exuding souvenir baskets and china at every pore. "Fern Dale Cabin" it was proudly proclaimed on a rustic sign, and only a step beyond it the "Clam Shell" announced "Sweet Fern Baskets, Postal Cards, and Souvenirs," and the "Sunflower Gift Shop" lay in wait ten paces further on close beside an old white mansion with faded green shutters and dahlia beds framed in circles of whitewashed stones. On the upper doorstep two handsome shells, one on each side, formed a decoration that had been there from time immemorial. Some of the old houses had beautiful tall china jars and settles on their narrow porches. One window bore a modest sign "Sunflower Seed for Parrots 10 cents a Quart." The doors were a study in themselves with their panelings, their fanlights, their fluted columns and pediments, beloved of water-color artists, some of whom were in position, with easel and block, working away happily. What would summer art do without our old New England towns?

The fish dinner turned out better than even remembrance had pictured, beginning with an ambrosial chowder and ending with apple pie, and as the Spectator came out upon the Fort Beach Road he found the Pirate Cottage at his very elbow. True to its traditions, it is now a Tea Room and Gift Shop, and its proprietor makes much of its history. In the early colonial days—it was built in 1650—a man dwelt in it who was secretly a pirate. The neighbors found it out, and the officers of the Crown came riding to Marblehead to investigate. But the pirate was too quick for them. He decamped, leaving a houseful of rich silks and brocades and other plunder, and was never seen again. Close by, in Oakum Bay, as it was once called, a band of pirates brought a beautiful woman on shore, murdered her, and buried her near the scene of the deed. At least, for years the ancient inhabitants, passing this point on dark nights, could hear her ghostly screams, though no grave and no body were ever to be found. It is altogether a thrilling and possible tale, and one more asset for a pageant; for a good reliable ghost has always fitted well into a show, ever since the days of Hamlet.

Speaking of graves is a reminder of Whitefield's question when the great preacher visited Marblehead and was shown the Old Burying Hill—"Where do they bury their dead?" There is no doubt that a more naturally inhospitable graveyard was never selected than this rocky height. But the first settlers had to build on the hill, in order to command both the sea and the wilderness in case of attack. They put their meeting-house there, worshiping weapons in hand, and when the first perilous years were over, they continued to bury the dead around its hallowed walls. The meeting-house has vanished long ago, but on the slopes, wherever the depth of earth is sufficient, the forefathers of Marblehead sleep their last sleep, above the tides they sailed, looking out to sea from their fortress height. On All Saints' Day, if there happens to be a storm, they must feel at home when their spirits come forth and snuff the gale. Life in Marblehead in those pioneer days meant war and fishing. The gay yachting fleet was racing off Fort Sewell Park that afternoon as the Spectator stood on the top of the Burying Hill and read the inscription on the little marble monument erected to mark that historic day of death when, in one storm, off the Grand Banks, ten vessels from Marblehead, with all their crews—sixty-five men and boys—were lost at once. Those were days that called for sterner stuff indeed.

The backbone of the stanch little community was its religion. In a commanding line across one slope run the six headstones of "Ministers' Row." In contrast to the other simple slate slabs, these are large and elaborately carved. The oldest two of the six are all in Latin, with beautiful wavy runes and decorations. Then come two with bas-reliefs of the heads and shoulders of the deceased divines, in Geneva gowns and wide collars. No wonder they were called Roundheads, if these careful portraits are likenesses. The next stone has an intricate and most spirited design of crossbones, skull, scythe, and hour-glass. And the last and largest of all is a rather lackadaisical contrast, with its urn and weeping-willow branch. About them cluster respectfully the lay gravestones, mostly with no decoration at all, or only a round-headed cherub with rudimentary wings. The oldest stone dates back only to 1681. Before that the graves are unmarked. But the settlers were buried here from the first, above the harbor and the tides, looking off to the mother England whence they came.

Marblehead finally bought its site from Winnepewauken, the Indian chieftain, for sixteen pounds, in 1684, but it had been there since 1629. The earliest inhabitant, named Doliber, was hardly a subject for a pageant, for he brought a fish hogshead over from Salem and lived in it, down in the cove, for the first winter of his stay.

But by the time when Edward Dimond, the wizard captain, dwelt in the Old Brig, that quaintest of Marblehead houses, under its grand old willow tree at the foot of Burying Hill, there was plenty of picturesque material. "Old Dimond," so the fishers on his vessel said, would send the crew below decks on a dark night, give orders to invisible helpers, and have a deck-load of fish in the morning, netted and landed by goblin hands. He was an entirely orthodox wizard, however, and when at home in the old house on nights of storm he would climb the Burying Hill and "beat about" among the headstones, using every incantation he knew to save the vessels out at sea from wreck. Wizardry ran in the family, for his daughter, born in the Old Brig, became a noted fortune-teller in Lynn.

Turning a bit to the left and mounting the winding lane, the Spectator found himself at Agnes Surriage's Well—another historic spot, in the grassy yard of an unpretending cottage overlooking the harbor. Once this was part of the garden of the old Fountain Inn, where Agnes Surriage, in 1742, as a barefooted, beautiful lass of sixteen, scrubbed the stairs and caught the eye of the young English baronet, Sir Harry Frankland. From the old well, as she looked off across the ocean, did the Marblehead girl ever see a vision of Portugal, far on the other shore of the Atlantic, and of earthquake shock, falling timbers, a whole stately city rocking in ruin, and only her two slender hands to save the man whom she loved? But why continue—has not a novel been written about her of which all Marblehead is proud? The ancient well is still used, but the Spectator has been too well educated in the lore of the bacillus to drink from any well-head, however romantic, so he did not draw himself a sparkling cupful—no, indeed.

Of course there was Floyd Ireson's house to be looked up—

> "Old Floyd Ireson, for his hard heart
> Tarred and feathered and carried in a cart
> By the women of Marblehead."

And the Spectator turned in at the next gift shop and bought a guide-book, only to find that the Amazonian story was entirely false, and that Skipper Ireson was an innocent man, maligned by his cowardly crew. When the wrecked sailors of the Active in that terrible October gale in 1808 off Cape Cod lighthouse called for help from Ireson's vessel, he endeavored to reach them, but his crew refused to endanger their lives, and insisted on leaving the shipwrecked men to their fate. Upon returning home, fearing the story might get about, they agreed to lay all blame on the skipper. Consequently he was seized, on a bright moonlight night, besmeared with tar and feathers, and ridden through the town in an upturned dory dragged by men and boys—no women. Opposite Workhouse Rocks the bottom of the dory came out, and a cart was secured and the ride went on as far as Salem. Salem refused admittance to the strange procession, and it returned to Marblehead. During the entire ordeal Floyd Ireson said not a word. But at the door of his own house, as his tormentors released him, he turned and said: "I thank you for my ride, gentlemen; but you will live to regret it!" Too late, the truth came out, and Marblehead treasures a letter from Whittier saying that the poet is rejoiced to learn the real facts, and acknowledging that the "narrative of the ballad was pure fancy" founded on an old fragment of rhyme heard when a school-boy from a Marblehead playmate. Behind the plain exterior of the old Ireson house what a tragedy was concealed of cruel and unjust shame domiciled with a brave and silent heart!

One brave man, and good one, Marblehead has never ceased to honor—General John Glover, who recruited his own regiment, called by Washington Irving "the Amphibious Regiment of Marblehead Fishermen," and led it himself in the Revolution through one campaign after another. It was this sailor regiment that rowed George Washington across the Delaware. What were cakes of ice in a mere river to them, who knew the bergs of the Grand Banks? Glover Park, given to the city by a descendant of Colonel Jonathan Glover, John's brother, also a Revolutionary worthy, looks down upon the harbor, a perpetual memorial to these heroic ancestors; and Fort Sewell Park and Fort Washington Park, on their sentinel headlands, and the old Powder House, and the Town Hall, are historic, too.

As the Spectator sped back on the trolley toward Salem again, his next neighbor on the front seat pointed out a tented meadow a mile or so outside the town. "That's Hathaway Field, where they're goin' to have a page-ant tonight," he volunteered. The Spectator felt a pang—and yet, could any pageant have so filled his mind with the past as the old streets of Marblehead themselves had done? The Indian sachems, the little congregation on Burying Hill, the wizard and his crew, Agnes Surriage digging in the ruins of Lisbon to rescue her lover, Floyd Ireson in his cart, the embattled fishermen—not even Hathaway Field could stage all these as the inner eye saw them move and pass, on the very spots they had trod when they lived and toiled, loved and suffered, fought and won, so many years ago.

BY THE WAY

Most men learn to make generalizations in their own business, but few specialists would hazard an induction like that made by a speaker at the National Dentists' Convention in Chicago: "Be sure to marry a girl with pink-tinted teeth. Dull, chalky teeth show insincerity of nature." If it is thus easy to know disposition by the teeth, the dental character-reader should have a booth in the charity bazaar next to that of the professor of chiromancy.

"Mrs. Wiggs of the Cabbage Patch," after a selling career of more than a decade, has recently gone to a forty-seventh edition. More than half a million copies altogether of this book have been sold in America and England.

A collector of records of centenarianism reports the recent death of an Italian peasant woman at the age of 188. He mentions two other centenarians who have exceeded the age of the noted Dr. Parr, who died at 152; one of these, Thomas Cam, is credited with 207 years, and the other, William Edwards, with 168 years. All these cases of extreme longevity are to be marked with an interrogation point, for parish registers are sometimes altered and tombstones tampered with.

To pass from instances of great age to those of irrepressible youth, we note that the eightieth birthday of the Chairman of the New York Stock Exchange was recently celebrated with much rejoicing by that most active organization, and that Mrs. Rebecca Kissick, of Philadelphia, aged 104, is reported to have challenged any woman more than fifty years old to a race up the 350 steps of the City Hall tower.

An American's humor sometimes saves him from embarrassment when a speaker compliments him in a strange language. At the closing session of the International College of Applied Chemistry a German delegate praised the work of the Chairman, Mr. W. H. Nichols. That gentleman responded by saying that he didn't understand a word of the speech, but that, notwithstanding the sound of some of the words, he took it for granted that nothing bad was said of him, and he would let it go at that!

With the North and South Poles reached, the edge of interest is somewhat taken off of accounts of exploration. And yet there have remained some worlds to conquer, for it is only within the last month that Greenland has ever been crossed from west to east. A Swiss exploring party under Dr. de Quervain accomplished the feat, marching for three months over the icy wastes of the interior.

The British War Office has suspended the use of monoplanes by the Royal Flying Corps, owing to the large number of fatalities that have recently occurred among the army aviators. The biplane is regarded as safer than the monoplane, though not so speedy.

A new railway in Mexico, the Durango-Llano Grande road, is expected to make available the vast quantities of iron ore in the Cerro Mercado, or Iron Mountain, which is estimated to contain 500,000,000 tons of iron ore. This has not been profitable to mine heretofore because of its inaccessibility.

The recent earthquake in Constantinople is said to have damaged the famous Mosque of St. Sophia. The dome, which is one of the largest in the world, is reported to be in danger of collapsing This mosque was originally a Christian church, and as it may some time be restored to its original use it is to be hoped that thorough repairs will be made. The Turks might almost be excused for passing the hat in Christian lands for this purpose.

The Duke of Wellington, according to recently published memoirs, went more than once to an exhibition in London to see a representation of Napoleon on his death-bed. If this is true, it shows an unlooked-for degree of sentiment in the Iron Duke. If the cases had been reversed, and Napoleon had won at Waterloo and had outlived Wellington, one could hardly imagine the Emperor paying a like tribute of veneration to the English general.

Ceremonious forms in correspondence, such as "I have the honor to be," "Your obedient servant," etc., long disused in business but surviving in official letters, are, it is reported, to be abandoned hereafter by the War Department. Even the familiar expressions "Sir" and "Yours respectfully" are to be barred, and letters are simply to bear the name of the person to whom they are addressed and the signature of the sender. Time and typewriting, it is believed, will both be saved by the innovation.

The "Critic," says Miss Gilder in the "Literary Digest," was once issued with its leaves uncut. It was decided finally to have the edges trimmed. But at least one subscriber objected to the new plan, and regularly came to the "Critic's" office himself to get his copy with untrimmed edges! This subscriber must have been a near relative of the stubborn New Englander some one tells of, who, after a new road had been opened and the old one closed, always let down the obstructing bars and drove over the old thoroughfare when he had occasion to pass that way.

Rotterdam and Antwerp are close rivals for the position of second largest port in Europe, as far as tonnage is concerned, Hamburg being the first. From January 1 to August 1 the tonnage that arrived at Rotterdam amounted to 6,794,681, at Antwerp 6,855,677, and at Hamburg 7,939,193.

Within the last twenty years Oriental rugs have become recognized in America as the most desirable floor coverings, and their use has immensely increased; and yet this change of fashion has apparently not lessened the prosperity of our carpet mills. The great factories at Yonkers, New York, employing 3,100 persons, recently distributed to those employees a bonus of $70,000. The country seems to be big enough to absorb the products both of Orient and Occident.

In Germany, says the "Electrical Review," electrical apparatus and wires carrying high-voltage currents are marked by a warning sign consisting of a startlingly realistic lightning-bolt and the German word for "Danger!" The "Review" suggests that it might be well if the same warning emblem were adopted in this country as a safeguard to all who may come near high-voltage circuits or their supports.

The receipts of the New York City post-office for August were $1,905 214.39. Those of the Chicago post-office were $1,932.488.69. Of course civic spirit is a fine thing, but is it worth while for Chicago to lock up so much good money in postage stamps just to "beat New York"?

The Political Campaign: The Primaries

State primaries and conventions, together with increased activity in the field work of all parties, made last week a notable one in the campaign. The New Jersey primaries present as their most significant feature the smallness of the total vote, which was almost startlingly less than it was in the Presidential primaries of last spring, showing by clear inference the substantial dimensions of the Progressive party of the State, which as a new organization must nominate its candidates by petition, and of course takes no part in primary elections. The Democratic primary vote in the State on the preferential ballot for United States Senator, in which strong interest was felt, was, as the New York "Sun" points out, less than thirty per cent of the vote cast for Woodrow Wilson as Governor two years ago. Small as this vote was, the defeat of the candidacy of James Smith was emphatic—a plurality of between 20,000 and 25,000 in a total vote of some 76,000. This is not only a personal victory for his opponent, Judge William Hughes, but a strong indorsement of Governor Wilson's condemnation of Smith's political character and methods. A singular feature in New Jersey was the election of three avowed Progressives who indorsed Mr. Roosevelt and the principles of the Progressive National platform yet offered themselves as candidates for Congress on the Republican primary tickets. The defeat of the "regular" Republican candidate for Mayor in Newark and the machine disasters in Hudson County are to be added to the evidence of dissatisfaction with the remnant of the great party which last spring recorded its preference for Mr. Roosevelt and the programme of social justice which he represents. In Massachusetts the total primary vote of both parties was less than half the vote for Governor cast in 1911; it was not far below the Presidential preference vote of April, but with this difference, that the Democratic vote rose from about 28,000 in April to about 99,000 in September, while the Republican vote fell from about 172,000 in April to about 97,000 in September—a direct indication that the prevailing immediate interest was as to the re-election of Governor Foss, who received a primary indorsement of about 63,000 as against about 36,000 for his opponent, Mr. Pelletier. The Republicans nominated ex-Speaker Walker by a plurality of 10,000.

Conventions and Speeches

In Connecticut the Progressive Convention was a rousing one. In platform and selection of candidates this convention stood on as high a plane as the New York Syracuse meeting. Herbert Knox Smith, formerly Commissioner of Corporations, as candidate for Governor may be compared for ability and earnestness, if not experience, to Mr. Straus in New York. Equally commendable is the nomination in New Hampshire for Governor by the Progressive Convention of Mr. Winston Churchill, whose fight against political and industrial bossism is notable in the political history of the State. Governor Bass presided at the Convention; one of the strongest features of the occasion, as was also the case in Connecticut, was a stirring, straight-from-the-shoulder speech from Governor Johnson, of California. In fact, all the speeches made by the Progressive candidate for the Vice-Presidency last week in New England were memorable and effective. The New York Republican State Convention at Saratoga nominated Mr. Job E. Hedges, a New York lawyer, as its candidate for Governor, and Mr. James W. Wadsworth, Jr., former Speaker of the Assembly, as its candidate for Lieutenant-Governor. Meanwhile, Mr. Roosevelt in the West and South, and Governor Wilson nearer home, have been talking to many thousands of their fellow-citizens. Mr. Wilson has continued to avow his inability to see

anything definite in the definite proposals of the Progressive platform as to the trusts and the tariff, holding that to control the trusts as the Inter-State Commerce Commission controls the railways would be to enter into partnership with them, and that, as to the tariff, no beneficial results would follow the Progressives' plan of getting the facts from a genuine Tariff Commission and acting on schedule after schedule as these facts show that the needs of industry, the consumer, and the workman require. But we look in vain in Mr. Wilson's speeches for specific recommendations in either case—in his view neither free trade nor tariff for revenue only meets the case as to the tariff, nor does he advocate the abolition of all large corporations instanter. Moreover, he rejects the help of knowledge acquired by skilled commissions of experts, saying, "I have lived with experts all my life, and I know that experts don't see anything except what is under their microscope—under their eyes." He is even reported to have given his opinion of experts by quoting the saying, "plain liars, damn liars, and experts." This is hard to reconcile with his supposed advocacy of public utility commissions. To all this the Progressive party replies that the people must act, but that they must act rationally, after learning the facts and through agents of trained ability; and that administrative work requires the services of expert administrators. In the South Mr. Roosevelt has been greeted with glowing enthusiasm; in Tennessee in particular his presentation of the Progressive ideas evidently made a deep impression, and the press reports such strength of the new party in that State as to insure a probability of a Progressive victory there in November. The waterways question was used in some of Mr. Roosevelt's Southern speeches as an illustration of the need of combined National action in all large matters instead of the "haphazard and piecemeal fashion of the past," and a practical application was his recommendation that, as soon as the Panama Canal is finished, its plant, the expert knowledge, and the trained engineers there employed should be used to solve the waterway problem.

Catholics and Indian Schools

The decision of President Taft with regard to the wearing of religious insignia or ecclesiastical dress in Government Indian schools can hardly be wholly satisfactory to anybody. Devout Catholics who believe it is a function of government to teach religion will not be satisfied, because the President decides that no teachers will hereafter be engaged in such schools who wear ecclesiastical garb; devout Protestants will not be satisfied, because fifty-one teachers formerly connected with Catholic schools now wearing ecclesiastical dress in the Government schools are permitted to continue the practice; the great body of American citizens, without regard to religious creed, who believe in the complete separation of Church and State will not be satisfied with the President's explanation of what is sectarian and what is not sectarian in Government administration. We briefly review the controversy which has resulted in the decision made public last week by the President. In recent years the Federal Government has taken over from various religious bodies Indian mission schools, and has made these schools Government or public schools by harmonious arrangement with the various churches concerned. Complaint having been made to the Indian Commissioner that sectarian practices were still permitted in some of these Government public schools, the Commissioner, last January, issued the following order:

> In Government schools all insignia of any denomination must be removed from all public rooms, and members of any denomination wearing distinctive garb should leave such garb off while engaged at lay duties as Government employees. If any case exists where such an employee cannot conscientiously do this, he will be given a reasonable time, not to extend, however, beyond the opening of the next school year after the date of this order, to make arrangement for employment elsewhere than in Federal schools.

This action of the Indian Commissioner, Mr. Robert G. Valentine, is supported by two important legal precedents. The Court of Appeals of the State of New York, in the cases of O'Connor *versus* Hendrick, decided that the wearing of ecclesiastical garb in the public schools of the State was sectarian enough to justify the exclusion of such garb; and the Supreme Court of Pennsylvania, in a similar controversy, has upheld the constitutionality of a law excluding ecclesiastical garb from the public schools. It should be remembered that it is possible to teach by means of symbols as well as by words. But on the complaint of the Bureau of Catholic Indian Missions the President revoked Commissioner Valentine's order, and, after a hearing, has now approved the decision of Secretary Fisher, of the Department of the Interior, to

make the revocation permanent. The argument of Secretary Fisher and of the President may be substantially condensed as follows: There is nothing in the Federal Constitution or Federal statutes to compel the President to exclude sectarian garb from the Indian schools, therefore in permitting it he is violating no law; there are only fifty-one teachers wearing such garb in the Indian schools; the Government ought not to permit this number to grow, and in so far as we can we will take action to prevent its growing; it is true that the Indian schools are public schools and ought not to be sectarianized; the situation is a difficult and delicate one, but we think the simplest thing to do is to let the teachers now wearing ecclesiastical garb remain, as, after all, there are only fifty-one, and let the practice, even if it is not altogether in harmony with American institutions, die of its own accord. We think Commissioner Valentine was right and that the President is wrong. It would be much better to turn all Indian schools over to private management, letting the Catholic Indians go to Catholic schools and the Protestant Indians to Protestant schools, than to involve the public school system of the United States in any kind of a controversy over what we hope is the irrevocably established policy of a complete separation of Church and State in this country.

President Taft and the Cost of Government

The American Government is the only one of first rank which offers to the public no budget, or proper statement of Governmental income and Governmental expenses. Congress makes appropriations for our Government's expenses. These appropriations are based on estimates submitted by the various departments under a law which makes no provision for executive review. Of course without this review the estimates become grossly inflated. Such a method is, as President Taft says, both "haphazard and wasteful." He adds: "Authority is granted for the expenditure of a billion dollars each year, without any thought as to where the money is coming from. This is done on the theory that there will be no deficit. . . . While the Constitution makes Congress responsible for money-raising as well as for appropriations, responsibility for borrowing has been shifted to the President, by empowering him to procure loans to meet deficits!" No wonder that our Presidents have become restive under this method. Some time ago Mr. Taft sought to correct it by directing the heads of departments to send their estimates to him before they were printed, so that a certain uniformity or standard might be exercised over all of them. This order reduced the initial estimates by millions of dollars. A part of the work of the recently instituted Economy and Efficiency Commission is to summarize such statements, and so to co-ordinate them as to bring about a statement of coming necessary expenses which will not exceed the balance in the Treasury. Such a reform has, of course, blocked the schemes of those who would profit by the wasteful diversion of public moneys. Hence, in the appropriation bills passed at the close of the late session of Congress, the Economy and Efficiency Commission was ruthlessly "trimmed." One bill reduced the salaries of the members of the Commission, while in another bill a paragraph slipped in at the last moment provides that "the regular annual estimates of appropriations and expenses of the Government shall be prepared and submitted to Congress by those charged with the duty of such preparation and submission, only in the forms as at the time are required by law, and in no other form and at no other time." Despite this, the President still plans to send his recommendations to Congress in budget form. He has now directed all the department heads to appoint representatives to confer with the Economy and Efficiency Commission. Indeed, in his opinion, Congress cannot prevent a President from submitting a budget. "It is quite within his duty and power to have prepared, and to submit to Congress and to the country, a statement of resources, obligations, revenues, expenditures, and estimates, in the form he deems advisable. And this power I propose to exercise." The President's position in this is courageous and wise.

President Taft and the Spoils System

Closely following the President's lettter to the heads of departments comes another welcome announcement. It is that all of our fourth-class postmasters are to be taken out of the "spoils system." In other words, they are to be taken out of the old order of things when an appointee owed his position to the influence of some powerful politician—to some "boss" acting by means of a Senator's influence with the President,

if, indeed, the boss and the Senator were not one person. They will henceforth owe their positions, as all under our civil service rules owe theirs, to their own merit in competition with other candidates. Four years ago, by executive order, President Roosevelt placed under civil service rules the fourth-class postmasters of the States north of the Ohio and east of the Mississippi Rivers, a total of nearly fourteen thousand. Those still outside of civil service rules numbered over thirty-six thousand. These are now included by President Taft. The reason for the geographical selection in the Roosevelt order was to make the experiment in the more densely populated States. The new order of things has worked well. It appealed to some twenty thousand fourth-class postmasters in the States south of the Ohio and west of the Mississippi, and they recently signed a petition to be transferred to the merit system. They were already assured of the President's approval, for he had put himself on record as advocating the inclusion in that system not only of the fourth-class postmasters but of all postmasters, and not only of all postmasters but of all other Federal officials—collectors of customs, collectors of internal revenue, naval customs officers, surveyors, assayers, receivers, and public land agents. Of course Mr. Taft would have added the first, second, and third class of postmasters to this list if he had authority over them. Legislation by Congress is required to place them under the civil service rules. In spite of the partisan motive that will be attributed to this act, it is to be welcomed. Since the Civil Service Act was passed it has been a pleasant task for The Outlook to chronicle the various events which have occurred in redeeming Governmental agents from the spoils system. The most recent event is appropriately due to a President who believes that *all* Government officers below the grade of Cabinet members should be removed from political influence and placed under the competitive system.

The Secretary of War: A Victim of Fake Journalism

The friends of both Mr. Stimson, the Secretary of War, and Mr. Roosevelt were disturbed by an alleged interview with Mr. Stimson which appeared very widely in the daily press about two or three weeks ago. In this alleged interview Secretary Stimson was not only made to take issue with Mr. Roosevelt's political principles and platform, which of course he had a perfect right to do, but was made to use phraseology in severe personal criticism of Mr. Roosevelt, which the friends of the two men, who knew their former personal relations, greatly regretted. The interview, however, was so specific, and the office of the Secretary of War commands such respect, that it seemed incredible that any decent American newspaper could deliberately lie in such a matter. But the interview was "faked," as will be seen from the following letter which we have received from Mr. Stimson. The letter is dated San Francisco, September 19:

> I should like you to know that the alleged interview with me reported about two weeks ago in one of the San Francisco papers making a personal attack on Mr. Roosevelt is entirely unfounded. The words of personal criticism of Mr. Roosevelt put into my mouth in that interview were never uttered or thought by me, although I am strongly opposed to his candidacy. As soon as the interview was published I repudiated it through the Associated Press, but I find now, on my return from a trip to the Yosemite, that, notwithstanding this, it has found its way into Eastern papers through other channels. I should be glad to have my friends know that it is unfounded.

We welcome the opportunity to print this letter, first, because we desire to aid in the correction of what was a very grave injustice to the Secretary of War, and, second, because it gives us the occasion to repeat the warning often made in these pages that too large a number of American daily newspapers are wholly irresponsible and unreliable. In this case we think, too, that the Associated Press is greatly to blame. That organization disseminated throughout the country the false report of which the Secretary of War justly complained, and, so far as we can discover, did very little to correct the error after attention was called to it.

Ulster and Home Rule

Home Rule in Ireland, now regarded as near its passage by the House of Commons, has entered upon a turbulent period in its history, as everything which relates to Ireland does, sooner or later. A very serious and menacing opposition has been growing in Ireland itself. Ulster, the northernmost of the four counties which constitute Ireland, is the home of nearly one million six hundred thousand people out of a total population of nearly four million four hundred thousand in the island. The differences between the men of

Ulster and the men in the South are much greater than between the men of Piedmont and Lombardy and the men of Naples and of Sicily; and the feeling of antagonism is more intense than the feeling that formerly separated the two extremes of Italy. It is not only political, it is religious and racial. Ulster is aggressively Protestant, the rest of Ireland is Catholic. Ulster is mostly industrial; the rest of Ireland is mostly agricultural. Ulster represents a large infusion of Scotch blood. For many months past Ulster has been protesting that it would not submit to the rule of an Irish Parliament. It has now definitely taken its position that the British Parliament has no right to transfer the allegiance of Ulster from Great Britain to Ireland, and that if the transfer is made Ulster will resist. This feeling has taken many aggressive forms of late, and it has been intensified by a very unpatriotic attitude on the part of some of the Unionist leaders, chief among them Mr. Bonar Law, the Conservative leader, who has used the Ulster feeling as a weapon against the present Liberal Government, and has gone to the very verge, if not over the verge, of justifying the rebellion of Ulster in case the Home Rule Bill is passed. It is to be hoped that calmer counsels will prevail, and that the impossibility of the independence of one county of Ireland as against the rest of that country will be recognized. Ulstermen have a right to demand adequate guarantees under any change of government, but the endeavor to detach the county from the island and make it an independent State would seem to be as impossible as were some of the early fantastic attempts at secession in this country.

Chinese Finances

As is well known, the Chinese Republic is in need of funds. Soldiers must be disbanded and paid and other extraordinary expenses met. But even the ordinary "running expenses" of the Government would be sufficient to demand additional cash resources. Accordingly, last February the Government appealed to four Powers with which it had in the past contracted loans—Great Britain, France, Germany, and America. To these were added later Russia and Japan. These six Powers are the ones chiefly interested in China. They agreed to lend enough money to put the Chinese Government on a sufficiently substantial footing to "start in business" with a clean slate. To this end about three hundred million dollars would be needed. The Powers agreed to lend this amount provided the Chinese Government agreed to certain reported conditions:

1. The purposes for which the funds were required should be stated by the Chinese and approved by the Powers.
2. The Government should adopt an audit system to insure the effective expenditure of the loan for the purposes specified.
3. The salt taxes, agreed upon as a guarantee for the loan, should be administered either by the existing Maritime Customs Organization or by a separate service under foreign protection, thus safeguarding the proper administration of the security.
4. The Chinese Government should not borrow elsewhere until the loan was entirely issued.

At first everything seemed favorable for the conclusion of this six Power loan. But with the advent of the new Government, and the strong sense of nationality which naturally thrilled the Chinese people, a reaction took place. It was felt that, at the very outset of its career, the new Government was being considered not as an equal with the other Powers but rather as their ward. Certain independent financiers, especially in Belgium, took advantage of this and attempted, without demanding such guarantees, to float a small loan with the Chinese Government. Now another independent loan, it is reported, has actually been floated, the moving powers behind which are not yet disclosed. Such a loan would doubtless gratify the Chinese as a demonstration of their financial independence. It would also be regarded by them as indicating a policy of independence in other respects. Now, in its efforts, not only to establish a better government for China, but also to make China occupy a larger place in the world's interests, the new Government has the sympathy of Progressives everywhere. But as unwise and extravagant expenditure has distinguished the native administration of Chinese finances, would not the new Government be acting in its own interest to agree to protect its creditors and itself? Perhaps some plan satisfactory to the lenders and consistent with China's self-respect can be devised.

Dr. Morrison on China

As The Outlook recently stated, Dr. George Ernest Morrison, for fifteen years the correspondent of the London "Times" in China, has been appointed political adviser to the new Chinese Government,

and has accepted the appointment. Long recognized as an authority on China, Dr. Morrison's first published statement after assuming his new office will be read with peculiar interest. It is a protest against the suspicions of some concerning the new Republic. First, as to the frequent statement that China is likely to split in half and that there will be civil war between south and north, Dr. Morrison inquires, "Where is the line of cleavage? Both parts of China are equally republican." Second, those who allege that "President Yuan Shi-kai is aiming at a dictatorship are ignoring the facts of his career." Third, as to the charge that the President's Advisory Council is composed of hostile factions whose quarrels threaten the continuance of the Republic, Dr. Morrison declares: "Nothing could be more misleading. These parties differ in their programmes as political parties do in all countries, but all are equally republican." Fourth, "it is held to be a reproach and a danger that the new men now active in the Government of China are without experience." Dr. Morrison contrasts these new men with the "corrupt princes and degraded eunuchs" who were in power under the Manchu monarchy. The new men are "men of Western training and modern culture. . . . Had such men had a voice in the Government . . . would the position in Manchuria be what it is today? Would China have been involved in the Boxer rebellion? Contrast the treatment of foreigners during this widespread rebellion [of 1912], when foreign life and property were held sacred throughout the twenty-two provinces, with the conditions in China during the Boxer rebellion, when the Throne itself offered money rewards for the heads of foreign men, women, and children. The members of the Cabinet and of the Advisory Council may be inexperienced men, but certainly no body of men who have held rule before in China can be compared with them in intelligence, training, and education." Finally:

> People in England hardly realize the immense change that has had to take place in the administration of the country. Under the old régime no man could hold office in the province of his birth. Now the reverse rule is observed. Most officials in the provinces are now natives of the provinces in which they are serving. Surely the interests of the province are thus better served than under the old system, when officials sent to provinces to which they were not bound by ties of birth had as their main object the amassing of the largest fortune in the shortest time, bleeding the province in the interests of the corrupt Manchu Government in Peking, to whom they owed their office. . . . These changes have involved the recasting of the whole internal machinery of Government.

That the changes have been effected with such comparative smoothness should, we agree with Dr. Morrison, inspire hope in the future of the country.

A Plea for Lake Windermere

There are few places in the world where mountain and water combine so perfectly in perpetual but always changing beauty as they do in the Lake Country of England. There are still fewer places where such peaceful beauty of lake and highland combine to form a setting for literary associations as in this same English Lake Country of Wordsworth. If ownership in real but intangible value is vested in those who know how to appreciate it, this Lake Country is surely a part of the heritage of Americans as well as of Britons. Those Americans, therefore—and there are thousands of them—who have a proprietary right in the beauty and associations of that region will be concerned to know that their property is in some peril, and they will be gratified to know that there is under way an effort to protect it. The peril is to the head of Lake Windermere. The owner of a tract of land there has planned to build a number of "villa residences." The plan to save the lake from this disfigurement—for any buildings there would disfigure the lake—involves the purchase of this strip of land. The owner is not only willing to sell the property, but is ready to contribute, with the consent of his brother, two thousand dollars toward the purchase fund. That is enough to show that he is a sharer in the ownership of the real values in that spot and is a comrade of those who wish to preserve this lake. The Rev. H. D. Rawnsley, Canon of Carlisle, poet and essayist, and Hon. Secretary of the National Trust for Places of Historic Interest and Natural Beauty, in a statement which we have received from him, accompanied by a letter, tells what a great many people may not know, that in the midst of this strip "lie the remains of an important Roman military camp which was spoken of in Camden's 'Britannia' as 'the carcass, if I may so say, of an ancient city, with large ruins or walls, the rubbish of old buildings in many places.'" And he adds:

> What Camden saw in 1590, and what Thomas Braithwaite knew when he was collecting coins

from the ruins in Queen Elizabeth's days, is now a grass field in which the fosse and rampart of Borrans Ring, as it is called, is still distinguishable.

But no excavation has taken place there, and though in the adjacent nursery garden great quantities of Roman pottery and tiles have been found from twelve to eighteen inches below the surface, with the remains of fires, charred oak and bones, the secret of this Roman fortress camp is still hidden close within its grassy bosom. . . .

To the archæologist it is a matter of no small moment that an as yet unexcavated Roman camp should pass into public hands; and when we consider the stream of tourists who pass to Waterhead and Ambleside during each of the summer months, it is clear that their temporary stay at Waterhead, as they wait for the boat, or their sojourn in the town, will have great additional interest added to it by the fact of their being able with their own eyes to see the remains of Roman life here at the head of the lake.

In indorsement of this undertaking there has come to The Outlook the following letter which will be of special interest to all Americans:

August 23, 1912.

Dear Sir:

I have read with great interest, as I am sure all lovers of Wordsworth and of the Wordsworth country must also have learned, of the danger that the head of beautiful Lake Windermere may be injured, and I take the liberty of sending you this line to express my warm sympathy with the project of raising a fund to prevent the region from suffering any such substraction from its exquisite charm. All lovers of the English poet must wish to preserve the Wordsworth country intact.

Sincerely yours,
WOODROW WILSON.

To the Editor, The Outlook,
New York City.

Canon Rawnsley, whose address is Crosthwaite Vicarage, Keswick, England, in the course of his letter writes to us: "Incidentally I may mention that £100 has just come to me in honored memory of the late Holman Hunt, O.M. It is possible that there may be in the States those who, in memory of their beloved ones who were known to care for our English scenery and who have passed away, will wish to follow this example and send a contribution to the national work of preserving for posterity the loveliness of the English Lakeland."

Arctic Discoveries

It is a pity that the serious work done by Professor Stefansson's party in the Arctic was so ludicrously treated by newspaper writers that at first its real significance was hardly appreciated. Absurd talk about the "lost tribes of Israel" and the discovery of Eskimos descended from Sir John Franklin's crew, or descended directly from Leif Ericsson, certainly had a tendency to make sober readers laugh at the reports. In point of fact, Professor Stefansson is a serious and careful observer; and the narrative printed over his signature recently in the New York "Sun" affords no excuse for the absurd stories of his expedition to which we have alluded He has now returned to New York City and to his work in connection with the American Museum of Natural History, after an absence of more than four years employed in exploration. The expedition was sent out jointly by the American Museum of Natural History and the Canadian Government's Geological Survey; and it had as its object the examination of little-known regions on the northeastern boundary of Alaska. It is true that the most interesting object, among several, was the discovery of tribes of Eskimos unknown to white men, whose existence has long been rumored. The expedition followed the Mackenzie River from above Edmonton, in Canada, to the edge of the Arctic Ocean, and thence explored both westward and eastward. A great part of the region traversed had very little in it to sustain life, and this accounts for its avoidance by most of the known Eskimos. The explorers persisted in pressing through this region, and on the coast opposite Victoria Island they found several tribes who were undoubtedly different from any known people of the north. As they are described by Professor Stefansson, it would appear extremely probable that they are, in part at least, of Scandinavian descent; and a few of them had unmistakable traits, such as blue eyes and light hair, which showed European racial connection. Professor Stefansson's explanation of the existence of such a race of people is that the Norse colonists, known to exist in Greenland and supposed to have been exterminated by hostile Eskimos long ago, were only partially destroyed, and that a large portion of them escaped and mingled with the Eskimos of Victoria Land. This theory Professor Stefansson puts forward only as the most probable one. Besides the curious ethnological discovery which has attracted so much attention, it should be noted that this expedition has resulted in added knowledge in the field of zoölogy and archæology, as well as in geographical records of some importance.

Pierre Loti: Impressionist

Louis Marie Julien Viaud, widely known under his nom de plume "Pierre Loti," who is now visiting this country, is a Frenchman of Huguenot ancestry, who entered the French marine service in 1867, visited many parts of the world, and resigned with a rank of lieutenant fourteen years ago. The following year he published his first novel, "Aziyadë." This story has been followed by many others in which the distinguishing feature has been the description of landscape steeped in its own atmosphere. In this way Pierre Loti has pictured Constantinople, Tahiti, Senegal, Brittany, Iceland, Algeria, Japan, India, Palestine. His heroines are all primitive women who represent the native and largely the physical qualities of their race before its modification by modern cosmopolitanism. Pierre Loti is perhaps the most cosmopolitan of writers; but his whole endeavor has been to get away from cosmopolitanism and recreate primitive conditions. His work recalls Flaubert and Lamartine, but he lacks the vigor of the novelist and the poetic quality of the author of "Souvenirs" of the East. His stories best known in America are "Madame Chrysanthème" and "The Iceland Fisherman," the latter a charming piece of atmospheric work, a tender and beautiful picture of the mystery and wonder of the sea and of the tragedy of the people who live by it and upon it. With the possible exception of Lafcadio Hearn, a man of greater penetration and grasp, Pierre Loti is the foremost impressionist of the day. This means that he paints with a sensitive and delicate brush the appearance of things. His work has no rootage in any soil. It is wholly lacking in ethical constructiveness; it floats on light wing over the deeps of life; its meaning lies on the surface as completely as his interpretation of different countries lies on the surface. His diction is remarkable for its descriptive quality; and he has the gift of steeping his stories in elusive melancholy—a melancholy which comes from the passing of older and more picturesque habits, with an entire absence of any sense of the profounder meaning of life. It follows, as a matter of course, that his work is at times offensively sensuous. He is a member of the French Academy. He seems to have received an unusual number of impressions immediately on his arrival in this country; but he ought not to be held responsible for the varying newspaper reports of his moods and views.

A National Capital Made to Order

Australia is to follow America in having a made-to-order, carefully planned capital in a federal district, and comes to this country for the plans. The Australian Constitution, adopted in 1900 by the Federation, provided for a new capital city, separate and distinct from any of the present cities of the several colonies, on a site to be selected within ten years. Early last year the engineers finally selected a locality in the federal district of some nine hundred square miles which the Parliament had cut out of New South Wales. A competition was then formulated under the auspices of the Department of Home Affairs, and invitations and information data sent to all parts of the world calling for ground plans for the proposed city, and such other descriptive and suggestive matter as competitors might include to convey an idea of the scheme for a city, including Capitol, university, military post, other public institutional buildings, and all the necessary structures to take care of the capital municipality, its industries and habitation. Walter Burley Griffin, of Chicago, won this competition, which was world-wide in its scope, and receives a prize of £1,750 ($8,750). He sent ground plans of the central part of the city proper, four miles square, drawings on contour maps provided by the Australian Government; smaller scale plans showing anticipated suburban extensions and the related features of the environment; sectional cuts in two directions through the city showing the elevation at very small scale of public and other buildings, and a perspective view from the top of one of the local mountains of the entire plan. The district is described as being especially favored in physical features. A river runs through the proposed site for the capital, lending itself to decorative effects. The district contains many mountain peaks of moderate height, some covered with perpetual snow. Two peaks of 6,230 and 5,290 feet elevation, respectively, give a background for the monumental government buildings. Lower mountains border closely the site of the new city, so that they may be used as city parks. Still lower hills offer sites for the important buildings. A great circle on the south bank of the river has been selected for the Government buildings. The river is

to be widened into a lake immediately in front of this site, and on the other side there will be elaborate gardens. On another axis of the Government building site is the municipal center, and further away a manufacturing section with a center of its own. It is as though the Government group were the hub, with the other centers located on the radiating spokes at irregular distances from the hub. There is a university center, a market center, a railway center, a residential section. About each of these centers is planned a system of streets all its own, grouped about in polygons.

THE PROGRESSIVE MOVEMENT

IV.—THE TARIFF

In a rural town not a hundred miles from New York City there was, thirty years ago, an abandoned woolen mill. Clustered about it were a dozen empty cottages. No one worked in the mill; no one lived in the cottages. The place was known as "the deserted village," and summer boarders were accustomed to visit it, as the one curiosity in the vicinity. Some English capitalists have bought the mill and established a successful carpet factory which employs five or six hundred men and women. The empty cottages are filled. More than a hundred new cottages have been built. The road, more than a mile in length, from the deserted village to the neighboring village is lined with attractive homes. In the now united villages, which have become practically one village, a local real estate company has been formed to erect cottages for newcomers, and it is difficult to build them fast enough. A local bank has been established. A new schoolhouse has been built, and already the people are beginning to question whether it will not all have to be used for primary and grammar school grades and another be built for high school purposes. One church, which had been standing empty, has been reopened; in another church, where formerly the Sunday-school had possibly twoscore of scholars, the Sunday-school room is crowded. The village stores do a thriving business. A Village Improvement Society has bought an old house with Revolutionary memories and converted it into a social center. A Boys' Scout movement has been initiated. There is no phase of town life which does not show improvement. And this improvement is, not exclusively, but chiefly, due to two causes:

The advent of the carpet mill;

And the simultaneous exclusion of saloons from the town, under a local option law.

The advent of the mill has brought a new market to the butcher, and baker, and grocer, and shoemaker, and tailor—to all that have goods to sell; and the exclusion of the saloon has prevented the money that is now contributing to the general wealth of the community from going where it would contribute to general poverty.

A large proportion of these five or six hundred employees have come to C—— from England and Scotland. They have come because the English capitalists could not import the carpets if they were woven in England without paying America for the privilege of importing them, and they could import the carpet weavers. The workers' families have come with them. They have to be housed, hence the cottages; to be fed, hence the trade for the grocer and butcher and chicken farmer; to be clothed, hence the business of the tailor; their children are to be educated, hence the new school-house; they worship, hence the added prosperity of the churches. It is true that the price of living has increased since the carpet factory came to C——. The villagers pay more for their meats and houses and clothing and rent. There is a good deal of complaint because of the high cost of living. But it would be difficult to find any number of villagers who would wish to go back to the lessened population, the diminished trade, and the smaller schoolhouse, even if these were accompanied with the lower prices of twenty-five years ago.

The object of a protective tariff is to do for the United States what it has done for the town of C——. It creates a diversified industry and brings the producer and the consumer together. Mr. Wilson, in a speech to the farmers, has told them that they get no benefit from the tariff, because America does not import farm products, and therefore the farmer does not need to be protected from foreign competitors. But the benefit to the farmer does not come from the exclusion of foreign competitors. It comes from the fact that the purchasers for his products are brought to his door, and he has not to pay for transportation of his products across the ocean in order to find a purchaser.

Enterprising towns recognize this principle. It is not uncommon for a town to offer to

capitalists a site for their factory free of expense; sometimes the people add a bonus or subscribe for stock, in order to secure for their goods the customers that the factory will bring to the place.

The history of C—— has been repeated all over the United States. The tariff has developed manufactures; the manufacturers have brought an immigrant population; the immigrant population are customers for the farmers and the shopkeepers. If the United States had remained the purely agricultural country that it was a hundred years ago, Americans would be bringing their manufactured articles from abroad and selling their agricultural products to consumers abroad, and the price of transportation across the ocean would have to be added to the price paid by the purchaser or taken from the price received by the producer; or the cost of transportation would have to be divided between the two. The transformation of America from a nation dependent on other nations for its active products into an independent nation developing within itself all the resources necessary for its welfare is not wholly due to the protective system; but this transformation could not have been accomplished without the protective system.

Carelessness in some quarters and corruption in others have produced serious abuses in the tariff. The question as now presented to the American people is this: Shall we abolish the system altogether? Or can we correct the abuses and retain the system?

Three plans for dealing with the tariff are presented to the American people by the three parties.

The Democratic party proposes to abolish the protective system altogether. It even declares that Congress never had the right to establish a protective system. It says:

"*We declare it to be a fundamental principle of the Democratic party that the Federal Government under the Constitution has no right or power to impose or collect tariff duties, except for the purposes of revenue.*"

This position Governor Wilson indorses. He says in his speech of acceptance: "Our one clear conviction as Democrats is that in the last analysis the only safe and legitimate object of tariff, as of taxes of every other kind, is to raise revenue for the support of the Government."

This principle would not only forbid Congress from taking into consideration the effect of the tariff in promoting or hindering industrial development of the country, it would have forbidden the Federal Government from such action as taxing the State banks in order to promote a National bank currency, and imposing a high tax on a poisonous form of sulphur in order to protect the workers in match factories against disease.

The Republican party proposes to retain the protective system; and to prevent favoritism by basing all revision on the report of an expert and non-partisan commission. It also declares its purpose to be "to protect adequately American industries and wages." But it proposes no plan for securing the benefit of protection to the wage-earner, and recent events have made it very clear that in some of the most highly protected industries the wage-earner is getting wholly inadequate wages. On this subject, in his speech of acceptance, Mr. Taft is also ominously silent.

The Progressive party agrees with the Republican party in favoring (1) a protective tariff; (2) based on reports from a non-partisan scientific tariff commission. But it differs from the Republican platform in condemning the Payne-Aldrich Bill, which Mr. Taft approves; in demanding "an immediate downward revision of those schedules wherever duties are shown to be unjust or excessive," which the Republican platform, though recommending the reduction "from time to time" of some import duties, does not demand; and in emphasizing the necessity of clearly defined measures to make the protective system protect both the wage-earner and the consumer. This it is proposed to accomplish through a permanent tariff commission with large power of investigation, following, in some respects, the example set by the German Tariff Commission. The platform of the Progressive party says:

"*Primarily the benefit of any tariff should be disclosed in the pay envelope of the laborer. We declare that no industry deserves protection which is unjust to labor, or which is operating in violation of labor laws. We believe that the presumption is always in favor of the consuming public.*"

And this declaration was founded on Mr. Roosevelt's declaration in his speech preceding the enunciation of the platform: "In my opinion, the American people favor the principle of a protective tariff, but they desire such tariff established primarily in the interest of the wage-worker and the consumer."

The reader who desires to get a clear, concise, and authoritative interpretation of the

difference between the Democratic and the Progressive parties on the tariff question will get it by comparing the paragraphs italicized above, one quoted from the Democratic, the other from the Progressive, platform. The difference may be concisely but unauthoritatively defined as follows:

Democratic party. Abolish the protective system. Throw the American market open to the world. Make a tariff simply to raise money.

Republican party. Retain the protective system. Keep the American market for the American producer. And trust to natural law to secure a just division of the common benefit between the capitalist, the wage-earner, and the consumer.

Progressive party. Retain the protective system: but immediately reduce the present tariff. Keep the American market for the American producer; and take appropriate measures to divide the profit justly between the three parties who should be benefited by it, with a presumption always in favor of the consuming public.

On the tariff question, thus stated, the principles and sympathies of The Outlook are with those of the Progressive party.

THE PANAMA CANAL ACT: IS IT DISHONORABLE?

Last August, before the passage by Congress of the Panama Canal Act, we stated what we believe to be the duties of the United States with regard to the administration of the Panama Canal in the following language:

This Nation should regard itself as a trustee for the benefit of the entire world in its operation of the Panama Canal.

It should not attempt to make a profit out of tolls, and at least a part of the maintenance cost of the Canal should be paid out of the funds of general taxation.

Toll rates should be uniform to all nations, and there should be no discrimination in favor of American ships. An American steamship carrying goods from New York to Tokyo should pay exactly the same toll rate as an English ship carrying goods from Liverpool to Tokyo pays.

If foreign nations endeavor to discriminate in favor of their ships by granting subsidies or by remitting tolls, the President of the United States should be authorized to impose a maximum rate of toll upon the ships of such a nation—instead of a minimum rate fixed for all nations agreeing to abide by the principle of non-discrimination. This will be following the principle upon which the President is given discretion to impose a maximum tariff on those nations which unfairly discriminate against the United States.

American vessels engaged in the coastwise trade may pass through the Canal free without violating the non-discrimination clause, because now no foreign vessels are allowed to engage in trade between American ports.

Canadian vessels voyaging between an Atlantic port in Canada and a Pacific port in Canada or *vice versa*, and American vessels passing between such ports, ought to be regarded as engaged in foreign commerce.

There should be no attempt to discriminate between owners of vessels. Any man or any organization of men who own ships should have common rights with others in using the Canal. Therefore legislation against railway-owned ships would be discrimination. If railway-owned ships are a bad thing for the country, which we do not believe, forbid directly the railways to own them. Do not try to prevent such ownership indirectly by using the Panama Canal as a club.

European critics, chiefly in Great Britain, and Canadian critics, some of whom have sent their personal protests to The Outlook, assert that the Panama Canal Act violates one of the principles outlined above to such an extent as to make the Act an Act of Dishonor. In other words, they assert that in exempting American coastwise vessels from tolls the Government of the United States is grossly discriminating against foreign nations, and therefore violating its solemn treaty.

On the contrary, we assert that the exemption of coastwise vessels from tolls is not a discrimination against foreign nations, since foreign nations cannot engage in any way, shape, or manner in American coastwise trade. We further assert that when an endeavor was made in the American Congress to exempt American foreign commerce as well as American coastwise commerce, the force of American public opinion, which we believe is strongly in favor of the most honorable observance of treaty obligations, compelled the abandonment of such a position, and as the Act now stands, American vessels engaged in foreign commerce will pay the same tolls that the English, the French, the German, or any other nation pays.

The controversy, then, turns upon the question whether the exemption of American coastwise vessels is a discrimination against foreign nations. Our belief is that, after a reasonable lapse of time, which will give our foreign critics an opportunity to consider the matter, they will themselves abandon their

contention. But if they still insist upon it and demand international arbitration, we are in favor of arbitration, provided a court of arbitration can be formed the members of which are not parties in interest.

There is another aspect of this question upon which we want to say a very frank but not unfriendly word. The British press, in its severe and sometimes bitter comment upon the United States in this controversy, has displayed an attitude towards America and Americans that seems to many of us on this side of the water to be apparently prejudiced and irritating. Our British critics have frequently used the word "dishonor" in connection with our building and administration of the Panama Canal. Have they given us in this matter that word of praise which we may be fairly said to deserve? If they have spoken such a word of praise, they certainly have not repeated it often enough to be in danger of over-stimulating our vanity.

What is it that the United States has done? For nearly four hundred years the civilized world entertained the idea of a canal through the Isthmus from the Atlantic to the Pacific. Surveys were made, plans were drawn, treaties were enacted. Finally the French people undertook the work. They failed. The American people assumed the burden. They have fought disease and death. They have struggled with engineering problems incredibly difficult. They have laid upon themselves financially an everlasting burden of over four hundred million dollars. All this has been done not merely for their own benefit, but for the benefit of the entire world. And their final act is to say that the ships of all nations, including their own, engaged in international commerce shall share the benefits of the Canal on equal terms. Not only that, they have legally fixed for the ships of the British people (who are now accusing the Americans of dishonorable practices) a rate of toll which is actually insufficient to pay the cost of the maintenance of the Canal.

The interest on the Canal bonds alone, to say nothing of the cost of operating the Canal and of maintaining order and health in the Canal Zone, will be twelve millions of dollars annually. It is perhaps within bounds to say that the people of the United States will tax themselves twenty million dollars a year for the purpose of opening the Canal to the ships of the world. Professor Emory R. Johnson, one of the leading experts in this country on the canal commerce of the world, estimates that it will not be until 1925 that the traffic through the Canal will reach the point of sixteen million tons annually. The maximum rate fixed by the Panama Canal Act per ton is one dollar and twenty-five cents. It is therefore reasonably probable that for the first ten years of its existence the receipts of the Canal will not pay its fixed charges.

This policy is to be commended. It is a policy recommended by President Taft, and is highly honorable to the American people. Cannot our British critics recognize some of these things, and admit that the American people are possibly honorable?

There are certain advantages and disadvantages to the political development of the United States which are found in the Panama Canal Act, but these we shall wait to point out in a future article.

OUR POLICE DISEASE

New York City has been giving to the country a needed lesson. The Rosenthal murder was a tragic, almost theatrical, exposure of the corrupt partnership between policemen and criminals, between men who make money out of lawless vice and men chosen to enforce the laws, between the shepherd's dog and the wolves. It is this that Mr. Meloney, in the title of his article which appears on another page, calls "our police disease."

That disease is ours; it is epidemic in American cities. It is not confined to New York. If it is at its worst in New York, it is only because there it has most to feed on.

What Mr. Meloney tells about the consequences of this police disease in New York is written not only from the record of the case so far, but also from knowledge gained through his experience as a newspaper man and through his experience in the Mayor's office. His diagnosis of the disease, therefore, is not that of a theorist, but of a man who has had what may be called clinical training.

He has not been content with describing the disease; he proposes a definite method of treatment. It is highly significant that one who sees as clearly as Mr. Meloney how deep-seated the evil is also firmly believes that it can be eradicated. That fact is more important than any specific measure he suggests.

Without discussing his article in detail, except incidentally, we wish to call the attention of the readers of that article to certain matters relating to the police problem which seem to us fundamental.

There are at least three causes of the police disease, and, correspondingly, three points to which the attack upon the disease must be directed.

The first cause lies in the law itself. In the larger part of the Union the State takes an attitude toward the city like that of a parent who issues his commands to his son but takes no measures to secure obedience. This is always demoralizing to the son and humiliating to the parent. It has proved demoralizing to the city and humiliating to the State. If the city is to be regarded as a minor child to be controlled, it should not be left to enforce the laws which the State enacts. The State should assume the responsibility of enforcing its own laws. If, however, as we believe, the city is to be treated as an adult, it should be empowered to make its own charter, decide for itself the questions that chiefly concern its own citizens, and then be called upon to enforce only those laws which it makes for itself. In brief, as The Outlook has said before, the power that makes the law should assume the responsibility of enforcing it; and, conversely, the power that is expected to enforce the law should have the authority to make it. The application of this principle to the police disease is clear. As long as the police of the city are supposed to enforce a law for which the people of the city have no desire and assume no responsibility, the police will continue to exercise that discrimination in enforcing the law which is at the root of all police corruption.

The second cause of the police disease is the existence of corrupt men in places of authority. This cause of evil is not confined to the police—it is a cause of evil in the school, the bank, the private business concern, and even the church. The way to attack this is, of course, the old, obvious method of ferreting out the corruption and dealing with the offenders. This is District Attorney Whitman's distinctive task in the Rosenthal case. It is an essential part of the treatment; but it is not the whole of it.

The third cause is to be found in the perversely wrong organization of the police itself. At present in New York, and in many other cities, the subordinates in the police force have a long and almost unshakable tenure of office, while the commander of those subordinates is in a position of the greatest insecurity. Authority that is subject to removal at any time is no authority at all. The real authority will always reside in a system that is at least comparatively permanent. In the police force, therefore, the authority over the force resides not in the Commissioner, who is here to-day and gone to-morrow, but in an irresponsible organization within the permanent members of the force. It is that irresponsible organization—known as "the system," *par excellence*—that is the real seat of the police disease.

It is for the purpose of reversing the present police organization—making the head permanent and the subordinates easily removable—that Mr. Meloney offers most of his suggestions. With this end we agree; but not with all the means.

The Police Commissioner should have an office of comparative security. We do not believe he should be appointed by the Board of Estimate, because it is never wise to intrust the appointive power to a group except for the selection of subordinates engaged in the service of that group. The appointment of the Police Commissioner by the Mayor, however, might well be made subject to confirmation by the Board. His removal should not be left to judges. The function of the court is not administrative; the removal of a Commissioner of Police is a distinctly administrative duty. It is never well to avoid one evil by creating another. The removal of the Police Commissioner may, we believe, be intrusted to the Mayor, under limitations, provided the Mayor himself is subjected to prompt recall by petition of the people themselves.

The members of the police force, officers and men, on the other hand, should be deprived of their undeserved and injurious grip upon their places in the force that they now have. The view that the policeman has a property right in his office has been fruitful of evil in the police and injustice to the people at large. Mr. Meloney's suggestion that the police enlist for a term instead of being appointed to a permanent office is interesting. Enlistment would emphasize the reversal of the present arrangement. In that respect it is good. Whether it would be practicable or not we cannot judge. It is certain, however, that the members of the police, officers

and men, should be subject to prompt removal by the Commissioner after trial by court martial. The decision should not be subject to review by the civil courts, but only by the Mayor. Whether the lieutenants and inspectors of police be under the command of a chief or not, the men in places of authority on the police force should be subject to the Commissioner, and removable by court martial.

The Rosenthal case should result not merely in the punishment of murderers and corruptionists, but also in the reform of the system under which murderers and corruptionists flourish.

LETTERS TO UNKNOWN FRIENDS

From my Unknown Friends I have received a great many more letters than it has been possible to answer through the columns of The Outlook. Some of them have been answered personally, but this also involves an amount of time and thought which is not always at my disposal. In this and later articles I propose to group a number of these letters, answering them briefly. If the correspondent finds the answer inadequate, as in many cases he probably will, I ask him to accept it as a token of interest and good will, and to regard it as a suggestion which he must amplify by his own reflection.

LYMAN ABBOTT.

How shall I resist temptation? Never is there a time that I fall into temptation but that I am sorry afterwards and promise myself to reform—without avail. How shall I strengthen my will power? H. F.

If you are in company with a person of strong will, you probably find yourself sustained in your purpose by his will. He reinforces your good resolution. It is the teaching of the Bible, and it is the faith of those who believe in it, that there is an invisible Father of our spirits, in whose fellowship we may live, and by whose strength we may strengthen our weak wills and steady our wayward wills. There is no process by which this change in character can be instantly accomplished. But if you seek the companionship of those whose character you wish to emulate, and the companionship of your Father whose service you wish to do, you will find your will gradually strengthened and steadied. But you must expect that your ideal will always be better than your performance, though you may hope that each year will show both a better ideal and a better performance.

Could you speak a helpful word to those who have no inborn sense of the reality of the unseen? To those who possess it—as most great Christians do in very large degree—it may seem incredible that any one can be born without it. But I am convinced that there are many such people. E. T. B.

To this very fundamental question there are two answers.

First, we are not to measure ourselves by the clearness of our vision, but by our obedience to such vision as we have. Only three of Christ's disciples went up into the Mount of Transfiguration and saw him there, but the others could be obedient to him. The private soldier who never saw General Washington could be loyal to his unseen commander, and Benedict Arnold, who had lived in close companionship with Washington, could be a traitor to him. We all have some vision of truth and duty, and we are to test ourselves, not by the excellence of the vision, but by our obedience to such vision as we have.

Second, the clearness of the vision depends partly upon temperament, but we may all cultivate it by obedience to its message of inspiration, and by some fellowship, through literature or otherwise, with the men and women of vision. But our prayers should be chiefly, not for greater gladness and glory in seeing, but for greater patience and courage in obeying.

What is the meaning of the saying, "Are not five sparrows sold for two farthings? and not one of them is forgotten by God"? It is supposed that God loves and protects the sparrow, and the application is that in like manner he loves and protects us. Please explain this lovable belief with the inexorable facts.

A. T. M.

What do we most desire for our children? Happiness or character? If God were to protect us from the perils and temptations of life, he would not equip us with character, nor would he furnish us the highest happiness. For the highest happiness comes to the courageous in confronting danger and to the virtuous in overcoming temptation. Peter, in his inventory of the qualities that make up a noble character, describes them as follows: Faith, valor, knowledge, self-control, patience, godliness, brotherly kind-

ness, love. These qualities cannot be given to one ready made; they must be developed in one by life education. It requires courage to develop valor, study to develop knowledge, struggle to develop self-control, burden-bearing to develop patience, battle with one's self to develop loyalty to God—that is, godliness—uncongenial neighbors to develop brotherly kindness, and self-sacrifice to develop, to its highest degree, love. If we regard the purpose of love to be to give present-day happiness, it is impossible to believe that God is love. If we believe the object of love to be the development of the highest form of character and the noblest experiences of life, it is possible to believe that we have in the struggles which make for character the help of a Great Companion who has more hope for us than we have for ourselves, and more faith in us than we have in ourselves.

Will Dr. Abbott give in The Outlook his interpretation of Matthew xvi. 18, 19, and John xx. 23, including a definition of the word church as used in the first passage, and by so doing aid a perplexed reader to a better understanding of the text?

*

There are two views respecting the Church of Christ. One, that he organized a Church to which all his followers should belong; the other, that he taught certain principles and imbues his followers with his own spirit, leaving those who accept those principles and possess that spirit to form their own organizations for carrying on his work—organizations which differ in different communities and at different epochs. The first is the Catholic view, the second is the Protestant view. The second is my view. I understand Christ's meaning in Matthew xvi. 18, 19, to be that whoever has a living faith in Jesus as the Messiah will by that faith be transformed in character, as Simon was transformed from a wave of the sea into a rock, and that on this living, transforming power of faith Christ founds the great invisible body of all his disciples and followers—a body which is more than any one church, but which is interpreted and expressed by all Christian churches. And I understand by his saying in John xx. 23, "Whosesoever sins ye remit, they are remitted unto them; and whosesoever sins ye retain, they are retained," that he puts upon this invisible body of his disciples and followers the responsibility of purifying the world and perfecting the kingdom of God. If they are faithful to their work, they will succeed in it; but the responsibility is laid upon them, and if they do not take up the work which he has laid upon them the work will not be done.

PROGRESSIVE DEMOCRACY[1]

THE HIGH COST OF LIVING

EDITORIAL BY THEODORE ROOSEVELT

THERE can be no more important question than the high cost of living necessities.

The main purpose of the Progressive movement is to place the American people in possession of their birthright, to secure for all the American people unobstructed access to the fountains of measureless prosperity which their Creator offers them. We in this country are blessed with great natural resources, and our men and women have a very high standard of intelligence and of industrial capacity. Surely, such being the case, we cannot permanently support conditions under which each family finds it increasingly difficult to secure the necessaries of life and a fair share of its comforts through the earnings of its members.

The cost of living in this country has risen during the last few years out of all proportion to the increase in the rate of most salaries and wages; the same situation confronts alike the majority of wage-workers, small business men, small professional men, the clerks, the doctors, clergymen.

Now, grave though the problem is, there is one way to make it graver, and that is to deal with it insincerely, to advance false remedies, to promise the impossible. Our opponents, Republicans and Democrats alike, propose to deal with it in this way. The Republicans in their platform promise an inquiry into the facts. Most certainly there should be such inquiry. But the way the present Administration has failed to keep its

[1] In a series of editorials, of which this is one, Mr. Roosevelt is repeating in essence the statement of his political faith made before the Progressive Convention at Chicago.

promises in the past, and the rank dishonesty of action on the part of the Penrose-Barnes-Guggenheim National Convention, makes their every promise worthless.

The Democratic platform affects to find the entire cause of the high cost of living in the tariff, and promises to remedy it by free trade, especially free trade in the necessaries of life. In the first place, this attitude ignores the patent fact that the problem is world-wide, that everywhere, in England and France, as in Germany and Japan, it appears with greater or less severity; that in England, for instance, it has become a very severe problem, although neither the tariff nor, save to a small degree, the trusts can there have any possible effect upon the situation.

In the second place, the Democratic platform, if it is sincere, must mean that all duties will be taken off the products of the farmer. Yet most certainly we cannot afford to have the farmer struck down. The welfare of the tiller of the soil is as important as the welfare of the wage-worker himself, and we must sedulously guard both. The farmer, the producer of the necessities of life, can himself live only if he raises these necessities for a profit. On the other hand, the consumer who must have that farmer's product in order to live, must be allowed to purchase it at the lowest cost that can give the farmer his profit, and everything possible must be done to eliminate any middleman whose function does not tend to increase the cheapness of distribution of the product; and, moreover, everything must be done to stop all speculating, all gambling with the bread-basket, which has even the slightest deleterious effect upon the producer and the consumer. There must be legislation which will bring about a closer business relationship between the farmer and the consumer. Recently experts in the Agricultural Department have figured that nearly fifty per cent of the price for agricultural products paid by the consumer goes into the pockets, not of the farmer, but of various middlemen; and it is probable that over half of what is thus paid to middlemen is needless, can be saved by wise business methods (introduced through both law and custom), and can therefore be returned to the farmer and the consumer. Through the proposed Inter-State Industrial Commission we can effectively do away with any arbitrary control by combinations of the necessities of life.

Furthermore, the Governments of the Nation and of the several States must combine in doing everything they can to make the farmer's business profitable, so that he shall get more out of the soil, and enjoy better business facilities for marketing what he thus gets. In this manner his return will be increased while the price to the consumer is diminished. The elimination of the middleman by agricultural exchanges and by the use of improved business methods generally, the development of good roads, the reclamation of arid lands and swamp lands, the improvement in the productivity of farms, the encouragement of all agencies which tend to bring people back to the soil and to make country life more interesting as well as more profitable—all these movements will help not only the farmer but the man who consumes the farmer's products.

There is urgent need of non-partisan expert examination into any tariff schedule which seems to increase the cost of living, and, unless the increase thus caused is more than countervailed by the benefit to the class of the community which actually receives the protection, it must of course mean that that particular duty must be reduced. The system of levying a tariff for the protection and encouragement of American industry so as to secure higher wages and better conditions of life for American laborers must never be perverted so as to operate for the impoverishment of those whom it was intended to benefit.

But, in any event, the effect of the tariff on the cost of living is slight; any householder can satisfy himself of this fact by considering the increase in price of articles, like milk and eggs, upon which the influence of both the tariff and the trusts is negligible. No conditions have been shown which warrant us in believing that the abolition of the protective tariff as a whole would bring any substantial benefit to the consumer, while it would certainly cause unheard-of immediate disaster to all wage-workers, all business men, and all farmers, and in all probability would permanently lower the standard of living here.

In order to show the utter futility of the belief that the abolition of the tariff and the establishment of free trade would remedy the condition complained of, all that is necessary is to look at the course of industrial events in England and in Germany during the last thirty years, the former under free trade, the latter under a protective system. During these thirty years it is a matter of common

knowledge that Germany has forged ahead relatively to England, and this not only as regards the employers, but as regards the wage-earners—in short, as regards all members of the industrial classes. Doubtless many causes have combined to produce this result; it is not to be ascribed to the tariff alone, but, on the other hand, it is evident that it could not have come about if a protective tariff were even a chief cause among many other causes of the high cost of living.

It is also asserted that the trusts are responsible for the high cost of living. I have no question that, as regards certain trusts, this is true. I also have no question that it will continue to be true just as long as the country confines itself to acting as the Baltimore platform demands that we act. This demand is, in effect, for the States and National Government to make the futile attempt to exercise forty-nine sovereign and conflicting authorities in the effort jointly to suppress the trusts, while at the same time the National Government refuses to exercise proper control over them. There will be no diminution in the cost of trust-made articles so long as our Government attempts the impossible task of restoring the flint-lock conditions of business sixty years ago by trusting only to a succession of lawsuits under the Anti-Trust Law—a method which it has been definitely shown usually results to the benefit of any big business concern which really ought to be dissolved, but which causes disturbances and distress to multitudes of smaller concerns. Trusts which increase production—unless they do it wastefully, as in certain forms of mining and lumbering—cannot permanently increase the cost of living; it is the trusts which limit production, or which, without limiting production, take advantage of the lack of governmental control, and eliminate competition by combining to control the market, that cause an increase in the cost of living.

There should be established at once, as I have elsewhere said, under the National Government an inter-State Industrial Commission, which should exercise full supervision over the big industrial concerns doing an inter-State business into which an element of monopoly enters. Where these concerns deal with the necessaries of life the Commission should not shrink, if the necessity is proved, of going to the extent of exercising regulatory control over the conditions that create or determine monopoly prices.

By such action we shall certainly be able to remove the element of contributory causation on the part of the trusts and the tariff towards the high cost of living. There will remain many other elements. Wrong taxation, including failure to tax swollen inheritances and unused land and other natural resources held for speculative purposes, is one of these elements.

The modern tendency to leave the country for the town is another element; and exhaustion of the soil and poor methods of raising and marketing the products of the soil make up another element, as I have already shown. Another element is that of waste and extravagance, individual and National. No laws which the wit of man can devise will avail to make the community prosperous if the average individual lives in such fashion that his expenditure always exceeds his income.

National extravagance—that is, the expenditure of money which is not warranted—we can ourselves control; and to some degree we can help in doing away with the extravagance caused by international rivalries.

These are all definite methods by which something can be accomplished in the direction of decreasing the cost of living. All taken together will not fully meet the situation. There are in it elements which as yet we do not understand. We can be certain that the remedy proposed by the Democratic party is a quack remedy. It is just as emphatically a quack remedy as was the quack remedy, the panacea, the universal cure-all which they proposed sixteen years ago. It is instructive to compare what they now say with what they said in 1896. Only sixteen years ago they were telling us that the decrease in prices was fatal to our people, that the fall in the production of gold, and, as a consequence, the fall in the prices of commodities, was responsible for our ills. Now they ascribe these ills to diametrically opposite causes, such as the rise in the price of commodities. It may well be that the immense output of gold during the last few years is partly responsible for certain phases of the present trouble—which is an instructive commentary on the wisdom of those men who sixteen years ago insisted that the remedy for everything was to be found in the mere additional output of coin, silver and gold alike.

There is no more curious delusion than that the Democratic platform is a Progressive platform. The Democratic platform, representing the best thought of the acknowledged Democratic leaders at Baltimore, is purely

retrogressive and reactionary. There is no progress in it. It represents an effort to go back; to put this Nation of a hundred millions, existing under modern conditions, back to where it was as a Nation of twenty-five millions in the days of the stage-coach and canal-boat. Such an attitude is toryism, not Progressivism.

In addition, then, to the remedies that we can begin forthwith, there should be a fearless, intelligent, and searching inquiry into the whole subject, made by an absolutely non-partisan body of experts, with no prejudices to warp their minds, no object to serve, who shall recommend any necessary remedy, heedless of what interest may be helped or hurt thereby, and caring only for the interests of the people as a whole.

FOLLOWING THE CAMPAIGN

A WEEKLY DIGEST OF POLITICAL OPINION AS EXPRESSED BY PEOPLE AND NEWSPAPERS

THE JUDGES AND THE PLAIN PEOPLE

WHY is there dissatisfaction among the people with the courts? That there is dissatisfaction is shown by party platforms in this Presidential campaign. Is this something that concerns the every-day life of the common people?

Mayor Gaynor, in an article on "Bench and Bar," gives an answer. In this article he speaks not only as a public leader but as a man who has served as a judge on the New York Supreme Bench. He says:

> Do the courts . . . stand in the way of social and economic progress? . . . Yes, they do, and have done so for a long time. . . . Nothing is more distressing than to see a bench of judges . . . set themselves against the manifest and enlightened will of the community in matters of social, economic, or commercial progress.

This has chiefly affected the working people. There are many examples. Mr. W. F. Dodd, of the University of Illinois, in a communication to The Outlook, refers to an example in the State of Colorado. There the Legislature passed a law providing an eight-hour working day for the workingmen in mines and smelters. The Supreme Court of that State so interpreted the Constitution that it nullified that law and prevented the working people from having this relief.

What is the result of this sort of thing? In a letter to The Outlook, Mr. Henry N. Starr, of Illinois, expresses a common opinion:

> The American people fancy that they are a free and independent democracy, when, in fact, they are living under a usurping judicial autocracy.
>
> That our judges are mainly wise and pure, and not cruel and wicked men like Jeffreys and his associates under Charles I, is fortunate for us. The system has grown so gradually and so insidiously and has been so taken for granted as correct that the people have failed to take alarm. It is strange, but the judiciary have in fact usurped the power to repeal any law, under the plea that it is unconstitutional.

This dissatisfaction with the courts is nothing new. Mr. William L. Ransom, of the New York bar, in an address delivered not long ago before the Brooklyn Bar Association, has given an account of "the relation of the courts to the people," tracing it from the early days of the Republic. He has shown that in this history there were three periods of popular concern about the courts. The first period came "soon after the founding of the Government." The question then was whether by court decisions the several States could be made to conform to the Constitutional powers of the National Government. Says Mr. Ransom:

> That proposal aroused a very great deal of momentary antagonism. Two Presidents of the United States openly used their power and patronage to enforce a negative answer. Some of the most eminent members of the bench and bar . . . fought long and bitterly against the Progressive standards declared by Chief Justice Marshall in the Supreme Court of the United States; but, in the end, the new trail, blazed by the Nation's courts, became the accepted Constitutional path.

The second period was foreshadowed by the warnings of Alexander Hamilton, who expressed his view in the following question concerning the encroachments of one governmental department on another:

> How are the encroachments of the stronger to be prevented, or the wrongs of the weaker to be redressed, without an appeal to the people themselves, who, as the grantors of the commission, can also declare its true need and enforce its observance?

Thomas Jefferson said in his letter to Thomas Ritchie dated December 25, 1820:

A judiciary independent of a king or executive alone is a good thing, but independence of the will of the nation is a solecism.

Again, in his letter to Judge Roane of September 6, 1819, Jefferson said:

It should be remembered as an axiom of eternal truth in politics that wherever power in any Government is independent it is absolute also. Independence can be trusted nowhere but with the people in mass.

Actual conditions about a decade later were thus reflected by Alexis de Tocqueville:

If I were asked where I place the American aristocracy, I should reply without hesitation that it is not composed of the rich, who are united by no common tie, but that it occupies the judicial bench and the bar. . . .

Armed with the power of declaring the laws to be unconstitutional, the American magistrate perpetually interferes in political affairs.

This second period culminated in a discussion over the Dred Scott decision. In this the Federal Supreme Court put Scott out of court because it held that a slave, or a slave's descendant, could not be an American citizen or have any standing in the Federal courts. Then the question was, as Mr. Ransom says:

Should the Dred Scott decision—a perfectly good decision, doubtless, in law, judged by legal precedents and mainly legal theories of the scope of the Constitution—be permitted to stand permanently in the way of the enlightened public conscience of the time?

Commenting on this, Abraham Lincoln said in his speech of June 26, 1857, at Springfield, Illinois:

We believe as much as Judge Douglas—perhaps more—in obedience to and respect for the judicial department of government.

We think its decisions on Constitutional questions, when fully settled, should control, not only the particular cases decided, but the general policy of the country, subject to be disturbed only by amendments to the Constitution as provided in that instrument itself. More than this would be revolution.

But we think the Dred Scott decision is erroneous. We know the Court that has made it has often overruled its own decisions, and we shall do what we can to have it overrule this.

The comments of Lincoln have been referred to by the advocates of the submission of judicial decisions to a popular vote. But Mr. Herman W. Stillman, a Chicago lawyer, writing to The Outlook, says:

Lincoln never advocated the submission of judicial decisions to popular vote. He stood for a government *by* the people and also for a government *of* the people (which means a government in which the people permit themselves to be governed), both in accordance with the self-imposed restraints of the Constitution.

In their government *by* and *of* the people, in the passage of laws, the people cannot go further than authorized by the limitations of the Constitution; and in their government *by* and *of* the people, in the construction of their laws, they must be content to submit to its restrictions. . . .

They do not repudiate the principles and policies of Abraham Lincoln, but they believe that the Lincoln way is to create an enlightened public sentiment, with which the people, through their judges, will surely fall in line, within the limitations of the Constitution; and that if a law is desirable which the Constitution forbids, its enactment should first be made lawful "by amendments to the Constitution as provided in that instrument. *More than this would be revolution!*"

Now we are in the midst of the third period of especial popular concern with the courts. As Mr. Ransom remarks, "there is undoubtedly less of rancor and resentment, less of hate and haste, and far more of good humor and self-restraint in the present discussion than in the past."

As to this, Senator Root said in recently addressing the New York State Bar Association:

Some of the recent discussions of judicial conduct have been dignified and temperate expressions of reasoned opinion which we must respect although we may not agree with it, such, for instance, as the recent article by Mr. Roosevelt in The Outlook. Some other expressions, however, have been rather exhibitions of violent temper and appeals to prejudice, imputation of sinister motive, and incitements to hatred. Such expressions we may not hesitate to condemn; and I am glad to believe that the condemnation will find a response among the great body of American people.

What is, and what should be, the attitude of the judges? In this connection Mr. Robert S. Wickham, a Binghamton, New York, lawyer, calls our attention to the following quotation from Justice Holmes's "The Common Law:"

The life of the law has not been logic: it has been experience. The felt necessities of the time, the prevalent moral and political theories, the intuitions of public policy, avowed or unconscious, even the prejudices which judges share with their fellow-men, have had a good deal more to do than the syllogism in determining the rules by which men should be governed. The law embodies the story of a nation's development through many centuries, and it cannot be dealt with as if it contained only the axioms and corollaries of a book of mathematics.

With this in view, Mr. Harry L. Kent, director of instruction at the Kansas State

Agricultural College, Manhattan, Kansas, writes to The Outlook as follows:

Where, in the services of our present justices—good men that they are—is the series of experiences that will give sympathy and understanding of the social conditions, requirements, and dues of the laboring and industrial classes? These men have been intimately associated with and employed by the wealthier members of our social body. They have studied, sympathized with, understood, and finally solved problems for this portion of society, favorably and acceptably to their clients.

But wherein lies their fitness to grasp the other side of the questions which come before them? . . . Ought not, could not, there be that other quality or consideration for fitness to sit on the Supreme Bench—the sympathy, experience, and understanding that come from just as intimate contact, study, and struggle with and for the problems and rights of the industrial classes as of the employing classes?

This criticism was most particularly accentuated by a recent decision of the New York State Court of Appeals, holding unconstitutional the Workmen's Compensation Law of that State. There was no possible appeal to the Federal Supreme Court, for there is no such appeal from a State decision adverse to the constitutionality of a statute. Concerning this Mr. Ransom says:

It is hard to explain . . . why beneficial legislation which the Supreme Court of the United States has held to be "Constitutional" when enacted by Kansas or Oregon should be left nugatory in New York on the theory that it violates the very provision of the Federal Constitution which it has been held not to violate.

The New York case directly led to Mr. Roosevelt's proposal in his address last spring at Carnegie Hall, New York City:

I am proposing merely that, in a certain class of cases, involving the police power, when a State court has set aside as unconstitutional a law passed by the Legislature for the general welfare, the question of the validity of the law—which would depend, as Justice Holmes so well phrases it, upon the prevailing morality or preponderant opinion—be submitted for final determination to a vote of the people, taken after due time for consideration.

Mr. Roosevelt styled his proposal "the Recall of Judicial Decisions." But, remonstrates Mr. Ransom, "from a lawyer's point of view, a more unfortunate and misleading characterization could hardly have been made." He adds:

Nearly all of the vigorous denunciation which the proposal has received . . . has been due to this unfortunate phrase. . . . Let us see just what his proposal . . . is not.

1. It has nothing to do with the United States Supreme Court and its decisions. . . .

2. It would in no way weaken or impair the interpretation or enforcement of the guaranties of the Federal Constitution by the Federal courts. . . .

3. It has nothing to do with any "specific" clause of any Constitution. . . .

4. It would not in any way repeal or amend or destroy the "due process" clause of any State Constitution. . . .

5. It has nothing to do with the "recall" of judges. . . .

6. It has nothing to do with the "decision" or "judgment" in any suit.

"If Mr. Roosevelt means," declares Mr. Charles E. Carpenter, of the University of North Dakota, "when he says he is not proposing anything in connection with the Federal Constitution, that the people may review a decision holding a State statute in conflict with a State Constitution, but may not overrule a decision where a statute is held to be in conflict with the Federal Constitution, it is difficult to see how Mr. Roosevelt's proposal could in any way relieve from the admittedly deplorable result reached in the Ives case."

On this point Mr. Walter James Shepard, of the University of Missouri, writes in a letter to The Outlook:

An amendment to the Federal statute permitting appeals in *all* cases where the question of the validity of a State statute is raised on ground of alleged conflict with the Federal Constitution would assure a final decision by the Supreme Court of the United States, and go far towards alleviating the condition.

There has also been some decided dissent. For instance, Mr. Stillman, from whom quotation has already been made, declares:

The American people elect most of their officials. They are trying the experiment in some States of electing their laws. It is now suggested that they choose their Constitutional interpretations by ballots.

It is the opinion of many patriotic citizens, who are part of the people, and who desire their full share in government by the people, that this is not practicable. They honestly believe that the electors have not yet advanced sufficiently in opportunity to know the law, ability to apply it, or freedom from boss rule, especially in our large cities, to make the experiment a safe one.

Mr. William G. Coleman, a Baltimore lawyer, in writing to The Outlook, says:

It is not believed that a theory so destructive of our governmental system under a fixed Constitution, so abhorrent to every thoughtful man's ideas of the proper administration of justice, will be accepted by any but a very negligible and unsafe element of our whole people. . . .

The proposed review of decisions would bring about chaos and injustice instead of the

stability and justice which our Constitution affords.

Mr. E. B. Valentine, of Electra, Texas, writing to The Outlook, points out that "the principal difference between the proposed popular interpretation of State Constitutions and the present power of amendment would seem to lie in the fact that the proposed power would be retroactive, while the present power is not." He explains:

Primary elections are not retroactive. The recall of officers is not retroactive. The popular election of United States Senators would not be retroactive. The initiative and referendum are not retroactive. Constitutional amendments are not retroactive. All the various methods of expressing the popular will by direct vote that are now enforced or that have heretofore been proposed, so far as I am aware, are not retroactive. But the proposed interpretations of Constitutions by popular vote surely would be retroactive, and, to that extent, unwise.

Mr. William R. Burleigh, of Manchester, New Hampshire, asks the following practical questions:

If elected on the platform you publish, what can Mr. Roosevelt legally do to compel the adoption of the direct primary, the short ballot, the initiative, the referendum, the recall, the review of judicial decisions, the reform of the courts, or the government administration of public utilities?

Do not you and he both know that these are all matters exclusively in the control of the individual States?

But we already have a system equivalent to Mr. Roosevelt's, asserts Mr. Albert S. Bard, of New York City, in a letter to The Outlook. "Ordinary decisions," says he, "may be 'recalled' . . . by act of the Legislature. Except so far as Constitutional matters may be involved, the law as declared by the courts can be changed by the next Legislature or Congress, as the case may be." Mr. Bard instances the following illustration:

A milling company had appropriated, without permission, the portrait of a girl for use in its advertisements, and was circulating the portrait over the legend, "The Flour of the Family." The Court of Appeals said, in effect, that because this had never previously been recognized as a breach of personal rights it wouldn't recognize it, and held the girl to be without remedy. This decision was so abhorrent to the general sentiment of the State that the very next Legislature abrogated the decision with a statute.

Where a Constitutional question is involved, comments Mr. Bard, such decision may be "recalled" by amendment to the Constitution. Of this he gives the illustration of the New York decision against the Workmen's Compensation Act, "which, within a short time, will undoubtedly be 'recalled' by an amendment to the State Constitution expressly permitting such acts."

Referring to the assertion that if the people know enough to make a Constitution, they know enough in the last resort to say what it was that they meant when they made it, Mr. Bard asserts that "this seemingly artless sentence . . . may be taken to mean very different things." For instance:

If it means (*a*) that persons capable of drafting a constitution are capable of construing it, I agree. But the people are not competent to draw constitutions, and they never do draw them in fact. The work is done by skilled experts having years of specialized training. All that the people do is to say, in a very rough way, whether the general ideas embodied in the document are acceptable.

If it means (*b*) that a people capable of voting to adopt a constitution may wisely be left to decide whether or not particular amendments which are proposed shall be adopted, again I agree. This is precisely what we do to-day.

But if it is intended to mean (*c*) that a people . . . capable of voting upon the acceptance or rejection of a constitution is capable of reviewing as a court of last resort a question of its construction, or may properly do so, the proposition is laughable. It simply cannot be done.

Mr. Allan F. Westcott, of Annapolis, Maryland, writing to The Outlook, thus concludes:

In most cases, since laws are in the nature of bonds between the individual and society, the people, as a body, are litigants, either as plaintiffs or defendants. To transfer judicial power to them would be to combine the offices of plaintiff or defendant and judge, an anomaly in Anglo-Saxon legal procedure.

In answer to this point Mr. Bernard A. Rosenblatt, a New York City lawyer, in a letter to The Outlook, says:

On a careful examination of the problem, such reasoning must appear weak and unconvincing. If the people were the judge between the minority and the majority, then indeed the decision might justly be viewed with suspicion. But in the case to which the recall of judicial decisions is intended to be applied the Legislature of the State, sworn to defend and sustain the Constitution, has enacted certain laws which it deems Constitutional. The legislators have neither the moral nor legal right to pass any laws but those which they are convinced are Constitutional. . . .

When such a law, approved by the executive and legislative branches of the government, is disapproved by the courts of the States on the ground that the act is in contravention of the State Constitution, we have a situation wherein two branches of the government (law-making and law-enforcing) disagree with the opinion of the third branch (law-interpreting). Is it not

logical to provide for some method whereby the people . . . should decide as between the diverse opinions of their various representatives as to what the Constitution really is?

Another method is proposed by Mr. George L. Burtis, of Marquette, Michigan. Writing to The Outlook, he suggests that a law declared unconstitutional might be submitted to the people; and adds:

If the people of the State or of the Nation, acting as a unit for the purpose, give a majority vote in favor of the law, and thus reenact it, then let it take its place as an *extra-Constitutional law*, having the same force as the Constitution itself and repealable by the people, and by them only.

A . . . plan, also needing for its establishment Constitutional amendment, would be to have every law submitted to the Supreme Court of State or Nation, as the case might require, if during its passage through the Legislature or Congress its constitutionality were brought into serious question, and if two-fifths of the Legislature requested a decision from its Supreme Court as to the constitutionality of the proposed law before it went to the Executive for his signature.

Mr. Dodd, who has already been mentioned, declares himself to be "in hearty agreement with Mr. Roosevelt's arguments," but feels that the end at which Mr. Roosevelt aims may be accomplished more fully and less cumbrously by two measures:

(1) Take from the State Constitutions the broad guaranties of "due process of law" and "equal protection of the laws," leaving all State cases involving such guaranties to be settled by an application of the Fourteenth Amendment to the Federal Constitution. . . .

(2) If these clauses are removed from State Constitutions, contests over the validity of new social and industrial legislation must then be based almost entirely, if not entirely, upon the provisions of the Fourteenth Amendment. An amendment to the Federal Judicial Code . . . would permit all such cases to be brought promptly from State courts to the United States Supreme Court for final settlement.

Mr. Harrison J. Conant, a lawyer of Montpelier, Vermont, writing to The Outlook, declares:

That some of our courts have nullified the will of the people expressed in legislative enactments by an "absurd narrowness" of interpretation of the Constitution "resting on literal distinctions," is too obvious to be denied.

But Mr. Conant asks:

Would it not be in accordance with the true theory of Constitutional interpretation to require decisions of the court to be *unanimous* in order to nullify any act of the Legislature? . . . In a criminal case we resolve a reasonable doubt in favor of the accused, and require that all of the jurors be free from such doubt. Is it unreasonable to require unanimity when the Constitution is on trial?

Ex-Governor Lucius F. C. Garvin, of Lonsdale, Rhode Island, in the course of a letter to The Outlook, says:

The trouble with President Taft, Mr. Root, Mr. Lodge, Mr. McCall, and Secretary Nagel is that no one of them appears to realize that present conditions are extremely bad. President Taft says that, instead of popular review of judicial opinions of the Constitution, let the people amend the Constitution. But he does not recognize the fact that for the people to amend the National Constitution as they wish is an impossibility; nor are most of the State Constitutions open to change at the will of the majority. If the people could change their Constitutions . . . as they can do in the State of Oregon, then they could well afford to do without the other powers to which Mr. Taft objects. They could, and would, create a legislature truly representative. They could, and would, provide machinery for the election of executive officers far superior to that which now exists. As Mr. Roosevelt has just written, setting forth the line of separation between the Progressives and their opponents, "The issue is perfectly simple. Do you believe in the rule of the people? If you do, you are with us. If you do not, you are against us."

That is the truth. If Mr. Taft and his supporters had faith in the American theory of government, they would advocate some method by which a majority could alter the organic law when they so desire. The fact that not one of them proposes the granting of such power to the people indicates that they believe in the aristocratic form of government.

At all events, Mr. Arthur W. Richards, of Yonkers, New York, writing to The Outlook, thus concludes:

I suggest that we let up a while on theoretical judgments as to the ability of the people to rule and give them a trial at it.

This is why the Progressive party adopted the following plank:

The Progressive party demands such restriction of the power of the courts as shall leave to the people the ultimate authority to determine fundamental questions of social welfare and public policy. To secure this end it pledges itself to provide:

1. That when an act, passed under the police power of the State, is held unconstitutional under the State Constitution by the courts, the people, after an ample interval for deliberation, shall have an opportunity to vote on the question whether they desire the act to become a law, notwithstanding such decision.

2. That every decision of the highest appellate court of a State declaring an act of the Legislature unconstitutional on the ground of its violation of the Federal Constitution shall be subject to the same review by the Supreme Court of the United States as is now accorded to decisions sustaining such legislation.

THE DEATH OF GENERAL NOGI

BY GEORGE KENNAN

GENERAL COUNT KITEN NOGI, who committed suicide in Tokyo on the night of September 13, was perhaps the most widely known and best loved of all the great leaders who directed the armies of Japan in the memorable war of 1904–1905. He was born in Choshiu in 1849, and began his military career, at the age of fourteen, as a samurai in the service of the Daimio of Choshiu, one of the most powerful nobles of feudal Japan. His early training on its physical side was that of a Spartan boy, and on its mental and moral side that of a Marcus Aurelius. His whole life showed that he was deeply impressed in his earliest youth with the temper and spirit of Old Japan, and his rules of conduct were based on the ethical code known as Bushido —"the way of the knights." The very foundation of that code, as expounded by a recent Japanese historian, was "loyalty—loyalty to one's lord, or to any man or matter upon which one's heart is set." The code also taught, and Nogi as a boy learned, the importance of fearlessness, modesty, simplicity, sensitiveness to considerations of personal honor, readiness to sacrifice everything in the performance of duty, and complete disregard of mere existence when existence is incompatible with inherited standards of faithfulness and moral obligation.

With these ideas in his mind and with this spirit in his blood, young Nogi began his military career. He served with credit in the civil war of 1877 (the so-called Satsuma Rebellion), and was subsequently promoted two or three times; but he did not see active service again until the outbreak of the Chinese War in 1894, when, after appointment to the command of a brigade, he took part in the capture of Port Arthur—the great fortress which he was destined to attack and capture a second time in 1904. After the Chinese War he was raised to the peerage; received the decoration of the Golden Kite; was made lieutenant-general, and given command of the Second Division of the Japanese army at Sendai. In 1896 he was appointed Governor-General of the newly acquired territory of Formosa; but after a short term of service there he returned to Japan and took command of the Eleventh Division, which was then stationed at Marugame. In 1900 he resigned his post, settled with his wife and his two sons in the country, and became a simple farmer. If his sovereign had not again needed his services, he might have lived the rest of his life as a plain country gentleman in his native province of Choshiu; but when the war with Russia broke out, the Emperor recalled him to Tokyo, promoted him to the rank of full general, and ordered him to command the army that was to operate on the Liaotung peninsula—the very field where he had first won distinction.

Of the crowning achievement of his life, the capture of Port Arthur and the destruction of the Russian fleet lying in the harbor, it is hardly necessary to speak. I wrote twelve articles for The Outlook from the headquarters of the besieging army, and everybody must still remember the bombardments, the night attacks, the sure-death parties, and the tremendous final assaults on Two-Hundred-and-Three-Meter Hill and the central forts. Two incidents of the siege, however, are still worth retrospective attention, on account of the light that they throw upon the character and beliefs of the man who, at the last, did not regard it as weak, dishonorable, or unfaithful to take his own life. The first one is the death of his second and only remaining son in the storming of Two-Hundred-and-Three-Meter Hill. As the social unit in Japan is the family rather than the individual, the continued existence of the family is regarded as a matter of the utmost importance, and the complete extinction of a family line is a calamity of the most serious and deplorable nature.

When the Russo-Japanese War began, Count and Countess Nogi had two surviving children, both sons, and both in the army. At the storming of Nanshan, Shoten, the elder son, perished; and when the siege of Port Arthur began, Hoten, the younger son, was an officer in a regiment that formed a part of General Nogi's attacking force. Ninety-nine Western fathers out of a hundred, when they had given one son to their country and had only one left, when they faced the possibility of a bereavement that would leave them childless in their old age

and bring to an end their family line, would have sheltered a little the one son that remained. It would have been easy for General Nogi, as supreme commander of the Third Army, to assign Hoten to duty on his staff, and thus protect him from some of the dangers incident to regimental service at the extreme front. Nogi, however, was not a father of that type. He and his remaining son might both die; but it was the duty of both to die, if necessary, and each must serve faithfully in the position that he occupied, regardless of death and regardless of the possibility of family extinction. Hoten, therefore, was left to take his chances at the front. His father watched the tremendous struggle for possession of Two-Hundred-and-Three-Meter Hill with a full consciousness that his last son was taking part in it; but during the progress of the battle he showed no signs of emotion. At night, however, when his officers had retired and he believed himself to be alone, he would sit for an hour at a time with his face in his hands and tears trickling through his fingers. Early in December, on the third day, I think, of the assault, Hoten was killed while leading a small storming party in an attack on one of the covered trenches of the Hill. When the father was notified of the son's death, he received the news calmly, and in his subsequent address of congratulation to his victorious troops he made no reference to his own bereavement. As he afterward said to a Russian officer of General Stoessel's staff: "You have lost many dear comrades; so have I; but it is not our custom to express our grief. Our hearts may be full, but our words must be few."

The second incident of the Port Arthur campaign that seems to me worth remembrance at this time is the solemn battlefield address to the spirits of the dead. Toward the close of the siege General Nogi, for the satisfaction apparently of his own inner nature and his own deep feeling of moral responsibility, caused an altar to be erected on a dusty plain between the hills in front of the Russian forts; assembled the officers of his staff and a part of his troops; and, after performing the Shinto rites of reverence and respect, read a written address to the spirits of his dead soldiers. In this address he humbly apologized for the incapacity that he had shown in the conduct of the siege, and begged the forgiveness of the men who had been sent to their death by him, but who might possibly have been saved alive if the siege had been better managed and the assaults more skillfully directed. Such a ceremony and such an address are foreign to all our modes of thought and action; but even if the spirit of Old Japan be strange to us, we can hardly fail to appreciate the touching sincerity of the feeling, and the strength of the conviction that the dead are still in existence, and that the living have in relation to them an unchanged duty and a continuing responsibility.

That General Nogi was deeply conscious of his own limitations and mistakes, and that he was greatly oppressed by a feeling of accountability for them, there can be no doubt. He was not a man to say what he did not sincerely mean, and in a letter written to General Terauchi, the Minister of War, a few days after the surrender of Port Arthur, he said: "I wish you all the compliments of the season" (it was just after New Year's day). "The feeling I have at this moment is solely one of anguish and humiliation that I should have expended so many lives, so much ammunition, and such a long time in the accomplishment of my task. At last General Stoessel's patience has become exhausted and he has surrendered the fortress, so that, in this part of the field, a settlement has been reached. I have no excuse to offer to my sovereign and to my countrymen for this unscientific, unstrategical combat of brute force. . . . Our preparations are now complete, and we are looking forward with great pleasure to tasting the sweets of a field campaign [the reference is to the forced march northward to take part in the battle of Mukden]. . . . I thank you heartily for your kind condolences on the death of my sons, and I beg you to forgive my long display of military unskillfulness."

Again, in an extremely brief report to the Emperor upon the siege of Port Arthur and the battle of Mukden, General Nogi said: "Even with such loyal and gallant officers and men as I had, a long time was spent—more than half a year—in capturing the Port Arthur stronghold; and in the battle of Mukden" (twenty-six words omitted in the report as published) "and we could not find an opportunity to crush a large force of the enemy's horsemen who moved in the rear of our left flank. This gives me the deepest cause of regret in my life." The twenty-six omitted words were probably a self-condemnatory statement of partial failure in the flanking movement on

the Japanese left, which was intended completely to surround Kuropatkin's army. The words were stricken out by the Emperor personally before the report was given to the press, and his object evidently was to prevent historical record of a great injustice done by General Nogi to himself. This deep consciousness of comparative inefficiency, and of moral responsibility therefor, Nogi never ceased to feel. In the later years of his life he often referred to it, and more than once said to his friends that the loss of his two sons seemed "almost a necessity, because only through this terrible bereavement could he answer to the spirits of the many brave men whom it had been his unhappy duty to send to death."

Such an attitude toward the dead and such a feeling of responsibility for personal errors that possibly increased the number of dead are foreign to all our modes of thought and all our standards of moral accountability; but they are quite in harmony with the spirit of Bushido and Old Japan, and Nogi must be judged by the feelings and beliefs of his teachers and contemporaries, not by feelings and beliefs that have been created by a different history and environment, and that prevail in a very different part of the world.

Another noteworthy trait of Nogi's character was his generosity to his enemies. In a recent article in The Outlook I referred to his extraordinary magnanimity in offering, at the unveiling of the Japanese monument to the Russian dead at Port Arthur, to conduct a Shinto religious service in honor of the spirits of the soldiers who, while living, had killed his sons and twenty or thirty thousand of his countrymen. An additional illustration of this trait is to be found in a letter that he wrote to the Governor of Nagasaki just before General Stoessel and his officers were sent to that port at the end of the siege. It was in part as follows:

Sir: It has been arranged to send around by your port the Russian military men and officials who are returning to their country on parole. I do not doubt that you have received some official communication as to their treatment, but I desire to state my own views, for your information. It need hardly be said that persons released on parole are not prisoners, neither are they enemies. They are merely foreigners who have performed loyal service in their country's cause. So long as combat continued, due vigilance, of course, had to be exercised; but I trust that the officials and the people of my country will not now regard these men as prisoners. They should be treated with humanity and the fullest courtesy.

Six years after this letter was written—in 1911—General Nogi spent a day or two in St. Petersburg, on his way to London, where he went to represent his Emperor at the coronation of George V. While in the capital of the Czar's Empire he did not forget, nor neglect, to lay a wreath of fresh flowers on the grave of General Kondratenko, one of the bravest and most skillful of the Russian officers with whom he had fought at Port Arthur. These incidents may seem unimportant; but they help to show what manner of man General Nogi was, and what his attitude was toward the spirits of the dead who died for Japan and the dead who died for Russia.

After the war General Nogi returned to Tokyo, where the great popular ovation that he received showed conclusively the depth and sincerity of the people's respect, sympathy, and love. In 1911 he went to London to attend the coronation of George V, but during the five or six years that followed the war he lived quietly in Tokyo, attending to his duties as military counselor, taking an active interest in affairs of state, but doing nothing to attract particular attention. On the 30th of July the whole Empire was shocked and plunged into the deepest grief by the death of the Emperor Mutsuhito. On the 13th of September—forty-five days later—General Nogi stabbed himself in the throat and the Countess Nogi killed herself by *seppuku* just as the firing of a gun in the palace grounds announced that the body of the Emperor had begun its journey to the grave. No event in recent years has made a more dramatic and tragic impression upon the world, and none has been followed by more inquiry, conjecture, approval, and condemnation. Like Tolstoy's abandonment of his home and death in a railway station at Astapova, it has caused the whole world to ask, "Why?" In the absence of any positive information with regard to the Nogis' intentions and reasons, it is difficult to suggest any adequate psychological explanation of their action; but it may be possible to throw some light upon the history of suicide in Japan, and upon the social and traditional environment which has made self-destruction there a very different thing from self-destruction here.

In order to understand, however, the Japanese attitude toward suicide, we must divest ourselves, as far as possible, of our own inherited and acquired beliefs, and try to look

at the matter from the view-point of a people who have never regarded suicide as essentially, inherently, and in all cases a crime. Suicide in Japan has always and everywhere been regarded as sometimes justifiable. Throughout the feudal period *seppuku*, or self-disembowelment, was enforced in the samurai class as a punishment for certain kinds of offenses; but this association with crime never made it disgraceful *per se*. Death by suicide continued to be honorable and, in certain cases, praiseworthy. When a *bushi*, or knight, was forced to a choice between two lines of conduct, one of which involved the sacrifice of principle and the other the sacrifice of life, he chose the latter without a moment's hesitation, and put himself to death with perfect coolness and dignity. Life, in the West, has almost invariably been put first in the list of desirables. Life, in Japan, has always been regarded as insignificant when balanced against any one of a dozen other things. Loyalty was better than life; the faithful performance of duty was better than life; the sacrifice of one's own interests to the interests of one's lord was better than life; the preservation of personal honor and dignity was better than life. Life was of value only when it was compatible with certain ideals of conduct. It may be said that these ideals of conduct were artificial, unreasonable, or even fantastic; but that does not affect the fundamental difference between the Eastern man and the Western man in the attitude of each toward life.

The Eastern man (I now refer particularly to the samurai) was always ready to die for the thing that seemed to him worth while—and there were many such things. The Western man is also ready to die for the thing that seems to him worth while—but there are few such things. The worth-while things in the East and the West differ as widely as does the attitude of the East and West, respectively, toward suicide as a means of attaining the worth-while things or avoiding the things that seem to be vitally injurious or disgraceful.

Suicide, as a means of attracting attention to what seem to be insupportable evils and exciting public feeling against them, has been practiced in Japan for centuries. As late as 1891 Ohara Takeyoshi, a lieutenant in the Yezo militia, committed suicide in front of the graves of his ancestors in Tokyo as a protest against what he thought was the indifference of the Japanese Government to Russian encroachments in the north. His explanation was that he thought "an appeal from the grave would move men's hearts more surely than any arguments urged by a living voice." After the Japanese-Chinese War, when Japan gave up Port Arthur and allowed it to be occupied by the Russians, no fewer than forty Japanese army officers committed suicide by *seppuku*.

This ideal of conduct may seem strange to us, but it is not incomprehensible, and there have been analogous cases even in the West. I knew a young married woman in Siberia—a political offender—who was condemned to death while pregnant, but who concealed her condition in order that she might be hanged with her unborn child. Her sentence would have been commuted if the authorities had known all the facts, but she was ready to commit what was virtually suicide because she thought that the horror of such an execution would raise a storm of popular indignation and protest against Russian governmental methods. How does this case differ in principle from the suicide of Ohara Takeyoshi and the officers of the Japanese army? And yet it is not an Oriental case. We are undoubtedly right in condemning Japanese suicide; but let us not misunderstand it, nor ignore the fact that the principle which underlies it—the insignificance of life in comparison with certain other things—is not to be condemned without qualification. It is a principle that has given firmness and strength to the Japanese character, and that has produced many men of the Nogi type—the type of Old Japan. How strong devotion to this principle has been in Japan we may see from the action of the lower house of the Japanese Parliament upon a proposal, made as late as 1869, to prohibit *seppuku* and abolish it altogether. Two hundred members out of two hundred and nine voted against the proposal, and six refrained from voting. The speakers who defended *seppuku* declared that it was "the very shrine of the Japanese national spirit and the embodiment in practice of devotion to principle." The spirit of Japan has changed since then, but it still remains unchanged in a few men of the Nogi type.

In very early, almost prehistoric, times the custom of *jun-shi*, or dying with the master, led to the interment of living Japanese retainers with their dead lord. This custom gradually died out, but voluntary suicide as

a means of showing personal devotion or attachment to a master or superior persisted for many centuries. In 1614, for example, three of the retainers of the Prince of Hirado killed themselves by *seppuku*, in order to "bear their dead lord company." There have been hundreds of similar cases in more recent times. General Nogi is said to have left a letter to be given to the new Emperor. When that letter is published, if it ever be published, we shall probably know definitely the reasons for the writer's suicide. Meanwhile I may perhaps venture to express the opinion that Nogi's act was not an act of weakness, nor a result of melancholia, nor an evidence of unbalanced mind. He never was weak in his life; he never allowed himself to be crushed by grief; and in the forty-five days that followed the death of his friend and master he never showed the least sign of mental derangement. So long as the body of the Emperor remained unburied, and so long as Nogi could render any service to his dead lord, he acted with perfect self-possession, calmness, and intelligence. When all was over, when there was nothing more to do, he ended his own life as an expression of his boundless devotion to the man whom he had loved. It was in the spirit of Old Japan, but Nogi was a man of that era, and lived in the mental and moral atmosphere of that time. In order to understand, dimly at least, the underlying principle of the act it is only necessary to imagine that the inherited beliefs and the social order of Old Japan which sanctioned and approved the death of Nogi in Tokyo were just as strong and just as compelling as were the inherited beliefs and the social order which sanctioned and approved the death of Straus, Millet, Astor, and Butt on the sloping decks of the sinking Titanic. It is not so much a difference in men as it is a difference in beliefs, traditions, ideals of conduct, and the social order. We may not approve the spirit of Old Japan, but by putting ourselves mentally in the places of the samurai of Old Japan we may at least understand it.

As for the suicide of the Countess Nogi, it is only a proof that the devotion of a Japanese wife to her husband is just as deep and strong as the devotion of an American wife to her husband. Mrs. Straus, on the Titanic, refused to leave Mr. Straus to die alone; and the Countess Nogi, in the modest little house in Akasaki, determined in the same spirit to share her husband's fate. Both women were faithful and devoted, and both had the strength and the courage that faithfulness and devotion give. The tombstone over the grave of the Nogis should bear the words from Bushido which describe their ideals—Loyalty, Duty, Faithfulness, Courage, Devotion, and Self-sacrifice.

THE LORD'S PRAYER

BY PRISCILLA LEONARD

Up to the mighty life of God on high
The soul that breathes this immemorial prayer
Is lifted, with its earliest words, to share
Wider horizons and an ampler sky,
To the Eternal Name and Will brought nigh,
Of the Eternal Kingdom child and heir;
And having caught man thus from daily care
To God—behold, God stoops to glorify
The life of man, that life of hard-won bread,
Of trespass and temptation day by day,
So far from peace, by sin beset so sore;—
O Son of Man and Son of God, who shed
Immortal hope upon the human way,
Thy prayer clasps earth to heaven forevermore!

OUR POLICE DISEASE[1]

BY WILLIAM BROWN MELONEY

ONCE more New York City has set the Nation by nose and ears with a scandal of police corruption. This time its noisomeness has reached even beyond the seas. The cities of the Old World, no less than those of the New, are aghast at the revelations concerning blackmailing policemen and toll-paying crime which cable and telegraph have been carrying to them since July 16 last. The *exposé* is as much a part of the daily news of London and Paris as it is of San Francisco and Detroit. London rhymesters are not behind those of Chicago in making it the subject of pertinent and impertinent verse. Berlin and Los Angeles are cartooning it.

To foreigners the revealed coalition between crime and those vested with the authority of suppressing it is but one of the many startling phenomena of which they are accustomed to read in our American life and institutions. To us it has never been a phenomenon. It is, and has been, a problem these past fifty years, whose solution we have, with becoming hypocrisy, sporadically attempted. It is not the problem of New York City alone, but of every city above the third class in the United States.

It is more than a problem. It is a disease. It has been diagnosed times without number, most notably in New York City by the Lexow Committee of 1894, and by the Mazet Committee of 1899. Hardly a day passes without the news carrying evidence of its existence in one or more cities. Hardly a municipal election is held without this disease, in one phase or another, proving the source of a determining "moral" or immoral issue.

The latest manifestation of our police disease, or diseased police, was shot into the world's attention at two o'clock of the morning of July 16, 1912, when the Camorra of the Department of Police of the city of New York assassinated a State's witness who within a few hours was to have given to the public prosecutor proof in corroboration of charges of blackmail and official oppression which he had previously made.

This witness was a gambler named Herman Rosenthal. He was a product of New York's East Side, who began life as a newsboy. According to his own sworn statement, he, as a lad of seventeen, went weekly to a police station and paid $25 for the privilege of running a game without molestation. That was twenty years ago.

In November, 1911, Herman Rosenthal made the acquaintance of Charles Becker, a lieutenant of police, and then commander of the "Strong-Arm Squad," a police body accustomed to lawless acts and practices, which is supposed to deal with the suppression of gambling and disorderly houses and gangs. Oppression and not suppression is the record of this and all similar squads.

New Year's eve last found Rosenthal and his wife, Becker and his wife, who is a public school teacher, and a number of others at a dinner in the club of a fraternal order. This festive occasion seems to have served to seal a friendship, or at least an understanding, between gambler and police officer.

New York had been and was notoriously "wide open." By that it is to be understood that houses of ill fame and gaming were plying their trades successfully, and that crimes of trick, fraud, and device, designed to relieve bucolic strangers and muddle-brained natives of pocket-burning cash, were the order of the day. All of this notwithstanding apparently persistent "raiding"—dust always for the eyes of the gullible—which resulted in no corrective convictions.

Herman Rosenthal was ambitious to be a "big gambler"—one of the "uptown fellows" who may make a fortune in a night. He wished to be of the Tenderloin aristocracy. There are classes even in the underworld. Caste lines are drawn as rigidly there as they are in the *haut monde*.

March saw Herman Rosenthal established as the proprietor of a house in the gamblers' Golconda—New York's Tenderloin. His place was in a block in West Forty-fifth Street where, at that time, one couldn't throw a rock without breaking the window of a gaming den.

On April 15 Becker and his squad "raided" Rosenthal's house, during the proprietor's absence. Among those arrested was a boy, nephew of Rosenthal's wife. Thereafter a policeman was stationed on the premises

[1] See in connection with this article an editorial elsewhere in this issue.—THE EDITORS.

night and day. This is a common and lawless form of police oppression. As the lessee and legal tenant, Rosenthal would have been within his rights to have employed any necessary force to have ejected these police invaders. But Rosenthal did not think of the law any more than his police oppressors thought of the law. The gambler saw all around him carrying on their games. He saw houses "raided" and resume "business" before the echo of the footsteps of the raiders died away. No policemen were stationed in them. By devious ways he sought to have the guards removed, but his place had been singled out as a mark. It was plain that forces were at work to drive him back to the East Side. Nobody wanted his "protection" money. The reason has not yet been demonstrated by evidence. But one should keep the fact in mind that Rosenthal was an alien in the Tenderloin. He was a competitor. He represented an invasion from the East Side. Protection money is paid by gamblers not only to insure freedom from police interference, but also as insurance against competition. The fewer the gambling-houses, the bigger the returns for those who control the traffic. Crime buys privilege just as "big business" buys it.

The arrest of Mrs. Rosenthal's nephew by Becker became an aggravating sore in the situation which confronted the gambler. Why will appear in a moment. Rosenthal went about the Tenderloin contending that it was unjust, illegal, a "frame-up;" that the boy had been neither player nor employee; that he had been simply visiting Mrs. Rosenthal when the raiders entered the house. Debt began to oppress Rosenthal. Cupidity and jealousy became the stokers of the fire which was blazing within him. Of that fire the mighty power of revenge was born. He would pull down the temple though it destroyed him. He had something to tell. He sought the Mayor's ear. He was turned away. He sought the ear of the Commissioner of Police. He was turned away. He sought legal advice. He was counseled to cause the arrest of the precinct police commanders responsible for stationing trespassers upon his premises. He made a complaint of oppression before a police magistrate. Warrants were denied him. Summonses were denied him. He sought the ear of the District Attorney, and at last won an official's attention.

Rosenthal in an affidavit told the prosecutor that he had opened a gambling-house in the Tenderloin by and with the connivance of Lieutenant Becker; that Becker's share of the proceeds was twenty per cent; that Becker had stationed his blackmail collector, "Jack" Rose, in the house as an overseer of the earnings; that Becker had told him shortly before the raid that their friendship had become known at police headquarters and that to save his position he must raid the Rosenthal house; that he told Becker to go ahead; that when he protested against the stationing of a patrolman on the premises following the raid, Becker told him he was helpless to do anything; that forces higher up were behind that oppression; that in order to salve the sting Becker canceled a loan of $1,500, which money he had advanced at the time of the opening of the house; that Becker was a grafter and that the District Attorney could easily substantiate this with the means of investigation at his command; that the prosecutor could establish, so far as the gambling-houses of the city were concerned, that there was a fixed scale of police toll (this is a National fact, with variance only in amount)—$500 to open a house for faro and roulette games and $300 a month to operate it, $500 to open a pool-room for afternoon play and $300 a month to operate, $50 to $250 a month (according to the proceeds) to operate a crap game, and $50 to $100 a month (according to the proceeds) to operate a poker club. In a few words Rosenthal painted Becker as without parallel in the long line of police wolves who had grown rich preying upon crime. The lieutenant's bank accounts would prove what he said. He asserted that he had learned of the amount of graft Becker was collecting from the lieutenant's own lips. He was willing to go before the Grand Jury and tell his story. He was willing to bring other witnesses to the fore to corroborate what he said.

There had been no secrecy about Rosenthal's moves. It was known that he had tried in vain to see the Mayor and the Commissioner of Police. The proceedings covering his application for summonses or warrants for the precinct police commanders had been public. He went forth from the District Attorney boasting that at last he had found somebody in authority who would listen to him. He told the newspapers about it. The issues of July 16 printed most of what he had told the prosecutor, and which I have here summarized. Rosenthal stayed up

until two o'clock that morning to read what the papers had to say about him and his charges. But he did not stay up late enough to read their final editions. He had been murdered by the police Camorra.

The scene of Rosenthal's assassination was the entrance to the Hotel Metropole in West Forty-third Street, only a step from the busiest and most brilliantly lighted section of Broadway. It is in the heart of the Tenderloin. The hour chosen was one when the night life of that district is at its hectic height. The restaurants were crowded. The gaming-houses were pouring forth their patrons, denizens, and keepers. Newsboys were crying their wet, inky wares. It was so bright in front of the Metropole that men and women who bought papers paused to read. The sidewalks were rattling under a traffic of feet. That block of Forty-third Street is a park of night-hawk taxicabs. The curbs were lined with them. Of a sudden the taxis melted away. Somebody had passed a signal. It took but a few minutes to clear the street. Then a gray touring-car, its head pointed toward the east, drew up in front of the Metropole.

The State's witness, but in the eyes of the Camorra the "blab," the "snitch," the "informer," the "traitor," the "squealer," against whom the *omerta* had been pronounced, was in the Metropole's restaurant. He was reading the first fruit of his "squealing" in black headlines and columns of text. The District Attorney had announced publicly that he was convinced that Rosenthal had told some truth, and that subpœnas had been issued in furtherance of investigation. A chattel mortgage record of the $1,500 which the gambler said Becker had lent him had been found. A decoy of the Camorra entered the restaurant and told the State's witness that "a friend" outside wished to speak to him. He did not say that the "friend" was death. There was a fusillade of pistol shots as the Camorra's victim put foot on the sidewalk. A minute later the gray touring-car was speeding to the eastward away from a corpse which the night lights touched with strange hues. A policeman "off duty," who had been in the restaurant with an actress, and who had seen the "squealer" go forth to his doom, gave chase in a taxicab. He was accompanied by two others from the swarm of patrolmen and detectives in the neighborhood. They did not overtake the gray car nor ascertain its license number. A citizen who did observe the number was arrested when he gave it to the police.

It is not my purpose to record all that has happened since that hour. It will suffice to say that New York knows that it has not been due to Police Department activity that nine men stand indicted for the assassination in front of the Hotel Metropole. As I write seven are under arrest—Becker, who is charged with having plotted and procured the commission of the crime, two gangsters out of the four who fired the death shots, and four more underworld rats, of whom three have confessed that they hired the assassins. Of these three, "Jack" Rose has confessed to having been the collector of blackmail levied upon crime by the indicted lieutenant. He has confessed that he procured the assassins to do Becker's bidding. Up to date, August 23, the District Attorney has uncovered bank deposits in the name of Becker and his wife of a total of $50,000. There is a prospect of a total of $125,000. These deposits were made during ten months, coinciding with the period of Becker's unrestrained influence as commander of the "Strong-Arm Squad." The salary of a lieutenant of police of the city of New York is $2,250 a year. If Becker and his wife, even with her school-teacher's salary, had lived on air, they could not have saved this money from their incomes. Perhaps they may explain it. During the Lexow investigation an equally suspicious amount of wealth was discovered in the possession of "Aleck" Williams, an inspector.

"I made it speculating in town lots in Tokyo, Japan," was his answer to the prober's interrogation, "Where did you get it?"

Besides the nine accused murderers of Rosenthal two police subordinates of the lieutenant stand indicted for perjury and oppression. They are accused of having falsely procured the indictment of a notorious gang leader named Zelig, on a charge of carrying concealed weapons. Conviction under this indictment (it was a second offense) meant fourteen years' imprisonment. The State is in a position to charge that the weapon alleged by the two policeman to have been found on the person of the gangster was placed there by them after they had taken him into custody, and that the purpose of their act was the arrest and indictment—steps in a process which would make him amenable to the wishes of their

superior, Becker. In the *argot* of the police and the underworld this is called a "frame-up."

Upon Zelig's arrest it was Rose and the other confessed agents of the lieutenant of police who obtained the gangster's admission to bail in the sum of $10,000, pending trial. Zelig has confessed that it was he who supplied the four assassins who rode to the Hotel Metropole in the gray touring-car. Rose and the accomplices indicted with him have confessed that they obeyed Becker because he threatened to "frame" them into Sing Sing Prison.

Whither the trail of corruption will lead no man can predict. Whether the investigators who follow it finally come to the lair of the "man higher up" depends upon how much more those already in the toils of the law tell in order to save themselves from the electric chair. It is certain there is a "man higher up." If there weren't, there couldn't be grafters lower down. This has been demonstrated again and again, just as it has been demonstrated that there is a police Camorra, and as it will be demonstrated again by the assassination of other Rosenthals or "squealers" unless we deal with the problem efficiently and constructively—unless we excise the cause of the disease.

Herman Rosenthal is not the first victim of the police Camorra in New York. There was McAuliffe, in 1902.

James McAuliffe complained that a house of ill fame had been set up next to his residence. It was a "protected" house. No attention was paid by the precinct police commanders to his complaint. He carried his complaint to police headquarters. The result was that Edward Glennon, who was wardman of the notorious chief Devery, and who had been protecting the house of ill fame, was dismissed from the Department of Police. McAuliffe was not a drinking man. Shortly afterward he left home one evening to visit a sister. He was arrested for "intoxication," and was taken to the West Forty-seventh Street police station. He left it as a corpse or in a dying condition. His dead body, bruised and beaten and skull fractured, was found the following morning in the street, a few blocks from the station. Nobody was brought to justice for that murder.

A few years ago a drunken Brooklyn policeman named Dillon, who grafted food supplies from the small shopkeepers on his beat, became enraged because some duck eggs which he had obtained by blackmail turned out bad. Frenzied with liquor, he entered the delicatessen store where he had obtained the eggs to "get even." Terrorized, the proprietor and his wife told their twelve-year-old boy to telephone to police headquarters for aid. Dillon shot and killed the boy. It was established by competent witnesses that when Dillon was placed under arrest his uniform was whole and unmarked. When he reached the police station where he was locked up, there was an ugly knife-slit in his coat. Dillon pleaded self-defense upon his trial. He claimed that he had been assaulted with a knife by the boy. He pointed to the cut in his coat as corroboration. The prosecutor was able to riddle this story and show that the coat had been cut by a policeman between the scene of the killing and the station-house. Dillon was convicted of manslaughter and sentenced to a seven-year term in Sing Sing.

So much for illustration of the Camorra's external exemplifications.

What remains to be revealed as a direct result of the Rosenthal assassination cannot be any blacker than what was dragged into the light by the Lexow and Mazet investigations, and during the meantime. The Lexow investigation lasted ten months. Thirty-one policemen were indicted and dismissed from the Police Department. Six were tried. Two were acquitted by juries. One went free as the result of a jury disagreement. Two were convicted. The Court of Appeals set aside the convictions and granted new trials. The indictments were then dismissed. One captain who was too stingy to employ counsel pleaded guilty. He consented to wear stripes in the penitentiary for thirty days. That was the harvest. Of the entire thirty-one dismissed from the Department, eighteen were restored to their positions by the courts. One of these, William W. McLaughlin, an inspector, after a vacation of three years was rewarded by the city with $25,000 for back pay and counsel fees. Bawds, brothels, saloons, gambling-houses, pickpockets, confidence men, and even steamship companies were shown by that inquiry to be sources of police blackmail. One inspector was shown to be the agent of a whisky house. This was "Aleck" Williams. Saloon proprietors had to buy his goods. Their alternative was to quit business.

The Lexow investigation cost the State $188,000. Nothing constructive resulted. Five years later it cost the State $46,066 more to ascertain that the police Camorra was still in existence. The Mazet Committee sat from April to December of 1899. Two policemen were suspended from duty. There were no prosecutions. Nothing constructive resulted from this inquiry so far as the police were concerned. Thirteen years later, if evidence of unchanged conditions in the meantime were lacking, the Camorra is so bold that it dares to assassinate a State's witness in one of the most public places on earth.

Among the Mazet Committee's findings was this:

"The police laxity toward certain laws [meaning the sumptuary laws and laws aimed at the suppression of vice] inevitably results in laxness toward all criminal offenses."

In that sentence, lame as it is, a big nail is hit squarely on the head. By grace of the people's hypocrisy the police of the country are the interpreters of our laws and not the enforcers thereof. A system of government by men and not by law has reared itself. For fifty years we have been electing executives who, by grace of the same hypocrisy, have been permitted to encroach upon the judicial branch of our system of government. It does not matter what the laws on the books may be, it is what these executives, and through them the police, are given to understand their respective communities would wish them to be. It is forgotten that these laws are general; that they are expressive of the will of the people of a whole State, and not of any particular city or town. But these laws remain on the books and continue to be the screws by which grafting policemen may wring toll from the underworld. They are the means by which official blackmailers are enabled to retire with mysteriously acquired riches. If the laws be obnoxious, then the one way to get rid of them is to enforce them. Only the people who enacted them can repeal them.

Lawlessness begets lawlessness. This popularly permitted usurpation of power on the part of the police in the interpretation of the laws has begotten a power of autonomy among them. As Tacitus, in speaking of obedience, has put it: "They attend to their duties, but still, as preferring rather to discuss the commands of their rulers, than to obey them." It is but a fiction that our police are public servants. They are public masters. They are a law unto themselves. They rule themselves. It may be accepted as an axiom of American municipal politics that the boss who has the police with him is the boss who wins elections. And for these election services and others between times politicians expect to pay, and do pay, with the enactment of laws which the police desire. It is easier to impeach a Supreme Court justice than to oust a grafting policeman from his job.

Nowhere in the United States is there a police department so securely intrenched in the power of its own will as in the city of New York. Its numerical strength as a political factor is primarily responsible for this. Twenty-five thousand votes will determine any close election in the metropolis. There are 10,000 voters in New York's police department. Said a practical politician, discussing the police with me not long ago: "Give me the cops and an issue that will hold them together and I'll swing any election. It's a poor skate of a cop that can't swing three votes. There isn't a beat in New York without three or more 'good citizens' on it breaking some ordinance or law with the cop's connivance. There isn't a cheaper or easier way for them to buy the cop's blindness than by voting for the man or thing the cop wishes to see go through."

A semi-remedy for this has been in force now for several years—the designation of patrolmen to strange posts and districts on election day. But what the department can do, voting with all its strength, was demonstrated in 1905. That was the year William Randolph Hearst was a candidate for Mayor against George Brinton McClellan. Hearst won the police vote principally with a promise of a three-platoon system—an eight-hour-day working law. The result was such a close one that despite an exhaustive recount and the fact that the courts awarded the office to McClellan there are thousands upon thousands of honest, hard-headed New Yorkers who will never believe that Hearst was not elected. Tammany Hall was against Hearst that year.

I think I have made it sufficiently clear why the political bosses desire things to remain as they are. If I have failed, one has but to read the newspapers from day to day. The bosses prevented any constructive treatment of the disease following the Lexow investigation. They prevented treatment

again after the Mazet probe. Lack of efficient leadership as well as hypocrisy on the reform side contributed on both occasions to the bosses' success. Unless strong leadership develops and the righteous indignation of the people is properly ordered, it is more than likely that politics will prevent this latest diagnosis of police disease to pass without remedial results.

What the New York police cannot obtain by political favor it does not hesitate to obtain by purchase. When it is necessary, it can maintain the wealthiest and most powerful lobby in the country, excepting that of the trusts. The department is a nest of internal organizations. They are called "benevolent" associations. They pay benefits for "death, resignation, or *dismissal*." Every rank from inspector down to doorman has its association. They thrive by virtue of a peculiar willingness on the part of the majority of policemen to pay through the nose. Naturally, shrewd men are the leaders of these organizations. You can always find them in positions of power in the department. They are the actual rulers of New York's police. With few exceptions, the long line of Commissioners have been led to believe that by coddling these association heads they could win the "good will" of the force. For the past fifty-five years New York has averaged a new Commissioner every seven and one-half months. This, of course, includes the periods when the rule was by board.

During the commissionership of General Theodore Bingham the Patrolmen's "Benevolent" Association sent out a call to its members for a "mortuary fund" of $150,000. Bingham had pending in the Legislature at the time certain bills by which he hoped to bring the force within control. It was boasted in Albany that the bills would never pass. Bingham heard of the "mortuary fund." He enlisted the aid of the District Attorney, and together they uncovered $74,000 in a safe-deposit box; $8,000 more was found wrapped in a dirty shirt in the home of the head of the association.

The officers of the organization denied that the fund was for legislative corruption. They said it was designed to increase the association's death benefit from $225 to $1,000. When they were asked why they had not put the money in bank, where it might draw interest, their answer was that this perhaps was due to a lack of business instinct. Bingham and the District Attorney broke into the association's secret meeting-place. They found a list of all contributors to the "mortuary fund," but there were no entries in the books of account, no records of receipts given to contributors. However, a document most illuminative of the "system" was brought to light. A patrolman named George Willett had refused to subscribe to the "mortuary fund." This report was made by the collector:

> This man, George Willett, who refused, I am told, has failed to make good for the salary bill, the defeat of the reorganization bill, or for any of the assessments that have been collected from time to time to enable your committee to secure better conditions. In spite of this he is always well taken care of by the superior officers of his precinct. He pleads poverty, but I am told that he has between $800 and $1,000 in bank. (Signed) MARTIN CAHILL.

The then Detective Sergeants' "Benevolent" Association (this rank has been abolished and the association has been merged with the lieutenants') gathered a fund of $20,000 the same year. Neither this sum nor what the patrolmen collected found its way to the State capital. Bingham's bills were passed. The Camorra still exists. Bingham was ousted from office by Mayor McClellan. The men whom Bingham tried to bring within control are still in power in the Police Department.

An instance of the willingness of policemen to be exploited is part of the current Camorra investigation. The Legislature in April last, at the instigation of the municipal administration, enacted a law increasing the salary of doormen (station-house keepers) from $1,000 to $1,400 a year and giving them the rank of patrolmen. The bill had the approval of Governor, Mayor, and Commissioner of Police. There was and is no human reason why any of the men benefited by that law should pay one cent to anybody for its adoption. Yet they are paying. I quote from a report of the Commissioner of Accounts:

"Officer Valentine Brandt testified that at Murphy's demand [Murphy is a former policeman now engaged in the practice of law] he signed a note for $400 payable to Murphy in monthly installments of $25 each. His first payment was made on July 2 [1912]. His receipt which he produced is signed 'William E. Murphy, per M. Johnson.' Brandt understood that the figure $400 was fixed by the amount of the increase in his

annual salary. . . . The police seem to be obsessed with the idea that the passage of any measure beneficial to them cannot be accomplished without the payment of large sums of money. They thus become the easy victims of the unscrupulous."

There is a remarkable psychology involved in the policeman's apparent joy in being exploited. I can only pause to say, however, that the majority of policemen are potentially as honest as the rest of humanity.

Since the reorganization of New York's department of police in 1857 there have been eighty-three Commissioners. Since the reorganization of 1883 there have been thirty-three Commissioners and five Chiefs. Between 1883 and 1900, when the office of Chief was abolished, the five successive incumbents of that office were retired for cause. The last one, Devery, had to be *legislated* out of office. Of the Commissioners only seven have been permitted to serve the term for which they were appointed. One died in office. The rest died politically. Only one has ever successfully submitted himself to the votes of the people after holding the office. That is Theodore Roosevelt. No Commissioner has ever been permitted to occupy the official chair long enough to ascertain whether he has been coming or going. Is it to be wondered that the police are self-willed? Is it to be wondered that there are "benevolent" associations? Is it to be wondered that there is a police Camorra?

Still, if the Police Department has wrecked Commissioners, it has also wrecked the Mayors who have appointed them. Under New York's present system of government the Mayor has the power of appointment and removal. It is a strange fact that in the last analysis the people of the metropolis measure the success or failure of a municipal administration by the way it handles the Police Department. Certainly the existing system of appointment and removal of the Commissioner of Police is at an end of the demonstration of its inefficiency. The responsibility of selecting the leader of 10,000 men is undoubtedly too great to be given to an individual. Political ambition, personal opinion, or perhaps a vision that he may succeed where other men have failed—these are only too likely to be factors in determining the attitude of the appointing power. Then, too, there is the very human liability of mistaking public clamor for public opinion, or public opinion for public clamor.

But to change the system of appointment and removal is by itself no remedy. The police still would remain their own masters. They still would be the interpreters of the law. The temptation of their commander still would be to do what he believed to be in accord with the wishes of the populace of the city rather than to obey the will of the people of the whole State. Commissioners of Police have political ambitions. So far as the present statutes are concerned, they are more than sufficient to shut up every gambling and disorderly house in New York within twenty-four hours. The powers have come up out of the common law. If the police had been actuated by legal and honest motives, they would not have adopted the oppressive proceeding of stationing a patrolman in Herman Rosenthal's gambling-house. After obtaining the proof that the premises were used for gambling purposes, they could have proceeded against the owner of the property and caused him to evict Rosenthal; or they could have arrested him and prosecuted him criminally for leasing his property for such uses as Rosenthal had been making of it. Not only are the operators of gambling and disorderly houses liable under the law criminally, but so also are the owners or lessors thereof. It is buncombe for the police or any other officials to say that the law is inadequate. Nor would any lessor, in the face of his rent-rolls, be able to plead ignorance of the uses to which lessees had been putting his property. Crime and vice pay landlords for accommodations in the same ratio in which they purchase "protection" from the police.

While under the Constitution the metropolis, on account of its population, is, and will continue to be, the dog, and the State the tail that wags the dog, still the enforcement of the laws as they are written cannot help but be the remedy for their alleged obnoxiousness. Only by a rigid enforcement will it be possible to obtain an expression of enlightened public opinion on the subject. As a consequence, hypocrisy must fall and a readjustment of those laws in keeping with that opinion follow. Until such readjustment, however, enforcement of law is the only way by which we may hope to put an end to police corruption. Only a free police can enforce the laws—a police without fear of political vengeance or expectation of political favor. Law enforcement means primarily a regaining of the control of the police by the

people, and to that end the police of the metropolis should be placed on an absolute military basis. It will be necessary as a matter of procedure to do likewise with the police of every city of the first and second class in the State. It is the cities which suffer from police corruption. It is the cities in which our laws for the suppression of vice and crime are employed as levies of police blackmail.

Americans like to shudder at the word "military." In the early history of the Nation it was a habit. Now it is an affectation. Call an organization by any other name and we will let it pass. The theory upon which all American police departments are organized is military. The system is military. But as it stands it is but a shell, for the kernel, discipline, has been stolen by crooked politicians and their ambitious tools.

In an editorial article in the New York "World" of August 18, 1912, I submitted this plan of reorganization of the metropolitan police:

"There are no legal barriers, which may not be breached, against legislating out of existence the entire police department as it stands. Simultaneously it should be re-enlisted as a unit for a three or five year period, with a continuing process of re-enlistment thereafter to be determined by the records and the fitness of individual members. There need be no vital disturbance of existing civil service and pension laws. The power of the Commissioner of Police should be made absolute. Examinations for promotion should be continued as at present instituted. Much is to be said in favor of divorcing the uniform rank from the detective branch of the force. Under a military system trials of departmental offenders would be by court martial, and with the power of punishing by dismissal and imprisonment as well as by fines. Trial by deputy should be abolished. The sole power of review should be in the Commissioner, and there should be no appeal from his decision. He should be absolutely independent of importunity from any source whatsoever. He should be in a position to make the men under him understand that they would rise or fall by merit or demerit alone, and not by the influence of a district leader, pothouse politician, or sentimental busybody.

"To insure stability of character and to command the class of men equipped by experience and skill to fill the position of Commissioner, the tenure of the office should be from ten to twelve years. The salary should be twice what it is at the present time. The power of appointment should be vested in the Board of Estimate and Apportionment. This body is elected by all the people. It comes nearer expressing the will of the whole people than any other body or individual under our present scheme of municipal government. The responsibility of selecting an official as important as a Police Commissioner and the commander of 10,000 men is too great to be given to the judgment of one man, even as the power of vesting the Commissioner's removal in one man is too great. There is always existent under this arrangement the temptation to accord with public clamor or personal whim or ambition or vision. We have had incompetent Police Commissioners and incompetent Mayors. By no means have all of our Commissioners been bad and all of our Mayors good. As the law stands now, no Commissioner can be free of will. Under any and all circumstances he, as a proposition of human nature, must be submissive to the will or the opinions of the appointing power. If he isn't, he must get out, and over his head always hangs the sword that dismissal attaints him from ever holding the office of Police Commissioner again, although it is to be doubted very much whether the Court of Appeals would agree with the Charter's weird provision of attainder. Still, this remains unsettled.

"Having vested the power of appointment in the Board of Estimate and Apportionment, its sole contract with the Police Commissioner should be the rigorous enforcement of all laws and ordinances, and a diligent maintenance of outward order and decency. Violation of that contract in any degree should be cause for removal upon the establishment of proper proof. The power of removal should be by petition originating either with the Mayor, a majority of the Board of Estimate and Apportionment, or the people themselves. This petition and its charges should be made answerable by the accused within not less than thirty days at a public hearing before a committee of not less than three judges of the Court of Appeals, the committee to be designated by the presiding judge. That is getting as far away from the realm of politics and political influence as it is possible to get until we change our method of selecting the judiciary. As to a petition originating with the people, it should be provided that it must

be signed by not less than one hundred freeholders, who should be liable under a bond in the event that they present false or frivolous charges. Likewise the city could be made liable for damages on account of false or frivolous charges presented by either the Mayor or the majority of the Board of Estimate and Apportionment."

Since the submission of that plan I have heard this criticism: "Must courts martial displace civil justice?" I have in mind courts martial only so far as dealing with departmental offenses is concerned. The civil laws and the law courts of the State and the Nation are sufficient to deal with assassins or any other class of criminal offenders.

During seventeen years I have enjoyed exceptional opportunities of studying our police disease in all of the larger cities of the country. Out of that experience I have drawn this: Unassailed, police corruption is a marauding, insatiable monster. Attacked, it will slaver and fawn upon the hands which throttle it.

THE CONSERVATIVE LEADER IN ENGLAND[1]

BY H. HAMILTON FYFE

NEVER was there a leader of a great political party with fewer outward signs of leadership about him than Andrew Bonar Law.

When it was known that he had been chosen to succeed Mr. Balfour as general of the Conservative force in the House of Commons, even Englishmen asked themselves if they had caught the name aright. Foreign observers inquired bluntly, "Who is Bonar Law?" The choice amazed them.

Of course it was not a free choice. If the party could have voted by ballot for its new leader, Bonar Law might have received a few votes. The majority would have voted for Austen Chamberlain. Not far behind would have come Walter Long. But those who wanted Long would not have served willingly under Chamberlain. So, in order to avoid splitting the ranks, it was necessary to elect a man to whom nobody had any particular objection. That man was found in Bonar Law.

The situation created by Mr. Balfour's adroit acceptance of the Forward Conservatives' slogan, "B. M. G." (Balfour must go), showed the weakness of the party. He himself was only a nominal leader. For eight years, instead of being in the vanguard, he had walked behind the procession, doing all he could to check its progress. A friend of mine, candidate for a Parliamentary seat in the Midlands, went to talk over with Mr. Balfour the prospects in his constituency. This friend is a sincere and eager Protectionist or "Tariff Reformer," and he talked tariff reform. When he had done, Mr. Balfour passed a hand wearily over his forehead. "My dear fellow," he murmured, "you don't mean to say you believe all that!"

Mr. Balfour, however, in spite of his disbelief in everything, including himself and the chief plank in his party's platform, had two valuable qualities—prestige and personal charm. He is a distinguished man, and it was his distinction alone that kept the party together. Unfortunately, there was no distinguished man to take his place. Mr. Long is an amiable country gentleman, neither an "intellectual" nor an orator, nor indeed anything but an honest man. Mr. Austen Chamberlain would never have had any position in politics if he had not been son to the great "Joe." He speaks moderately well, but has no ideas. He could lead along a road well marked with sign-posts, but in unknown country he would not know which way to turn.

Now, Bonar Law is like these other two in that he lacks distinction, but he is unlike them in being a good speaker and in possessing an exceptional brain. He is a man who has got to the front by force of character. He was a convinced Protectionist (or "Fair Trader," as it was called then) long before "Joe" Chamberlain announced his dramatic conversion in 1903. There are many Conservatives, therefore, both inside and outside the House

[1] The increasingly critical political situation in Great Britain, and particularly the Ulster agitation against Home Rule in Ireland, of which we speak elsewhere in this issue, make this pen picture of the personality of the present Conservative leader of timely interest.—THE EDITORS.

of Commons who welcome his leadership and believe that he will serve the party far more capably than either Mr. Long or Mr. Chamberlain could have done.

Let us see what there is in Bonar Law's record and character to support the hope that he may be the man to re-establish Conservatism in popular favor. First we will hear him speak in the House of Commons. He has been sitting, while others addressed the House, perfectly quiet, to all appearance little interested. Unless you had been told who he was, you would scarcely have noticed this spare figure with the pensive, wide-open. melancholy eyes. His brown hair, getting a little thin, is brushed in an orderly, ordinary way. His lean features are shaven save for a small mustache. He wears a decent black coat. He looks just a decent, ordinary man.

That is, in fact, exactly what he would be but for his one passion, his characteristically Scottish passion—the passion for argument. Now he rises. A light burns in those eyes, no longer pensive or melancholy. He begins to speak, rapidly yet distinctly, with an excellent choice of words. He has seized upon points made by earlier speakers, and he is arguing them with resolute conviction as well as dialectical skill.

He has made no notes. He carries all his material in his head. They say that since Lord Brougham died no one has ever been able to handle a complex argument so clearly and easily as Bonar Law. The pleasant voice, agreeably flavored by a slight Scottish accent, flows on without any of those painful pauses, those "er, er, er's" which usually punctuate an Englishman's speech. Once he does pause. He is flinging arithmetic at his opponents, a ceaseless Maxim gun discharge of statistics. Of some important figures he is not quite sure. He takes from his trousers pocket a little note-book, just a little three-cent note-book it looks like. He turns at once to the right page and reads out, in a tone quivering with triumph, the figures which he declares "destrroy the entirre Frree Trrade case."

Although he uses notes so seldom, he always seems to have concealed somewhere about him just the note he wants. His clothes must surely be made with an extra allowance of pockets, and every pocket holds emergency ammunition. Listen! Some statement of his is questioned. There are shouts of derision from the Liberal benches: "He never said it," "Query," "Quote." Bonar Law looks at the Liberal benches with a grim smile. Then he plunges into a pocket—always the right one. At sight of a slip of blue House of Commons Library paper the Liberal benches are silent. They know what is coming. "Speaking at Birmingham on September ten, nineteen hundred and five. . . ." Another point scored by Bonar Law.

His points are always argumentative, never rhetorical. He appeals to reason, to facts; not to emotions or imagination. He can be bitter in irony. He now and then turns a neat phrase of humor; but he never lifts a debate above the level of logic. He never makes anybody want to cheer.

A queer, dry figure, this Scotsman with the one passion—the passion for proving some one else to be wrong. Even at school he was always wanting to argue. His schoolmaster at Hamilton pronounced him a boy of great mental power, a serious boy, a boy anxious to do well (*i. e.*, to argue other people down). At Glasgow High School the commendation took a different form. His master here declared testily that "he had every kind of sense except common sense." Evidently he had argued his master down! What he was like at Richibucto Grammar School, New Brunswick, no record tells. Although he was only twelve when he left Canada, the land of his birth, for Scotland, the land of his fathers, he had no doubt begun to argue even before then.

As a young man in the Glasgow office of his uncle he argued steadily in the intervals of mastering the iron trade. He joined a Parliamentary debating society, which had Government and Opposition sides and observed all the forms of the House of Commons. Here, like W. S. Gilbert's Sir Macklin, "he argued high, he argued low, he also argued roundabout him." At the same time he "took lectures" at the university, and for wider self-improvement joined a literary discussion club. His seriousness and anxiety to do well drew upon him the notice of a merchant prosperous in the iron trade, who offered him a partnership. The result of this was that by 1900, when he was forty-two years old, he had saved enough money to be able to retire from business.

His idea was to devote his energies to politics. He soon won a seat in Parliament and started for London to argue himself into office. For a while he sat on

back benches unnoticed. Reserved, he made few friends. Self-reliant, he bided his time. His first speech was dismissed by a Conservative newspaper as "dull," but Sir William Harcourt praised it, and the apparently unemotional Scot glowed with gratitude. Soon the House of Commons recognized that he was a man who, when he spoke, had always something to say. His leaders saw that he might be useful, and after only two years in Parliament he was invited to become a junior Minister. The Board of Trade, which concerns itself with matters of industry and commerce, required an Under Secretary. For four years he filled the post with discretion and industry. Then Mr. Balfour's Government went out and Bonar Law found himself one of the leaders of the Opposition.

He had risen with unusual rapidity. Tariff reform gave him his opportunity. He became logician-in-chief to the movement. Very few of its supporters could argue the case for Protection. Bonar Law could and did. The others took refuge in vagueness. He went into detail. He buttressed his arguments with solid figures and facts. He did not try to dazzle his hearers; he tried to make them think. This did not make him popular, for the people do not want to be made to think. They want to be stirred, entertained, hypnotized. They would far rather listen to Lloyd George's emotional abuse of dukes than to a reasoned proof of the necessity of reform. But the reasoned proof has more influence upon them in the long run.

In a play by Somerset Maugham one of the characters bids a young politician "remember that the British people like their leaders dull. Versatility they cannot bear, and wit they utterly abhor." That is true. Even Lloyd George's emotionalism, with its religious flavor, they have begun to distrust as too "sensational." But the duller Bonar Law's speeches were, the more readily was he labeled "serious" and "safe."

Those epithets sum him up. He belongs to the "industrious apprentice" type. He is a teetotaler; after his defeat in the election of 1906 he was discovered calmly sipping a glass of milk. A Presbyterian minister who "preached to him for a quarter of a century" gives him a handsome testimonial: "He was a devout, attentive, and appreciative hearer." He goes little into society. His wife died two years ago, and he felt her loss deeply. But even before that he was seldom seen at parties of any kind. He prefers his own home to the homes of other people; with a book he can be quite happy. His only amusements are chess and golf. To his children he is a friend as well as a father. When he took his place as Leader of the House, there was an Eton boy in the Strangers' Gallery, granted special leave for the occasion. That was young Bonar Law.

Now it is clear, I hope, why I began by saying that there were no outward signs of leadership about this safe, serious, respectable, argumentative Scot who has suddenly become a figure in world politics. Nor does it seem to me likely that he will ever really lead. The British people require of the man whom they will follow that he shall be in some respect a Superman. Leadership is a question of vitality; it demands an excess of life force. A leader must have strong personality. He must be able to influence a crowd by merely standing before them. They must be interested in him before he begins to speak.

Without Gladstone's prophetic dignity, Disraeli's Oriental fervor, "Joe" Chamberlain's businesslike enthusiasm, or Lloyd George's emotional ecstasy (which makes men shed tears at meetings and cry aloud, "Thank God for Lloyd George!")—without any picturesque quality whatever, how is Bonar Law to seize hold of the mass of people as these others have done and swing them in the direction he wants them to take? If success depended upon argument, he would be the most popular leader ever known. But argument has very little place in modern politics. For one voter whom you can convince by reasoning there are ninety-nine who must be appealed to in quite a different way. You must touch their imagination. You must impose your policy upon them by sheer force of will.

Such a leader will arise again among the British Conservatives. He will bring with him the ideas which are to mold the future. He will sweep away the tiresome network of machine-made tactics which cramps Conservative effort to-day. He will draw his following from all classes. He will build his platform upon broad principles, easily grasped. Such a leader the British people are waiting for. But they have not got him in Andrew Bonar Law.

THE ISSUES OF THE CAMPAIGN

BY WILLIAM DE WITT HYDE

PRESIDENT OF BOWDOIN COLLEGE

CANDIDATES

SHALL we have for President a judge?
Or a scholar?
Or a prophet?

Shall we have for Vice-President a reactionary?
Or a moderate?
Or a reformer?

TERM OF OFFICE

Shall we have two terms, with the first a steam roller for the second?

Or, more fearful of evil than hopeful of good, a single term?

Or as many terms as the people's need of leadership demands?

THE TARIFF

Shall we have a tariff which forces the consumer to pay on whatever manufacturers see fit to produce the difference in cost of production here and abroad, approximated by a scientific tariff board; plus a reasonable profit determined by the manufacturers themselves?

Or a tariff reduced steadily downwards toward a system of just charges rather than Governmental patronage, beginning with the schedules which have most obviously been used to kill competition and keep prices here above prices of the same articles sold abroad?

Or shall we have a tariff recommended by a tariff commission with power to inquire into costs of production, conditions of labor and wages, and cost of protection to the consumer; administered with an eye to the workman's pay envelope as well as to the employer's pocket; and with the presumption in favor of the consuming public wherever cost to consumer exceeds benefit to the producing class?

CONTROL OF CORPORATIONS

Shall we have attempted restoration of competition by enforcement of existing and supplementary law; with possibly a trade commission of very limited authority, and voluntary incorporation under a Federal incorporation law?

Or shall we rely largely on State remedies for National evils, enforced by vigorous prosecutions under existing and supplementary Federal law; and valuation, supervision, and rate regulations of railways, express companies, telegraph and telephone lines by the Inter-State Commerce Commission; with prohibition from engaging in business which brings them into competition with their shippers and patrons, and from overissue of stocks and bonds?

Or shall we have National regulation of inter-State corporations by a strong Federal administrative commission, which shall maintain permanent active supervision to enforce complete publicity of such corporate transactions as are of public interest, and prevent unfair competition, false capitalization, special privileges, swindling prospectuses, with a view to security of investment and equality of opportunity for all; and, where necessary, regulatory control over the conditions that create or determine monopoly prices?

LABOR

Shall we regard the hard conditions of labor as mainly inevitable results of natural and moral causes; their substantial improvement by legislation a "Socialistic dream;" waiting for remedies to filter down through the employers' prosperity or work out through agencies and laws already provided?

Or shall we recognize that we are in a new age where life is hard and opportunity embarrassed because privilege and private advantage have interlaced their subtle threads throughout our present law; create a department of labor; provide employees' compensation; limit injunctions in labor disputes to cases in which they would be issued if no industrial dispute were involved; and uphold the right of wage-earners to organize to improve wages and conditions of labor?

Or shall the Government directly protect the worker from accident, occupational disease, child labor, and labor of women at night; provide minimum safety and health standards, a minimum wage for women, and a living wage in all industrial operations; one day of rest in seven for all workers and an eight-hour shift in continuous industries; all under the control of a Department of Labor with a seat in the Cabinet?

THE CONSTITUTION AND THE COURTS

Shall the Constitution and the courts and the self-imposed limitations they embody be left as they are; and the complete inde-

pendence of judges be maintained; with simpler methods of removing derelict judges and reform of judicial procedure?

Or shall we have substantially the same things with a tendency toward States' rights in their interpretation?

Or shall there be easier and more expeditious methods of amending the Constitution; more effective National jurisdiction over those problems which have expanded beyond the reach of the individual States; restriction of courts so as to leave the people the ultimate authority on questions of social welfare; recall, after due deliberation and review by the United States Supreme Court, of decisions on certain Constitutional questions?

THE MACHINERY OF ELECTIONS

Shall we have the old system, modified by publicity of contributions and prohibition of contributions from corporations?

Or publicity before as well as after elections; prohibition of contributions beyond a reasonable maximum from individuals as well as from corporations; Presidential primaries and direct election of United States Senators?

Or strict limitation of campaign contributions and expenditures, with detailed publicity before and after primaries and elections; registration of lobbyists; publicity of committee hearings, and a record of all votes in committee; prohibition of Federal appointees from holding office or taking part in political conventions; direct election of United States Senators; direct primaries for nomination of State and National officers; Nation-wide preferential primaries for candidates for the Presidency; with the initiative, referendum, and recall as a last resort in rare and extreme cases where otherwise the people would be misrepresented; and equal suffrage for men and women?

Of course the platforms and speeches of candidates contain other topics—civil service, pensions, parcels post, navy, merchant marine, conservation, internal improvements, health, immigration, the Philippines, banking and currency reform; but on these points the promises of the parties are so nearly alike, or else so indefinite, as to present no clear-cut issues.

The election will turn on the candidates, the term of office, and the five great issues—the tariff, the control of corporations, labor, the Constitution and the courts, and the machinery of elections. In most general terms, the single issue is—whether we shall have mainly the old things in the old ways?

Or most of the old things and the few new things the old ways slowly and slightly changed permit?

Or several new things in the new ways that are necessary to secure them?

THE SPECTATOR

THERE are country hotels that are but transplanted bits of urbanity, if one may use the word without any suggestion of its derived meaning. There are other mere lodging-places that give life to the adage that there is no place like home. But the one from which the Spectator has just returned to his fairly normal life belongs to neither of these, or else he would not be putting pen to paper (alas that it is fingers to type-levers in these unromantic days!) to give some of the impressions that have been made upon him.

It was a most comfortable hostelry, with a proprietor of purest gold, a table that left no impression save satisfaction, and guests who were as pleasant as any reasonable man would expect of a gathering juxtaposed by the finger of fate and not by choice. Consequently it furnished a most interesting field for a study of what the average American crowd does when it has nothing to do.

There was no distinct and recognized point of attraction or reason for occupation. No lake offered boating in couples, no wonderful view thrust itself pre-eminently upon the attention; there was no social clique to throw apples of discord and incite strife as to the fairest or the most fashionable. The inmates had, for the most part, to depend upon themselves or upon one another for what distraction they desired. There was a tennis court, or an apology for one, and the scenery round about was sufficient to lure out the few adventurous amateurs of the brush and palette; but, excepting for these—a beggarly few—and a solitary mountain climber,

the place was occupationless. So the Spectator gave himself up to his favorite avocation, and observed human nature to learn what it would do under the conditions.

Breakfast, of course, took its place in the routine, and the Spectator counted only free hours in his investigations. Soon, however, the long row of piazza chairs were eclipsed by the more or less fair occupants, and it needed only a glance along the serried row to see why the magazines for women give so many pages to fancy-work. Saxony wool, filoselle, Irish flax, tabourets, French knots, buttonhole stitch, Mexican drawn-work, anything that was known to be useless and thought to be pretty was allowable and kept in evidence. Whatever useful sewing was done in the vacation hours does not fall within the Spectator's province, since it remained invisible during the whole of his sojourn.

There were a few accidental men, but these had no occupation except such as is furnished by cigars and cigarettes, and by what the French students know as *blague* and our children call fooling—the empty, amusing, good-natured talk that comes from nothing and leads back to the home of its origin by a thousand devious routes. It was often bright and clever, but was no more profitable than blowing soap-bubbles. If at any time there was an approach to the serious, there never lacked the "comic relief" to render serious discussion impossible. If the Presidential question came up at all, it was in a quiet side talk of no more than a few moments' duration. This, with a little strolling about, or an occasional call at the village store, took up the time till the coming of the mail agitated the human mill-pond and destroyed what little cohesion had been developed.

After luncheon there was a tacit recognition that no one was going to do anything that was more attractive than playing cards, and the more shameless devotees made up their fours for auction bridge and betook themselves to the afternoon service. The virtuosos sought the music-room, and either rendered or interpreted or murdered the classics, as their taste and skill dictated. Since murder is easier than music, it was far more frequent and lasting. If the spirits of great composers haunt the earth, they will not be found within earshot of most summer hotels.

The Spectator wonders about the modern vacation. He is interested in its origin and evolution. Romans had their hot springs and their country houses, their Italian villas; but there seems to have been only a limited class that expected the change and respite now sought for all but the completely submerged. The modern vacation is a new thing, and one for which so much is claimed that the Spectator begs leave to express wonder at what so many do with it.

The afternoon drifts on to evening, and once dinner is out of the way all feel that any pretense of aught but recreation may be abandoned. Then the true tastes of the guests are allowed to have full sway. The bridge tables are in full swing; the poor piano is run under full steam, while belated children stamp, yell, and pursue one another, themselves often followed by here and there a sensitive mother who is no Bedlamite; a few couples dance, oftenest two girls or women in most incongruous pairs; and outside upon the piazzas the habitually discontented strive to complain of that which hitherto has escaped its meed of grumbling.

Is the Spectator cynical? He hopes not. But this devotion to the game of auction bridge excites suspicion. The Spectator occasionally takes a hand, and for a time enjoys the game. But he confesses that it does not seem worthy of the time and attention given to it. The question will arise and will not down, Is it not talk about bridge rather than bridge itself that makes the game so popular? And why should the few hours we can get out of a hard working-year be so largely devoted to a game that is, as each bridge-player will admit, played so very badly by most of those who attempt it?

The answer is the same as must be given to the question, Why are vacation hours spent so aimlessly? The solution is found in the fact that modern life has destroyed the ability to find relaxation in a change of occupation; most of us have capacity or interest in but a narrow round of activity, and, this coming to an end, we are stranded, bored and disappointed. Is it not true that there is a great dearth of reasonable occupation open to the seeker for rest and renewal? And does not the fault lie in his inability to do anything out of the regular round well enough to enjoy it?

The Spectator thinks that herein lies the explanation of the failure of the average vacation.

THE NEW BOOKS

Miss Wealthy, Deputy Sheriff. By Elizabeth Neff. The Frederick A. Stokes Company, New York. $1.

This lively little book has the double merit of telling an exciting plot story about a mysterious bank robbery and of being a clever and amusing tale of character and humor.

"Charge It." By Irving Bacheller. Harper & Brothers, New York. $1.

This is a companion piece to Mr. Bacheller's well-known "Keeping Up with Lizzie." Here our old friend the Hon. Socrates Potter puts a spoke in the wheels of the extravagant young fellows who think they must keep up with Harry. There is a lot of human nature in the book, and it will make people think as well as amuse them.

Marie. By H. Rider Haggard. Longmans, Green & Co., New York. $1.35.

In his new story Mr. H. Rider Haggard returns to the time and scene of his earliest and most successful romances. One of his old characters, Allan Quatermain, again takes up the narrative after some clumsy introductory machinery which might well have been omitted. The story is centered about the famous and horrible massacre of General Retief and his party of Boers by the Zulu King Dingaan.

Red Cross Girl (The). By Richard Harding Davis. Charles Scribner's Sons, New York. $1.25.

A volume of short stories from the pen of Mr. Richard Harding Davis is always welcome, and this is no exception. Mr. Davis must be tired of having reviewers say that he has never equaled his first story, "Gallegher;" certainly, even if that be true, he has to his score an extremely large number of capital tales with novel situations, direct and forcible narratives, and quick action. The half-dozen or more stories here collected answer that description and will have a deserved popularity.

Prelude to Adventure (A). By Hugh Walpole. The Century Company, New York. $1.20.

A Cambridge undergraduate kills a classmate by a blow in sudden wrath. No one for a long time suspects his secret, and he struggles with amazing outward calm against his inward instinct that tells him he must in some way meet and face the debt he feels he owes to society and to his conscience. Here, as in his "The Gods and Mr. Perrin," Mr. Walpole is a searching psychologist and a writer of singular force and clarity. The book is somber, but it is powerful.

Where There's a Will. By Mary R. Rinehart. The Bobbs-Merrill Company, Indianapolis. $1.25.

A sanitarium on its last legs, two stranded members of a broken-down theater company, an American girl engaged to a real Prince, a newly married couple hidden in a hut in the woods, a bunch of rich dyspeptics compelled to take exercise and proper food by a tyrannical young man who runs the sanitarium in place of the real owner, whom he happens to resemble—these are a few of the queer ingredients which the author has mixed together in an immensely amusing farce of a novel. It is ingenious, surpriseful, and full of fun.

Lovers (The). By Eden Phillpotts. Rand, McNally & Co., Chicago. $1.30.

The hardships of American prisoners of the Revolution at the Dartmoor prison is a favorite topic of Mr. Phillpotts in short story and novel. The present romance has almost a superabundance of prison incident, not always quite probable—for instance, the complex rescue of the man who is hanged. The earlier part of the book is both thrilling and rich in character study and love interest.

Gate of Horn (The). By Beulah Marie Dix. Duffield & Co., New York. $1.30.

Mystical and hovering around the idea of reincarnation, this story is subtler than most of this author's tales, is stronger in literary art, but is too vague and dreamy to arouse the average novel reader to tense interest.

My Lady's Garter. By Jacques Futrell. Rand, McNally & Co., Chicago. $1.35.

A melancholy interest attaches to this story as the last from the pen of the brilliant concocter of plots who perished on the Titanic. It is a complicated and not very plausible tale of the crimes of a clever rascal, "The Hawk," and the title refers to the theft from the British Museum of one of the garters supposed to have been presented by royalty to the Countess of Salisbury after the incident which is alleged to have been the origin of the Order of the Garter.

Long Portage (The). By Harold Bindloss. The Frederick A. Stokes Company, New York. $1.25.

Mr. Bindloss again writes of the Northwest, this time with a somewhat elaborate plot story. One feels in all the novels from his pen a full knowledge of *locale* and people, and a true reflection of human endeavor against the obstacles of semi-primitive life, but his literary tread is heavy and his incidents are not always probable.

Courts, Criminals, and the Camorra. By Arthur Train. Charles Scribner's Sons, New York. $1.75.

Mr. Train utilizes his experiences as a New York Assistant District Attorney and as a careful and trained observer of the recent extraordinary Camorra trials at Viterbo to put in contrast American and Italian methods of criminal procedure. The fascination of all that has to do with the protection and prosecution of crime is universal, and such topics as those on "The Presumption of Innocence," "Why Do Men Kill?" and "Detectives Who Detect" make good

reading. The book, like Mr. Francis Wellman's "The Art of Cross-Examination," unites professional acumen with popular treatment.

Man Farthest Down (The). By Booker T. Washington. Doubleday, Page & Co., New York. $1.50.

Many of the chapters in this volume first appeared in The Outlook. The author, in comparing the conditions of laboring people in Europe with those in America, and more especially the colored people here, is hopeful and cheerful as to American industrial life, and intensely sympathetic with those things in the life of European toilers which are oppressive and sorrowful. The book is the record of an immensely interested and fair-minded observer.

Famous Houses and Literary Shrines of London. By A. St. John Adcock. E. P. Dutton & Co., New York. $2.50.

There are still existing in London many houses of literary association—more than is generally supposed. Here, for instance, are some seventy sketches of houses which have direct connection with Dickens, Thackeray, Lamb, Carlyle, and other less famous men. To some extent also the book has to do with the literary associations of the London of the past. The text is written by Mr. A. St. John Adcock, who has made an intimate study of London's streets and houses and their history, while the fine drawings are furnished by Mr. Frederick Adcock.

American Occupation of the Philippines, 1898-1912 (The). By James H. Blount. G. P. Putnam's Sons, New York. $4.

From 1898 to 1901 the author was an officer of the United States Volunteers in the Philippines, and from 1901 to 1905 he was a United States District Judge in the Philippines. He ought, therefore, to know something about the Filipinos, and he does. As he spent a year in Cuba, he knows something about the Cubans too. His contrast of the two races is interesting. He says:

> The Filipinos can run a far better government than the Cubans. In 1898, when Admiral Dewey read in the papers that we were going to give Cuba independence, he wired home from Manila: "These people are far superior in their intelligence and more capable of self-government than the people of Cuba, and I am familiar with both races." After a year in Cuba, and nearly six in the Philippines, two as an officer of the army that subjugated the Filipinos and the remainder as a judge over them, I cordially concur in the opinion of Admiral Dewey, but with this addition, viz., that the people of those islands, whatever of conscious political unity they may have lacked in 1898, were welded into absolute oneness as a people by their original struggle for independence against us, and will remain forever so welded by their incurable aspirations for a national life of their own under a republic framed in imitation of ours. Furthermore, the one great difference between Cuba and the Philippines is that the latter country has no race cancer forever menacing its peace and sapping its self-reliance. The Philippine people are absolutely one people as to race, color, and previous condition.

As a history of the American occupation of the Philippine Islands from 1898 to 1912, and as a book of reference, the merit of Mr. Blount's volume is evident even to the casual reader The work will be practically indispensable to the student of colonial politics.

Work of Wall Street (The). By Sereno S. Pratt. D. Appleton & Co., New York. $1.75.

Mr. Pratt's book, of which we have already spoken, has been enlarged and revised for the new edition which has become necessary. It is a valuable reference book in that it gives a full exposition of the methods of the money and stock markets. Its explanation of terms used is particularly full and satisfactory, and the arrangement of the volume is notable for its convenience and plainness.

General W. T. Sherman as College President. Collected and Edited by Walter L. Fleming. The Arthur H. Clark Company, Cleveland, Ohio. $5.

This is the awkward and not entirely descriptive title of a large volume prepared by Dr. Walter L. Fleming, of the Louisiana State University, where Sherman served as President during the two stirring years which preceded the Civil War. What makes the book of live value to-day is that it contains a large number of General Sherman's letters in which appear vividly and fearlessly his views and those of many prominent Southern men on the National problems which were just reaching their crisis. Sherman was by no means always correct or entirely fair in his judgments, but he was always vigorous and always honest, and these letters cast a brilliant light on conditions in the far South at the time.

Life and Letters of John Rickman. By Orlo Williams. Houghton Mifflin Company, Boston. $3.50.

This title conveys very little to most readers, but fortunately the publishers arouse curiosity and interest by placing on the title-page also the sentence, "Lamb's Friend the Census-Taker." Mr. Orlo Williams, who has prepared this book, was fortunate enough to get hold of a large body of correspondence between Rickman and Lamb, Southey, Coleridge, and others. Rickman, who was the originator of the census in England, and a famous statistician, was intimate with Lamb's circle, and references to him as a pleasant companion appear here and there in the literature of the time, but the existence of the letters now printed and edited was known to few persons. These letters have not a little of personal, literary, and political interest, and are therefore really worth preservation, although for the general reader a smaller volume and a less expensive reproduction of the correspondence might have proved desirable.

Boy (The): How to Help Him Succeed. By Nathaniel C. Fowler, Jr. Moffat, Yard & Co., New York. $1.25.

A practical man's practical suggestions about boys, good alike for father and son. The sentences are crisp, clear, and often epigrammatic. An original feature is the "Symposium of Success," which includes the replies of 319 "men of mark" to twenty-five questions upon success-making.

LETTERS TO THE OUTLOOK

JAPANESE MORALS

I object decidedly to Mr. George Kennan's reckless misrepresentation of my opinion of Japanese morals in The Outlook for August 31 (pages 1011 and 1014). He uses the time-worn method of isolating a sentence from its context, and thus makes me out a Japanophobe. Writing in "Young Japan" (whose title Mr. Kennan misquotes), I said of Japanese morals:

> In a previous section of this book attention was directed to five noble qualities of Japanese character: bravery, loyalty, alertness, thoroughness, and self-control. To the superficial, this might seem to be a sufficient moral equipment for any nation. But a little thought convinces otherwise. What is bravery worth without purity? What value has loyalty without honesty? The intellect must not only be alert and thorough, but it must also be sincere. The will must learn not only self-control, it must also learn self-reverence. The two cancers at the core of the Japanese character are deep-set dishonesty and abandoned impurity; either would be sufficient to wreck the life of any nation.
>
> Let it not be said that this is the prejudiced opinion of an unsympathetic outsider. A Japanese journalist recently confessed that "our countrymen have earned an unenviable reputation of being the most untrustworthy people on earth," and admitted that they had earned it justly. As for the other, Japan is the only civilized government that deals in licensed prostitution as a source of revenue, and tolerates the sale of young girls by their parents under guise of a regard for "filial piety."

Mr. Kennan himself gives the correct explanation of the commercial dishonesty of large masses of the Japanese; but the correct explanation of a cause does not annul its effect. Happily, conditions are being rapidly bettered, and no one rejoices in this more than I do. But the plausible arguments of Mr. Kennan regarding the social evil are quite beside the mark with those who have had adequate opportunities for a clear understanding of the unique Japanese treatment of this subject.

I am not a Japanophobe, but neither am I a Japanophile. Nevertheless, I devoted vastly more space in my books to the virtues of the Japanese than to their vices. And I felt so strongly their charm that I said in "Japan To-Day" what I would like to repeat here: "No friends could have been gentler, more considerate, more helpful, than those dusky pagan Southerners, under whose silken vests beat the hearts of as chivalrous gentlemen as ever brake lance in a tourney. Saladin was a pagan. And when I think of those Japanese gentlemen and their gentle deeds in the days when they were true 'friends in need,' I feel like erasing from these pages every sentence which is not a compliment, every criticism that is not a tribute; while their beautiful word of parting has for me an added new meaning: *Sayōnara—If it must be so!*"

JAMES A. B. SCHERER.

Throop Polytechnic Institute,
Pasadena, California.

I should be quite ready to apologize to Mr. Scherer for misquotation or injustice, but I cannot see that, in this case, I have been guilty of either. He admits the accuracy of my quotation, but accuses me of misrepresenting his general attitude toward the Japanese by citing a single sentence, without its context. The context, however, does not modify the assertion. When Mr. A. declares that Mr. B. is a liar and a profligate, and that lying and profligacy will wreck his life, the accusation is not softened or modified by a contextual admission that Mr. B., nevertheless, is brave, loyal, alert, thorough, and self-controlled. If I had been reviewing Mr. Scherer's book, or describing his general attitude toward the Japanese, it would have been misleading and unfair to use a single sentence as the basis for a sweeping generalization. I was dealing, however, not with Mr. Scherer's book, nor with his general estimate of the Japanese people, but with the specific assertion, which he now repeats, that "the two cancers at the core of Japanese character are deep-set dishonesty and abandoned impurity; either would be sufficient to wreck the life of any nation." The first clause of this statement I quoted as an illustration of what seemed to me a general tendency to exaggerate certain Japanese vices that are particularly obnoxious in the West, and to make dogmatic and sweeping assertions upon an insecure foundation of facts. At this particular time, when a general effort is being made to lessen the frequency of wars, it seems to me extremely desirable that racial prejudice and international misunderstanding should not be increased by exaggeration of racial or national defects, and especially by inadequately supported assertions that whole peoples are brave, loyal, alert, thorough, and self-controlled, but are, nevertheless, cancerous with deep-set dishonesty and abandoned impurity.

GEORGE KENNAN.

Baddeck, C. B., Nova Scotia.

THE DANGER OF UNTRAINED AFFECTION

In a recent issue of The Outlook appears a story entitled "The Deserter," a cleverly written bit of human interest fiction, but with what appears to me an unfortunate moral. The writer seeks to show that in a difficult situation a warm-hearted woman with a display of affection and sympathy successfully handled conditions that were beyond the power of a trained charities worker to remedy. It will be remembered that in this story the breadwinner, thrown out of employment, is unable to endure the sight of his suffering family, and, believing that his presence is a barrier against relief for his dear ones, schemes to get himself out of the way. Every social worker knows that this is not an unusual case. The heroine in "The Deserter" is touched by the man's apparent devotion to his family; shares his belief that it would be better

for him to betake himself off, and so provides the means of subsistence for his family. She winks at his desertion as something perhaps to be deplored, but yet as a rather clever thing to do.

The organized charities worker is caricatured as a cold-blooded female, armed with note-book and pencil, devoid of feeling, lacking in insight, and making foolish investigations. The issue is joined between this human iceberg on the one hand, and the man and his family in league with Lady Bountiful on the other, and the writer of the story thinks that the situation was gloriously met when the charities worker was ignominiously put to rout.

Stories of this character hurt and irritate the trained workers in the social field, who have made these problems a life study, and they serve to increase the prejudice that already exists against the work of organized charity. There is a widespread feeling that untrained affection gets better results than do skill and method in the work of social rehabilitation.

Now, a little reflection will show that the impulsive settlement worker by her meddling, as described in the story, defeated the best interests of society. She confesses to making paupers of a wife and babies. She takes the mother from home, where she properly belongs, to become a wage-earner. She suffered the man to be relieved of the strain of caring for his family—a dangerous moral experiment under the best circumstances, while our hero has a weakness for drink. If you go through the lodging-houses of the Bowery in New York City, or South Clark Street, Chicago, you will find men like this by the scores of thousands. She sets a precedent for other men in the community, which they will not be slow to avail themselves of, secure in the belief that society will care for their families. As a matter of fact, Lady Bountiful has set much mischief afoot.

Now the skilled worker would quite properly have held that man would have found employment for him, if he could not find it unaided, and in the meantime would not have suffered any hungry mouths to go unfilled. He would have kept that family together, a self-supporting social unit. He would have canvassed all possible resources of that home, such as kinfolks, friends, church, or lodge, for that was the only purpose of the much-resented investigation.

The prejudice against the trained worker in the field of philanthropy is based on the notion that skillful investigation precludes the free play of natural affection and sympathy. The organized charities worker resents this feeling, for none knows better than he that "though I bestow all my goods to feed the poor, and have not love, it profiteth me nothing." The social game has no attractions for a loveless character, and the affection of those needing help is the biggest asset in the work. As Frederick Almy, the dean of American charities workers, has well said, "Organized Charity is Organized Love."

It is a pretty safe rule to keep hands off when it is known that organized charity is caring for a case. And when one desires the close human touch of himself caring for the needy, he can do no better than to seek the advice and help of people who understand that business and who would be glad of his help. Philanthropy is one of many fields where the amateur and the meddler can do an appalling amount of damage.

JAMES J. COALE.

Lackawanna, New York.

THE IMPORTANCE OF ONE VOTE

In this year of our Lord 1912, when we have three university graduates as candidates for the highest office in the gift of the American people, who knows but that the value of a single vote may prove to be as great a factor in deciding the momentous question as to which one shall take the oath of office March 4, 1913, as has ever been the case in the history of our country? But in order that we may not be led to underestimate the value of one vote, let us recall a case in point, and one that actually occurred, in the State of Indiana between 1840 and 1850.

In De Kalb County, Indiana, when the election day arrived, there was a man who was in doubt whether to go to the mill or to the polls. Finally, after a certain amount of coaxing, he decided that he would exercise his right of franchise and vote. He voted the Democratic ticket, and a Democratic member of the Legislature was elected from his district by a majority of only one vote. That Legislature elected a United States Senator, and by the vote of the one member from that district Mr. Hannegan was chosen.

Mr. Hannegan took his seat in the Senate, and was president of the Senate *pro tem.* when the vote was taken for the annexation of Texas. On the floor the vote was a tie, and Mr. Hannegan's casting vote decided the question in favor of annexation; and this action brought on the Mexican War, which has so shaped the subsequent history of our country.

This illustration certainly brings before us an extreme case, but who knows when another instance may occur proving the same value of one vote?

W. H. VAIL.

PERHAPS BOTH SAID IT

In The Outlook of September 7, 1912, page 14, under caption "The Uses of Repartee," you make Horace Greeley say, "The way to resume is to resume," when it was the Hon. Salmon P. Chase in a letter who said (not Greeley), "The way to resumption is to resume." The above quotation is often attributed to Greeley, which is wrong.

FRANK D. REESE.

Cortland, New York.

BY THE WAY

Only one officer who saw service in the Civil War is, it is announced, left on the active list of the United States army—Colonel John L. Clem, of the Quartermaster's Department. Readers whose memory goes back to war times will remember him as "Johnny Clem, the drummer boy," who became famous for refusing to surrender at Chickamauga. He killed the Confederate colonel who tried to capture him, and after the battle was made a sergeant, though only twelve years old.

Archery is showing signs of revival as a sport. The National Archery Association at its tournament a few weeks ago in Boston had the largest attendance it has had for many years. Several American archers are said to hold records that have not for fifty years been equaled in England, the original home of the sport.

A schooner nearly a hundred years old, the Hiram, built in Biddeford, Maine, in 1820, is to make the voyage around Cape Horn to San Francisco for the Panama-Pacific Exposition. With one exception, this is the oldest vessel of American registry now afloat. She has been in active service ever since she was launched.

"... overcome one man. . . . The fight wrecked nearly all the cars." ... [illegible] ... the police appear on the scene.

That the United States Government can sometimes indulge itself in an act of genuine philanthropy is seen in the recent postoffice order that periodicals issued in ... [illegible] ... to be carried through the mails free.

Trouble in Turkey

There is serious trouble in Turkey. Not only has the war with Italy passed the first year of its existence without any sign of a cessation of its steady success, but it has aroused a danger in Turkey-in-Europe feared from the start and now seen to be increasingly ominous. The ill success of Turkish arms has encouraged the most warlike of the races in Turkey, the Albanians, to insist upon certain reforms which should have been settled long ago. The Young Turks, having compelled the infamous old Sultan to abdicate, and somewhat intoxicated with their own power, would not give sufficient heed to the Albanian requests. The result was that the Young Turk Cabinet was last summer succeeded by another, a Cabinet composed of more moderate men, but not to be regarded as a reactionary body. The Albanians persisted, however, and there has been considerable fighting in the province. The Servians, encouraged by Treaty of Alliance, Bulgaria, Montenegro, and Greece, all Balkan mountains into Turkey in the effort to their brethren—it should be remembered that not half of the population of Turkey-in-Europe is Mohammedan. In Servia the feeling against Turkey is also bitter, especially since the Turks have crossed the Servian frontier. There has also been fighting on the Montenegrin border. The report long by Turkish troops, it is feared, intended that would be more hostile towards Turkey than usual—for the political societies in Turkey are continually agitating for war under favorable circumstances. Therefore, it would seem wise for Turkey to maintain peace with Italy at least as possible, under cover of the necessity to protect the Turkish provinces. Indeed, some suspect that a part of the trouble in Turkey has been fomented by the Turkish Government itself. With the excuse to the jingoes among the six million

The Powers and Turkey

[illegible] come for some Power to have such a position. As Albania [illegible] Albania wants autonomy, but two Powers—Italy and Austria—do not want [illegible] anything which might lead to a break up [illegible] Albania [illegible] Austria and not Italy might be the dominating power in the Adriatic as well as in the Ægean Sea, should it come under Italian influence the Austrian interests might be threatened. The Powers, however, might well afford to risk a war during such an interval as Austria has already demanded for Macedonia, and thus give to the two most disturbed provinces of Turkey-in-Europe their long-coveted local liberty. But Italy and Austria are not the only Powers directly interested in the Balkan situation. Russia,

THE BALKAN PENINSULA

as always, stands ready to see that the provisions of the Treaty of San Stefano with Turkey (1877), which the Powers ruthlessly supplanted by the Treaty of Berlin (1878), are revived for the benefit of the Balkans and the Serbs. Had the San Stefano treaty remained in force, many Macedonian atrocities which have since taken place would have been far less likely, for Macedonia would have been under a Christian governor and would have enjoyed larger liberty. By reason of racial sympathy, Russia stands behind Bulgaria, Servia, and Montenegro in their attempts to regain rights for their suffering co-nationalists in Turkey proper. But Russia has another desire, one cherished ever since the Crimean War over half a century ago; she means to get the right to send all her ships through the Dardanelles into the Mediterranean. While Italy, Austria, and Russia may be the Powers most directly involved in settling the Balkan question, the other Powers are also interested. Germany of course is behind Austria; for whatever Germany's ally gains in Turkey will redound to Germany's benefit in the ambition to make Austria and Turkey together only a stepping-stone to an immense new German colony in Asia Minor. The interest of England and France has largely to do with Greece. Greek independence could hardly have been won without the support of those nations, and now, though—against the wishes of almost every Cretan—the Powers have kept the autonomous island of Crete from becoming completely Greek, the faint vestige of Turkish sovereignty can hardly be maintained much longer. Out of the present conflict, therefore, whether there be a real war or only the desultory fighting of

last week, we may expect that the provinces of Turkey proper will ultimately enjoy some at least of the autonomy which Crete now enjoys.

The Contending Forces

Turkey shows unexpected resource and readiness in defying the four states—Bulgaria, Servia, Montenegro, and Greece—which are ready to take arms against her. Their combined force of about half a million men amounts to about the number of men which Turkey is mobilizing. Two of the four kingdoms, however, have already begun to draw upon their compatriots in this country. More than a thousand men—some with the uniforms which they had worn in the Bulgarian army—are ready to set sail from New York City, in response to summons from the Balkans, and a larger number of Greeks are equally ready—all are men belonging to the reserve classes of the two armies. Under orders from the Greek Government—which has the prerogative of seizing for war-time use any ships sailing under the Greek flag—the Greek steamship Macedonia is now taking on ammunition for the Greek army, and will sail immediately. Although the Greek army did not give an altogether flattering account of itself in the war of 1897 with Turkey, it is believed to be now in much better shape; in addition it would have the example of whatever Servia can do and of what Bulgaria would be likely to do. Above all, it would have the example of the Montenegrin forces, which have never been conquered by Turkey. The promptitude with which some weeks ago the Turkish Government ordered the mobilization for autumn maneuvers within striking distance of the Bulgarian frontier now characterizes her summons to all classes of the army—not only the Nizam or first line, and the Redif or second line, but also the final Mustafiz or ultimate reservist line. This, together with the activity of eleven thousand men in the gendarmerie, shows vigor. In addition, the Government has detained a large number of Greek ships in the Sea of Marmora, and has announced its intention of using them as transports in case of war. Thus, though the "Sick Man of Europe" has been sick a long time, he displays great vitality in what many have prophesied will be his dying moments. Yet if, after all, the Balkan Powers are now strong enough to force him to return to Asia, what then? What would be the future of Turkey-in-Europe? Would it be divided among the great Teuton and Slav Powers? Or would it fall to a confederation of Balkan states? The latter would seem to be the more natural and probably the more beneficial event for all concerned. For if the Turks are to return to Asia, why should not the remaining races absorb the country? In other words, why should not Turkey-in-Europe be now split up among the Bulgars, Serbs, Montenegrins, Albanians, and Greeks? And why should not these nations come together for the purposes of common defense in a Balkan union?

Ulster's Covenant

Ulster Day passed with many expressions of the severest determination of Ulster not to accept Home Rule if it should be granted to Ireland, but with no violence. Belfast was preternaturally calm. Shops were closed, a number of religious services were held, and thousands of houses were decorated with the Union Jack. Sir Edward Carson, who has been called the uncrowned King of Ireland, was received with enthusiasm and taken to Ulster Hall in a solemn procession. The flag borne before King William III at the Battle of the Boyne was placed beside him; and when he signed the covenant, followed in turn by men of the standing of the Marquis of Londonderry, Lord Charles Beresford, the Moderator of the Presbyterian General Assembly, Bishops of the Irish Church, great numbers of clergy, and members of Parliament, by the representatives of public business, and then by a host of others, there was what the newspaper reporters described as an avalanche of long-pent-up enthusiasm. The covenant was signed in scores of other places in England, Scotland, and Wales—wherever Ulstermen found themselves. The covenant, which has given to these demonstrations something of the sober determination and religious fervor of other great protests in Scotland, declared, in effect, that, "being convinced that Home Rule would be disastrous to the material well-being of Ulster as well as to the whole of Ireland, subversive of our civil and religious freedom, destructive to our citizenship, and perilous to the unity of the Empire," the signers, loyal subjects of King George, pledged themselves in solemn covenant to stand by one another in defending equal citizenship in the United Kingdom, "using all means which may be found to defeat the present conspiracy to set up Home Rule in Ireland, and in the event of such

Parliament being forced upon us we solemnly and mutually pledge ourselves to refuse to recognize its authority, in the sure confidence that God 'will defend the right.'" Meanwhile the Government has made a contribution to the task by reprinting the latest Ulster population statistics from the blue book; these show that in a population of 1,581,696 there are 690,816 declared Catholics—forty-five per cent of the whole population.

The Political Campaign: New York

Last week political interest centered largely around the Democratic State Convention of New York, held at Saratoga. The nomination of William Sulzer as the candidate for Governor may be described as having been made, not at the behest of Murphy, but by his permission. The issue, in essence, was not whether the boss controlled enough votes to name the candidate, but whether the Convention should accept Tammany domination or resent it. Tacitly, Tammany's power to control was acknowledged, and Tammany's concession in throwing over Governor Dix and allowing the delegates some choice as between other candidates was gratefully accepted as a boon by a majority of those who knew that an out-and-out Murphy candidate would not have even a possibility of winning as against the strong tide of public feeling in favor of Oscar Straus. An eloquent protest against Tammany dominance was made by Thomas Mott Osborne, who said, pointing his finger directly at Murphy, "This man sits here now, surrounded by his satellites, dispensing favors, dictating policies, and granting the nominations of a great party. Look at him well, for you will never look upon his like again. For him the hour will soon strike, and upon the ruins of his fall will arise here the Democracy of the future." As regards Mr. Sulzer himself, opinion seems to differ widely among those who represent what may be called the Wilson, rather than the Tammany, Democracy. Governor Wilson himself indorses Sulzer as a man of high principles devoted to the public interest. But so strong an adherent of Governor Wilson as the New York "Evening Post" declares: "However independent he may have been at times, he is, and has been, essentially a part of Tammany Hall, against whose infamies he has never taken up arms. Nor is there the slightest reason to believe that, if elected, he will really cut loose from the influences which have made him what he is and kept him in public life." As to the Saratoga platform, it has been characterized by a paper which approves of Mr. Sulzer as a candidate, the New York "Sun," in these words: "Three thousand words were naïvely put forth at Syracuse mainly with the purpose of raking in together all the little detached units of public sentiment and of showing by superficial and vague rhetoric that this historic party is behind nobody in its sensitiveness to every ephemeral emotion labeled progress and reform."

Campaign Discussion

Among the platform utterances of the week was President Taft's optimistic declaration at Beverly, which may almost be summarized by saying that in his view everything is so prosperous and everybody so contented that it would be a terrible risk to do anything at all—naturally he therefore regards the new party platform as a "crazy quilt" made up of "new fads and theories, many of which are preposterous and impracticable." A companion picture to this optimism may be found in the crowd of twenty thousand people who, on Sunday night of last week, at the Madison Square Garden in New York City, sang the "Marseillaise" and cheered Mr. Debs's bitter and epigrammatic censure of all parties and all candidates; perhaps his most clever epigram was that in which he described Governor Wilson as "the kid glove on the paw of the Tammany tiger," while of Mr. Roosevelt he asserted that "he stands to-day on the platform he denounced within the last four years," and Mr. Taft he described as "the more or less celebrated jurist who had the honor of issuing the first injunction that paralyzed a railroad strike." And if another companion picture is needed for Mr. Taft's cheerful view of universal prosperity and content, it might be found in the scenes of violence and class hatred at Lawrence, Massachusetts. Mr. Roosevelt's long campaign tour ended with his return to New York on Wednesday of last week after a journey of over 10,500 miles. It will be followed by a second trip of over two weeks to some of the States of the Middle West, by a short campaign in Pennsylvania, and finally by a campaign throughout New York State, to begin with an address at Madison Square Garden and to be continued by several days of

rapid and vigorous campaigning through the State, in part or all of which it is probable that he will be accompanied by the Progressive candidate for Governor, Oscar Straus, who has already increased substantially by his sensible, moderate, and effective speeches the almost universal high regard with which his fellow-citizens in the metropolis and throughout the State already held him. The last two days of Mr. Roosevelt's trip through the South did much, say impartial judges, to convince the South that the Progressive party represents principles of importance to the entire Nation without regard to sectional lines, and there are many predictions that at least two Southern States, Tennessee and North Carolina, are to be put into the Progressive column, while elsewhere throughout the South the Progressive ticket will poll a larger vote by far than any non-Democratic ticket has had since the war. An account of Mr. Roosevelt's appearance before the Senate Committee on Campaign Contributions appears on another page, and that general subject is also discussed editorially.

The Campaign Issues: Ex-President Eliot's View

A valuable addition to campaign discussion has been made by two letters published in the New York "Times:" one by Charles W. Eliot, President Emeritus of Harvard University, advocating the election of Governor Wilson; the other a reply by Albert Bushnell Hart, Professor of Government at Harvard, advocating the election of Mr. Roosevelt. The Outlook heartily welcomes the publication of these two letters. The writers have set an example which might worthily be followed by other leaders of thought. It is a great advantage not to have the campaign discussion carried on exclusively by candidates, professional spellbinders, and partisan journals. President Eliot thinks that there are two principal issues in the present campaign: the prompt and effective reduction of the high tariff, and the extent to which the Constitution of the United States ought to be modified by interpretation or in practice in order to enable the National Government to deal with grave measures of social, industrial, and political reform. Governor Wilson and the Democratic party he thinks likely to accomplish a judicious and effective reduction in tariff rates, which he believes is not to be expected either from the Republican party under the leadership of Mr. Taft or from the Progressive party under the leadership of Mr. Roosevelt. The platforms of all three parties he regards as "much alike in promising a large number of social and industrial reforms, many of them long known to be desirable, but some full of difficulties and dangers." The Democratic party's platform and candidates, while less conservative than the Republican, are more promising than the Progressive, partly because "the public sayings of Governor Wilson are much more prudent and measured in regard to the proposed changes than those of ex-President Roosevelt." Mr. Roosevelt is regarded by Mr. Eliot as "an impulsive, self-confident, headstrong man, impatient of restraints and opposition," who "has shown himself capable while in power of taking grave public action—which, of course, seemed to him wise and right—in disregard of Constitutional legal limitations." Finally, Mr. Eliot objects to Mr. Roosevelt's candidacy because it involves "another Constitutional change—the question of a third term in the Presidency."

The Campaign Issues: Professor Hart's View

Professor Hart defines the principal issue thus: "Is the American Government to be really democratic, as democratic as human nature will admit, or the affair of comparatively a small class in the community?" The Progressive movement is the product of a determination to secure the birthright of which we have been deprived. Single reforms in the direction of popular rights, such as commission government for the cities, the Australian ballot, primary laws, popular election of Senators, have been accomplished, in spite of the resistance of the political forces in control of the old parties. "The Progressive party is the first great National organization in our history to commit itself and all its voters to the programme of general reform." The dread of Federal centralization is not justified by National experience. "The Post-Office is one of the largest business enterprises in the world, and, with all its defects, is as superior to the sacred express companies acting under State charters as Theodore Roosevelt is superior to Governor Dix." There is much more danger of usurpation by corporations than by a single President. Some kind of progress is inevitable. If the Government stands still, powerful interests will make progress and create a private system and acquire vested rights difficult to dis-

turb, and Socialism will make progress and in a little while will elect a Socialist President of the United States, "which means that the Socialist National Committee will be President. There is only one way to head off the danger, and that is the formation of a party which will take over the reasonable part of the Socialistic programme." Mr. Eliot's estimate of Theodore Roosevelt is not justified. "Those who know Theodore Roosevelt intimately know how far his head or mind is from acting on impulse, or from acting without consultation and discretion." Mr. Roosevelt's strong language is both justified and beneficial; justified because "it is not easy to be calm and weigh every word when bandits are emptying your pockets;" beneficial because his vigorous representation of the country's need of reform has been one of the factors in creating a National progressive sentiment. "He is the political parent of Governor Hughes and Governor Folk and Governor Johnson and Governor Wilson. Not one of them would have been Governor in our time but for the influence of Theodore Roosevelt." As to the third term, "not one voter in ten to-day is seriously influenced by the fear of the third term *per se*, or will vote against Theodore Roosevelt on that ground." It is probably too much to hope that either of the political parties will publish both letters for general distribution; and the political millennium is not so far advanced that the two parties are likely to combine in such publication. We wish that the New York "Times," which originally published these letters, would print them both in cheap pamphlet form and give them to both the National Democratic and the National Progressive Committees for general distribution. That our own sympathies are wholly with Professor Hart may be taken for granted. That Mr. Eliot does not apparently recognize at all the movement in America to throw off the bosses who have ridden both the political parties like an "old man of the sea," an effort recognized as important both by Mr. Wilson and by Mr. Roosevelt, we can only attribute to the fact that for the last nine or ten months Mr. Eliot has been abroad, and has not yet become acquainted with recent events and political currents.

The Invisible Government

One of the most picturesque and illuminating incidents of the so-called Senatorial investigation of corrupt political conditions was the appearance at Washington last week of Mr. William Flinn, of Pennsylvania, and the giving of his personal testimony before the Committee. Mr. Flinn for many years shared with the late Senator Quay the control of Republican politics in the State of Pennsylvania. It will be remembered that in the West recently Mr. Roosevelt was asked by one of his audience how he explained Mr. Flinn's adherence to him and his policies. Mr. Roosevelt replied that Mr. Flinn had been for many years intimately acquainted with political conditions in Pennsylvania; that he personally knew the corruption that exists in both the old parties, and that for his children's sake he desired to see some effective reforms of these conditions. At the Senatorial investigation, when asked by one of his inquisitors why he was an adherent of the Progressive party in this campaign, he replied as follows:

> I wanted a strong primary law; I wanted a corrupt practices act; I wanted public utility legislation; a law regulating child labor and the employment of women; a law fixing a minimum wage for women; a law preventing the sale of fake securities in Pennsylvania; in short, I wanted to bring into play the things that Theodore Roosevelt stood for, because I believe him to represent a complete plan of government. I still think so, and that is why I engaged so earnestly in this campaign, and I am glad that I did.

When further questioned, Mr. Flinn stated that he "wanted to get rid of the conditions that existed, but was not against the existence of a political organization. I believe in organization." Mr. Flinn's testimony had a frankness that was singularly interesting. He testified that he has contributed so far this year nearly one hundred and fifty thousand dollars to the political campaign, both for the work in the primaries before the Convention and for the Presidential campaign since the Convention. Of this amount, one thousand dollars was contributed to Senator La Follette's campaign early in the winter, before Senator La Follette's leadership collapsed. Some of this money was contributed in behalf of Mr. Roosevelt to States outside of Pennsylvania. One item he testified to was the sum of $29,000 spent in sending postal cards to voters, instructing them how to vote. But the most significant part of his testimony was his acknowledgment that he drafted with his own hand a so-called contract or memorandum of agreement several years ago between "M. S. Quay, of the first part, and J. O. Brown and William Flinn, of the second part, the consideration of this

agreement being the mutual political and business advantages which they receive therefrom." The contract was never signed, and therefore never executed, and Mr. Flinn testified that he never intended to execute it when it was drawn; but nevertheless it is one of the most clear exposures of the political system which Senator Beveridge has called the "Invisible Government." It provided that all nominees, delegates, and legislation in the Republican party in Pennsylvania should be satisfactory to both parties of the contract. One clause reads as follows: "It being distinctly understood that at the approaching National Convention to be held at St. Louis the delegates from the Twenty-second Congressional District shall neither by choice nor by vote do other than what is satisfactory to the party of the first part"—that is to say, Senator Quay. Mr. Flinn stated that this document was a fair example of the political conditions prevailing in the Republican party of Pennsylvania under the control of Senator Quay, and it was his disgust at this condition of things that led him to espouse the policies of Mr. Roosevelt, which promised, for the first time, to provide effective reform in Pennsylvania. He added that his conversion from Quayism to Rooseveltism took place five or six years ago. Those voters who wish to eradicate from our Government the methods of political management which were typified by Senator Quay in Pennsylvania, and are typified in the State of New York by Mr. Barnes in the Republican party and Mr. Murphy in the Democratic party, will share with us the belief that Mr. Flinn has performed a real public service in giving his testimony before the Senatorial Investigating Committee.

The New School of Journalism

The Pulitzer School of Journalism, Columbia University, New York City, was formally opened on Tuesday of last week with addresses by Bishop Greer, President Butler, and Dr. Talcott Williams, the Director. One hundred students were in attendance. Dr. Williams, upon whose unusual equipment for the position, both on the theoretical and the practical side, The Outlook made comment at the time of his appointment last spring, called attention to the fact that twenty-one countries and States, including China and New Zealand, were represented in the student body; and that one-half of the men who had entered for the first year had had newspaper experience and had left wage-earning positions to enter the school. One-fifth of the students with whom the school begins hold college degrees, and nine are women. Many journalists have been slow to accept the utility of special training for journalism, precisely as old-fashioned lawyers were skeptical of the utility of the law schools. They had known no other preparation than the reading of the law in the office of some practicing lawyer. In the same way the commercial community, with few exceptions, once regarded special courses for business; now young men are eager to take advantage of technical training for commercial work. Dr. Williams defined the purpose of the training and writing in the school to be to secure accuracy and individuality of style; and called attention to the emphasis laid on actual work under conditions as nearly approximating those in newspaper offices as possible. This training in accuracy of expression, however, rests on a foundation of knowledge of history, economics, and literature, the aim being not to make men who will write "smart" articles in the shortest possible time, but men thoroughly prepared to do both apprentice work and the higher class of work which lies beyond for men of ability and ambition. The newspapers of the country have in their employ a large number of college-trained men; they also have, unfortunately, far too many men who have very little regard for the English language, and very little knowledge of it, except for purposes of sensational writing, and whose ambition is not to report the facts, but to make what is technically called a story. The diminishing influence of newspapers in this country has been due to the fact that many of them are in the service of special interests. A newspaper is a large enterprise, requiring very heavy investment of capital; and in many cases the man who furnishes the capital very naturally desires to serve his own business interests, and the opinions of some newspapers are more or less deflected from independence by the influence, not so much of the advertisers, as of the owners of the papers. For this reason journalistic opinion does not weigh as much in this country as it did two decades ago; nor do newspaper readers attach as much importance to the reports of events and the accounts of people. In the endeavor to make a good story facts are so constantly distorted and speeches are so often misre-

ported that a general skepticism of the trustworthiness of the news pages has taken possession of the mind of the country. There are many journals whose work is on a high ethical as well as intellectual plane; but journalism as a profession stands in sore need of greater independence and of greater accuracy. In these ways, as well as in the work of technical preparation, schools of journalism may be, and doubtless will be, of very great service.

For Health and Cleanliness

To the average layman there is a formidable sound in the very title of a Congress on Hygiene and Demography, and when he reads the names of a dozen or more eminent medical scientists in whose presence at the Congress the professional medical journals exult because they have been in the foreground in attacking the problem of *poliomyelitis*, he may be inclined to think that the interest of such a meeting is for experts and not for common folk. He will see his mistake, however, if he will read the dictionary definition of demography, which relates to vital and social statistics and their application to the comparative study of races and of nations; and, again, when he realizes that the popular rendering of *poliomyelitis* is simply the dreaded disease commonly known as infantile paralysis. So with other topics. If the severity of scientific nomenclature is laid aside, it will be found that the recent Congress at Washington had to do with those things in which the citizen, for himself and those near to him, is intensely interested. For instance, lately The Outlook spoke of the subject of mental hygiene, of the importance it is constantly assuming, and of its fundamental value in human life and activity. Now, one of the most attractive and interesting features of the Congress at Washington was the mental hygiene exhibit, and we are glad to learn that after attracting the closest attention from both foreign and American delegates to the Congress, it is to be brought to New York, and may be seen at the College of the City of New York. This may be cited as only one instance of the innumerable ways in which, through exhibits, through addresses, and through the reports in the daily papers of important discussions, the Congress of Hygiene and Demography has excited interest in many branches of hygiene, sanitation, and moral as well as physical health. One day's session, for instance, took up the possibility of a vaccine for tuberculosis (Dr. Vaughan, of the University of Michigan, declared that its discovery was not only possible but probable), the question of pasteurized milk (with Nathan Straus, of New York, as the chief speaker), and the conservation of woman in industrial life (with a leading paper by Dr. Friedrich Zahn, of Munich). To give a list of the delegates present would be almost to make a directory of the great medical and sanitary authorities of the world; to report or to sum up their addresses would be to compile a work which would be as valuable as it would be voluminous, one which we hope will, in point of fact, be prepared and made available for the reading of the layman as well as of the scientist. What can be done by such a Congress is shown by the fact that the preceding session, which took place in Berlin five years ago, was followed by legislation in several of the great nations of Europe having to do with the hygiene of industry, and the passing of these laws was the direct result of the work of that Congress. It is evident that the Congress just held will, even more than its predecessor, make evident the need of co-operation between the Government and science in guarding the health of the people. How wide was the scope of the discussions at Washington is indicated by the fact that the "Medical Record" points out that they "ranged all the way from the control of rabies to the hygiene of the engine-room; from the education of immigrants to the training of health officers; from the causes of mortality in the professions to the statistics of appendicitis in the German navy."

The Situation in Lawrence

Trouble has broken out again in Lawrence. The threat was definitely made last spring by leaders of the Industrial Workers of the World that if Ettor and Giovanetti were convicted there would be "hell in New England." The beginning, at Salem, of the trial of the two men, who as accessories before the fact are charged with responsibility for the murder of Anna Lopezzi last January, has been celebrated with a foretaste of the threatened inferno. On Sunday, September 29, there were riots in connection with the commemoration of the death of Anna Lopezzi; on Monday, the day of the trial's beginning, a one day's strike of protest was called. Thousands of laborers, largely

members of the Industrial Workers of the World, marched through the streets of Lawrence. They waved their banners in the eyes of the police; they forcibly prevented willing laborers from entering the factories; they violently insisted on proceeding with unauthorized parades. Frequent clashes, bloody although not fatal, ensued. Such is the story which the newspapers unanimously tell. In spite of the regrettable and unjustifiable violence of the strikers, if indeed the press reports in this regard are true, the reasons for the indignant protest of the laborers are easily discernible. The foreign workers in the mills at Lawrence (only about seven per cent of the operatives there are of American-born parentage) have been subjected to unhumanized conditions of labor—on that the evidence is clear. They regard their strike last spring not only as a justifiable but as a necessary revolt of outraged human nature against personal abuse from their foremen and needlessly low wages from their employers. They are devoted to Ettor and Giovanetti. They insist that the two men always counseled against violence, not for it. They are passionately indignant at the arrest and indictment of the two leaders on a charge which, not to their partisan vision alone, but to the unprejudiced thought of one reading the evidence before the Grand Jury, seems to amount to this: that during the two or three weeks before Anna Lopezzi was shot, Ettor and Giovanetti uttered sentiments which can be interpreted, not always without difficulty, as encouraging a riotous spirit; that this general spirit of disturbance was responsible for a particular riot on January 29, at which neither Ettor nor Giovanetti was present; that in this riot Anna Lopezzi was shot, some say by one Coruso, some say by Officer Benoit, all admit without direct intent; and that Ettor and Giovanetti are therefore to be held as accessories before the fact of murder! It is not surprising, although not entirely reasonable, that the resentment of the strikers should be rendered bitter by the fact that while President Wood of the American Woolen Company, indicted on an accusation of plotting the alleged planting of the dynamite in the Syrian colony, is enjoying his liberty and ease, Ettor and Giovanetti have been in prison seven months, without bail, pending trial. If it is true, as has been alleged, that the delay has been in accordance with the wishes of the counsel for Ettor and Giovannetti, they personally have no right to complain, but the people of Lawrence and of Massachusetts have emphatically a right to protest against the holding back of trial on charges of this unusual nature and of this wide public importance, no matter at whose request the delay was permitted. The Industrial Workers of the World have in the whole situation an immense leverage of natural resentment on which to rely. On the other hand, it is easy to understand the attitude of the authorities in Lawrence—that Ettor and Giovanetti were arrested, indicted, and confined by due process of law; that their guilt or innocence is a matter for courts to settle, not for mobs; that parades and banners are incentives to violence, and must be repressed; and that property, at all hazards, shall be protected. The two parties to the conflict cannot easily understand each other. It is to be hoped that the soberer minds among the laborers, who evidently lost control of the men on Monday of last week, will regain their dominance and keep it steadily. "Go back and wait a while. See if Ettor and Giovanetti get a fair trial at Salem," is the good advice given by a strike leader to the laborers. The principle which a distinguished member of the British Parliament recently voiced in Ulster, the workers in Lawrence are, unhappily, finding it easy to act upon: "The crisis has called into existence one of those supreme issues of conscience, amid which the ordinary landmarks of permissible resistance to technical law are submerged."

The Pope and Peru

Pius X has addressed an Encyclical or letter to the archbishops and bishops of Latin America on the subject of the Peruvian Indians. Of course, like the rest of the civilized world, his Holiness stands aghast at the revelations made by the official statement to Parliament of Sir Roger Casement, the British agent sent to investigate the reports of the atrocities committed in the Putumayo region of the upper Amazon country in eastern Peru. The Outlook has already described these outrages, and has recommended the establishment of religious missions throughout the region. They must apparently be Roman Catholic missions, as Roman Catholicism is the only recognized religion in Peru. It is a satisfaction that the head of the Roman Catholic Church has put himself on record as follows: "Our mind is stricken with horror, and we feel the deepest pity for that unhappy race [the Indians in the Putumayo

district]. What, indeed, is so cruel and so barbarous as, for reasons often trivial and not rarely for the mere pleasure of inflicting torture, to put men to death by scourging or with red-hot irons, or constantly attacking them to massacre them, killing hundreds and thousands of them by murder; or to sack towns and villages, slaughtering the natives, of whom within these past few years some tribes have, we learn, been almost exterminated?" Thus does Pius X, in the twentieth century, as the New York "Freeman's Journal" points out, re-echo the words of Benedict XIV in the eighteenth century, a Pontiff who also interposed the weight of his authority to put a stop to the wrongs done to South American Indians in his day (1741). The publication of Pius X's latest Encyclical has been followed by the despatch of a number of Franciscan missionaries to the unhappy district.

THE PROGRESSIVE MOVEMENT

V—MONOPOLY

There are two parallel railways running from New York to Buffalo, one going to Albany on the west bank, the other on the east bank, of the Hudson River. A through express train from the West to New York on the west bank of the Hudson was, a year or two ago, almost habitually behind time. The people residing on the west bank who depended on this railway for their transportation to New York found themselves greatly inconvenienced. They presented a complaint to the New York State Railway Commission. It investigated; ascertained, we judge from the results, that there was local traffic enough to pay for the running of a local train; and directed the railway company, when the train was seriously late—the maximum lateness allowed was half an hour—to put on a local express to serve the local needs. This was forthwith done; and now the citizens living on the west bank of the Hudson almost invariably get their train within half an hour of the schedule time. This has been accomplished for the advantage of the citizens by the regulation of what is necessarily a monopoly. And it has been accomplished without lawsuit, without delay, and without any other expense to the citizens than the insignificant expense involved in the maintenance of a Railway Commission.

If there had been no Railway Commission, what remedy would the citizens have had? None. The West Shore Railroad is controlled and operated by the New York Central Railroad, which runs on the east bank of the river. The citizens could have made up a purse and brought suit, or they could have united in an appeal to the Attorney-General to bring suit, to dissolve the combination existing between the West Shore and the New York Central, on the ground that it is a combination in restraint of trade. Some years would have elapsed before this suit could have been decided. If it should have been decided in favor of the prosecution, and the combination between the West Shore and the New York Central had been annulled, still the citizens would have had no relief, for, as a great river separates these two roads, there is no competition between them in the carriage of local traffic.

The Standard Oil Company had secured by 1898 a practical monopoly of the oil traffic. There was still some attempt by independent companies to do business in competition with the Standard Oil. To destroy this competition, the Standard Oil was accustomed to undersell its competitor in his own field by selling, if necessary, at less than cost until he had been driven out of business, and recouping itself for the loss by the profits which it made in other districts. Independent dealers in not a few instances were by this method thrown into bankruptcy. If there had been a Government Commission with authority to regulate the Standard Oil business, as there is a Railway Commission with authority to regulate the railway business, the independent dealer could have complained to this Commission, the Commission could have investigated and forbidden the Standard Oil Company to continue its practice and have arrested any driver or agent who sold under a legitimate price and for the purpose of driving a competitor out of business. There was no such Commission. The independent competitor had no remedy. After more than a dozen years of litigation conducted by the United States Government, the Supreme Court of the United States has decided that the Standard Oil Company is by its very organization a violation of the Anti-Trust Law, and has ordered its dissolution. Meanwhile the independent dealer has been bankrupted. A remedy which it takes twelve years to put into operation is no remedy.

These two instances may serve to illustrate in a concrete way to our readers the difference between the Democratic and the Progressive method of dealing with trusts. It is

the difference between dissolution and regulation.

No one proposes that the Government shall legalize, justify, protect, or enter into partnership with monopoly, Mr. Wilson's naïve misunderstanding of the Progressive proposals to the contrary notwithstanding. The Democratic party proposes to destroy monopoly by dissolving into its constituent elements any combination which has obtained a monopoly, and to do this by legal proceedings before the courts. The Progressive party proposes to destroy monopoly by taking from any person or corporation the powers which make it a monopoly, and to do this by administrative action.

A person, whether individual or corporate, has a monopoly when he has such control of the production of a commodity as to render it possible for him to fix the price and determine the quality of the article. The Democratic party proposes, when the corporation acquires such power, to dissolve the corporation. The Progressive party proposes, before the person acquires such power, to put him under Government regulation and prevent his exercising the power. The Democratic party favors "the vigorous enforcement of the criminal as well as the civil law against trusts and trust officials." The Progressive party proposes "the establishment of a strong Federal administrative commission of high standing which shall maintain permanent active supervision over industrial corporations engaged in inter-State commerce, or such of them as are of public importance."

Theory and experience combine to demonstrate the futility of the Democratic plan and the practicability and efficiency of the Progressive plan.

There are several ways in which a monopoly may be obtained.

Government may grant a monopoly. If in a liquor license State the Excise Commissioners license only one hotel to sell liquor in a village, that hotel has a monopoly of the liquor traffic in that village. If a city grants a franchise to a railway company to run a track through its streets, that company has a monopoly of street railway traffic in that city. If the United States Government grants a patent to the Bell Telephone Company to operate a telephone, the Bell Telephone Company has a monopoly of the telephone so long as that patent lasts. In these cases the monopoly is obtained by direct Government action.

The monopoly may be obtained by private ownership acquired through purchase. The anthracite region of the United States is a comparatively small region. Some half a dozen corporations have obtained the ownership of this kind of coal. Through this ownership the very small body of gentlemen who practically control these corporations control the anthracite of the United States, and therefore the chief fuel of the Eastern section of the United States. A comparatively small body of men, by processes which need not be here described and are not very well understood by the public, have obtained control of a large proportion of the oil-wells of the United States, and so have obtained a control of the product on which the great majority of the people of the United States depend for light. In these two cases, and there are others analogous, the monopoly has been obtained by a combination organized for the purpose of securing such monopoly; that is, for the purpose of securing power to limit output, control prices, and determine quality. The purchaser of oil must take such oil as the Standard Oil Company chooses to give him, and pay such prices as the Standard Oil Company chooses to charge. The purchaser of anthracite must purchase such coal as the coal companies choose to give him, and pay such prices as the coal companies choose to charge. Thus the people of the United States in the one case, the people of the Eastern States in the other, are dependent for their light and their fuel on the almost despotic power of a small body of men whose authority to determine quality and fix prices is practically unlimited. The Democratic party proposes to meet this condition of affairs by dissolving the combination; the Progressive party proposes to meet this condition of affairs by testing the quality of the coal and oil which these combinations may sell and by controlling the conditions under which they are produced, and, if necessary, by determining the prices which the combinations may charge; and to do this it proposes that these and all other analogous concerns shall be subject to supervision and regulation by an administrative bureau, which shall always have access to their books and accounts, always have an opportunity to investigate and understand the way in which their business is carried on, and which shall also have power to regulate wages and conditions of employees.

These are the two methods between which

the country has to choose in the approaching election: dissolution or regulation. Dissolution affords no remedy, and does not pretend to afford any remedy, for monopoly obtained by grant from the Government, whether that grant is given by license, franchise, or patent. And experience has proved that it also furnishes no remedy for monopoly obtained by combination.

The dissolution of the Standard Oil Company has done nothing whatever to decrease the commercial power of the men who control the Standard Oil Company. Nor is this the fault of the Company. That Company has literally complied with the order of the Court. It has broken itself up into thirty-four separate companies. It has assigned to each stockholder of the former united Company his proportion of the stock of each one of the thirty-four companies, with the result that a stockholder who formerly had one share of stock worth nearly seven hundred dollars has now thirty-four shares of stock in thirty-four separate companies and receives his dividends thereon in fragmentary payments, collectively considerable, separately insignificant. The reader interested to understand this division in detail will find it recorded in "McClure's Magazine" for August, one passage of which quoted here will suffice for our purposes:

> The Galena Signal Oil Company, sending out its dividends, had twelve hundred separate checks of less than ten cents each—six hundred of them for three cents. It cost a two-cent stamp and an envelope to send each one of these and a two-cent stamped envelope for returning a receipt; and, after that, in many cases the cost of following up and mailing out requests for a return of the receipts. A single three-cent dividend cost in postage charges as high as eight and ten cents. The three-cent dividend checks were not cashed; their holders tore them up or tacked them on the wall as souvenirs. And more and more the disgust of the small stockholders grew; and more and more they let their holdings go.

In consequence of the dissolution of the Standard Oil Company many of the small stockholders have sold out their fragments of stock; the large stockholders have bought them in; the price of stock first fell, then rose in value; as a result Mr. Rockefeller is reported to have added $100,000,000 to his pocketbook, and the power of the men who manage the Standard Oil has been increased rather than diminished. This is what the Democratic and Republican parties—for the two parties agree in their trust policy—have accomplished in the case of the greatest voluntarily formed monopoly in the world. This is the policy which Mr. Taft, Mr. Wilson, and, we believe, Mr. La Follette also, are urging on the country.

What would the Progressive party have accomplished?

It would have put the Standard Oil Company under the direction of a Government Industrial Bureau. It would have required the Standard Oil Company to submit all its books and all its business to Government inspection, as the books and business of the banks are submitted to Government inspection. It would have required the Standard Oil Company to keep its books in such fashion that they could be understood by Government inspectors. It would have required the Standard Oil Company to issue to the public understandable reports of its business, with its values and its profits. It would have inspected all the output of the Standard Oil Works, and required its commercial oils to come up to a specified standard. It would have prevented the Standard Oil Company from underselling competitors in one district and recouping itself by high prices in another district. And it would have required a reduction of the prices of Standard Oil wherever the prices were found, by the inspection of the values and the profits of the Company, to be unreasonably high, and therefore burdensome to the public. It is not at all strange that those great trusts which have been organized for the purpose of creating a monopoly, and their organs, journalistic and political, are bitterly opposed to the Progressive plan and heartily in favor of the Democratic-Republican plan of dealing with the great trusts.

There are two objections urged against the policy of regulation as thus described:

First, it is asserted that this policy would destroy commercial liberty. Would you deny, it is asked, the right of men to sell what they will, at what price they choose? The Outlook answers unhesitatingly, Yes. The Government has already deprived men of the right to sell tainted meats, rotten fruits, adulterated foods. It already requires men to submit the things they sell to Government inspection and conform them also to a Government standard. It already fixes the price which railways may charge shippers and travelers, and the price which trolley lines and hacks may charge passengers. We would extend the authority of Government and give

it the power to determine the quality of goods produced and the prices charged for them by any person or corporation which had obtained or was apparently likely to obtain a monopoly; that is, such control of its commodity as would enable it to control prices and determine quality. And we would bring the monopoly under such Government control, whether the monopoly was obtained by license, franchise, patent, or combination.

The other objection, or perhaps we should rather say another form of the same objection, is thus stated by Mr. Taft in an apparently authorized interview:

> What do you think, Mr. President, of the proposal of the third term party to control the trusts through Federal incorporation and regulation?
>
> It would create the most monstrous monopoly of power in the history of the world—a power as much greater, as much more autocratic, than that of a Cæsar or a Napoleon as the business interests of the twentieth century are greater, more dominant and far-reaching than were those of two thousand or two hundred years ago. An unprincipled man with such power in his grasp could perpetuate his authority, perhaps under legitimate forms, and become a dictator until his hold could be shaken loose only by revolution.

This objection is founded upon that inherent distrust of the people which seems to The Outlook characteristic of Mr. Taft and his party, and in a less degree characteristic of Mr. Wilson and his party. We think it was Alexander Hamilton who a hundred years ago pointed out the fact that men who control the necessaries of life control the people. Let a small body of men control the fuel, and another small body of men control the lights, and a third small body of men control the food products, and a fourth small body of men control the currency, and a fifth small body of men control the National highways, and these men, by controlling the absolute conditions of life, control the country. That there is danger of such control is patent to every student of present-day conditions in America. It is obscurely felt by hundreds of thousands of men and women who have not studied present conditions, but who feel the pinch which those present conditions produce. This control of the necessaries of life is now possessed by irresponsible men who cannot be called to an account by the people except through the long, slow, hazardous, and expensive process of lawsuits; we wish to see that control transferred to the direct representatives of the people, elected by them, acting for them, and answerable in frequent accountings to them.

The Outlook suggests nothing startling, nothing new, in this demand. For not less than a quarter of a century we have been urging upon our readers the alternative which modern commercial organization presents to them: The people must control the great corporations or the great corporations will control the people.

CAMPAIGN CONTRIBUTIONS

The proceedings of the Senatorial Investigating Committee at Washington have not been those of a non-partisan and impartial body acting for the general public good. The animus of the Committee is too clearly indicated by the fact that it has devoted its time and attention almost exclusively to Mr. Roosevelt, and that it has so far given no attention whatever to the political campaigns of Mr. Wilson, Mr. Bryan, Judge Parker, or Mr. Taft, although the Committee states that it will take up their campaigns later. Nevertheless, every Progressive whose main purpose is to destroy the germs of invisible government by exposing them to the antiseptic sunlight of public opinion must welcome the results of even the one-sided efforts of the Committee.

In view of these results it is worth while to survey briefly the recent history of campaign contributions. In 1896 financial men were very much alarmed by the Silver Campaign initiated by Mr. Bryan. If he had been elected, the country would have gone at once on a silver basis without any legislation, since, under the law as it then existed, it was within the power of the Executive Department to pay the debts of the United States, or most of them, in silver or gold at its option. The contributions made by Wall Street in 1896 to Mr. McKinley's campaign fund were not made to secure any special favors. Mr. Herbert Croly, in his admirable and illuminative biography of Senator Hanna, says that on August 15, 1896, Mr. James J. Hill found Senator Hanna trying to raise money in New York City for the Republican campaign, but with only small success.

> The financiers of New York would not contribute. It looked as if he [Mr. Hanna] might have to curtail his plan of campaign, and he was so disheartened that he talked about quitting. Mr. Hill immediately offered to accompany

Mr. Hanna on a tour through the high places of Wall Street, and during the next five days they succeeded in collecting as much money as was immediately necessary. Thereafter Mr. Hanna did not need any further personal introduction to the leading American financiers. Once they knew him, he gained their confidence. They could contribute money to his war chest with none of the qualms which they suffered when "giving up" to the regular political "bosses." They knew that the money would be honestly and efficiently expended in order to secure the victory of Republican candidates.

In the second McKinley campaign in 1900 there was still the same anxiety in financial circles, because Mr. Bryan was still running. Mr. Roosevelt was forced upon the ticket in spite of the opposition of both Mr. Hanna and Mr. McKinley; "although," says Mr. Croly, "he had behaved as a loyal Republican, he was regarded as erratic and 'unsafe,' as, indeed, he undoubtedly was from the point of view of an administration of the affairs of the country chiefly in the interest of business." Mr. Croly sums up the situation in these words:

> Against their own will Mr. McKinley and Mr. Hanna had called to their support the only man who could most effectively supplement their strength with the American people—the one man who could make the ticket represent the Nationalism of the future as well as of the past and of the present.

In 1904 Mr. Roosevelt's nomination was still opposed by Mr. Hanna, and was accepted finally by him and by the business interests which he represented only because the popular demand was one that could not be resisted. The Democrats, by their nomination of Judge Parker, sought to conciliate, if not to obtain favor with, the conservative business interests, but without success. The financial interests were afraid of a party which had twice nominated Mr. Bryan and which seemed to them erratic and unsafe. They contributed, therefore, to the success of the Republican party, as they had done before when Mr. McKinley was a candidate, in spite of their justifiable fear that they might have some difficulty in getting Mr. Roosevelt to take their point of view regarding corporation legislation.

There was at that time neither law nor public sentiment against corporation contributions to political campaigns. With a very few pronounced exceptions, the corporations made their contributions, not by the way of purchasing special and specific favors, but because they believed they would share in the general prosperity resulting from the policy pursued by the party to which they contributed. Thus the silver interests, such as the mine owners and smelters, contributed to Mr. Bryan's campaign fund, not because he made specific promises in return, but because they believed free silver would promote the general prosperity of the silver industry. Mr. Roosevelt never denied, nor does he now deny, that contributions were made by corporations to the Republican campaign fund when he was a candidate for President. What he does deny is that these contributions involved any promise or understanding of any kind, save that every man would have a square deal, no less and no more, under his Administration. This promise he carried out, and the hostility of certain special interests to him now is simply an increase of the opposition which the same interests made to his nomination as Vice-President in 1900 and to his nomination as President in 1904.

Mr. Roosevelt, as President and since his Presidency, has certainly done as much as, if not more than, any other one man to stimulate public opinion against the corrupt alliance of "business" and politics. He has advocated the law which now stands on the statute books forbidding political contributions by corporations; he has advocated publicity of all campaign contributions; and the Progressive party under his leadership has to-day made a fuller and more detailed statement to the public of its receipts and expenditures than any of the other parties in the field. Mr. Taft's managers have made no public statement of any kind; Mr. Wilson's managers have made a statement so far only of receipts; Mr. Roosevelt's managers have made a full statement of both receipts and expenditures.

There is one more phase of this matter which deserves careful consideration. The legitimate expenses of any organized campaign on a Nation-wide scale, whether political, educational, or religious, are large. If the people of the country do not wish secret contributions to be made by the "special interests," with the sinister influences which such contributions exert, they must make the contributions themselves. Printing cannot be done, halls cannot be hired, envelopes cannot be addressed, postage cannot be paid, traveling expenses cannot be met, literature cannot be circulated, and therefore the voter cannot obtain the information which he ought to have in order to vote correctly, without the expenditure of money. As we have already

said, we have no means of getting at the expenditures made thus far in the campaign by the Taft or the Wilson managers, but there lies before us the complete statement of the expenditures of the National Committee of the Progressive party, both in the primary campaign preceding its Convention and its Presidential campaign since the Convention. We find, for example, that the Progressive National Committee has spent on the items of printing and stationery alone the sum of $60,000, and the total sum which the Progressive National Committee has been able so far to expend in both primary and Presidential campaigns has been less than $325,000. This expenditure has been made to promote the right of the citizens of the United States to a really free, popular government. This is the purpose and the effect of the Progressive party, as indicated by the fact that since the formation of this party almost every candidate in the other political parties of the country has called himself a Progressive. Even Mr. Taft is now claimed by his managers to be the only true Progressive candidate before the country.

Money is needed to carry on the work of political education and to make corrupt financial control of American politics permanently a thing of the past. As our readers know, we believe that the most effective agency for this great political and social reform is the Progressive party under the leadership of Mr. Roosevelt. Those who agree with us are urged to send their contributions, small or great, to Mr. Elon Huntington Hooker, Treasurer, the Progressive National Committee, Hotel Manhattan, New York City. Those who give money to the cause of popular government in this campaign are really helping to lay the only foundation upon which other philanthropic and humane reforms can securely rest.

THE KNOWLEDGE OF LIFE

"I know I shall never know so much that I cannot learn more; and I hope I shall never live so long as till I be too old to learn," are the quaint words in which Bishop Hall puts the aspiration of a devout soul. His "Meditations" were always in the hands of General Gordon, a soldier to whom action was always the expression of high purpose.

There are those who learn through study, those who learn through meditation, and those who learn through action; and in the education which alone makes life intelligible all these methods have their place, and it is a blessed fact about this education that those who cannot use one method can use another. The happiest people are those who are teachable. In life, as in all the lesser schools, there are many who sit on the benches and go away knowing little more than when they came. The stream of knowledge flows past them, but they never drink of the life-giving current. The wonderful process which enriches others beyond the dreams of avarice leaves them as poor at the end as at the beginning; for it is possible to live in such a state of self-absorption that the knowledge of life never finds access to the soul to correct and interpret the knowledge of self.

There is no surer way of missing that knowledge of self which the Greeks held of such high importance than shutting one's self off from the knowledge which comes through the open door of sympathy with others and fellowship with that larger world in which we all find our homes. No man knows his own garden unless he knows something of the infinite forms of growth in the landscape which enfolds him; as no one intelligently loves those who sit at his own hearth unless he cares for those who sit in other homes. He who pursues himself never overtakes wisdom, and goes out of life as ignorant as when he entered.

They are fortunate who find large room for thought, for it is by meditation that what happens in us and to us is transformed into experience. For manifold incidents, much travel, wide contact, do not of themselves constitute experience. There are those to whom all manner of things happen, but to whom nothing becomes experience; outward happenings become experience only when we discover what they mean to us, and that which comes to us stays with us in wider knowledge and deeper insight. One may see a splendid procession and get nothing from it but a glimpse of men moving and banners waving; while to another it stirs a host of memories and gives wings to the imagination. The wonder of life may be a passing show to us; or it may be rich with suggestion and impulse. It may be like the idle turning of the pages of a book of marvels which mean nothing to us, or it may be a great revelation.

There are those, too, to whom action is only a form of external energy; a tireless

going to and fro on the earth which brings nothing but fatigue. Action is sometimes a turning of wheels which grind no grain, a rush of wings which never move in flight, a hurrying of feet which travel to no goal; for action does not count in the making of character or the gaining of knowledge unless it is the servant of purpose, the outward expression of spirit trying to realize its possibilities of creative power or of useful service. We learn nothing unless we hold ourselves in fellowship with others, unless we seek for the meaning of the happenings of our lives, unless action is the forcible language through which we put forth the energy of our spirits. It is the reflex influence of outward happenings and activity that gives life its inexhaustible interest and its immortal value.

HOW I BECAME A PROGRESSIVE

EDITORIAL BY THEODORE ROOSEVELT

I SUPPOSE I had a natural tendency to become a Progressive, anyhow. That is, I was naturally a democrat, in believing in fair play for everybody. But I grew toward my present position, not so much as the result of study in the library or the reading of books—although I have been very much helped by such study and by such reading—as by actually living and working with men under many different conditions and seeing their needs from many different points of view.

The first set of our people with whom I associated so intimately as to get on thoroughly sympathetic terms with them were cow-punchers, then on the ranges in the West. I was so impressed with them that in doing them justice I did injustice to equally good citizens elsewhere whom I did not know; and it was a number of years before I grew to understand, first by associating with railway men, then with farmers, then with mechanics, and so on, that the things that I specially liked about my cow-puncher friends were, after all, to be found fundamentally in railway men, in farmers, in blacksmiths, carpenters—in fact, generally among my fellow American citizens.

Before I began to go with the cow-punchers, I had already, as the result of experience in the Legislature at Albany, begun rather timidly to strive for social and industrial justice. But at that time my attitude was that of giving justice from above. It was the experience on the range that first taught me to try to get justice for all of us by working on the same level with the rest of my fellow-citizens.

It was the conviction that there was much social and industrial injustice and the effort to secure social and industrial justice that first led me to taking so keen an interest in popular rule.

For years I accepted the theory, as most of the rest of us then accepted it, that we already had popular government; that this was a government by the people. I believed the power of the boss was due only to the indifference and short-sightedness of the average decent citizen. Gradually it came over me that while this was half the truth, it was only half the truth, and that while the boss owed part of his power to the fact that the average man did not do his duty, yet that there was the further fact to be considered, that for the average man it had already been made very difficult instead of very easy for him to do his duty. I grew to feel a keen interest in the machinery for getting adequate and genuine popular rule, chiefly because I found that we could not get social and industrial justice without popular rule, and that it was immensely easier to get such popular rule by the means of machinery of the type of direct nominations at primaries, the short ballot, the initiative, referendum, and the like.

I usually found that my interest in any given side of a question of justice was aroused by some concrete case. It was the examination I made into the miseries attendant upon the manufacture of cigars in tenement-houses that first opened my eyes to the need of legislation on such subjects. My friends come from many walks of life. The need for a workmen's compensation act was driven home to me by my knowing a brakeman who had lost his legs in an accident, and whose family was thereby at once reduced from self-respecting comfort to conditions that at one time became very dreadful. Of course, after coming across various concrete instances of this kind, I would begin to read up on the subject, and then I would get in touch with social workers and others who were experts

and could acquaint me with what was vital in the matter. Looking back, it seems to me that I made my greatest strides forward while I was Police Commissioner, and this largely through my intimacy with Jacob Riis, for he opened all kinds of windows into the matter for me.

The Conservation movement I approached from slightly different lines. I have always been fond of history and of science, and what has occurred to Spain, to Palestine, to China, and to North Africa from the destruction of natural resources is familiar to me. I have always been deeply impressed with Liebig's statement that it was the decrease of soil fertility, and not either peace or war, which was fundamental in bringing about the decadence of nations. While unquestionably nations have been destroyed by other causes, I have become convinced that it was the destruction of the soil itself which was perhaps the most fatal of all causes. But when, at the beginning of my term of service as President, under the influence of Mr. Pinchot and Mr. Newell, I took up the cause of Conservation, I was already fairly well awake to the need of social and industrial justice; and from the outset we had in view, not only the preservation of natural resources, but the prevention of monopoly in natural resources, so that they should inhere in the people as a whole. There were plenty of newspapers, the New York "Times," "Sun," and "Evening Post," for instance, which cordially supported our policy of Conservation as long as we did not try to combine it with a movement against monopolization of resources, and which promptly abandoned us when it became evident that we wished to conserve the resources not for a part of the people but for all of the people.

The country life movement was simply another side of this movement for a better and juster life. From Mary E. Wilkins to Sarah O. Jewett, in story after story which I would read for mere enjoyment, I would come upon things that not merely pleased me but gave me instruction—I have always thought that a good novel or a good story could teach quite as much as a more solemnly pretentious work, if it was written in the right way and read in the right way—and then my experience on farms, my knowledge of farmers, the way I followed what happened to the sons and daughters of the farmers I knew, all joined to make me feel the need of arousing the public interest and the public conscience as regards the conditions of life in the country.

Here again I have been fortunate enough to live with my own people, and not to live as an outsider, but as a man doing his share of the work. I know what the work and what the loneliness of a farmer's life too often are. I do not want to help the farmer or to help his wife in ways that will soften either, but I do want to join with both, and try to help them and help myself and help all of us, not by doing away with the need of work, but by trying to create a situation in which work will be more fruitful, and in which the work shall produce and go hand in hand with opportunities for self-development.

Very early I learned through my reading of history, and I found through my association with reformers, that one of the prime difficulties was to get the man who wished reform within a nation also to pay heed to the needs of the nation from the international standpoint. Every little city or republic of antiquity was continually torn between factions which wished to do justice at home but were weak abroad, and other factions which secured justice abroad by the loss of personal liberty at home. So here at home I too often found that men who were ardent for social and industrial reform would be ignorant of the needs of this Nation as a nation, would be ignorant of what the navy meant to the Nation, of what it meant to the Nation to have and to fortify and protect the Panama Canal, of what it meant to the Nation to get from the other nations of mankind the respect which comes only to the just, and which is denied to the weaker nation far more quickly than it is denied to the stronger.

It ought not to be necessary to insist upon a point like this, with China before our very eyes offering the most woeful example of the ruin that comes to a nation which cannot defend itself against aggression—and China, by the way, offers the further proof that centuries of complete absence of militarism may yet result in the development of all the worst vices and all the deepest misery that grow up in nations that suffer from over-much militarism. Here again I learn from books, I learn from study, and I learn most by dealing with men.

I feel that the Progressive party owes no small part of its strength to the fact that it not only stands for the most far-reaching measures of social and industrial reform, but

in sane and temperate fashion stands also for the right and duty of this Nation to take a position of self-respecting strength among the nations of the world, to take such a position as will do injustice to no foreign power, strong or weak, and yet will show that it has both the spirit and the strength to repel injustice from abroad.

MR. ROOSEVELT AND THE SENATE COMMITTEE

EDITORIAL CORRESPONDENCE FROM WASHINGTON

BY ERNEST HAMLIN ABBOTT

AT ten o'clock Friday morning, October 4, a crowd stood on the sidewalk in front of the Senate Office Building at Washington, and on the steps leading up to the entrance. An automobile drew up to the curb. From it stepped out a half-dozen men. Among them was a man of stocky build, in face and action decisive. There was a cheer from the crowd. Lifting his black felt slouch hat, this man, surrounded by his companions, passed through the midst of the people, then up the flight of steps, and, entering the building, walked along one of the corridors. Inside there was another crowd of people who cheered him as he went by.

After having served as Vice-President for a few months, he had been President of the Republic for seven years. During that time he had created a new movement in American public life. Now, after a lapse of four years, he was a leader and Presidential candidate of a new party, the outgrowth of that movement. The Senate, under the control of the two old parties, had created a Committee which had heard Senator Penrose and Mr. Archbold, both implacable enemies of the new movement and its leader, testify against him, and had then scattered without hearing his reply. He had sent a letter in reply to the Chairman of the Committee, Senator Clapp, a political friend; but it was a month before he was given a chance to make a sworn reply. What those charges were and what his letter said The Outlook has in substance reported.

Theodore Roosevelt's appearance finally last week in Washington was to enforce and supplement his letter, giving the letter as well as his oral statements the sanction of his oath as a witness.

When he took his seat before the table at which the Committee sat, it was not easy to believe, from his appearance, that he had just returned from a journey of over ten thousand miles, in which on almost every day he had been continually engaged in campaign speaking. There was no sign of weariness. Toward him the attitude of the members of the Committee, all but one being political opponents, was, in every outward sign of speech and manner, entirely such as Americans would wish any group of men to assume toward one who has been President of the United States.

After brief formal questions, to which he replied tersely, Mr. Roosevelt, with the permission of the Committee, first placed his letter to Senator Clapp under his oath as witness, and then began a statement of the evidence and testimony he desired to place before the Committee. As he proceeded, supplementing the documents contained in the "Clapp letter" with an additional letter and telegram he had found in his files among the hundred thousand letters he had written and signed in the past fourteen years, both the Committee and the audience were silent with attention. They listened with obvious interest to his statement that all the evidence brought forward against him consisted of merely hearsay statements of men who are dead; they listened with evident approval to his assertion with respect to the letter purporting to have been written by Congressman Sibley, and alleging an arrangement to have Mr. Archbold come to see him, that he was always ready to see any man, trust magnate, labor leader, Socialist, prize-fighter, lawyer, clergyman, who had any real business with him, and that he would send for any man when there was anything to be gained from the point of view of the public; they listened with amusement, which he shared with them, to his reference to the visits of two pugilists on "some questions of public policy"—one of which had to do with Mr. John L. Sullivan's nephew in the Marine Corps; they listened with evident understanding to his exposition of his relations with Mr. Harriman in the summer and fall of

1904, by which he showed, through reference to several letters and a telegram, that Mr. Harriman had come to see him with regard to certain political matters on his own initiative, to get Mr. Roosevelt's aid in inducing the National Committee to help the campaign in New York State, and not to render aid on behalf of Mr. Roosevelt's campaign; they listened with continued attention and interest as Mr. Roosevelt denied in general terms and specifically, citing evidence to support his statements, the often reiterated but never substantiated charge, first notably made by Mr. Parker, the Democratic candidate in 1904, that the financial side of Mr. Roosevelt's campaign in that year was conducted on a basis of blackmail, by means of promises and threats. It was then that the most dramatic moment of the day arrived, for it was then that Mr. Roosevelt, speaking to this Senate Committee, called upon the Senate to expel Mr. Penrose.

Reminding his hearers that Mr. Archbold testified that Cornelius Bliss, who is now dead, attempted to blackmail him—an allegation that he, Mr. Roosevelt, declared that he did not for a moment believe—Mr. Roosevelt said:

> Mr. Penrose testifies that he advised Mr. Archbold to have the Standard Oil Company submit to the blackmail, and that he did it for fear they should incur hostility in certain quarters. They could only incur hostility of myself, the President, of the Attorney-General, and of the Commissioner of Corporations, with, I suppose, his superior, the Secretary of Commerce and Labor.
>
> Now I want to call your attention to the fact that they could incur my hostility only if they violated the law.

Then, turning directly to Senator Oliver, Mr. Penrose's colleague from the State of Pennsylvania, he continued:

> I have been Police Commissioner. If it were proved to me when I was Police Commissioner that any policeman had done in reference to a law-breaking liquor-seller or gambler what Senator Penrose admits he did—he, a Senator of the United States—in connection with the Standard Oil Company, I would have thrown that policeman off the force; and I hold that the Senate of the United States should throw Mr. Penrose out of the Senate on the admission that he has himself made before this Committee.

As he had turned toward Senator Oliver, Mr. Roosevelt had moved forward in his chair. "Now, for Mr. Archbold," and he drew himself back to his former position, "he testifies that Mr. Bliss tried to blackmail him, and yet he testifies that he regarded Mr. Bliss as an excellent fellow. He evidently does not see that there is anything objectionable in what he alleges Mr. Bliss did. . . . His complaint is that nothing improper was done for him by the Administration." Mr. Roosevelt declared that if any company acted in the way the Standard Oil had acted he would, if he were elected President again, repeat the "Abyssinian" treatment, with probably more success because of the likelihood of getting a better law for the real control of such corporations.

Mr. Roosevelt then supplemented this testimony from his opponents as to the lack of favoritism toward corporations by not only explicitly denying that any promise had been given to any interest that improper action would be taken on its behalf, but by noting that all those who had hoped for improper influence and were then disappointed are now hostile to him.

Turning, on the other hand, to the testimony of Mr. J. Pierpont Morgan, Mr. Roosevelt expressed surprise at learning—as he had for the first time learned that day—that Mr. Morgan had contributed to his campaign fund in 1904, inasmuch as he knew that Mr. Morgan had not been pleased over the bringing of the Northern Securities suit or the method of settling the anthracite strike; and he confirmed Mr. Morgan's statement that neither directly nor indirectly had Mr. Morgan suggested that any consideration was due him because of his contributions.

After a detailed tribute to Mr. Bliss for his disinterested public service, Mr. Roosevelt turned to more recent history, and put in evidence a letter from himself, and a reply from Mr. Ormsby McHarg denying charges of the use of improper methods in securing Roosevelt delegates in the South.

Continuing his defense on the lines of attack, he called to the notice of the Commission the fact that Mr. Hilles, the Republican National Chairman, and Mr. Bartholdt, a Republican Congressman, had stated in the public prints that the Progressives had spent three million dollars in their primary. With the assertion that bearing false witness is infamous as truly as stealing, Mr. Roosevelt continued: "If Mr. Hilles and Mr. Bartholdt can prove their assertion, I want to know it. If they cannot, they should not only be required to apologize, but they should both of them be immediately driven out of public life."

The Committee explained through its Chairman that it thought it was fair that Mr.

Roosevelt should have an opportunity to deny such a charge; but Mr. Roosevelt pointed out that that was not the right procedure. "It ought not to be necessary for us to answer them until they have shown good faith. . . . I think that Hilles and Bartholdt the minute they made such accusations should have been brought right up here and should have been told, 'Now, prove what you have said or stand shamed before the entire country.'" Mr. Roosevelt also called for the appearance of men like Mr. McKinley and Mr. Charles P. Taft for the Republicans, and like Mr. McCombs and Mr. McAdoo, representing the Democrats, and also Mr. Crane, of Chicago, who had contributed to both Mr. La Follette's and Mr. Wilson's primary campaign fund. As to the latter, he pointed out that such contributions to both sides—though in this case done undoubtedly with honorable intention—were very productive of corruption, as shown by the bi-partisan habits of corporations in the past. In concluding his general statement Mr. Roosevelt expressed his opinion that it was not quite fair to have postponed until this late day in the campaign the opportunity for the Progressives to meet the charges made, so that attention is riveted upon the contributions alleged to have been made to their cause.

For two hours Mr. Roosevelt was before the Committee making this statement. For two hours and a half longer in the afternoon Mr. Roosevelt was answering the questions of two committeemen. Most of these questions were in the nature of an argument, in the endeavor to prove that Mr. Roosevelt did not mean what he said he meant in his letters to Mr. Harriman, and to persuade him that he really knew about matters of which he had no knowledge. The first point referred to Judge Parker's old charge of campaigning by blackmail. In some questions about this, Senator Pomerene quoted from a speech of Judge Parker in which he argued that the Roosevelt campaign was based on what amounted to blackmail from the fact that the Republican National Chairman in charge of the campaign had been at the head of the Department in which one of the bureaus had certain powers of investigating corporations. Senator Pomerene declared that the charge was "rather by inference." "It is," said Mr. Roosevelt, "one by innuendo. 'And, Senator, I object more to a charge by innuendo than I do to one directly. I like a man to be game and say what he means. I do not like him to sneak around." And Senator Pomerene answered, "That is true."

In connection with this subject, and in answer to questions, Mr. Roosevelt also pointed out the change in public opinion that had taken place in regard to campaign contributions from corporations. And he recalled how a similar change had taken place with regard to the ballot, so that whereas once it was all right to go in a polling booth with a voter, now to do so would bring upon one moral obloquy. On another occasion reference was made to Mr. Roosevelt's phrase "practical men" used in a letter to Mr. Harriman. Mr. Roosevelt had said while testifying that he believed it was essential to have in public life men who were not only idealists but also practical men. In the course of his questioning Senator Pomerene asked: "As a practical man, would you naturally think that some of these people might be expecting favors?" "As a practical man of high ideals," replied Mr. Roosevelt, "who has always endeavored to put his high ideals into practice, I think any man who would believe that he would get any consideration from making any contribution to me was either a crook or a fool." The audience liked that.

The audience was somewhat amused once at the fact that Mr. Roosevelt found it difficult either to affirm or deny that he was acquainted with a certain man named. In one instance Mr. Roosevelt, on learning that a man whose name he did not recognize had contributed liberally to the Progressive primary campaign, promised to make his acquaintance at once. And he capped the climax with regard to campaign contributions by the story he told of Mr. Hooker, who had put into the treasury a newspaper clipping stating that the Progressives had raised $900,000! "I have in the treasury $1.67," Mr. Hooker had said, "and I have put this clipping in because it makes me feel opulent."

With this story Mr. Roosevelt's testimony came to an end, and he was excused. Gossip says that some of the correspondents of hostile newspapers were uneasy for the rest of the afternoon and evening over their task of trying to show that the Colonel was deeper, as it were, in the mire. This, however, is mere gossip, and gossip has no place in any account that has to deal with newspapers or political campaign charges, as everybody knows.

FOLLOWING THE CAMPAIGN

A WEEKLY DIGEST OF POLITICAL OPINION
AS EXPRESSED BY PEOPLE AND NEWSPAPERS

WILSON VERSUS ROOSEVELT

IN his recent speeches Governor Wilson has especially attacked two Progressive planks, namely, the proposal to regulate the trusts by a Federal Industrial Commission and the proposal to regulate the tariff by a scientific commission.

THE TRUSTS

"The trusts . . . have not grown," said Governor Wilson, speaking at Springfield, Massachusetts :

They have been manufactured, and not by natural processes but by the will, the deliberate planning, of men who were more powerful than their neighbors in the business world.

"We have got to see that the little fellows are protected," said Mr. Wilson, speaking at Minneapolis, "and that means that we have got to meet the just criticism of the old unrestricted competitive system." Mr. Wilson continued, as reported :

Men who have built up these great monopolistic enterprises, for they virtually are such, have been right in saying that the whole system was of a character to be destructive. . . . The only way to stop that is not by legalizing the enterprises that have done the destroying, but by seeing that no more destroying is done. And that is what I call regulated competition.

The Springfield, Massachusetts, "Republican" (Ind.) thus voices the comment of Governor Wilson's newspaper supporters :

Rooseveltism now means regulated monopoly and industrial centralization so far flung as to menace not only the liberty of the individual wage-earner, but the freedom of the labor unions themselves. . . . We do not say that experience may not in time demonstrate that, in certain lines, great industrial combinations will not so far consolidate and fortify their positions as to compel the Government to take them under its active supervision and control, but, in the present period, that stage in our experience has not arrived. The immediate future calls for a fair and sufficient test of regulated competition, for which Governor Wilson stands. His attack on regulated monopoly is, therefore, justified, and it is difficult to believe that the country is ready to move faster in this respect than his policy contemplates.

In his Detroit speech, as reported, Mr. Wilson thus defines Mr. Roosevelt's attitude:

I understand that his conclusion was (he does not say this, but this must be the inference) that the trusts had come to stay and that it was not possible to put them out of business, that it was not possible to check their supremacy.

Later, in Kansas, Mr. Roosevelt remarked :

Mr. Wilson states in rather disingenuous form—for he says it is a matter of inference from what I say—that I had said it was not possible to check the supremacy of the trusts. Now if Mr. Wilson does not know that this is an absolute misstatement, it is due to his deliberate refusal to read what I have said and what the platform has said. My statement is the direct reverse of that which Mr. Wilson alleges. I stated that *his* plan . . . would leave the supremacy of the trusts unchallenged, but that . . . *our* plan for an extension of Governmental power will establish the Government in absolute and complete supremacy over the trusts.

The Chicago "Tribune" (Prog.), in agreement with Mr. Roosevelt, says :

The trusts arose because in this great Nation it is more economical to do certain kinds of business on a Nation-wide scale than in any other way. As long as this remains true, the trusts will remain here. The trusts cannot and should not be "busted;" but they can and should be regulated by the Nation as a whole for the Nation as a whole.

Not all Democratic journals subscribe to Governor Wilson's programme. The New York "American" (Dem.) is one of the few exceptions. It remarks :

Just two remedies are proposed for checking the oppression of monopoly as it exists to-day—the regulation of monopoly by the Government, or, as Governor Wilson suggests, the regulation of competition.

To the regulation of monopoly he objects on the ground that Government must thereby "recognize monopoly" and enter into partnership with it.

Governor Wilson's alternative plan for regulating competition has been tried but once, and that was when the Supreme Court of the United States undertook to regulate competition by ordering the dissolution of the Standard Oil Company. . . . The result in that particular instance was not satisfactory. Competition was regulated by specific order to the competitors, forbidding them to do all sorts of things which were in unreasonable restraint of trade. The monopoly was left unregulated. The price of oil has been increased to the consumer and the value of the securities of the Standard Oil Com-

pany has been swollen by five hundred million dollars. . . .

Governor Wilson has yet to explain his plan for the regulation of competition. . . .

Mr. Hearst has said that an industrial commission, like the Inter-State Commerce Commission, the judges to serve for limited terms, is an immediate and effective method. What is Governor Wilson's method?

In his Detroit speech Governor Wilson remarked that during Mr. Roosevelt's Presidential term "trusts grew faster and more numerously than in any other administration." "Undoubtedly Governor Wilson knows as well as any other intelligent citizen," remarks the Philadelphia "North American" (Prog.), "that the trusts formed and the flotations consummated during Roosevelt's Presidency really had their origin years before. . . . But, as Governor Wilson also knows, it was Theodore Roosevelt who, as President, first grappled with this menace." This paper adds:

If, however, the formation of trusts during the Roosevelt term is counted by Governor Wilson a legitimate weapon of argument, he will not object to a further inquiry into the subject as it affects his own career.

He is Governor of New Jersey; has been for two years. Is he aware of the fact that that State is notorious throughout the Union as the spawning-ground of the most odious and flagrantly criminal trusts the world has ever seen? What has he to say to the notorious fact, perfectly familiar to him, that New Jersey has deliberately doctored its laws so as to attract to it for incorporation the predatory interests of the entire country? . . . We shall cite a few of the more notorious instances of the policy pursued in Governor Wilson's State.

The Standard Oil Company of New Jersey, with $98,000,000 of stock, boasts a New Jersey license to prey. The Woolen Trust, with $69,000,000 of stock, hails from Trenton. The Shoe Machinery Trust ($38,000,000), the special target of Louis D. Brandeis, one of Wilson's ablest supporters, flies the flag of New Jersey. The Glucose Trust ($88,000,000) had New Jersey's license to flood Pennsylvania with the doped stuff which Cassidy forced it to withdraw. The Sugar Trust, with its $90,000,000 of stock and its thieving propensities, was incorporated in New Jersey. Yea, the billion-and-a-half-dollar Steel Trust itself is the corporate product of that State's system.

Not to weary the reader, we shall merely mention a few others: The Beet Sugar Trust, $20,000,000; the Guggenheim Smelting Trust, $100,000,000; the Leather Trust, $113,000,000; the Powder Trust, $61,000,000, which found New Jersey even more generous than Delaware; the Tobacco and Snuff Trusts, $75,000,000; the Distillery Trust, $48,000,000; the Rubber Trust, $94,000,000; J. P. Morgan's Shipping Trust, $179,000,000; the Lead Trust, $25,000,000—all of them operating from the shelter of New Jersey's hospitable laws.

And these, by the way, are the very trusts which Governor Wilson speciously seeks to charge upon the Roosevelt administration!

AN INDUSTRIAL COMMISSION

Speaking at Minneapolis, Governor Wilson said, as reported, that the leaders of the third party started out with this proposition:

That the big combinations which now control business are inevitable, and that the best we can do is to establish an industrial commission which will take charge of them and see that they are good to us.

At Buffalo Mr. Wilson defined the matter as follows:

As to the monopolies which Mr. Roosevelt proposes to legalize and to welcome, I know that they are so many cars of Juggernaut, and I do not look forward with pleasure to the time when the Juggernauts are licensed and driven by commissioners of the United States.

The Louisville "Evening Post" (Ind. Dem.) thus summarizes the opinion of other Democratic papers on the Progressive plank:

"Our commission must attack unfair competition." Well, that is far less than the Sherman Anti-Trust Law says. Mr. Roosevelt's platform does not say what is "unfair competition," nor does it say what methods of attack are to be used.

"Our platform says explicitly that our commission must attack false capitalization and political privileges." Well, what is false capitalization, and what is political privilege? From whom does it come? On whom does it fall?

"Our platform says our commission must by continued, trained watchfulness guard and keep open all the highways of American commerce." Mr. Roosevelt cannot expect the country to attach any real importance to such expressions as these. It is difficult to read in them any meaning and purpose whatever.

But let Mr. Roosevelt himself speak. In his Helena, Montana, speech he remarked:

A couple of days ago Mr. Wilson in a speech in New York said that a body of men would not have the wisdom necessary to enable them to regulate the industrial progress of the country. There is no more difficulty in regulating the Standard Oil or the Steel corporation than in regulating a big railway.

We have actually made the Inter-State Commerce Law work. We have found by the test of actual work that the way to control the railways is by increasing the power of the Inter-State Commerce Commission—by regulating and controlling those railways, and not by any development of the Anti-Trust Law.

What I want to see done with our industrial concerns is to see an inter-State industrial commission and board which shall handle the Standard Oil, the Steel Trust, the Tobacco Trust, and every big trust through administrative action, just as the Inter-State Commerce Com-

mission handles the railways, and with a power extended beyond that of the Inter-State Commerce Commission.

Mr. Wilson need not bother himself finding men to administer such a law. If he cannot find them, I will.

Speaking of the Progressives in connection with the control of the trusts by an industrial commission, Governor Wilson remarked, as reported:

They even propose to remedy the results by the very means by which they were produced, namely, the partnership of the Government in the management of big business. I, for my part, can never bring myself to accept the proposal that the Government, by regulation, shall act through the trusts for the people.

To this Mr. Roosevelt later replied:

It is sheer nonsense to say that there has ever been any partnership of the Government in the management of such great typical trusts of the day as the Standard Oil Trust. . . . A Federal examiner can go into a bank at any time and make the most minute examination and can issue orders as to what the bank is to do as regards the vital features of its business.

Now we propose to do with Standard Oil, for instance, practically what is now done with the banks. Mr. Wilson's proposal is to do nothing with the Standard Oil Company, but merely to continue the utterly inefficient type of action prevalent under the Taft Administration, for no amendment of detail will ever make this effort at regulation by lawsuits successful.

The Progressive proposition is to give to a Governmental Commission substantially such power over the Standard Oil Company as that which the Comptroller of the Currency now exercises over the National banks.

As to Mr. Wilson's statement that under the Progressives corporations would control the labor market, Mr. Roosevelt replied:

There is a very simple way of testing the worth of this statement. Has the Inter-State Commerce Law put the workingman more in the power of the railways? Let Mr. Wilson answer this question.

As to the industrial commission's development into an enginery of oppression, the Gloversville, New York, "Herald" (Prog.) declares:

The Progressives do not propose to put such a weapon into the hands of a ruling class. They propose that there shall be no ruling class; that the people shall rule; that the people shall be the Government.

MR. GARY AND MR. PERKINS

In his Minneapolis speech Governor Wilson asserted that the plan of trust regulation by commission really originated with Judge Elbert H. Gary and Mr. George W. Perkins, of the Steel and Harvester Companies, and added, as reported:

Carry out the plan of Mr. Gary and Mr. Perkins and you will have given a control in the market for labor which will suit these gentlemen perfectly. They don't want competitors in the market for labor.

In his speech at Trinidad, Colorado, Mr. Roosevelt replied as follows:

Not once only, but again and again, in Messages to Congress and speech after speech, while I was President I advocated the method proposed by the Progressives for handling the trust question, which is practically the principle applied in the Inter-State Commerce Commission.

I wish to call attention at this time to the fact that, as far as I know, the overwhelming majority of men who control both the Steel Corporation and the Harvester Trust are supporting either Mr. Taft or Mr. Wilson.

The New York "Globe" (Rep.) concludes thus:

It is increasingly difficult to pump up enthusiasm for Governor Wilson and Mr. Brandeis as they warm over and restate propositions that have so often and so vainly been proclaimed—namely, that monopoly must be prevented and competition restored. . . .

The campaign has gone on far enough to suggest that, whether Mr. Taft is re-elected or Governor Wilson is elected, there is to be four years more of what we have had for twenty years—that is, nothing except futile lawsuits and disturbing prosecutions that reduce no prices and open no new opportunities to the many.

THE TRUSTS AND THE TARIFF

Says the Washington "Times" (Prog.): "It seems to be Governor Wilson's impression that the trusts must be reached through a drastic downward revision of the tariff. Certainly, Mr. Wilson declared at Hartford: "The chief seat of privilege in the United States is the tariff." In his Columbus speech Mr. Wilson also asserted, as reported:

Prices have risen all over the world, but much faster and very much higher in high tariff countries, where monopoly was protected, than in low tariff countries, where competition excluded monopoly. And the chief cause of high prices in America is that the markets are controlled. They can be controlled because the tariff screens them from the economic forces which establish prices in the markets of the world at large.

To this Mr. Roosevelt later replied:

Mr. Wilson has said that prices have risen all over the world much faster and very much higher in high tariff than in free trade countries. This statement is incorrect, and the slightest

study of the conditions of Germany and England will show that it is incorrect. The strain of living has increased more in England during the last forty years than in Germany during the last forty years, and yet England is a free trade and Germany a protective tariff country. The same holds true as between free trade England and protected France.

Mr. Frank A. Munsey comments as follows in "Munsey's Magazine:"

That the cost of living is high is certain; that it is very much higher than it was a dozen years ago is equally certain.

If the tariff had increased correspondingly in this same period we might well assume that it is, as the Democratic party asserts, responsible for the high cost of living. But the fact is that the tariff is no higher now than it was a dozen years ago; is no higher than it was under McKinley and Roosevelt, and yet the price of living has greatly advanced.

Queries the Milwaukee "Journal" (Rep.): "Can any man honestly say he knows where Governor Wilson stands on the tariff or what he proposes to do if elected?" It says:

The incredibly fatuous tariff plank in his party platform actually "demands" the elimination of the protective principle from our tariff. Governor Wilson made haste to disclaim personally that delirious nonsense in his acceptance speech. But shortly thereafter he threw a line to the huffed free-traders by declaring that protective duties are a drag on industry and an injury to the wage-earners.

A few weeks later, lo, he beams on the protectionist Democrats and proclaims that he is for protecting American industries!

A more prominent Republican paper, the New York "Tribune," gives this account:

Within the last three weeks the Democratic nominee has taken three absolutely inconsistent attitudes toward tariff revision. He has said at one time that tariff duties are a restraint on American productivity, and injure not only the community at large but even the workman and the manufacturer in industries directly affected by the tariff. . . . Governor Wilson has said that it is furthest from his ideas to modify the existing protective system, except with the greatest deliberation and caution. . . . Finally, he has said that since the Government needs revenue from a tariff on imports it is useless to talk about abolishing import taxes.

The Des Moines, Iowa, "Register and Leader" (Rep.) says:

The second visit of Governor Wilson to Iowa will serve to bring out much more plainly than the first visit the essentially doctrinaire nature of his campaign against the tariff.

Behind Governor Wilson the cultured scholar, the pleasing public speaker, and the genial gentleman, is Governor Wilson the inbred and ingrained strict construction Democrat, hostile to a protective tariff on academic grounds, coming to the consideration of the business interests of the country not as a practical man of affairs, but as a closet economist.

As to the Democratic tariff plank, Mr. Roosevelt said at Minneapolis:

If the tariff plank of the Democrats is not telling the truth, of course I need not discuss it with them. If it is telling the truth and should be put into effect, it would plunge this country into a period of commercial disasters such as we have not seen in a lifetime.

Later, at McAlester, Oklahoma, Mr. Roosevelt remarked;

Mr. Wilson said that, while he was a free-trader, he was not enough of a free-trader to hurt. He said: "You do not suppose that Democrats are engaged in any kind of enterprise that is going to cut their own throats?"

Why didn't he think of that in 1896? He took the view then that, if the programme of the Democratic party could be put into effect, it would cut the throats of the people. Either what he said then was not true or what he says now is not true. He cannot be consistent with both parts of his own record.

THE TARIFF COMMISSION

In his speech at Sioux City, Iowa, Governor Wilson said, as reported: "I want to warn the people of this country to beware of commissions of experts. I have lived with experts all my life and I know that experts do not see anything except what is under the microscopes under their eyes."

The Buffalo "Express" (Ind. Rep.) defines the necessity for a tariff commission as follows:

The average man, even though he be well educated, has neither the time nor facilities to go into abstruse studies of law and history and statistics. He must depend for the information by which he reaches his conclusions on the researches of experts of some kind. The plan . . . is not to substitute government by experts for public opinion, but to supply to public opinion the information and advice of experts.

Thus the Chicago "Evening Post" summarizes the opinion of the Progressive press by calling Governor Wilson's view "reactionary."

THEODORE ROOSEVELT AS I SEE HIM

BY LYMAN ABBOTT

AS a necessary and, I hope, not altogether unprofitable moral discipline, I have been reading this summer the editorials in certain New York City newspapers. Experience has convinced me that it is both pleasanter and more profitable to be amused than to be irritated. The attacks of these journals on Mr. Roosevelt have reminded me of the scene between Quilp and Sampson Brass, which all lovers of Dickens will easily recall—may their number never be less!

All this time Sampson was rubbing his hands and staring, with ludicrous surprise and dismay, at a great, goggle-eyed, blunt-nosed figurehead of some old ship which was reared up against the wall in a corner near the stove, looking like a goblin or hideous idol whom the dwarf worshiped. A mass of timber on its head, carved into the dim and distant semblance of a cocked hat, together with a representation of a star on the left breast and epaulettes on the shoulders, denoted that it was intended for the effigy of some famous admiral; but, without those helps, any observer might have supposed it the authentic portrait of a distinguished merman or great sea monster. Being originally much too large for the apartment which it was now employed to decorate, it had been sawn short off at the waist. Even in this state it reached from floor to ceiling; and thrusting itself forward, with that excessively wide-awake aspect and air of somewhat obtrusive politeness by which figureheads are usually characterized, seemed to reduce everything else to mere pygmy proportions.

"Do you know it?" said the dwarf, watching Sampson's eyes. "Do you see the likeness?"

"Eh?" said Brass, holding his head on one side and throwing it a little back as connoisseurs do. "Now I look at it again, I fancy I see a—yes, there certainly is something in the smile that reminds me of—and yet upon my word I—"

Now the fact was that Sampson, having never seen anything in the smallest degree resembling this substantial phantom, was much perplexed, being uncertain whether Mr. Quilp considered it like himself, and had therefore bought it for a family portrait, or whether he was pleased to consider it as the likeness of some enemy. He was not very long in doubt, for while he was surveying it with that knowing look which people assume when they are contemplating for the first time portraits which they ought to recognize but don't, the dwarf threw down the newspaper from which he had been chanting the words already quoted, and, seizing a rusty iron bar which he used in lieu of a poker, dealt the figure such a stroke on the nose that it rocked again.

"Is it like Kit—is it his picture, his image, his very self?" cried the dwarf, aiming a shower of blows at the insensible countenance and covering it with deep dimples. "Is it the exact model and counterpart of the dog—is it—is it—is it?" And with every repetition of the question he battered the great image, until the perspiration streamed down his face with the violence of the exercise.

The portraits of Mr. Roosevelt painted by the editors of some of these New York newspapers no more resemble the real Roosevelt than does the figurehead in Quilp's wharf-house represent the honest-hearted Kit. Their malignant misrepresentations are, curiously enough, sometimes corrected in the same issue by the report of the facts from their better-informed and more honest correspondents. The best answer to such malignancy is silence, an answer which I frankly confess I wish Mr. Roosevelt would oftener give to them.

But falsehood, however baseless, if repeated with sufficient frequency, finally produces an impression on the public mind, and even high-minded and thoughtful men get conceptions which, because the men are thoughtful and high-minded, they ought not to be unwilling to correct. Thus, in his recent letter, elsewhere reported in this issue of The Outlook, Mr. Eliot, President Emeritus of Harvard University, writes of Mr. Roosevelt: "The candidate of the Progressive party has shown himself capable while in power of taking grave public action—which, of course, seemed to him wise and right—in disregard of Constitutional and legal limitations." This charge has been often made, and the friends of Mr. Roosevelt have often called for specifications of it; but the specifications have never been given. We have never been told what specific clause of the Constitution or what specific provision of law any act of his has ever disregarded.

For the last thirty years I have been a somewhat careful student of current American history, and I hope conscientious in an endeavor to report and interpret it to my readers. During the nearly nine years of his executive life as Governor of New York State and President of the United States, no executive act of Mr. Roosevelt's, and no

legislation which he has recommended, has ever been declared unconstitutional by the courts; and I think it is equally true, though on this subject I do not speak with equal certainty, that no administrative act of his in the preceding years, as Civil Service Commissioner, Police Commissioner, and Assistant Secretary of the Navy, was ever set aside by his superior officers because by it he transcended the limits of his legal authority. Those who charge him with disregarding legal and Constitutional limitations should be able to specify the legal and Constitutional limitations which he has disregarded and the act in which he has disregarded them.

In fact, while he has been courageous in fulfilling all the responsibilities laid upon him by the Constitution and the laws, he has been scrupulous in not assuming responsibilities which are not laid upon him. His regard for the Constitution is in curious contrast with the proposal of the Presidential candidate who is his chief opponent. Governor Wilson has explicitly declared his agreement with the Democratic platform that it is unconstitutional to maintain a tariff for any purpose but raising revenue; and yet he declares himself opposed to making any sudden and radical changes in the tariff; that is, he proposes to go on in an unconstitutional course because he thinks obedience to the Constitution would produce commercial disaster. One may search the acts and speeches of Mr. Roosevelt in vain to find therein any proposal to violate the Constitution because to obey it would produce results injurious to the country.

I have not only been a careful student of current events, but for more than thirteen years I have been in intimate relations with Theodore Roosevelt, and for the last three years have been very intimately associated with him in editorial labors. We have met together in editorial conference and at luncheon once a week. I have seen him in his office at work, and I have seen him in his home at play.

In temperament we are very different. Mr. Roosevelt physically is an electric battery of inexhaustible energy I have been compelled all my life carefully to conserve such physical energy as I possess, and to do my work within the limits which a not naturally strong constitution has imposed upon me. Mr. Roosevelt is by temperament a soldier; in phrenological language, his combativeness is large. I am by temperament a teacher, and avoid battle of every description when it can be avoided without cowardice or dishonor. Mr. Roosevelt has, either by inheritance or by long training, great decision of character. My decision of character—and I do not think I am wholly without it—has been laboriously built up by conscious, deliberate effort persistently continued ever since the days when as a boy I read Foster's "Essay on Decision of Character" and discovered my own native weakness. Mr. Roosevelt acts upon questions presented to him with a celerity of judgment which takes one's breath away. I am accustomed to follow my grandfather's advice and, when a difficult question is presented to me, to sleep on it. Mr. Roosevelt always goes to his goal as directly and as swiftly as one of his rifle balls. Sinuous ways are abhorrent to him, and ways of indirection distasteful. I am always more inclined to persuade an opponent than to vanquish him, and in conflict recognize, as I do not think Mr. Roosevelt often does, the advantage of sometimes resorting to a flank movement rather than to a direct attack.

I think, therefore, I can understand the reason why Mr. Roosevelt is *persona non grata* to men of certain temperaments. Those who think that caution is the sum of all the virtues are afraid of his courage. Those who are unwilling to sacrifice peace to obtain righteousness dread his militant character. Those who are accustomed to reach their conclusions in the quiet of the study, after careful deliberation of the pros and cons, attribute his quick executive action to a rash and heedless temper. Mr. Roosevelt abhors that which is evil. He hates, as David did the enemies of Jehovah, with a perfect hatred, impurities, meannesses, falsehoods, shams, dishonesties of every description. He is fighting honest. Easy-going good nature is a natural American vice, and Mr. Roosevelt's hearty, and in the main healthy, hatred of wrong-doing and wrong-doers, always vigorously but not always temperately expressed, offends the taste of gentle natures.

It is not true, however, that Mr. Roosevelt acts from impulse, or that he is rash, heedless, or impetuous. I am accustomed to play solitaire, sometimes with a companion whose eyes are much quicker than mine. The cards are laid out on the table. I have to look at them one by one. My companion sees at a glance their relations to each other and what can be done with them. Present any problem to Mr. Roosevelt, and he instantly sees

all the conditions of the problem, and forms his judgment, not without careful thought, but without the delay involved in deliberation. I have not always at first agreed with him, but when I have given to the problem the deliberate study which my temper requires, I have come either to the conclusion that Mr. Roosevelt was correct or that the difference between us was less than I had thought it to be. When he ordered the discharge of the Brownsville soldiers, I thought he had acted rashly. I went to the Law Library, spent a morning in investigation of the authorities, and came to the conclusion that he had acted fully within his Constitutional and legal powers, and was fully sustained by military precedents. Later, taking up the official reports, I could come to no other conclusion than that he was equally sustained by the facts; and this was the result, as the reader will remember, reached by the United States Senate after three or four official investigations. He opposed the Arbitration Treaty negotiated by the Taft Administration. I supported that treaty. His views and mine were both given to the readers of The Outlook in its pages. But when our views were compared, we found the difference amounted simply to this: We both agreed that the new treaty could accomplish nothing more for peace than the treaty which it supplanted. He was opposed to it because it assumed to do what it could not do. I should have opposed negotiating it; but, as it had been negotiated, I thought its adoption could do no harm and might do a little good, and that its rejection could do no good and might do a little harm. I do not recall a single important instance in which my slowly formed opinion has differed from his almost instantaneous decision more widely than in the case of the Arbitration Treaty.

Most enigmatical men cease to be enigmas if you can get the key to their character. The key to Mr. Roosevelt's character is his vital interest in his fellow-men. All problems that directly concern humanity concern him. Problems that do not directly concern humanity he is not interested in. Philosophical questions, theological questions, economic questions, legal questions, scientific questions, interest him as they touch life, and only as they touch life. Wide as are his interests—and I know no man whose horizon is wider or whose life is filled with more multifarious interests—they are all practical. Whatever the circumference of the circle may seem to be, the center of it is always life—mainly human life.

He is interested in the minds of men, but not in the philosophical theories of the schools; in practical righteousness, but not in theological theories; in the maintenance of social justice, but not in legal formularies and fictions; in the protection of the home, but not in ecclesiastical theories about marriage and divorce; in improving the condition of the workingmen and their wives and children, but not in economic theories about labor and capital. It is partly because the tariff question and the currency question have been presented as economic problems, not as human problems, that they have but slightly interested him, and partly because other human problems have seemed to him, as they do to me, of greater immediate importance.

This spirit of interest in humanity makes him the fellow of all sorts and conditions of men, equally at home in a royal Court and in a mining camp, at once a cultivated gentleman and a thoroughgoing democrat. It leads him to measure all men, not by their dress, their station, their manners, their conversation, but by their inherent vital qualities—their integrity, truthfulness, sincerity, fidelity. He carries out in life the principle to which Professor Royce has given such eloquent expression in his volume on loyalty as the sum of all virtues.

This regard for his fellow-men is far removed from any spirit of patronage. It is a spirit not only of interest in his fellow-men, but of respect for them. His belief in the common people is not merely a political principle, it is a fundamental faith. This faith in his fellow-men makes him the reverse of opinionated or headstrong.

Every week the staff of The Outlook meets for conference. We spend between two and three hours in discussing the questions which are to be treated editorially in the next issue of the paper. Every member of the staff is free to express his own opinion and to urge it with all the arguments at his command. The discussion ended, the Editor-in-Chief decides what position The Outlook shall take on the question under discussion, and assigns the treatment to some member of the staff who is in sympathy with that view.

In this conference Mr. Roosevelt habitually joins. He shares in the arguments with the other members of the staff; he presents his opinions, but he never attempts to force

them. He is a good listener no less than an effective speaker. He asks advice as well as gives it, and is the more influential because he is perfectly ready to be influenced. It is true that, when he has considered a subject and reached his decision upon it, he does not easily change his decision. He is as far from being vacillating as he is from being headstrong. But it is also true that he is always ready to consider and to take counsel upon the question how best to interpret persuasively to others the conviction which he has formed, and he is always ready to weigh considerations which are offered for the modification of the conviction which he has himself reached. Of course upon political and international questions his counsels have had a great weight in our conference, but they have not been the final factor in determining the policy of the paper, and he has never desired that they should be. He has always wished, and acted upon the wish, that his conclusions should have the weight which his reasons would give to them, and no other weight. And he has always recognized the principle, and acted upon that principle, that the final editorial authority in The Outlook is in the Editor-in-Chief.

What the author of "Ecce Homo" has called the "enthusiasm of humanity" is the controlling characteristic in Mr. Roosevelt's character and conduct.

In the interval which elapsed between his return from Africa in June, 1910, and his consent given to the seven Governors to become a candidate for the Presidential nomination we were in constant and intimate companionship. I saw letters which he wrote, I consulted with him on actions which he took, I was present in conferences which he held with leading public men from various parts of the country. I say with confident assurance that he did not desire to enter again into political campaigning. He had no political ambition to assume the duties of the Presidency. He wished to avoid these duties if he could do so with honor. His answer in letters and conferences, reiterated in literally hundreds of cases, was always the same: "I do not wish to be a candidate." So long as there was any prospect that Mr. La Follette could and would be accepted as a leader of the Progressive party movement Mr. Roosevelt abstained from political activity. So far as he could conscientiously do so, he gave his support to Mr. Taft's Administration. During all that time I never heard from him, and my associates never heard from him, any word of unkindness or hostility toward Mr. Taft, though undoubtedly he shared with the great majority throughout the country their disappointment in Mr. Taft's Administration. Not until Mr. La Follette had broken down nervously in his Philadelphia speech, and his own friends had counseled him to withdraw, and it became apparent to those who were interested in the Progressive principles and the Progressive movement that the movement was in danger of utter failure for want of a National leader, did Mr. Roosevelt reluctantly consent to accept the leadership which was urged upon him.

I recall, as I write these lines, the day when that decision was apparently finally reached. It was about the time when the seven Governors presented to Mr. Roosevelt their united request that he become a candidate. He submitted to us, his associates on the Outlook staff, the question, Could he with honor decline? Each member of the staff was asked by him to give his opinion on that question. One of our number recalled the pledge that Mr. Roosevelt had given to the American people when he landed at the Battery, New York City, on his return from Europe: "I am ready and eager to do my part, so far as I am able, in helping solve problems which must be solved if we of this, the greatest democratic Republic upon which the sun has ever shone, are to see its destinies rise to the limit of our hopes and its opportunities." We all believed in the Progressive principles. We all thought that the campaign for them at that time would be a forlorn hope. We all believed that could Mr. Roosevelt remain in retirement for four years, in 1916 Progressive principles would be certain of victory. But we all agreed that he had no option but to accede to the apparently unanimous request of those who had faith in Progressive principles, and accept their proffered leadership, whatever the immediate political results might be. He entered on the campaign in February, 1912, at the call of honor, when ambition, ease, and personal inclinations all combined in urging him to resist that call.

I am not so innocent as to suppose that this personal testimony respecting Mr. Roosevelt will have any effect upon his political enemies, except, perhaps, to increase their scorn, and to make me as well as my friend the subject of that scorn. Nor do I

anticipate that it will have any material effect upon those who are temperamentally hostile, critical, or suspicious. But I think that among the readers of The Outlook there are not a few men and women who have sufficient faith in me to believe that I at least attempt to see life accurately and to tell truly what I see. To them I bear this testimony: Thirteen years of increasingly intimate acquaintance with Theodore Roosevelt has steadily deepened my affection for him personally, my esteem for his character, and my admiration for his political genius and his public services.

THE KITCHEN—THE HOME-MAKER'S LABORATORY

IN THE SERIES ON HOME-MAKING THE WOMAN'S PROFESSION

BY ELIZABETH McCRACKEN

HOWEVER home-makers may diverge in other matters relating to their profession, they are all in entire unity on one point, namely, that the most serious problem the housekeeper has to solve is that of domestic service. Furthermore, they are apt to agree that the knottiest part of that particular problem is the part that centers in the kitchen.

"Three meals a day!" Under a banner bearing this familiar device all women who are home-makers march. The problem of spreading a table three times a day confronts them all, and confronts them with equal portentousness. It would seem to matter little whether the table be in an apartment in a city, or in a house in a small town, or in a ranch on a prairie. The conditions may vary, the problem remains the same. Each and every home-maker must meet it, wrestle with it, and, in some sort, solve it. All home-makers unite, too, in the discontent with which they view their several solutions. They all desire to get better "answers" to the problem.

Naturally, no one so feels the pressure of this problem as the housekeeper who has two servants, the housekeeper who has only one servant, and the housekeeper who has no servant at all. In America such home-makers are in the large majority. The kitchen is their laboratory. They especially need help in equipping it and in using it according to scientific methods.

"The Laboratory Kitchen Lunch-Rooms have been my *greatest* help in making a laboratory of *my* kitchen," said one home-maker to me when I asked her who or what had aided her to her present signal proficiency as a housekeeper. "They are a big boon to the business world; but my interest in them is on another account—they have been a big boon to my home world!"

Of course I asked her to tell me just how; and she did. "You know," she said, "I was always interested in the subject of diet. When the agitation for pure food started, no one was more absorbed in it than I. Everything I could learn about it I learned; in every way in which I could use my knowledge I did use it. But the Laboratory Kitchen Lunch-Rooms taught me more than anything else. I discovered, from inquiring into the principles underlying them, the foundation upon which a proper diet rests; namely, that food to be good must be pure, *and* clean, *and* nourishing. I found out that food may be perfectly *pure* without being perfectly *clean;* and that it may be pure and clean, and even nutritious, and still not be *nourishing.*"

"For instance?" I interposed.

"Well, for instance: take a luncheon of lamb chops, rice, and asparagus, with cocoa for a beverage and baked apples for dessert. All these articles of food may be pure, yet if they are prepared with soiled hands or exposed to dust and flies they will not be clean. They are all nutritious, but unless they are properly cooked none of them will be nour-

ishing. Do you see? I didn't until the Laboratory Kitchen Lunch-Rooms helped me. I was never so engrossed in anything as I am in combining purity, cleanliness, and nourishment in my daily menus."

This home-maker was in the habit of keeping two servants. Remembering this, I asked: "How about your maids? Are they engrossed in it too? Do they co-operate with you?"

"Yes, they really do!" the home-maker replied. "About two years ago I got a new cook. When she came, I said to her: 'I think of my kitchen as a laboratory—a place in which experiments are tried. The cook, the experimenter, takes so much pure food, and, making and keeping it clean, combines it in such proportions and cooks it in just such a way and to just such a point. The result is a nourishing meal.'"

"And was she interested?" I queried.

"Immensely interested," the home-maker assured me. "She considered a moment, then she said, 'That's a new-fangled way of lookin' at kitchen wu'k, but it has its p'ints.' My 'second girl' has been with me only one year. I didn't have to explain to her when she came; the cook did it. 'Keep ev'rythin' in the dinin'-room awful clean and neat,' I heard her say; 'there ain't no use havin' a kitchen and ev'rythin' in it right if the dinin'-room ain't jest so. This here kitchen is a place where the best meals is cooked—pure, clean, nourishin'. Don't you spile 'em by slippin' up on the dinin'-room end of it!' And the 'second girl' saw! 'It's a notiony way of talkin', but it's all right for doin',' she said. Yes," concluded the home-maker, "my servants certainly do co-operate with me in my laboratory kitchen methods."

Another housekeeper of my acquaintance had an experience that was rather a severe strain upon her sense of humor when she introduced the kitchen as a laboratory to her servant—a "general housework girl" who had been in her service for six years. She told me about it with praiseworthy laughter.

"My dear," she began, "don't say a word to *me* about laboratory-kitchens-in-the-home. I know more things about them than are dreamt of in your philosophy! I had often been to that lovely Laboratory Kitchen Lunch-Room—the one that has waitresses, and tables, and napkins, and oh! *such* good food! I had heard all about what it stood for—pure food, clean food, nourishing food. I had loaded my mind with all its ideas about diet—combinations of proteids, carbohydrates, fats, and all the rest. So I thought I'd try to make my kitchen into a laboratory kitchen. 'Minnie,' I said to my maid, 'this kitchen is a chemical laboratory, a place in which experiments are tried. What we try for is a perfect meal. Just as they never know in any other chemical laboratory how experiments are going to turn out, so we never know here. When you start to make a cake, for example, you are trying a chemical experiment. If you get just the correct mixture of just the proper ingredients and apply just the needed degree of heat, the chemical experiment will turn out a success. If you fall into the least error, it will be a failure.'"

My friend paused for breath, and I remarked, "You were rather chemical in your terms, but—"

"Exactly," she interrupted. "Minnie listened with a gleam in her eye. You know, she went one year to evening high school, and she had a smattering of chemistry. Laboratory! Chemical experiments! Minnie became a chemical investigator. My kitchen literally was a laboratory. Such things as she tried! One day she made a cake and 'raised' it with yeast! When I spoke to her about it, she said she 'was experimentin' with leavens'! Another time she put olive oil in the bread instead of lard. She explained that 'both of 'em was fats,' and she was 'tryin' experiments with fats'! Well, I almost went out of my mind for a while. We never knew *what* would appear on the table. Minnie was *so* interested; and besides, she had been with me so long, and was so devoted, that I *couldn't* say anything to her. Then the family teased me so! They said I'd brought it on myself. After a while I saw that it was funny. And after a much longer while Minnie saw that original experimenting had its limits."

"How did she come to see that?" I questioned.

"She took to sending to the United States Department of Agriculture for their Food Bulletins, and reading them. She has become an expert on the subject of food!"

"So it turned out happily, your home laboratory kitchen?" I commented.

"Oh, yes, indeed it did," that home-maker agreed; "but," she added, whimsically, "it took it a long time *to* turn!"

Another housekeeper whom I know re-

ceived a suggestion of a different kind from the Laboratory Kitchen Lunch-Rooms. She had no servant, and the allowance she could command for household expenses was not large. "I used to try to buy *inexpensive* food," she told me, "thinking more of *quantity* and *variety* than of *quality*. I knew nothing about the relative nutritive values of food materials, nor of the proportions in which they should be eaten. Of course, in a vague way I knew, as most persons know, that certain articles of diet 'went together'—potatoes with meat, cheese with macaroni, butter with bread. I realized that vegetables and fruit were especially appetizing in warm weather, and that bacon and eggs were particularly acceptable in cold weather. I didn't know the whys and wherefores of any of these facts. The Laboratory Kitchen Lunch-Room that interests me most is the one that has counters and stools; because there *one* thing on the menu is often an entire meal. For example, they serve a hot roast-beef sandwich. One gets, complete, a mid-day meal—meat, bread, gravy which has butter in it—and it is hot! A person who requires a 'hot lunch at noon' has it in that simple and inexpensive sandwich."

"But in a private house would there be available at noon a hot roast of beef from which to make the sandwich?" I asked.

"On some days there would," my friend replied. "And always," she added, "there would be apt to be on *some* day of the week at noon a piece of *cold* left-over roast beef. That could be heated in the left-over gravy, and the sandwich made. I know," she observed; "I do it all the time on Mondays, with the remnants of the Sunday roast."

One summer morning, much later, I happened to pass her home, which is a pleasant little house in a pretty suburb. Seeing me from a window, she hailed me and invited me to come in to luncheon. "I have just put it on the table," she said.

The luncheon consisted of tea, thin bread and butter, and a salad. The salad was made of nuts and raisins and fruits, arranged on lettuce leaves, and covered with a creamy dressing.

"It sounds rather diaphanous," remarked one of my neighbors to whom I described that luncheon. But it was not; it was amply sufficient and satisfying on a warm summer day. And, on investigation, I think it would have been found to contain the "proteids and carbohydrates and fats and all the rest" to which my other acquaintance had referred.

My friend who prepared that simple meal has become very well informed on the subject of diet. She has read a surprising number of books, magazine articles, and Government Bulletins concerning it. I am confident that any meal planned by her would combine the nutritive elements in the proportions advised by the best authorities. The knowledge she has acquired has helped her in more than one direction. Through it she has been able to cut down the household expenses in her own home. Also she has seen her family improve in health by reason of her greater skill in selecting and using food materials. Lately another result of her home laboratory kitchen has shown itself.

A summer camp for girls near her home town desired a dietary director, her duties to be the ordering of the meals and the overseeing of the cook and the kitchen. My friend saw in this need of the summer camp a threefold opportunity—a chance to add a little extra money to her husband's income, a chance to give her two little children a whole summer in the "real country," and a chance to put into further practice the theories she had gathered from her studying. She applied for the position, and obtained it. It proved to be, in truth, the opportunity she had expected it to be.

"And to think," she said at the end of a happy, busy summer, "it all came out of the Laboratory Kitchen Lunch-Rooms! It was through them that I first learned that diet was a science; and an inexhaustibly interesting science at that."

"And what *are* the Laboratory Kitchen Lunch-Rooms?" is some reader asking. "And *where* are they?" They are four lunch-rooms of slightly varying kinds known collectively as the Laboratory Kitchen Lunch-Rooms, which have grown up in Boston within the past ten years. These places are under the management and control of a little group of educated women. The aim of those women is to supply to business men and women who lunch in town pure food, clean food, nourishing food, properly prepared, fittingly served, at a reasonable cost. In any one of the Laboratory Kitchen Lunch-Rooms one may obtain an excellent luncheon; its cost depends upon the particular lunch-room of the four that one selects.

One of them, situated in the shopping district of the city, is similar in its appointments

to the usual lunch-room. It is furnished with numerous small tables, covered with brown holland cloths, which are matched by brown holland napkins; and it is amply provided with waitresses, who bring the food directly from the kitchen. This is the most expensive of the four places.

The second lunch-room, which is on a business street, is equipped with counters and stools. The food is sent up from the basement kitchen on dumb-waiters. One server is allotted each counter. She takes the food from the dumb-waiter and puts it before the customer. The scale of prices at this place is a little lower than at the first.

The third place, a cafetaria, is more inexpensive still. One gets one's tray, and the food is served over a counter from the enormous receptacles containing it. The tables are larger, the general plan is a bit simpler. This diminishes the expense of a luncheon.

In the fourth place there is an ingenious mechanism by means of which the food is not only kept hot or cold, as the case may be, but is also prearranged in individual "orders." This mechanical device is in appearance like a post-office; in each box is an order—of soup, fish, meat, salad, or ice-cream. On a tray, which one gets for one's self from a pile, one puts whatever one chooses, drawing it one's self from its box; collects the necessary knife, fork, and spoon, and paper napkin from a convenient ledge; and, pausing at a desk near the railing which divides those about to lunch from those lunching, has an inventory taken of one's luncheon and receives a check. Going on to the filter, one fills one's own water glass. Then one seats one's self at an uncovered table. Luncheon over, one carries one's tray of empty dishes to the "slide;" and, at another desk, pays one's bill. It is a smaller bill than at either of the three previously described places. The cost of service is almost nothing. One has served one's self.

The food in each and every one of the four Laboratory Kitchen Lunch-Rooms is the same. It is of the same quality; an order in all the places is the same in quantity. The difference in price is due simply and solely to the difference in service and in accessories. Service and table linen, with the consequent laundry bills—the very same luncheon without these two items of expense costs just about half what it costs with them.

These housekeepers of whose home laboratory kitchens I have told were especially interested in the selection and the cooking of food; the Laboratory Kitchen Lunch-Rooms had helped them to accomplish these things in a less complicated manner and according to a more scientific method. All of them required accurate and ordered knowledge of dietary values, and the Laboratory Kitchen Lunch-Rooms had given them the needed impetus in the direction of obtaining it. Moreover, they discovered that it is a comparatively easy thing to obtain. The number of excellent books, magazine articles, and pamphlets on the subject of diet is exceptionally large; the Food Bulletins issued free by the Office of Experiment Stations of the United States Department of Agriculture are among the finest of their kind. Any housekeeper who desires to become a food expert may become one by reading in her "spare time" all this so easily available "printed matter." The Laboratory Kitchen Lunch-Rooms have helped a few women to become food experts; may not the experiences of these few help many more?

But the question of serving food is as seriously considered a part of the Laboratory Kitchen Lunch-Rooms as the cooking of food. In two of the lunch-rooms the customers serve themselves. In homes the housekeeper's problem is not completely solved when she has succeeded in choosing and in cooking (or in superintending the cooking of) a meal. How is that meal to be served? Even if she has two servants, the question is not very easily answered; if she keeps only one servant, a "general housework girl," the solution is still less simple; and if she has no servant at all, it is decidedly difficult. What housekeeper with two servants has not learned to hope that no unexpected guest will drop in to a meal on Monday or Tuesday, when both the maids are washing or ironing, and neither of them can wait on the table? What home-maker with but one servant invites the neighbors in to tea on that maid's "day out"? And what home-maker who has no servant at all but feels the lack of one most, not when she is cooking a meal, but when she is serving it in courses? "It isn't getting a meal," a friend of mine who does her own work said to me recently; "it isn't *that* which disturbs me; it is the serving of it! I often am tempted to fall into the old-fashioned habit of putting everything on the table at once in order to

do away with the leaving of my place at the table that the serving of it even in two courses involves."

"Why don't you try the cafetaria method?" a new acquaintance who was present asked. "It is just what you want! I know, because I have tried it. Of course for dinner it isn't exactly the thing, but for breakfast and luncheon it is ideal. It is a regular custom in my house. I assure you that for housekeepers, like ourselves, who have no servants it is the greatest labor-saving device ever invented!"

"What is it?" my friend inquired, eagerly. "Where did you get it? How do you use it?"

Our new acquaintance laughed. "It is a system by means of which persons serve themselves at meal-time, instead of being served," she answered. "I got it from one of the Laboratory Kitchen Lunch-Rooms—the Cafetaria. The way to use it is: Cook the breakfast or luncheon for the family; have it ready at a certain hour. Provide a tray for each person. Let him or her take it, come with it to the kitchen, having first 'set' it with such dishes and silver as may be necessary, and receive on it an 'order' of each article of food on the menu. Then let him or her go to the dining-room with it, eat the meal, and afterward, bringing the tray back to the kitchen, place the dishes in the sink or the dishpan. In my house breakfast and luncheon are served according to this plan. It saves time, work, and waste."

"It sounds pleasant, but queer," my friend commented.

"I'd like to see it in operation," I found myself saying.

"Spend a week-end with me, and you will," my new acquaintance said.

It was not long before I did spend a week-end with her. In the serving of dinner on the Saturday evening there was no hint of a cafetaria. My acquaintance—by this time a friend—and her husband took turns in serving the courses and removing the dishes between courses. Their two children, a girl of five and a boy of six, were in bed. "When they are old enough to sit up for dinner," my hostess remarked, "they will be a great help with the serving of the meal. I am really impatient for that time to come."

I confessed that I was "really impatient" for the next morning to come. I had often seen the Laboratory Kitchen Cafetaria, but I had never seen a home cafetaria. "You will see one to-morrow at breakfast," said my friend. And I did.

I was downstairs in advance of any one excepting my hostess. I found her in the kitchen, making toast, steaming cereal, boiling eggs, cutting grapefruit, and doing the numerous other things attendant upon the preparation of even the simplest family breakfast. "Where are the children—and the trays?" I inquired as soon as we had exchanged good-mornings.

"The children are dressing, with the help of their father," she replied. "They will all be here in a moment. The trays are in the china closet."

I peeped into the china closet. There I saw a pile of six or seven pretty Japanese trays. Near by were the dishes in ordinary daily use; in a drawer, already opened, lay the silver, each of the various articles in a separate division. In another drawer were paper napkins. (At dinner the night before we had had linen napkins.)

While I was still standing in the china closet, admiring the skill with which my friend had arranged it for the purposes of a cafetaria, my host and the two children appeared in the kitchen. Shortly afterward my hostess announced that "breakfast would be served to all whose trays were presented."

With the exception of herself, we all went into the china closet, took our respective trays, furnished them forth with china and silver and a paper napkin, and returned to the kitchen. My friend would have attended to me first, but I besought her to allow me to be served last, that I might see all that happened in her home cafetaria. "Certainly," she acquiesced. "You won't have long to wait, in any case; what happens happens quickly."

It surely did. The little girl put her tray on the kitchen table, and her mother rapidly served her with the cup of cocoa, the bowl of cereal, and the other things that made up her breakfast. Then her father carried the tray into the dining-room, tied her bib, and pulled out her chair. The boy proudly held his tray in his hands while his mother served him, and as pridefully bore it himself to his place at the dining-room table. "I am too big to spill anything," he said. Then my friend served me and my host, and then my host served his wife, and we three went together into the dining-room. The children had bided our coming. When we were all

ready to seat ourselves at the table, the little girl said Herrick's quaint "Child's Grace:"

> "Here, a little child, I stand
> Heaving up my either hand;
> Cold as paddocks though they be,
> Here I lift them up to Thee,
> For a benison to fall
> On our meat and on us all."

The cafetaria method was indeed a boon to that family. It saved my friend's vitality by saving her steps. Her husband liked the simplicity of it. As for the children, they regarded it as a game, and delighted in it.

Another acquaintance of mine has established in her home a cafetaria which is even more in accord with the Laboratory Kitchen Cafetaria. It is designed to save not only her steps, but also the money of the members of her family. Her home is a boarding-house. Most of her boarders are professional women whose meal hours are uncertain—trained nurses and social workers. She employs only one servant. The only meal served at a fixed time and set forth on the table in the customary way is breakfast. "Every one in the house can come to breakfast at the same time," she said; "so I serve that. No two of the family can be sure of being here at any specified time for luncheon and dinner, so I make the kitchen into a cafetaria for those meals."

"Where did you get the inspiration to do it?" I interrogated, as a mere matter of form. I felt very sure that she would reply as she did:

"From one of the Laboratory Kitchen Lunch-Rooms," she said.

"And how do you manage it?" I next asked.

"Very simply," she answered. "The same kind of luncheon and dinner that I used to have prepared in the kitchen and served on the dining-room table I have made ready in the kitchen and kept there. In the pantry there are trays, and china and silver are in the adjoining closet. Any member of the household who wants luncheon or dinner goes out into the kitchen, gets her tray, dishes, and silver, and is served by the cook. Then she goes into the dining-room. When she has finished her meal, she takes her tray back to the kitchen and drops her 'fee' into a box in the pantry provided for that purpose. If she has had luncheon, it is one amount; if the meal has been dinner, it is another. The rates are invariable."

"And do your boarders like this arrangement?" I queried.

"Very much," said my friend. "It is easy, quick; and, besides, it is cheaper for them. Before I tried the cafetaria plan I kept two servants. Now I have only one. So I deduct from my charges a proportionate amount for service, just as the Laboratory Kitchen Cafetaria does."

She invited me to luncheon one day that I might see her home cafetaria in operation. Excepting for the fact that one was served in the kitchen by the cook, instead of being served over a counter by a waitress, it was little different, otherwise than in size, from the Laboratory Kitchen Cafetaria. There was not quite so great a variety as to food as in the public lunch-room, and the lunchers were housemates and friends. The cook, who was "new," confided to me that this method of serving meals she considered "powerful odd;" but she granted that it saved both time and strength. The boarders, too, were inclined to smile at their home cafetaria; but the smiles were friendly ones.

Not a great while after that luncheon I went to spend a summer's vacation on a Connecticut farm. I was regaining my strength after an illness according to a scheme that included the consuming of oranges, milk, and raw eggs between meals. These refreshments came at frequent intervals. One day I overheard my hostess saying that "summer boarders who had to have so many snacks kept one person running all the time." The next time she "ran" in my direction with a "snack," I said to her, "Why don't you try a Laboratory Kitchen plan with my lunches?"

"What's that?" she questioned.

When I had told her, I suggested: "You might show me where the eggs and milk and oranges are kept, and when I need them I can get them myself. If you put my share in a separate place in the ice-chest, you can easily keep an account of what I use. It would save your time."

She reflected for a moment. "I believe it would," she said, emphatically; "I'll try it, anyway."

She did. At the end of my visit she said to me: "I think I'll see how else I can copy that Laboratory Kitchen you told me about. Maybe I could save time and steps along some other lines than serving snacks."

I have not seen her since, but not long ago I received a letter from her. "I haven't got any 'mechanical device' like the one you write me the newest Laboratory Kitchen Lunch-

Room has, for keeping things either hot or cold," she said, among other things; "but I do it, just the same, in an old-timey way. In the morning I make the coffee and set it on the back of the stove where it will keep hot. I do the same with the rest of the breakfast. As the different ones in the family get ready, they come downstairs and serve themselves with breakfast. I happened to have three old trays—not enough to go around, but everybody isn't ever down at once. The cold things I leave in the ice-chest; those who want them get them. It is such a relief to me not to have to set a table in the morning; and the family like this new way of doing better, too. It's a great thing on a farm to be able to save time and strength."

It has not been my purpose in this article to write the history of the Laboratory Kitchen Lunch-Rooms; nor to describe in detail the methods according to which they are operated; nor to comment upon the great public importance of the work done in them. My aim has been to give a brief account of the effect they have had upon the methods by which the home kitchens in the community have been managed, to tell a little about the private significance of their work—in short, to show the "side lights" of their history.

All the home-makers and housekeepers of whom I have written have learned from these Laboratory Kitchen Lunch-Rooms to conserve time, or strength, or money, or health. They have found out how to provide good food, pure, clean, and nourishing; and to provide it on the most economical basis as regards time, work, and money. The Laboratory Kitchen Lunch-Rooms have accomplished many large and excellent things; but of them, this thing that they have done seems to me to be greatest and best.

OVERCOMING BUSINESS FOOZLES

BY HERBERT G. STOCKWELL

IN golf, a foozle is a missed stroke, one so bad that, when committed, you feel keenly the censuring eyes of those standing around. I know of few things more humiliating than the complete disclosure in a foozle of one's entire lack of preparation in a game demanding the most intense preliminary study and practice.

The seasoned player who knows the game never completely misses the ball. He may not always execute the perfect shot planned, but when he addresses a ball the idea of missing it never enters his head. His mind is entirely occupied with the problem of placing the ball in the spot most favorable for the next stroke.

How closely games requiring courage, strength, and skill resemble business! Yet, when we pause to think, it is not strange that similar character qualities should be brought out in both spheres of activity.

Business transactions, as in golf, if undertaken by the inexperienced or careless, may be badly bungled. We say of such a blunderer, "He made a fizzle of it." To prevent the occurrence of these fizzles we must obtain instruction in the art of handling the tools of the occupation in which we are engaged. Underlying all of the surface peculiarities and eccentricities of various forms of business are certain methods which, when found and adopted, render the performance of business acts more pleasurable. When we learn the proper swing, and attune our faculties to it, we find that even dull business is full of possibilities hitherto unsuspected. When we have acquired the technique of business, we feel in the very performance of it a sense of superiority. Moreover, we feel free from the danger of making a fizzle of it.

SEARCHING YOUR BUSINESS RECORDS

I overheard a conversation between two merchants which, though quite ordinary in tone, shows so well a striving toward that knowledge which prevents costly mistakes that I feel impelled to repeat it.

"Jacob, have you ever had an audit?"

"No," replied Jacob.

"You're a chump!"

Jacob gesticulated aggrievedly: "Why should I have an audit? I have a bookkeeper now for twelve years! I trust him."

"If you never had an audit, there are things

in your books you never dreamed of. I never knew my business at all until I had an audit. Your bookkeeper can make mistakes —honest mistakes, understand me—the which will stand you on your head until you get straightened out."

Small as a business is, homely or beautiful as it outlines, the proprietor should not rest satisfied until he has completely mastered his own books of account.

Until he is able to read from his business records his financial position with respect to the world and to analyze his goings forward or backward, he is in danger of committing most grievous errors.

SAVING OUTLAY BY INQUIRY

On approaching a factory, a friend of the superintendent saw a large pile of broken castings, some of which contained marked evidences of expensive machining. It struck him that for mere scrap this pile of broken parts appeared very new. It was learned that extensive experiments had been and were being conducted in efforts to effect improvements in a certain machine to enable it to produce, if possible, more perfect articles than could be made on the machine then in use. "Have you ever tried to buy such a machine as you want in the market?" was asked. "No, I haven't; but we know there is nothing of that sort now made, because we would have heard of it."

Without seeking information regarding the effect he desired most earnestly to attain, the superintendent had gone blindly ahead, spending large amounts of money which, as was found later, would have been saved by a little intelligent research. An inquiry or two suggested by his friend produced the information that the very mechanical contrivance which he was trying to create had recently been patented, and was to be had in a supply store within a few squares of his factory.

FEW MEN ARE MENTALLY AMBIDEXTROUS

We may play golf in the afternoon and bridge at night, but we cannot do both well at the same time. Failure to succeed often follows attempts to do too many things at the same time. Anything worth the doing demands concentrated effort—the best effort.

A firm manufacturing a form of wearing apparel is now being dissolved because one of the members "is tired of his partner's blunders." In consultation with his lawyer, he said: "My partner is continually going at another thing before the first is finished. He goes and gets an idea started in the factory, where he belongs, then he rushes off on the road, thinking he can sell goods. He cannot get orders enough to pay his carfare. In the meantime, when he comes home he abandons the idea he first had and starts all over again on another one. In the factory we are constantly upset. I am tired of trying to follow his ideas that never amount to anything."

Why is it that almost to a man every one at times imagines that he could create grand successes in fields other than those in which he is at work? The unpossessed seems to many of us more attractive than the thing in hand. Exalted as our occupations seem to others, at times we would gladly exchange, or think we would, with those who have petty tasks. The wisest of us are those who try to ascertain for which occupation they are best fitted, and confine their principal efforts to learn to the last letter all that may be known of one occupation. We know that to be the only way of overcoming humiliating mistakes.

FACING THE MUSIC IN BUSINESS

When a novice commits just enough foozles to become seriously impressed with his own unimportance, he does not throw down his clubs. No. He seeks ways and means of preventing the recurrence of the blunders. It is no crime to make a mistake, but when made it is almost criminal to neglect or refuse to correct it.

Last summer I required a canvas cover for a small motor boat. The man recommended to me came, took the measure, and promised that the cover would be ready within a few days. When delivered, it could not by the most strenuous stretching be made to cover the boat. Did this young business man quickly attempt to correct his error and regain my confidence? No. He began with promises which ended in nothing, and finally abandoned his job entirely. He had run away from the duty of repairing his blunder, preferring to lose the cost of the unfinished job than to stick resolutely to it until completed.

Now, I know of no quicker road to the failure class than that which leads away from business duties. And I know beyond any doubt that to face the music is one of the most effective ways of overcoming fizzles in business.

Do you think that your prosperous neigh-

bor has had an easy career? Let him tell you of the times when he has had to grit his teeth to prevent crying out in his distress at deserved censure. He will tell you that more than once he has all but run away from the consequences of careless or ill-timed acts. But, knowing that courage is just as essential in business as elsewhere, he has assumed full responsibility and acquitted himself to the best of his aroused ability.

BUSINESS CONTESTS INCREASE STRENGTH

A man who overcomes a defect creates, in the very act, a strength to resist other tendencies to slip. His capital against visible blunder grows at compound interest. When a man clutches his mental fists and approaches the business in which he is engaged with a determination to conquer, he has already passed thousands of his companions who listlessly await success or fizzle, unduly elated by the one and unreasonably discouraged by the other, as they occur in turn.

It is said that law is a jealous mistress, one who will not brook any neglect on the part of practitioners. If a lawyer does not by constant reading consistently maintain his working knowledge of the law, she will desert him unceremoniously. Business is a sister of law in that respect. When once mastered, we must keep in practice. Few sights are more pitiful than the retired merchant who, after years of inactivity, having lost his all, attempts to resume business. He is out of touch with everything, and the task of returning to the ordinary contest is too much for the average man.

PREPARING FOR STRUGGLE

Just as helpless is the young man who fails to prepare for the expected. I heard the president of a local business club make two speeches, perfectly illustrating the necessity for careful preparation in all that we are about to undertake. His first speech was read from carefully written notes filled with thoughts right on the point of his topic. At the next dinner he arose and said:

"Gentlemen, as you know, I have been accustomed to speak from notes—I have heretofore used notes in speaking—I feel that a good speech should be delivered without notes—should come from the heart—without notes"—and that was as far as he could go. The men began to applaud and inquire concerning his "notes," whereupon he sat down in considerable discomfiture.

To know when one is not prepared and to refrain from utterance is often just as valuable as the ability to deliver a charming address. In business life it is as important to know when to keep silent as when to put forth one's best efforts.

Many things that one learns in the course of a day's contact with his fellows should be buried deep in the memory. I once heard a young friend deliver a scathing rebuke to a fellow-salesman who had improperly told of a private business incident.

"When you stumble across anything like that, you want to keep it under your own hat," said he.

How few of us carefully select and weigh our words! How many blunders are committed which hesitation for even a fraction of a second would have prevented!

The tip of the tongue is small indeed, but nevertheless a powerful instrument for the unmaking or the forwarding of business relationships.

Across the aisle in a crowded train sat a young merchant who, when he saw me, called out a boisterous salutation. To my matter-of-fact inquiry concerning business, he bawled out: "Rotten—the banks are watching me. I can't do anything." The seat beside me becoming vacant, he came over and explained further what proved to be an ordinary credit procedure on the part of the one bank with which he did business. Unfortunately, one of his largest creditors happened to overhear the totally unnecessary remark, and he subsequently caused the merchant some exceedingly unpleasant days.

LOYALTY TO EMPLOYERS

What wrecks are created by the craving for sympathy! Walk along the crowded thoroughfare behind chatting clerks out for luncheon. You will not be compelled to listen to the conversation of many before you will be astonished at the reckless divulgence of the private affairs of their employers in incidents supposed to prove unjust treatment received. Sudden dismissals may sometimes be traced to just such thoughtlessness.

To get on in the world, clerks should rank loyalty to their employer as first in the list of memorized self-regulations. Is it hard to have respect for him? If impossible, rather than labor in poisoned surroundings it would be better to seek other employment. But before one severs relationship with the

source of his income it would be well for him to rub up his glasses and take a new glance at things. Perhaps he will see that some of the dissatisfaction is attributable to his own defective vision.

If we seek irritating evidences, we may be assured that our search will not be in vain. It is so easy to feel abused that the faintest semblance of a fancied grievance is mushroom to thought.

Let us overcome our false notions of our relation to business, realize our shortcomings, and seek in every way to improve our ability, and we may be sure that our strength and skill in business will increase until no one can truthfully say, "He made a fizzle of it."

THE PENNY PIPER OF SARANAC

BY STEPHEN CHALMERS

HE called himself the Penny Piper, and apologized to his friends because sometimes his whistle exploded with strange noises and had to be patched with sticking-plaster. Yet when he played on his pipe the whole world listened, fascinated even by the strange noises; and the army of earth's children that followed him—that is following him still—was greater than the Pied Piper of Hamelin ever enthralled.

He was an odd fellow to look at, as, of course, a magic piper should be. Eagle-beaked and eagle-eyed, his face was ever touched with a Pan-like humor, "a deal of Ariel, just a streak of Puck." Whimsical, purposeful, quick-tempered, generous, selfish, lovable, fierce, forgiving—a human paradox.

This was the Penny Piper of Saranac, and he was something of a mystery to all who knew him in the little Adirondack village. They did not know he was a great man, for he never happened to mention the fact himself, and even the beginnings of the world were away on the other side of forty miles of tangled forest.

He did not fish. He did not hunt. He lacked the principal virtue of man in the wilderness—physical strength; and for a living he seemed only to tootle upon a penny whistle and cut a fantastic figure on skates on the lake behind the cottage where he lived.

The cottage was "a hat-box on a hill," as the Penny Piper himself said. All the winds of heaven blew around it. Below, the Saranac River snarled and guggled under its piled-up jam of ice. Beyond, Mount Pisgah glowered under icicled brows at Mount Baker behind the cottage. The Penny Piper said the only redeeming feature of the place was that it reminded him of some place else.

Most of all was he a mystery to his landlady and her lord. The Penny Piper burned holes in Mrs. Baker's sitting-room mantelpiece with the live ends of his cigarettes. In the evenings he would play Ancient Mariner to Andrew Baker's Wedding Guest. The Piper would talk to the woodsman, uttering strange matters, until Andrew's eyes grew heavy and his head nodded, and he was lulled to sleep in his chair by the magic words of a genius.

In the daytime, when the blizzard piled snow-drifts window-high, the Penny Piper made "big medicine" in the little room under the eastern gable of the "hat-box." In this room there was a single cot, also a plain table adorned with pens, ink, and paper; also a piano—and the penny whistle.

"He tootles the whistle better 'n he plays the piano!" said Mrs. Baker to her spouse.

"And a sight oftener," said the woodsman.

Of course he did! Who ever heard of Ariel, or Puck, or Pan playing a piano? True, there were times when the Penny Piper's hands grew numb with cold. Then he would get up from the table and make a fierce attack upon Beethoven with a heavy bunch of rusty keys. But he would usually wind up with a Jacobite air upon the penny whistle, after which he would resume with the pen. You remember his words: "To earn a little and to spend a little less; to make, upon the whole, a family happier for his presence."

Yet in this little cottage in the Adirondack wilderness, during the bitter winter of 1887–8, the Penny Piper played some of his sweetest

melodies; his notes reached their purest and clearest heights; and to-day what he wrote under that little eastern gable, where the drift-snow piled up against the window, is bound in morocco and gold, is scrolled on vellum and hung as mottoes in garret and mansion alike, in the offices of commerce and in the waiting-rooms of pain, in the temples of wisdom and in the heart of humanity, for it brings strength to the strong and cheer to the sick.

These but conspired with his genius and the keen air of the hills to such results as "Pulvis et Umbra," "The Lantern-Bearers," "Gentlemen," "Beggars," "A Christmas Sermon," and last (perhaps least) "The Master of Ballantrae," which ends in story where it was begun in fact—in the frozen forest under the shadow of Mount Baker, hard by Saranac Lake in the Adirondacks.

When Robert Louis Stevenson lived there, Saranac Lake village was but a backwoods hamlet. The first locomotive had not yet startled the buck and the bear.

The community which is now the metropolis of the Adirondacks had in 1887 less than a handful of the thousands who have since followed the trail first blazed in that region by Dr. Edward L. Trudeau, himself a victim of tuberculosis. Everybody knows why Stevenson went to Saranac, and everybody knows that Dr. Trudeau was his physician.

It has been said, upon hearsay, that Dr. Trudeau, the famous head of the Adirondack Cottage Sanitarium, and Robert Louis Stevenson did not get along together very well. This is without foundation in fact. Stevenson himself wrote on a leaf of the "Jekyll and Hyde" of "Dr. Trudeau's Complete Set, from the Author:"

"Trudeau was all the Winter at my side.
I never spied the nose of Mr. Hyde."

Dr. Trudeau was probably one of the few in the village at that time who appreciated what manner of man had come to it; and it is clear that Stevenson was quick to appreciate the intellectual qualities of the man who came to see him, first with a cold stethoscope, then with the warm hand of friendship.

This friendship was spontaneous. The nature of it may be judged from the fact that, when they did not agree, they did not agree to disagree—after the manner of the lukewarm—but quarreled!

But the quarrels! They were of the kind indulged in by brothers who part with black murder in their hearts and burst out laughing next time they meet. They were quarrels of the kind in which one holds it a private, personal privilege to criticise the other, but woe unto the third person who ventures to criticise either to the other!

On the really great things of life they were in perfect accord; so they chose the most trivial matters upon which to differ.

The best illustration of this is, perhaps, the "check story," which Dr. Trudeau sometimes relates, and always with immense delight. There was no stenographer present, and Dr. Trudeau himself does not undertake to repeat the exact dialogue, but from the facts and from a knowledge of the two personalities this is how it was:

Stevenson. My dear Trudeau! I have the greatest respect for your intelligence. For that reason it distresses me—distresses me!—to hear you utter such fallacy. How *can* the American baggage system be superior to the British luggage system?

Trudeau. But, my dear Stevenson, we are dealing with facts! I know that, as a Britisher, you are naturally prejudiced—

Stevenson (interrupting). I beg your pardon, Dr. Trudeau. I would never allow racial prejudice to warp my judgment in the matter of a ten-and-sixpenny trunk. The British system *is* the best. You hire a porter. You look after your own luggage. At your destination you claim it in person. It is not at all necessary to put your head out of the compartment at every stop and cry, like the Irishman: "Gyard! Is me tronk all right?"

Trudeau (who has been waiting with fortitude for a chance to continue). Of course not. Now, then—the American system! You are bound, say, from New York to San Francisco. You buy your railway ticket, indicate your baggage to a baggage-master with a pencil stuck in his ear and a bunch of tags in his hands. He gives you a brass check. In a week you are in San Francisco. You haven't seen or heard of your blessed trunk since you left New York; yet there it is, safe and sound. And all that is required of you in San Francisco is that brass check. *Now* what have you to say?

Stevenson (who is cornered, but hates to admit it). We-ell . . . *(He puffs great clouds of cigarette smoke and walks up and down greatly agitated. Then, with a burst of exasperation).* That is just you Americans all over! Checks! Checks! Checks!! You eat on the check system. You hang your hat on the check system. Why, an American can't even speak of *dying* without saying that he "hands in his checks"!

Trudeau (twenty-five years later). He had me that time.

After such an animated discussion one may picture Dr. Trudeau as he tramps down

the road to his own house, a muffled figure in coonskin cap and coat, his thick moccasins crunching on the frozen snow under the clear, snapping stars of the Adirondack midwinter, and vowing never to darken the Penny Piper's door again!

But next day Dr. Trudeau would remember that Stevenson was a sick man, that he was his physician, and that it was his duty to go and see his patient even if he could never meet him again as a friend. If he didn't go, no doubt the Penny Piper would be sitting in that eight-by-ten room with the piano and the cot and the table and the penny whistle, and with all the air excluded through the keyhole by cigarette smoke and sideward displacement.

Probably about the same time Stevenson would be blowing from his whistle that mournful Jacobite air to which he fitted "Sing me a song of a lad that is gone," and wondering whether he ought not to put on his buffalo coat and Indian moccasins and carry the hatchet to the Doctor for burial.

If it happened that he did not go, the Doctor would come sooner or later—professionally, of course! Robert Louis would receive him like a prince. Each would admit that the other was possibly right about the baggage system, except, perhaps, that—

And as like as not they would start in just where they had left off; or, if that subject were exhausted, take up another for argument, such as whether, according to Trudeau's theory, it were not wiser to conserve the health by observing moderation (say in the use of cigarettes), or, according to Stevenson's theory, regard ill health as something altogether outside a man and death merely a possibility of any minute and from any of a number of unexpected causes.

In this connection it is interesting to hear what Dr. Trudeau has to say about Stevenson's death in Samoa in 1894. It has been said that he died of tuberculosis. It has been said that he died of apoplexy.

"He did not die of tuberculosis," says Dr. Trudeau, "as I made a point of finding out. I have no documentary evidence that he died of anything else, but all the despatches from Samoa agreed that it was cerebral apoplexy.

"Yet it is a mistake to say that he never had tuberculosis. Although, while I took care of him, he had none of the active symptoms, such as hemorrhage, or fever, or tubercle bacilli, present, yet he undoubtedly had had tuberculosis. It may have become active again after he left Saranac, so there is no telling just how much that disease may have contributed to his mortal illness at Samoa."

Regarding a theory brought forward some months ago in a prominent medical publication, and copied extensively in the newspapers, that the morbid phase of Stevenson's genius was caused by tubercular toxin in his blood, Dr. Trudeau laughs heartily. If anything could be named to account for the production of such strange or morbid tales as "Jekyll and Hyde," "Olalla," and "The Merry Men," it would be the Celtic corpuscles in his blood!

The horrible fascination of the supernatural for the Scot is well known. The fearful fascination of the sea, as exploited in "The Merry Men," is also a characteristic of the high northern races, especially of the Scottish Highlanders, who in ancient days drew an infusion of blood from the Vikings. There was evidence of the Viking strain in Stevenson and his seagoing forefathers. Race toxin is the only influence his blood may have brought to his writings.

While on the subject, it is hardly necessary to state that Stevenson was much interested in the admirable work Dr. Trudeau was even then doing in tuberculosis research. Unfortunately, while on paper the Penny Piper could deal so beautifully with the philosophy of illness and death, his own physical weakness, and that personal sensitiveness which he so ably embodied in young Weir of Hermiston, compelled in him a horror of the material facts. He did not fish or hunt, because he could not bear the sight of suffering and death, even in animals that are regarded as fair game.

Imagine, then, what happened when, in a heroic moment, Stevenson ventured into Dr. Trudeau's laboratory, where the little guinea-pigs were being immortalized for the ultimate benefit of humanity and humaneness. Had Stevenson lived to hear the anti-vivisection uproar of recent years, the zoöphiles might have offered him their permanent chairmanship. But if we know anything of the Penny Piper's spirit, we fancy he would have refused it. The fact that he himself suffered imaginative agonies of sympathy for the guinea-pigs did not in the least becloud his vision of the end toward which sacrifice of some sort, not necessarily of blood, is ever the only means.

Here is the guinea-pig story, which illustrates the theory.

One day the Penny Piper's genius was deeply stirred. The whistle had been silent all morning, for it was a great thought he had seized upon. It was that of the lantern-bearers, the playful Scottish boys who carried bull's-eyes under their jackets and occasionally flashed them upon astonished passers-by. You could not see the lanterns, but it was a secret joy to each lad to know that he had his under cover, even if his whole being did reek of oil.

Ah! it was a grand thought, this of the light under the bushel that smelled of oil, and in his little room the Penny Piper's pen moved slowly and steadily over the paper.

> . . . Not a ray escaping, whether to conduct your footsteps or to make your glory public; a mere pillar of darkness in the dark, and all the while deep down in the privacy of your fool's heart, to know you had a bull's-eye at your belt, and to exult and sing over the knowledge.

When it was finished, the Penny Piper remembered that Dr. Trudeau had promised to show him the mysteries of his laboratory. Still aglow with the high thoughts of "The Lantern-Bearers," Stevenson put on his buffalo coat and hurried away through the snow.

The sight of the grave scientist bending over his work in that strange place of crucibles and tubes stirred the dreamer's enthusiasm afresh. Here was the thought materialized—the man with the bull's-eye, thinking less of fame than of the moment's task allotted. The Penny Piper told his friend of the day's work, talking as only he talked, every muscle and facial expression in action, his eyes aglow, and his long arms gesturing in illustration. But suddenly he remembered why he had come to the laboratory.

"Now, Trudeau," said he, "let me see *your* light!"

Dr. Trudeau picked up a tube containing a sickly-looking liquid.

"The scum you see in this tube," said he, "is consumption. It is the cause of more human suffering than anything else in the world. We can *produce* tuberculosis in the guinea-pig with it, and if we could *cure* tuberculosis in the guinea-pig, this great burden of human suffering might be lifted from the world."

Then he told of his own experiments upon guinea-pigs with cultures of tubercle bacilli, and produced charts showing results that made similar symptoms in the human case comprehensible, and more combatable. He pointed to a row of large stoppered bottles containing tuberculous organs of guinea-pigs, ghastly evidences of the destroyer's poison. With a bottle in his hand, Trudeau turned to his very silent companion and—found that Robert Louis Stevenson had vanished!

Astonished and puzzled, the medical scientist laid down his charts and went in search of the Penny Piper. He found him in the open air, leaning against a veranda post and looking very pale.

Trudeau (rushing to his side). Stevenson, are you ill?

Stevenson (swallowing hard). N-no.

Trudeau. You don't look well. How do you feel?

Stevenson (with a brave but sickly smile). Trudeau, I know—I know your lamp is very bright, but—to me it smells of oil like the devil!

The Penny Piper was fair above all things, however, and he generously admitted that the fact of an oil smell upsetting a particular stomach did not dim the luster of a particular light.

Seven years after Stevenson's death, Thomas Bailey Aldrich came to Saranac Lake on account of the illness of his son Charles. He lived in a cottage on the side of Mount Pisgah that overlooked the "hat-box" where the Penny Piper lived thirteen years before.

In a letter to William Dean Howells at this time (December, 1901) Aldrich wrote:

"We are very literary up here. Why did Hutton go to Jerusalem for 'Literary Landmarks' when he might have found plenty of them in the Adirondacks? Among others who have left footprints on the sands of time are Stillman, Emerson, and Stevenson."

Referring to Mr. Howells's admission that up to that time he had never read a novel of Stevenson's, Mr. Aldrich wrote in the same letter:

"You have missed an entertaining writer, though not a great one."

In passing, it may be mentioned that that dear fiction about Richard Mansfield visiting the Baker cottage and acting "Jekyll and Hyde" for the author's benefit is without foundation. Our talkative Penny Piper would surely have mentioned such an event in his letters to Henry James, or J. A. Symonds, or Sidney Colvin. Certainly he could hardly have helped doing so had the incident occurred to his collaborator in dramas, W. E.

Henley. But he did not. Dr. Trudeau has no knowledge of such a visit. Andrew Baker, Stevenson's landlord, thinks that the persistent tale grew out of the visit of a dramatic agent of Boston, who came to Saranac Lake in the hope of procuring certain dramatic rights from Stevenson.

As to Stevenson's being "not very popular," to revert to a suggestion in one of Mr. Aldrich's letters, he had little in common coin with the "natives" of that time, and the social, literary, and intellectual circle was limited. He was highly popular among those in the little colony who could appreciate him; and interesting, though few, are the *true* stories touching his social intercourse at this time.

One dinner of unusual ceremony may have suggested to Stevenson the sentence, "I have learned to move among pompous menials without much terror, never without much respect."

At this particular dinner Stevenson was not in evening dress. The Penny Piper was notoriously unconventional in attire. Besides, as Aldrich mentioned later, "the Saranackers don't dress for dinner, they dress for breakfast," and did not Stevenson assure Will H. Low that he was "a rank Saranacker, a wild man of the woods"?

Anyway, the dinner was a fine affair. The butler appeared at an appropriate moment and elevated a single eyebrow to convey that madam was served. As there were more gentlemen present than ladies, Dr. Trudeau "took in" Stevenson. As the Doctor playfully offered his arm, the Penny Piper clutched it in a kind of panic.

Trudeau. What's the matter?
Stevenson. Honest, now—aren't you scared?
Trudeau. Well, not exactly scared; impressed, perhaps.
Stevenson (shaking his head). Trudeau, this sort of thing always gives me stage-fright. I'm scared to death!

It was after one less imposing dinner that Stevenson expressed his terror of a hero-worshiping admirer. She was of the type that qualifies everything with superlatives. All through the evening she kept assuring the Penny Piper that "Jekyll and Hyde" was the "weirdest," "Treasure Island" the "loveliest," and "Will o' the Mill" the "sweetest"—ever!

The moment Stevenson escaped, he sought Dr. Trudeau's protection.

"I don't mind the Great Unwashed," he whispered tragically. "It's the Great *Washed* I dread!"

From the literary standpoint the most interesting story of the Penny Piper and his friends in Saranac has to do with the genesis of "The Master of Ballantrae" and the beginning of the real Stevenson woman in fiction.

Up to this time the women in his books, excepting Jim Hawkins's mother in "Treasure Island," had been somewhat of stage types. Jim Hawkins's mother was true, but Stevenson had his own deeply honest and just mother to draw from. There was an elusive girl in "The Merry Men," but she was shadowy; and in "Prince Otto" Seraphina and Madame von Rosen were incased in court artifice. He had not yet touched the deep springs of natural womanhood.

To appreciate the far-reaching effects of the incident that brought the Penny Piper's magic pen to the true delineation of women in his later works, it is necessary to begin at Saranac with "The Master of Ballantrae" and to show how General Custer's widow injected a failure into that book. But it was a failure upon which success was to be built.

Even as at Saranac the plot of "The White Feather" flashed upon Thomas Bailey Aldrich "out of a blue sky of idleness," so came the genesis of "Ballantrae" to the Penny Piper. In Stevenson's own words, this is how it was:

I was walking one night on the veranda of a small house in which I lived, outside the hamlet of Saranac. It was winter; the night was very dark; the air extraordinarily clear and cold, and sweet with the purity of forests. From a good way below, the river was to be heard contending with ice and boulders; a few lights appeared, scattered unevenly in the darkness, but so far away as not to lessen the sense of isolation. For the making of a story here were fine conditions. . . .

"Come," said I to my engine, "let us make a tale, a story of many years and countries, of the sea and the land, savagery and civilization. . . ."

Shortly after that December night he was again at a dinner-party. Most of the little colony were present, but for my purposes it is only needful to mention Mrs. Custer, Dr. Trudeau, and Robert Louis Stevenson. After the soup, Mrs. Custer opened fire upon the Penny Piper.

Mrs. Custer. Now why is it, Mr. Stevenson, that you never put a *real* woman in any of your stories?

Stevenson (with twinkling gravity). Madam, I have little knowledge of Greek.

Mrs. Custer. But you have *some* knowledge of women, surely! Why, you have been a married man these seven years!

Stevenson. With the result, Mrs. Custer, that I have forgotten all the Greek I ever knew.

Mrs. Custer. But the public expects it of you, and the feminine portion demands it. Come! When are we to be introduced to the Stevenson woman in fiction?

Stevenson (with sudden enthusiasm). Mrs. Custer! I promise you there shall be a woman in my next book!

The Penny Piper regretted his rash gallantry before the close of the evening. Later he confided his fears to Dr. Trudeau.

Trudeau. I've often wondered, Stevenson, but never thought to ask: Why *do* you never put a real woman in a story?

Stevenson. Good heavens! Trudeau, when I have tried I find she talks like a grenadier!

Nevertheless, he kept his promise to Mrs. Custer, and the result is that wooden effigy in "The Master of Ballantrae," who is called, for identification's sake, Clementina Durie.

But the ice was broken, and from this point the evolution of the real Stevenson woman in fiction is interesting to trace. Jim Pinkerton's wife in "The Wrecker" is true, but dim. Catriona in "David Balfour" is better—much; but both are girls. It is not until we meet Uma in "The Beach of Falesa" and a full-grown heroine in "St. Ives" that we begin to find boldness and accuracy in his strokes.

For this, as for many other reasons, what a pity that death stayed his hand in "Weir of Hermiston," for in the elder Kirstie he was etching a masterpiece of deep womanhood—"a severe case of middle age." But the work had progressed far enough to indicate beyond cavil that "Greek" might safely be added to his accomplishments.

Stevenson's place in the memory of Saranac Lake is unique. The people have forgotten the actual face of the man; and the record of his life there—of the many little things not down on the page of conventional literary history—is becoming obliterated by time.

Seldom does a visitor make pilgrimage to that little room under the eastern gable where the Penny Piper tootled on his whistle and penned golden letters in the intervals. And a stuffed coon mounted on a block of wood hides the holes burned in Mrs. Baker's mantelpiece.

But the echo of the magic pipe is still in the air, although the Penny Piper has vanished. There is no place where his works are more popular for their own sake, aside from their author's having lived there; for in all the world there is no place that needs and benefits by his brave creed of living more than Saranac Lake. It is a place of patient suffering, of ships that sometimes pass in the night. It is, like Stevenson personally, something of a tragedy, but, as in the case of the Penny Piper, none would ever know it except from acute contact and observation.

There are over one thousand persons in that Adirondack village, brought there by the same chance that led Robert Louis Stevenson to the hills; and if they would keep their courage strong and their faith in the world's goodness intact, their view-point must of necessity be that which Stevenson engraved upon the rocks of Mount Baker. It was indeed "big medicine" for the after-comers that the Penny Piper made in the little house up the road.

No one asserts that the brief passage of Stevenson through one Saranac winter is wholly responsible for that atmosphere of peace and good will which is a peculiar and seemingly unchangeable characteristic of that mountain village. But what he wrote while there has a tremendous application there, and Dr. Trudeau has pressed the application with that of his own broad humanity. The result is startling to the newcomer—a place with an atmosphere distinctively its own.

It would take a genius to define this atmosphere, but the genius of Thomas Bailey Aldrich did it when, the shadow of his son's doom hanging heavily upon him, he could yet write to William Dean Howells:

"There's a charm about the place. There's something in the air to heal the heart of sorrow."

The works of the Penny Piper are ever in demand at the village library, but there is one book in that institution which none may borrow, or even touch. It is "Morley Ernstein," by G. P. R. James.

A few months ago the librarian was looking over Stevenson's "Letters," when he came upon one to Mr. E. L. Burlingame. In it the Penny Piper feverishly asked for certain works of "dear old G. P. R."

"This return to an ancient favorite," wrote the Piper, "hangs upon an accident. The Franklin County Library contains two works of his, 'The Cavalier' and 'Morley Ernstein.' I read the first with indescribable

amusement—it was worse than I feared, and yet somehow engaging; the second (to my surprise) was better than I dared hope; a good, honest, dull, interesting tale."

The librarian laid down the volume of letters, and walked to the shelf where the remaining tatters of G. P. R. should be. "The Cavalier" was gone—long since defunct; but there was the "Morley Ernstein," yellowed and falling to pieces with age, for none had thought it fit to read since the days of the Penny Piper.

There followed a sudden demand for "Morley Ernstein," by G. P. R. James, but the librarian was firm. Morley is now an honored pensioner, withdrawn from common traffic.

The creed of the Penny Piper is almost a rule of mental conduct laid down for patients, not only by specialists of Saranac Lake but by many of the medical fraternity elsewhere. There is a case on record of a young man who arrived in the village with the usual excuse for arriving. He was examined by the physician, who presently asked the new patient whether his New York physician had prescribed anything.

"Yes," said the patient, and he produced this prescription:

℞ Fresh air.
" eggs.
Read Robert Louis Stevenson.
POTTER, M.D.

"Continue to take!" said Dr. Allen.

The influence of Dr. Trudeau upon the methods of anti-tuberculosis fighters is not without a suggestion of the influence of Stevenson upon Trudeau. When, as President of the Eighth Congress of American Physicians and Surgeons, Dr. Trudeau addressed his fellows at Washington, he thus paid tribute to the Penny Piper of Saranac, who had seen the light in his laboratory away back in the dark days:

> Let us not, therefore, quench the faith nor turn from the vision which, whether we own it or not, we carry, as Stevenson's lantern-bearers their lanterns, hidden from the outer world, and, thus inspired, many will reach the goal; and if for most of us our achievements inevitably fall short of our ideals, if when age and infirmity overtake us "we come not within sight of the castle of our dream," nevertheless all will be well with us; for, as Stevenson tells us rightly, "to travel *hopefully* is better than to arrive, and the true success is in labor."

THE NEW BOOKS

Cahusac Mystery (The). By K. and Hesketh Prichard. The Sturgis & Walton Company, New York. $1.25.

A murder mystery, a little on the model set by Mr. E. Phillips Oppenheim's stories in that it has international politics in the background. The tale has more literary merit and is more carefully written than most books of its class.

Joyous Adventures of Aristide Pujol (The). By W. J. Locke. The John Lane Company, New York. $1.25.

Not strictly a novel, but, as the title foreshadows, a series of narratives of the odd and amusing things that happened to one Aristide, courier, traveling salesman, picture-dealer, wanderer—a scamp without any meanness or wickedness in him, resourceful as a Yankee, and as clever in getting out of scrapes as he is reckless in getting into them. Withal, Aristide has a warm heart and a generous hand. The book is lively in invention, rapid in action, and full of fun.

Smoke Bellew. By Jack London. The Century Company, New York. $1.30.

"Smoke" is a cultivated young man and a bit of a *dilettante*. He gets pitchforked into the hard life of the Klondike, and his adventures there are both stirring and amusing; they range from breaking the bank at roulette to an elopement with the beauteous daughter of the Scottish chief of a tribe of Indians in an unknown and inaccessible country; the girl practically starves herself to death that he may survive, and dies in his arms—so in a page or two he marries the other girl! It cannot be said that the incidents are probable, but the picture of Klondike life is obviously true and the grip of the story-telling is so strong that the book is likely to have a large number of readers.

Memories of James McNeill Whistler. By Thomas R. Way. The John Lane Company, New York. $3.

This is the latest contribution to Whistleriana. The author is the son of the English lithographer who had to do with Whistler's lithographic attempts. As is natural, then, the emphasis in the present volume is laid upon that form of art. And in this lies its chief interest—a real interest. As to its biographic merits, however, the less said the better.

My Love and I. By Martin Redfield. The Macmillan Company, New York. $1.25.

Distinctly superior to the average run of fiction in that the author evidently cares greatly to

make his story reflect life truly. The events recorded in the lives of the novelist Martin and the impractical, high-visioned poet Blake are unusual and the love interest is strong in itself and subtle also in its treatment. The problems of Martin's marriage failure are presented delicately but vividly, and his love for another woman than his sordid wife is made to strengthen his character instead of weakening it. The novel has quiet humor.

Boy's Playbook of Science (The). By John Henry Pepper. E. P. Dutton & Co., New York. $2.50.

Physics in popular form, with hundreds of pictures and an immense number of directions for experiments in electricity, the wireless, air navigation, chemistry, and so on. The idea is to give boys the how and why of science in a way to attract them by the simple treatment.

Switzerland in Sunshine and Snow. By Edmund B. d'Auvergne. Little, Brown & Co., Boston. $3.

This is a suggestive volume, and yet it is unsatisfactory. In truth, any book about mountains is rather unsatisfactory. For there are certain things which must be felt; they cannot be described. When the author tries to describe the Swiss towns he is more successful. But even here the text seems trite. It is useful, nevertheless, as has been said, because of its suggestiveness.

With Dante in Modern Florence. By Mary E. Lacy. E. P. Dutton & Co., New York. $1.60.

The Dante lover will welcome this book. But why modern Florence? Because this is the Florence we know. To find Dante there we must regard Florence as a kind of manuscript which has been covered over with new writing by later scribes. Underneath lies the original manuscript. If we search for traces of the Divine Poet, we may find them. And if we take this author as our guide, we may easily find them.

Story of Santiago de Compostela. By C. Gasquoine Hartley (Mrs. Walter M. Gallichan). E. P. Dutton & Co., New York. $1.75.

To the well-known series of little books about "Mediæval Towns," which now includes something like thirty volumes, has been added one on the ancient Spanish town of Santiago. Historically this story reaches back more than a thousand years, and it has interesting legends and traditions relating to the early Church, to the invasion by the Moors, and to the enormous pilgrimages in the Middle Ages, and even in the seventeenth century, which were made to the shrines of Compostela. The book, like its companion volumes, is charmingly illustrated.

Fresh Air and How to Use It. By Thomas Spees Carrington, M.D. National Association for the Study and Prevention of Tuberculosis, New York. $1.

A practical volume has been prepared by Dr. Thomas S. Carrington, and it has the indorsement of the National Association for the Study and Prevention of Tuberculosis. Through its photographs and descriptions it tells how to make temporary and permanent sleeping porches, roof bungalows, tents, and loggias, as well as how to plan for open-air apartments in building new houses. The popular interest in this subject has been very great for the last two or three years. The book meets a real demand for advice and information.

Rambles in the Pyrenees. By F. Hamilton Jackson, R.B.A. E. P. Dutton & Co., New York. $6.

Readers of Mr. Hamilton Jackson's two volumes "On the Shores of the Adriatic" will welcome a new book by him. It is similar in size and binding to the others. But let intending readers have a care. From the title of the present volume they might expect a comprehensive description of the Pyrenees. Mr. Jackson, however, describes only one side of the mountains—the French. Nor is his description comprehensive. It is almost entirely restricted to the architectural monuments—and the most notable architectural monuments in that part of the world are almost exclusively ecclesiastical. If one consults the volume for information on this particular topic, he will be well repaid; but the book's title should certainly be changed; it should really be "The Plans, Drawings, and Elevations of Pyrenean Churches, with a Commentary on the Same."

Montessori System in Theory and Practice (The). By Dr. Theodate L. Smith. Harper & Brothers, New York. 60 cents.

This book by Professor Smith, of Clark University, is to be commended to the attention of those who feel an interest in the much-talked-of educational methods of Maria Montessori. It is a simple description of what is actually done by Dr. Montessori herself, and is illustrated by excellent photographs. The author adds an interesting account of educational experiments carried on in an American open-air kindergarten.

Footprints of Famous Americans in Paris. By John Joseph Conway, M.A. The John Lane Company, New York. $3.50.

The present year has brought forth a great field of "gossipy" books about French history in general, and Paris in particular. The latest is Mr. John Joseph Conway's. In this volume Paris and France take second place; our interest is almost wholly centered upon the compatriots described by Mr. Conway—Franklin, Jefferson, Gouverneur Morris, Monroe, Tom Paine, Paul Jones, Fulton, Samuel F. B. Morse, William Morris Hunt, Longfellow, Margaret Fuller, Saint-Gaudens, Dr. Evans, Whistler.

Men and Manners of Modern China. By J. MacGowan. Dodd, Mead & Co., New York. $3.50.

Mr. MacGowan has lived in China for more than half a century. He declares that the Chinese are both a lovable and a great people, and he has written this volume to show the reasons for his convictions.

BY THE WAY

During the past twelve months, says the "American Agriculturist," the farmer has received for a list of ten staple products from 38 to 68 per cent more than the average price during a period of forty-three years. Farmers will not complain, the "Agriculturist" thinks, if the abundant crops of this year result in somewhat lower prices.

An odd kind of cure for insanity is illustrated in "Collier's." It consists of a sham battle, in which several hundred patients of an institution in California are reported to have participated. The picture shows the blowing up of an imitation blockhouse. Five patients are said to have been sent home cured after the battle! Of course amusements are a good thing for the insane, but are the intensely exciting scenes of war likely permanently to help minds that have been deranged by overexcitement?

That persistent yachtsman Sir Thomas Lipton is coming to America, it is reported, to try to make arrangements for another attempt to "lift the cup." We wish him success—in making the arrangements.

Brazil, according to a lecturer at the International Rubber Conference in New York City, was the original rubber-producing country of the world, but was slow to appreciate the value of her vast rubber forests. Seeds from her rubber trees have been used to grow trees in many other countries, but now it is forbidden to export these seeds. Cultivated rubber sells to-day for twenty-two cents a pound more than wild rubber, and Brazil herself is beginning to cultivate the rubber tree.

The recent typhoon in Japan is reported to have been the worst in fifty years. In some respects it was the worst in a thousand years, for it caused the collapse of the noted shrine of Kasuga, erected in Nara, the ancient capital of Japan, probably in the eighth century.

Record-breaking enterprise is scarcely to be looked for in a newspaper with the placid name of the "Christian Science Monitor," but, so the September number of the "Linotype Bulletin" declares, this distinction was fairly earned by that paper at the Chicago Republican Convention. The "Monitor," whose home is in Boston, installed at Chicago a complete daily newspaper plant for issuing a facsimile of its home edition, and its issue of extras was "practically a continuous performance." A circulation of 60,000 copies a day was attained for this paper during its life of one week.

A poster with the words "No hunting or shooting allowed within city limits," lately put up in certain districts of New York City, may some day be of great interest to the antiquarian, as showing conditions of life in that metropolis in the year 1912. The League of American Sportsmen has put up the posters to protect quail and other birds that are still found occasionally in the Bronx.

Should words be pronounced according to the dictionaries or according to custom? a Western subscriber asks. Ought an American to say bäth or bath? gläss or glass? The best usage, it is admitted, determines English pronunciation; but is it the usage of one's neighbors or of the London literati? It would seem natural to give more weight to the practice of the nearer body of experts. In case, however, one's neighbors say *mu*-seum and *ly*-ceum, the courageous orthoepist will try to change the practice by fighting it out for mu-*se*-um and ly-*ce*-um.

The Hon. Hosea W. Parker, of Claremont, New Hampshire, so a subscriber writes, has an even longer record for attendance at Sunday-school than Mr. S. W. Winterton, of Keyport, New Jersey. Mr. Parker has been superintendent of the Universalist Sunday-school in Claremont, our informant states, for over fifty-one years. And Mr. Thomas Fitton, of Hamilton, Ohio, has attended the First Methodist Sunday-school for sixty-eight years!

A curious desert plant is described by Captain Haywood, of the British army, in his recently published book "Across the Great Sahara." This is called by the Arabs "acheb," and its peculiar characteristic is that it springs up only in a year when rain falls in the desert. The seed seems never to die. It merely rests in the ground, waiting for the requisite fall of rain. The locality may have no rain for ten years, yet the seed germinates when rain does eventually come. "Acheb" is very nourishing, and is eagerly devoured by camels. Why not import some of it for our own dry regions?

The Half Moon, the replica of Hudson's ship which was presented to this country by Holland for the Hudson-Fulton celebration, has now been given a permanent anchorage in the Hudson River near Yonkers. It will prove an interesting sight to all travelers and excursionists on this splendid river, which the most widely traveled Americans never cease to regard with enthusiasm.

While prices for meat in America are abnormally high, they have not reached the level of prices in Germany. A correspondent of the New York "Evening Post" says that in Berlin during August beef was forty-five cents a pound and mutton forty-seven. We have not yet had recourse to the German substitute for these meats, horseflesh; in Berlin during the first half of the year 5,924 horses were slaughtered for food.

An automobile air spring has now been placed on the market, says a mechanical contemporary, after three years of experimentation. "The object of the inventor was to make possible thoroughly comfortable and fast riding over the roughest pavements and roads." It is to be hoped that the announced success of the new device will not dampen the ardor of the good roads movement, for the sake of those who still must ride in last year's cars, or even in horse-drawn vehicles.

A prism glass bulb for tungsten electric lamps has been patented. It is said to diffuse the dazzling light from the tungsten filament without incurring the loss of illumination which accompanies the use of shades or ground glass bulbs, and thus to furnish a more agreeable as well as more economical light.

One of the largest estates ever administered without a will was that of the late John Arbuckle, of Brooklyn, New York, who left $30,000,000, which will go to his next of kin. The size of the estate shows that a pretty good business man is sometimes careless or indifferent about what becomes of his property after his decease.

The Outlook

OCTOBER 19, 1912

LYMAN ABBOTT, Editor-in-Chief HAMILTON W. MABIE, Associate Editor
THEODORE ROOSEVELT
Contributing Editor

The Opening of Parliament

The British Liberal Ministry again faces Parliament with at least three difficult matters on its hands, but Mr. Asquith and his confrères are accustomed to delicate and difficult situations, and so far they have been successful in dealing with them. They have been able to hold the support of the Labor party; that support is now, however, seriously menaced, and the loss of the forty-two Labor votes might at any time make the position of the Ministry critical. The loss to the Liberal party during the past few months of six or eight seats is interpreted as due to the dissatisfaction of the Labor element. So far the Government has been able to hold the vote of the Irish Nationalists; but the continued loyalty of this group of members depends on the energy and success with which the Home Rule Bill is pushed in the House. It is sufficiently advanced to be passed within a few weeks, and the Ministry are determined to give it precedence. The Nationalists' support depends on their confidence in the determination of the Ministry to send this bill to the House of Lords. The discussion, sufficiently rancorous from the start, has had additional bitterness injected by the determined opposition of Ulster, which has gone to the length of pledging itself to resist Home Rule by force if necessary. But here, too, the situation is likely to clear up by the adoption of some expedient which will protect Ulster against its fear of the domination of the other provinces. The Ministry is also confronted by very difficult questions of foreign policy. There is a very strong feeling that England has been made a cat's-paw by Russia in Persia, and many Englishmen of all parties resent what they regard as the betrayal of Persian rights. This criticism comes more from the Radical members of the Liberal party than from the opposing party, and is therefore the more dangerous. The Ministry also faces the difficulties presented by the Balkan situation, which is rapidly developing, and which involves international relations of great delicacy. Altogether the outlook for a comfortable session for Mr. Asquith is not promising; but Mr. Asquith is too much of a fighter not to welcome the struggles that await his Ministry. The three great measures before the present Parliament are the Irish Home Rule Bill, the bill for the disestablishment of the Church of England in Wales, and the Election Reform Bill, the last named an answer to the charge that the aristocracy has multiplied the number of its own votes about ten times, and deprived the working classes of approximately a million votes. In case the Home Rule Bill becomes law, it will be interesting to see whether the Irish members stand by the Government with regard to Welsh disestablishment and election reform. With the Irish votes and the Labor members the Government has a substantial majority. With a possible Irish defection, the Liberal tenure of office would be precarious. Under these circumstances, in order to retain the Labor members, it would seem to be the part of wisdom to introduce a new land reform bill to equalize the unjust conditions of land holdings in England.

A Modern David and Goliath

The story of David and Goliath was repeated last week when Montenegro attacked Turkey. A State less than the size of Connecticut against an Empire stretching into three continents! A population of 250,000 against a population of 25,000,000! An army of 50,000 against an army of 400,000 in peace strength and several times that number in war strength. Why all this? Because the Montenegrins are the most independent and warlike of all the Balkan peoples. Because the Montenegrins have never been subjugated by the Turks and are not afraid of them. Because the Montenegrins have reached the limit of their patience with Turk-

ish promises. Those promises, extending over many years, have generally related to frontier reforms demanded by the sturdy mountaineers, Turkey's interpretation of boundary rights having been grossly unfair. But the Turkish promises also relate to reforms demanded by the neighbors of the Montenegrins, the Albanians. They inhabit the Turkish province of Albania, to the south of Montenegro (the Black Mountain), and, like it, a mountainous country. There are five times as many Albanians as Montenegrins. While the Montenegrins have always been free of the Turkish yoke, some of the Albanians have long chafed under it. The Albanians, like the Montenegrins, are a proud race, and they demand satisfaction for their racial aspirations. Many of them want entire independence of the Turkish yoke; others would be satisfied by a grant of the following demands:

1. The fusion of all Albania under one local government.
2. Only Albanians to be employed in that government.
3. Only the Albanian language to be used in the schools.
4. Only the Albanian language to be used in the courts.
5. Substitution of Latin characters for the present Arabo-Turkish script.
6. Reduction of taxation.

None of these demands has been granted. And not only this; little has been done in the school and road building promised to the Albanians by the Young Turks when the latter came into power. Indeed, the Young Turks actually attempted to disarm a people among whom, like the Montenegrins, it is an offense for any man to go unarmed or to be inexpert in the use of arms. Finally, the Young Turks attempted to enforce the Turkish language as the official tongue. The natural result of all these things was that many Albanians rose in revolt. Now they have the aid of their kinsmen and neighbors.

Montenegro, Italy, and Austria

Behind Montenegro and Albania stands Italy. The old Italian fear that Albania might fall under Austrian domination and that the Adriatic might thus possibly become an Austrian sea has for years been emphasized by many patriotic declarations in Italy, and never more so than during this year of Italian "imperialism." The increasing bonds of amity and interest between Italy and Albania were, in 1896, strengthened by a bond between Italy and Montenegro, namely, the marriage of the Italian Crown Prince, Victor Emmanuel, now King, to Princess Helen, daughter of the Montenegrin monarch. The Italian jingos, having annexed Tripoli, now want to annex Albania. But, failing this, an arrangement which would doubtless please them would be, in the event of a successful war by Montenegro, the annexation to Montenegro of a part of Albania. But how about Austria? As Albania would not be Italian, the arrangement might possibly suit Austria too. It should be remembered that if the Ottoman Empire should be in danger of breaking up, Austria expects to seize the Turkish territory lying directly between the Austrian southern frontier and the Ægean Sea. Albania is not on the direct line, no matter how pleasant it might be to have that country as a "side issue." The other great Power most directly interested in the matter is Russia, but her ambitions could be fully met elsewhere. With regard to the events of last week, however, the query arises: Was not the signal for the break-up of Turkey-in-Europe given at Podgoritza, on the Albanian border, when Prince Peter of Montenegro fired the first shot of a thirty-hour battle which resulted in the rout of the Turks and a complete Montenegrin victory?

The Declaration of War

The King of Montenegro dismissed the Turkish Minister at Cettinje, the Montenegrin capital, and the Montenegrin Chargé d'Affaires at Constantinople demanded his own passports on the morning of the day in which, later, the King and his sons left for the Albanian frontier. Thereupon the Turkish Prime Minister cleverly complained that the declaration was made in a manner contrary to the practice of civilized countries, and in especial that it violated the rules laid down by the second international Peace Conference at The Hague (1907), to which Montenegro subscribed. The final act of that Conference provides:

> In case of serious disagreement or dispute, before an appeal to arms, the contracting Powers agree to have recourse, as far as circumstances allow, to the good offices or mediation of one or more friendly Powers. . . .
>
> The contracting Powers recognize that hostilities . . . must not commence without previous and explicit warning in the form either of a

reasoned declaration of war, or of an ultimatum, with conditional declaration of war.

Hence the Minister stated three points in which Montenegro violated the international treaty: (1) that no attempt was made to seek the good offices of a third party in an effort to find a means of avoiding war; (2) that the declaration did not set forth any real or tangible cause for war; (3) that the Montenegrins began hostilities without granting the usual preliminaries. The question now arises, Will Bulgaria, Servia, and Greece follow Montenegro? Not if the Powers can help it. The aim of the Powers has been to prevent war; but, if war should arise, to localize it. As far as Montenegro is concerned, of course there would be little difficulty in localizing her war with Turkey; indeed, Montenegro would wish to have it localized among her practically impregnable mountains, where she has always waged successful warfare. If, however, the grievances of Bulgaria, Servia, and Greece are as keenly felt as are those of the Montenegrins, it would be natural for those states to join Montenegro. But this is with the supposition that they have Montenegro's independent, courageous, and aggressive spirit, and that, man for man, they are as soldierly. This is not the case. In addition, the jealousies which have divided Bulgars, Serbs, and Greeks may still be counted on as a disintegrating force, even in face of the common enemy. The task of the Powers is thus proportionately lightened.

Nicaragua

Last week American intervention in Nicaragua was sadly marked by the death of several of our marines—so far as we know, the first occasion when any have been killed doing police duty in Latin America. The event occurred at Masaya, a city half-way between Managua, the capital of Nicaragua, and Granada, the principal city on Lake Nicaragua. Granada has been a great stronghold in the recent revolution. With its capture and the surrender of General Mena, the rebel leader, with hundreds of his men, the remaining revolutionists fell under the leadership of General Zeledon, Mena's ally, famous—or rather infamous—as the man who, in the face of an armistice, had bombarded Managua and wounded more than a hundred defenseless women and children. Zeledon was still interfering with the communication between the cities, especially with the movement of supplies, thus preventing famine sufferers from escaping to places of comparative safety. Admiral Southerland, sent by our Government in command of the bluejackets and marines who were landed to protect the lives and property of Americans, demanded that Zeledon evacuate his position or cease interfering with communication. Zeledon replied defiantly, and, after commanding his troops in an attack on our forces, fled from the scene, only to fall into the hands of the Government forces, by whom he was killed. The Americans drove the rebels back and succeeded in getting into the towns in which there is a large foreign element. Many persons were found on the verge of starvation. While our Government could hardly be afflicted with a worse misfortune than to be compelled to assume any responsibility for government in Nicaragua, the situation has amply justified the repeated requests for our intervention by the Nicaraguan Government, which admitted itself unable to afford the necessary protection to foreign life and property. The rebels had already killed two of our citizens, had seized and sacked our property, and bombarded our Legation at Managua. The Legation had received appeals from the European Ministers and Consuls for American protection for all foreign life and property—thus indicating our natural responsibility; in especial, to restore communication along the railway between the towns where foreigners were isolated and in extremity. Thus, when our marines arrived, they did not take sides as between the warring factions, but humanely operated as a body of police to protect foreigners.

Intervention, Not Aggression

Now that the main purpose has been achieved—the checking of the revolution—the purpose of our forces will be to restore normal conditions in a country where two months of disorder has caused a neglect of the crops and a stopping of business. If our effort in Nicaragua can be shown to be an act of aggression, then so were our acts in Cuba. Our intervention in Nicaragua will not have been in vain if it brings to the inhabitants of Central America some sense of the healthful, restraining influence which has operated towards the spread of whatever law and order now obtains in Cuba, Porto Rico, and Santo Domingo. With regard to all Latin America there are but two courses open to us. The first

would be to abandon the Monroe Doctrine and to cease to exercise the moral influence over the countries south of us which we undertook when the Monroe Doctrine was first pronounced. The second would be to adhere to the position then undertaken. It involves not only the announcement to European Powers that we deprecate their acquirement of territory in the Western Hemisphere; it involves on our own part practically a moral protectorate for the Western Hemisphere. When we said to the foreign Powers, "Hands off!" we took upon ourselves the responsibility of seeing that the Latin nations of the South behave themselves so that the European nations *could* take their hands off—in other words, that the Central and South American states should act according to the laws of civilization. Moreover, in taking this responsibility, we have always realized, and never more so than now, that it must not be for our own aggrandizement. It has not been. This is the only condition on which we can retain the world's respect.

The Political Campaign: A Double Misstatement of Fact

The country has a right to expect, when a Presidential candidate is stating the issues of the campaign, that he shall deal with facts fairly and with exactness. He may properly draw his own deductions from the facts, but he must not state that which does not exist at all as being common knowledge. A public man who has in the past earned such a reputation for political sincerity as Governor Wilson has possessed should not violate this rule, and, when his error is pointed out, he certainly should not violate it a second time in his attempted explanation. In his speech at Gary Governor Wilson, as stenographically reported by papers which support him, said, speaking of corporations of a monopolistic character in general and of the United States Steel Corporation in particular: "It is to the interest of these gentlemen that monopoly be maintained, and they are supporting the Bull Moose party because the Bull Moose party expects to maintain monopoly." Later, at Pueblo, he said: "It is a very interesting circumstance that the United States Steel Corporation is behind the third party programme as regards the regulation of the trusts." These declarations, coupled with his remarks about the trusts "joining the hallelujah chorus," were, so far as we have noted, universally regarded as meaning that the trusts, and one trust in particular, were backing and supporting the Progressive party. Whether financial support was implied or not is immaterial; the statement, even without that natural inference, is absolutely without foundation. Interpreting the allegation as every one else did, Mr. Roosevelt at once challenged its correctness and called upon Governor Wilson to adduce his proof or retract the assertion. What followed may be told in the words of Mr. Roosevelt's speech at Duluth:

> Mr. Wilson had no proof; he had not a particle of evidence, corroborative or otherwise. He could not make his statements good, and he would not manfully retract them; so he made public an explanation in which he said in reference to the United States Steel Corporation: "What I meant was that they are supporting him with their thought."
>
> Mr. Wilson is not a mind reader. I have not the slightest interest in his belief as to what the "thought" of a trust magnate is. It is sheer nonsense to treat such an accusation as that Mr. Wilson made in Gary, Indiana, as being meant merely to imply that the Steel Corporation was supporting me with its "thought."

Even if one regards the charge as being in effect that the capitalists of the Steel Corporation individually gave Mr. Roosevelt their moral support, the assertion falls to the ground. A Wall Street news agency, in its reports, remarks that the Progressive candidate would be lucky if three of the corporation's twenty-three directors voted for him—upon which Mr. Roosevelt remarked that three would be three times as many as he expected. Laying aside the phrasing of Governor Wilson's statement, we think that it would be perfectly fair to state the meaning which he finally settled upon as his own to be this: Mr. Roosevelt and the trusts believe in the same way of dealing with monopoly; this way would make the Nation a partner with the trusts and would perpetuate monopoly; naturally, therefore, the trusts "in thought," if not by purse and votes, are behind that plan. This is going from bad to worse; if Governor Wilson thinks it credible, well and good; one may be astonished at such a belief, but we may allow every statesman his own vagary of opinion. But when he alleges that partnership with monopoly and perpetuation of it are to be found in the Progressive platform and the utterances of its leaders, he makes as direct a misstatement of fact as when he stated that the monopolistic corporations are backing the

Progressive party. The truth may be here stated once more in Mr. Roosevelt's words:

> What is needed is the application, to all industrial concerns and all co-operating interests engaged in inter-State commerce in which there is either monopoly or control of the market, of the principles on which we have gone in regulating transportation concerns engaged in such commerce. The Anti-Trust Law should be kept on the statute-books and strengthened so as to make it genuinely and thoroughly effective against every big concern tending to monopoly or guilty of anti-social practices. At the same time, a National Industrial Commission should be created which should have complete power to regulate and control all the great industrial concerns engaged in inter-State business—which practically means all of them in this country. This Commission should exercise over these industrial concerns like powers to those exercised over the railways by the Inter-State Commerce Commission, and over the National banks by the Comptroller of the Currency, and additional powers if found necessary. . . . This Commission should deal with all the abuses of the trusts—all the abuses such as those developed by the Government suit against the Standard Oil and Tobacco Trusts—as the Inter-State Commerce Commission now deals with rebates. . . . *It should prohibit and effectually punish monopoly achieved through wrong*, and also actual wrongs done by industrial corporations which are not monopolies, such as the artificial raising of prices, the artificial restriction on productivity, the elimination of competition by unfair or predatory practices, and the like.

We leave it to the reader to judge whether this definite programme in the least corresponds to Governor Wilson's description.

Campaign Contributions

Charles D. Hilles, Chairman of the Republican National Committee, who declared that millions of dollars of Harvester Trust money had been used in the effort to nominate Mr. Roosevelt, was called before the Committee of the Senate now sitting in Washington, and failed to offer a shred of evidence to support the statement. All he could do was to submit to the Committee a letter he had written to Mr. Perkins, a director of the Harvester Company, who had called him to account. In this letter, which occupies about a newspaper column of fine type, he deals in inferences and rumors and irrelevant matter. He speaks about what is "freely reported," uses such vague phrases as "enormous sums," and attacks Mr. Perkins's motives; but absolutely fails in any particular to support his statement by evidence or anything even remotely resembling evidence. The humiliating position in which Mr. Hilles has allowed himself to be placed is the most striking consequence of last week's hearings. Referring to this charge of Mr. Hilles's, Mr. Roosevelt, week before last, said that, if true, he wished to know it, but if it could not be substantiated Mr. Hilles and Mr. Bartholdt, the Republican Congressman who had made a similar statement, should be driven from public life. A great deal of the "testimony," as it is termed, before this Committee has been, and continues to be, mere hearsay reports. There was, however, some direct evidence submitted. Mr. Crane, of Chicago, confirmed the statement that he had contributed to both the Wilson and La Follette primary campaigns, though not to such amounts as had been alleged. Mr. Charles P. Taft, a brother of the President, testified that he had given $125,000 to the National campaign for the President's renomination in addition to nearly $90,000 to local committees and organizations. Other members of President Taft's family contributed large sums. There is nothing discreditable about this. Indeed, the effort of some newspapers to make it appear that the existence of campaign funds is evidence of corruption and public evil is as stupid as it is wrong. The fact that a man contributes a large sum to one party or on behalf of one candidate is no evidence whatever that he is doing it as a result of an agreement to get any special privilege, or that what he has given is to be used for evil purposes. Political campaigns cannot be carried on without the expenditure of money, and money cannot be expended unless it is received. Indefinite statements with regard to the expenditure of these funds seem common in the testmony before the Committee. Thus Mr. Ogden Mills, the New York County Republican Treasurer, could only estimate what was spent in the primary campaign in the county. Mr. Mills submitted polling lists which he said tended to show illegal voting on behalf of Roosevelt delegates. This was his only answer, apparently, to the charges of illegal voting on behalf of Taft delegates. Likewise Mr. McKinley, the Taft manager in the primary campaign, was vague with regard to expenditures. When asked to substantiate charges given out in his name, Mr. McKinley said that many of the interviews in the pre-Convention campaign were put out without his knowing what they contained—another example of irresponsible campaigning. Mr. John D. Archbold, of the

Standard Oil Company, was again on the stand during the week, and testified that the receipt of the alleged Standard Oil contribution in 1904 had been destroyed. Apparently there will be no further pretense to prove this part of the Archbold-Penrose charge against the late Mr. Bliss. Mr. McHarg (now a Taft man) testified that he had made his tour in the South on behalf of the Roosevelt delegates at the solicitation of William L. Ward (now a Taft man also), and without remuneration. The principal effect of all these hearings has been to make clear how unsubstantial are the sort of charges that one is likely to hear from political bosses and managers during a campaign. The practice of making about political opponents reckless statements which cannot be substantiated has been the bane of American politics. Mr. Parker indulged in it in 1904. Messrs. McKinley and Hilles have been indulging in it in this year's campaigns. Mr. Wilson has allowed himself to do so lately in what he has said about the trusts and the Progressive party. We do not believe that this practice is any more desirable from the point of view of practical politics than commendable from the point of view of public morals.

The Conservation Congress: A Congress of Humanity

Last week, at Indianapolis, the fourth National Conservation Congress—a clearing-house for conservation ideas—held its sessions, with a large attendance of delegates from every section of the country. Governor Wilson's address on Conservation in general was carefully prepared, well delivered, and well received. Secretary Stimson, representing President Taft, called the attention of the delegates to the very pressing question of our waterways, as referred to in several of Mr. Roosevelt's recent speeches. The Secretary paid tribute to Mr. Roosevelt, who, as President, had frequently used his veto powers in preventing the damming up of streams by private individuals and corporations without proper compensation to the public. Mr. Stimson prophesied that the time will come when artificial means of producing power will be exhausted; for this reason he urged more effort in the preservation of waterways. While the waste of our natural resources was thus the keynote of many speeches, the waste of human life was brought forward in others, especially by Dr. Harvey W. Wiley, the famous food expert, and by Miss Julia Lathrop, the Chief of the new Children's Bureau at Washington. The resolutions adopted by the Congress indicated the increasing emphasis now laid upon the conservation of human life and its protection from injury and vice. The new President of the Congress is Mr. Charles Lathrop Pack, of Lakewood, New Jersey, the well-known authority on forests, and head of the Forestry Commission of that State. Since its inception, Mr. Pack has been intimately connected with the National Conservation Association, giving to it not only of his means, but, what is of even greater value, his expert counsel. In accord with this year's prominence of women in public affairs, the Congress chose as its Vice-President Mrs. Philip N. Moore, the former President of the General Association of Women's Clubs.

The Associated Press and Fake Journalism

The following letter which we have received from Mr. Melville E. Stone, General Manager of the Associated Press, explains itself:

October 10, 1912.

The Editor of The Outlook:

My attention is directed to an editorial which appeared in The Outlook of October 5, under the title "The Secretary of War: A Victim of Fake Journalism." In this editorial you sharply criticise the Associated Press for disseminating "throughout the country the false report of which the Secretary of War justly complained, and, so far as we can discover, did very little to correct the error after attention was called to it."

Let me say to you that the Associated Press did not disseminate the alleged interview at all, nor did we ever refer to it in any of our despatches. It appeared in a San Francisco paper, and if it was printed in other papers it was copied or sent to them by special correspondents.

It occurs to me that a publication which professes to be conducted upon decent lines ought at least to make some investigation before printing the sort of accusation contained in your editorial.

It is true we did not correct the error, because it was not our error, and in my judgment it would have been no kindness to Secretary Stimson if we had attempted to do so.

I shall expect you to make a prompt and ample correction.

Sincerely yours,
(Signed) MELVILLE E. STONE,
General Manager.

We regret that we made the error of saying that the Associated Press "disseminated throughout the country the false report of

which the Secretary of War justly complained." With apologies to the Associated Press for this error, we still wish to assert that its course in this matter is open to criticism. Secretary Stimson, in writing to The Outlook, used the following language: "As soon as the interview was published I repudiated it through the Associated Press." The Associated Press did not accede to Secretary Stimson's very natural request because Mr. Stone preferred to decide, rather than let the Secretary himself decide, what was best for the Secretary to do under the circumstances. What are the facts? The Secretary of War by the practice of fake journalism is made, without any basis of truth, to criticise personally an ex-President of the United States. These personal criticisms appeared in papers which take the Associated Press service. The Associated Press is requested by the Secretary of War to correct their falsity, made by journals taking its service, and the Associated Press declines. The Secretary of War endeavored to employ the only avenue that any public man has at his command for reaching the public with an important piece of news, and that avenue is closed to him by the manager of the Associated Press. This seems to us to be neither "kindness" to the Secretary of War nor justice to the public.

The National Game

There is perhaps no better index of the American enthusiasm for baseball than the fact that for a week a considerable part of the popular interest in the Presidential campaign has actually been diverted to the series of games between the New York "Giants" and the Boston "Red Sox," which are being played to determine what is called the baseball championship of the world. Although no teams from any other part of the world are competing for this championship, it is of course a fact that the champions of the United States are the champions of the world in this particular form of athletics. For the uninitiated we may explain briefly what has led to this series of games played on alternate days in New York and Boston—games which attract many thousands of people, descriptions of which fill every newspaper in the country, and the results of which are eagerly watched for at every telegraph and telephone office in every village and hamlet in the United States. The game of American baseball is about fifty years old. It began as an amateur pastime, and spread into every school and community of the country. Experts were soon developed, and these experts became paid professionals, and thus the professional side of baseball was developed. Finally leagues of professional teams were formed in order to regulate the rules and conduct of the games. The two largest leagues are known as the American League and the National League. The clubs composing these leagues are regular stock companies which are managed like theatrical companies. The country is scoured for the most skillful players, who are employed sometimes at very large salaries by the different clubs. The Boston club, popularly known as the "Red Sox," has won the championship of the American League. The New York club, popularly known as the "Giants," has won the championship of the National League. These two teams have now met in a specially arranged series of contests to determine who are the champions of the country. To win the championship, one or the other of these teams must win four games.

Is Professional Baseball Wholesome?

To play baseball of the character which these men play requires not only great physical stamina, great manual skill, and a temperate and regular life, but it requires a high degree of a certain kind of intelligence which is known professionally as "head work." It is undeniably a wonderful and sometimes a thrilling sight to see the technical skill displayed in a great baseball game, not only by the individual players, but by the entire group of players working together like a great machine. Strength of muscle, rapidity of action, grace of movement, quickness of decision, courage in adversity, coolness in perplexity, self-control amid great excitement, are manifested in a very marked degree by these professional players. It is not surprising that forty thousand people will gather, as they did at the first game of this series last week, and will pay an average of two dollars apiece to see this kind of display of athletic skill. The strain upon the men engaged in such a contest is very great. Each player knows that his slightest mistake, or "error," as it is technically called in the game, will be telegraphed over the country. The pitcher who permits an opponent to get a base hit which

brings in a winning run knows that a groan of despair will go up from the thousands of supporters of his team. At the first game between the "Red Sox" and the "Giants" in New York on Tuesday of last week, for example, in the last half of the last inning the score stood four to three in favor of the "Red Sox." The "Giants," by timely batting, got a man on second base and third base, with only one man out. A base hit by one of the two "Giants" who had their turn at the bat would have won victory for their team. A second "Giant" was put out. Their third and last batter came to the home plate. The Boston pitcher pitched five balls, two of which were called strikes and three of which were not over the plate and are known technically simply as "balls." He had only one more ball to pitch. If at the incredible speed which this particular pitcher possessed the ball did not get over the plate, the batter, by the rules, could take his base. If it did go over the plate, the batter might get the needed base hit, which meant victory for New York and defeat for Boston. The game was practically to be decided by that one pitched ball. Imagine what the feelings of that pitcher must have been! And yet, with great coolness and deliberation, although with the most intricate gyrations which modern pitching demands, he put the ball over the plate with such a curve and with such speed that the batter struck out and the game was ended. It was really a dramatic moment, and one which will be remembered for a long time in the annals of baseball. There are many who criticise American professional baseball because only eighteen men engage in it and forty thousand men and women sit on the grand stands and watch the play. As a matter of fact, the influence of modern professional baseball is, on the whole, thoroughly wholesome. Not only is rigorous fairness promoted and enforced by the management, but the professional skill displayed stimulates throughout the country an interest in baseball which leads American boys of every age and type to play the game as efficiently as possible, and therefore really promotes outdoor life under strict regulation. What public opinion now accomplishes, and ought to continue to accomplish, is the playing of clean baseball—that is to say, contests in which the players shall represent fair and skillful sportsmanship free from brutality, trickery, and organized betting.

Two American Scientists

The names of two American scientists stand prominently in the news of last week—of one because of his premature death, of the other because of the honor bestowed upon him. Dr. Morris Loeb belonged to that group of American scientists who are contributing to the advancement of pure science. America has been rich in that particular form of genius which applies scientific knowledge to the use of mankind, but not as rich as some other countries in that form of genius which by patient research increases the knowledge of man concerning the universe in which he lives. At the time of his death Dr. Loeb was devoting himself to chemical research in his private laboratory. Before that time he had been successively on the teaching staff of Harvard University, Clark University, and the New York University. His work was of the sort not fully appreciated by the man without technical training. It concerned such subjects as the speed of chemical reactions and the electro-conductivity of liquids, which do not appeal to the popular mind like the phonograph and aeroplane. The value of such work, however, is no less because it brings no reward in the form of popular acclaim. Dr. Loeb was only forty-nine years old. He was far from being a recluse. His services in behalf of wise philanthropy and social service were multifarious. He was very prominent in several Jewish organizations devoted to good causes. Dr. Alexis Carrel, who is not yet quite forty years old, has just been made the recipient of the Nobel prize for Medicine. Although not an American by birth, it is Dr. Carrel's seven years of work at the Rockefeller Institute in New York that has brought him this distinction. Dr. Carrel's work has attracted wide attention outside of medical, or even general scientific, circles, because of the nature of his achievements. Some of these achievements, though not in the popular field of applied science, have been of the sort that may rightly be called sensational. He has, for example, taken the organs of animals out of the body and has not only kept them alive but proved that the tissues can be made to develop. An account of his work was given in The Outlook of July 13. Such work as this not only has an interest for everybody, regardless of technical training, but is a manifest contribution to the practical arts of surgery and medicine, and thus to human welfare.

THE PROGRESSIVE MOVEMENT

VI—THE TWO DEMOCRACIES

In a series of lectures delivered before the Brooklyn Institute in 1909–10 the editor-in-chief of The Outlook thus characterized the epoch on which we had then already entered: "This ideal of self-government has been undergoing a change which is none the less revolutionary because it has been growth, and hence unconscious—a change from a government of self-governing individuals into a self-governing community. We have learned that the interest of the whole is more than the sum of interests of all individuals; and that the interests of all individuals can be secured only by their common recognition of the interest of the whole. . . . A self-governing community is something very different from a community of self-governing individuals." The realization of this truth and its organization in a great National movement has produced the Progressive party. The platform of that party is the organized expression of a faith in the democracy which is a self-governing community. The difference between the Progressive platform and the Democratic platform is the difference between the democracy of a self-governing community and the democracy of self-governing individuals.

To say that the Progressive platform is a patchwork of individual reforms contributed by individual reformers; that it lacks unity, coherence, definiteness of purpose; that it has been borrowed from Mr. Bryan, or from the Socialistic organization, or part of it from the one and part of it from the other; to say that it is the old Republicanism with some new and incongruous elements added, is not only to ignore the course and current of American history, it is to argue a curious ignorance of the great classics of political literature. The fundamental principle underlying the Progressive party and determining its purpose has been often expressed by prophetic writers, though never before so coherently and consistently by an effective political organization. It has been interpreted to the world in Plato's "Republic," in Aristotle's "Politics," in Augustine's "City of God," and in other less famous visions furnished to the world by its great thinkers. One of the latest and clearest interpretations is furnished by "The Nation: The Foundations of Civil Order and Political Life in the United States," by E. Mulford, published in 1870. Without quotation from any of these authors, we set forth the principle in our own words.

The nation is a person; none the less a person because a corporate person. It has a consciousness of its own, an opinion of its own, a conscience of its own, a will of its own. This consciousness is something more than the sum of all the individual consciousnesses; this opinion is something more than the sum of all the individual opinions; this conscience is something more than the sum of all the individual consciences; this will is something more than the sum of all the individual wills. Each modifies the taste of the other. A painting is composed of different pigments put upon the canvas by the artist; but the painting is something more than the sum of all the pigments. It has a life of its own. A symphony is composed of all the notes of the fifty or sixty instruments which constitute the orchestra, but the symphony is something other than the sum of all the sounds of all the various instruments added together, for the sound of each instrument modifies the sound of its neighbor and produces by the combination a sound unlike either of them. A home is something other than a man, a woman, and some children living within the four walls and under the roof of a single house. The home has a character of its own, and this character is distinguished from and more than the character of the individuals who compose the home. It is a composite character. So the American Nation is something more than the ninety millions of heterogeneous people who live upon its territory and under its flag. Its public opinion is something other than the sum of their opinions. Their opinions, intermingling, combining, colliding with each other, make a composite opinion different from that of any one, different from that of the sum of them all. The consciences of its various members, combined, produce a moral sentiment different from the moral sentiment of any one or of all taken separately. The wills of this ninety millions of people strive with one another in a political campaign. In the conflict each individual will is modified by the wills of the neighbors.

Thus this Nation is seen to be something more than a heterogeneous population leagued together to protect the rights and promote the interests of the individual members. It is an intellectual and moral person; it thinks,

feels, resolves; it has opinions, emotions, purposes; and these opinions, emotions, and purposes are something more and something other than those of the individuals who compose the Nation.

This Nation has National interests which are distinct from the interest of any individual or class of individuals.

There are certain National highways, on the right use of which the life of this Nation depends, as the life of the individual man depends on the free currents of the blood. Anæmia on the one hand, congestion on the other, are injurious to its health, and may even be perilous to its life. These highways must be administered, not merely in the interest of the owners, nor merely in the interest of the passengers who are traveling on the highways, nor merely in the interest of the shippers who are sending goods on these highways. These National highways must be administered in the interest of the Nation as a Nation; and because the Nation is tardily coming to the consciousness of this fact it has established a Railway Commission to compel the owners to administer the railways in the interests of the Nation. And this Railway Commission represents something more than the stockholders, or than the travelers, or than the shippers; it represents the Nation in its totality.

In the competitions of our complex civilization some men have got control of articles necessary to the welfare of the people. Whether this control has been obtained by Government license or franchise or patent, or whether it has been obtained by skillful combination and large purchase, is immaterial. That the Nation may live and thrive, the control of the necessaries of life must not be allowed to pass into private hands. Hence the proposal to establish a Commission which shall regulate and supervise the production and distribution of the articles which are necessary to the life of the Nation. The object is not merely to protect individuals from monopolies which are oppressive; the object is to make the resources of the Nation serve the interests of the Nation.

The children are the children of the Nation; they belong to the Nation. It is to the interest and it is the duty of the Nation to see that they are educated. It is to the interest and it is the duty of the Nation to see that they are not deprived of their childhood by being set to work in mines and factories before the time for work has come. The Child Labor Law is not merely a philanthropic endeavor to protect individual children from individual acts of oppression. The Child Labor Law is an act of the Nation protecting its own children, because the life and well-being of those children are necessary to the life and well-being of the Nation.

The wives and mothers are parts of the Nation; they belong to the Nation, as the hand or the head belong to the individual, and are to be protected by the Nation, because the Nation must protect itself from injury. When, therefore, it awakes to the fact that the employment of women in mines and factories for ten or twelve hours a day is robbing the Nation of its wives and its mothers and is sapping the foundations of the Nation, because it is sapping the foundations of the home, the Nation says, This must stop. Its laws for the prevention of excessive hours of labor of women are not merely a philanthropic endeavor to protect women who are not able to protect themselves; they are a resolve of the Nation to protect itself, as a Nation, from conduct which is destructive of the National health.

The men of this Nation, no less than the women of the Nation, belong to the Nation, because they are parts of the Nation. The Nation has a right to take whatever action may be necessary to prevent these men from being driven into courses of conduct or enticed into courses of conduct which are inconsistent with the very best service to the Nation as its citizens. When it finds men working twelve hours a day and seven days in the week, or other men working for a pittance so small that efficient, capable life cannot be sustained upon it, the Nation has a right to interfere and to prescribe maximum hours of labor and minimum wages for labor. It interferes not merely as an act of philanthropy to protect individuals from either the rapacity of others or from their own folly; it interferes to protect itself from social conditions which are robbing it of its wealth, for the wealth of the Nation is in its citizens. It has the same right to emancipate laboring men and women from intolerable conditions of labor that it had to emancipate the slaves from equally intolerable conditions of labor. The Nation has a right to exist. It has a right to healthful, vigorous, efficient existence. And this right to a healthful, vigorous, efficient existence gives it the right to see to it that all its citizens are able to live healthfully, vigorously, efficiently. When lawyers

cry out against interference with the right of private contract, the Nation replies, No member of this Nation has a right to make contracts which are destructive of the National well-being; such contracts the Nation will not permit to be made, and if they are made the courts shall not enforce them.

There are private properties which it is the duty of the Nation to protect. There are also public properties which it is the duty of the Nation to protect. The mines, the forests, the water powers, belong to the people of the United States. In the past the Nation has allowed these public properties to become private properties. It now proposes not to allow such public properties as it still possesses to become private properties. It proposes to retain the ownership and the control of them, and to see that they are so administered that the Nation shall not by their administration be impoverished in order that a few individuals may be enriched. The wealth of the Nation is something other than the wealth of individuals in the Nation, and the Nation has a right and a duty to protect its public domain from private spoliation, that it may hand down to future generations unspoiled the inheritance which it has received not as an absolute gift but as a trust.

The Nation is a great industrial organization. The interest of one is the interest of all. An injury to one is an injury to all. The Nation, as a great industrial organization, has a right to make whatever laws are necessary to make sure that the industries of the individual shall be so carried on as to promote the wealth of the whole. It has a right, therefore, to make laws which will promote American industry and protect it from destructive competition from servile or semi-servile labor in other lands. It has a right to enact such legislation as will keep the American market for the American producer, and will bring the producer and the consumer together on American soil, and will promote variety of employment and therefore variety of individual character in the development of a true National life. It has a right to impose taxes on foreign imports for the purpose of promoting this industrial life and this material welfare of the entire Nation. And it has a right to take whatever action may be necessary to see to it that this protection of the Nation from injurious foreign competition serves also to protect the individual from injurious native combination. The Nation has a right, by the tariff system, to promote the National prosperity, and it has also a right, in connection with that system, to provide for passing that prosperity around. It has a right to make a system which will protect the manufacturer and the farmer, the capitalist and the workingman, the producer and the consumer. The Progressive party affirms that right; the Democratic party denies that right; and the Republican party affirms the right only to protect the people from foreign competition, not the right to protect the workingman and the consumer from native combination.

The courts of this Nation are not mere arbitrators between individual suitors. They are constituted not merely to protect one individual against wrong-doing by another individual. This is one part, and an important part, of their function, but it is not their whole function. They are interpreters of the conscience of the Nation. They officially declare what the conscience of the Nation affirms to be just and right in the life of the Nation. They are not to be mere interpreters of law; they are to be interpreters of social justice. When they make traditions of the past, which were fitted to ancient conditions, bind the Nation in the present in conditions for which those traditions are unfitted, they mistake their function. Tradition is a wise guide in determining what is social justice, but it is a poor substitute for social justice.

Neither the courts, nor the Congress, nor the President, constitute the Nation. The people constitute the Nation. The courts, the Congress, the President, are instruments for interpreting the public conscience to the Nation. The courts represent the public conscience; the Congress represents the public judgment; the President represents the public will. It was the people, not President Lincoln, who pronounced the emancipation of the slave; it was the people, not the Congress, who declared war against Spain; it was the people, not Chief Justice Marshall, who affirmed the right of the Supreme Court to interpret with authority the Constitution of the United States. When the Supreme Court disregarded the consciences of the people, as it did in the Dred Scott decision, the decision went for naught. When the Congress disregarded the will of the people, as it did in abolishing the Missouri Compromise, its action went for naught. When the President disregarded the will of the people,

as President Johnson did in his attempted prosecution of the leaders of the secession movement, the attempted prosecution went for naught. Neither Court, Congress, nor President has any real and permanent power, except as they respectively represent the conscience, the judgment, and the will of the people. The review of a certain class of judicial decisions by popular appeal, the recall of administrative officers, the direct primary, the short ballot, the initiative and the referendum, are simple methods to make it easier for the people to exercise this power and so make the courts, Congress, and the Executive more responsive to the popular will.

If these representatives of the people are directly responsible to the people; if, either by the system of recall or by the system of short terms, those who represent the people can be called to account by the people for their administration, there is no danger in making the National Government a strong government. It is not true that history shows that strong governments are dangerous to the people. What history shows is that irresponsible governments are dangerous to the people. There is no danger that the President of the United States will become a dictator so long as he must give account of himself every four years to the people and the people have the opportunity to decide whether they wish him for another four years. Neither legislator nor executive has any prescriptive right to a second term because he has had a first term. To affirm, even by implication, such a right is to regard the office as a privilege to be possessed, not as an opportunity for rendering service. On the other hand, there is no reason why, because either a legislator or an executive has had two terms, the people should be denied the right to continue his service for a third term. The Nation has a right to select its own representatives. They are selected, not to govern the Nation, but to act as the Nation's representatives in the Government; not to impose their judgment or their will on the Nation, but to carry out the will and the judgment of the Nation in their action. Whenever they and the Nation part company, whenever they cease from any cause adequately and efficiently to represent the will and the judgment of the Nation, the Nation should have the right to retire them. So long as they do truly represent the Nation, so long as they do carry out the judgment and the will of the Nation, the Nation should be at liberty to retain them in office. They have no right to remain in office against the will of the Nation. There is no reason why the Nation should be prohibited from retaining them in office so long as they do carry out the will of the Nation.

The Old Guard believes in government by representatives of the people. It believes in a strong government by a select few over the many. It opposes, as perilous to the Republic, every change which increases the power of the people and makes the representatives more directly responsible to the people. It believes in a wisely governed Nation, but not in self-government. It believes neither in a government over self-governing individuals nor in a self-governing community.

The Democratic party believes in a government of limited powers, and that the function so far as possible should be confined to the protection of persons and property. It dreads every increase of government's administrative powers, because it dreads a bureaucracy. It believes in a government of self-governing individuals, but it does not believe in a self-governing community.

The Progressive party believes in a strong government representing the people and made directly responsible to the people. It recognizes the difference between a self-governing community and a community of self-governing individuals. It believes in a self-governing community, and the political reforms which it advocates—preferential primaries, direct election of United States Senators, the short ballot, the initiative, referendum, and recall, a more expeditious method of amending the Federal Constitution, effective legislation for limiting the hours and improving the wages and conditions of labor and for the protection of the Nation's health, the National regulation of the great inter-State corporations, the conservation of the National wealth, a protective tariff organization to protect the consumer and the workingman as well as the employer—are all applications of this fundamental principle: the solidarity of the Nation as a self-governing person. They are all based on faith in the capacity of the people to shape the policies and direct the destinies of a great Nation. They are all phases of the belief that the American Republic must be, not merely a government of self-governing individuals, but a self-governing community.

THE PANAMA CANAL AGAIN

In the issue of The Outlook for October 5 we stated our reasons for the belief that the Panama Canal Act embodies a successful and honorable endeavor to provide for the administration of the Panama Canal in full harmony with the spirit of the Hay-Pauncefote Treaty. In that article we promised to consider later the advantages and disadvantages of the Act to the domestic policy of the United States. Such a consideration is the purpose of the present article.

The domestic disadvantages of the Act are that certain clauses endeavor to regulate indirectly railway transportation. The Act forbids American railways or other common carriers to own, directly or indirectly, any steamships passing through the Panama Canal. The Act also provides for the regulation of railway freight rates from interior points in the United States upon goods to be shipped to foreign points on vessels owned by American railways. These two provisions seem to us entirely out of place in the Panama Canal Act. We do not believe that this is the proper way in which to regulate or control American railway rates. If there are evils connected with the freight rates of American railways, such evils should be abolished directly by giving the Inter-State Commerce Commission more authority over railways, and not indirectly by using the Panama Canal as a kind of club to be held over the heads of railway managers. The kind of railway legislation injected into the Panama Canal Act is generally known as "rider" legislation, the influence of which is always bad on the economic, political, and social life of the country. "Rider" legislation is generally, if not always, the result of an attempt to dodge an issue, and dodging an issue in politics is not only bad for the issue, but is bad for the dodgers.

The advantages of the Panama Act to the domestic policy of the United States are found in one fundamental and deep-reaching principle adopted in the Act—namely, the principle which gives the President of the United States almost supreme authority over the administration of the Canal. No single piece of National legislation that we are familiar with recognizes the executive authority of the President so completely as the Panama Canal Act. We welcome this recognition, because it is in harmony with the doctrine which The Outlook has held and advocated for many years. We have been surprised that public interest through the press and other channels of public discussion has not been more aroused with regard to this feature of the Panama Canal Act.

Those who examine the text of the Act carefully cannot fail to be struck by the extraordinary way in which Congress has given the President almost complete responsibility for the administration of the Canal. It almost seems as if Congress had said: "This problem is too big for us to handle; let the President do it." By the specific terms of the Act the President is authorized to acquire any additional land "that he may deem necessary for the operation, maintenance, sanitation, or protection of the Panama Canal." Congress ratifies *in advance* any change "of laws, orders, regulations, and ordinances adopted and promulgated in the Canal Zone by order of the President for the government and sanitation of the Canal Zone." The President is authorized "to extinguish by agreement, when advisable, all claims and titles of adverse claimants and occupants" of land, and land under water, necessary to the Canal; the President is authorized to discontinue the present Isthmian Canal Commission when he thinks wise, and thereafter to govern the Canal through a Governor or other person whom he may deem competent; the President is authorized to appoint the Governor of the Panama Canal with the advice and consent of the Senate, and, further, to appoint all other persons whose service is necessary for the completion and administration of the Canal, and such appointees shall be removable at his pleasure; the President is authorized to change the tolls to be levied for the use of the Panama Canal at his discretion on six months' notice; "the President shall provide a method for the determination and adjustment of all claims arising out of personal injury to employees;" the President is authorized to decide all the details regarding wireless telegraphy along the Panama Canal; the President is authorized to maintain and operate dry docks, repair shops, warehouses, etc., "for the purpose of providing coal and other materials, labor, repairs, and supplies, for Government vessels," and for supplying the same "at reasonable prices to passing vessels;" the rules of practice in the District Court of the Canal Zone "shall be prescribed or amended by order of the President;" when the United States is engaged in war, or

"when in the opinion of the President war is imminent," the President shall designate an officer of the army who shall have "exclusive authority and jurisdiction over the operation of the Panama Canal"—that is to say, as Commander-in-Chief of the army, the President in time of war shall be the sole administrator of the Canal.

This brief résumé of the Panama Canal Act discloses the fact that the real Governor-General of the Panama Canal is the President of the United States. Congress, in our judgment, has shown great wisdom in conferring this power upon the President. The Act does not in any way encroach upon the rights of Congress to repeal or modify the terms of the Act by future legislation. And so the people of the United States, so long as they have a free ballot and the intelligence to use it, can protect themselves and the Canal from any dangers of despotism or incompetency on the part of the Executive.

The great and fundamental advantage of this increase of the executive power of the President is that it places the responsibility upon the shoulders of one man whose position is such that he can be carefully watched by all the people of the United States. This may rightly be called true representative government.

Congress has given the Chief Representative of the American people the authority and power to manage this great enterprise. To use the vernacular of the street, it is now "up to" the American people to elect Presidents who are competent to manage this great international highway in a manner that will promote the people's best interests.

ART AND THE PEOPLE

The growing interest of Americans in art affords a gratifying sign that idealism in America is keeping pace with growth in material prosperity and in scientific scholarship. We perceive and respect this growing appreciation of art, not merely because "the finest Romney ever painted" is brought to this country, nor because our wealthy patrons of art have been able to get other masterpieces for their collections; nor because art schools and academies are springing up here and there with ever-increasing membership and enthusiasm; nor because in Minneapolis, New Orleans, Los Angeles, and many other places spacious and monumental buildings are being erected to house art treasures.

American appreciation of art is evident chiefly because Americans of all classes and in great numbers go to the galleries. In a single year over eight hundred thousand people visit the Metropolitan Museum in New York City and a like number the Art Institute of Chicago. The interest is proportionate in other communities. About a quarter of a million people visited the Boston Museum of Fine Arts last year, and nearly two hundred thousand visited the Pennsylvania Academy of Fine Arts at Philadelphia; about a hundred and seventy-five thousand persons visited the Detroit Museum of Art last year, and a hundred and fifty thousand persons the Albright Gallery at Buffalo, while since the new Museum at Toledo was opened last January it has been visited by over a hundred thousand persons—and this in a town with a population of a hundred and fifty thousand!

The Toledo Museum directors have set an example worthy to be followed in other places. When they started the movement towards getting the present sumptuous building, they wanted not dollars so much as popular interest. They went to the Toledo shops and factories at noon and talked on art. They brought public school children every day to their temporary museum and talked there on art. Once a week they sought out the club women and told them something about art. They organized the poor boys and girls of the factories, and society men and women alike, into classes for the study of art history. And now these study clubs and all school-children go to the new five-hundred-thousand-dollar museum freely every day—fourteen thousand school-children have already so visited it—while for the general public there are free days each week. Now that the Museum is opened, the directors from time to time give "special evenings"—inviting on one evening a church society, on another the employees of a large factory, on another the employees of a department store. Two large receptions were devoted entirely to the colored people of the city. On these evenings there is a little music, a little talk, and a little refreshment. More than this, all conventions and congresses coming to town are invited to spend an hour or so at the Museum.

In this total attendance the greatest factor and indicator of popular interest is the Sun-

day attendance. Last year in New York City nearly two hundred and eighty thousand persons visited the Metropolitan Museum on Sundays and nearly two hundred and forty thousand the Chicago Museum—about a third of the total attendance; and at Buffalo over a hundred thousand, or two-thirds of the annual attendance. Detroit shows the same number. We wonder whether there are any left who would have our museums closed on Sunday!

In the midst of a strenuous political campaign and in a year which unprecedentedly reflects America's commercial and industrial leadership, we may remember with satisfaction that popular interest is not confined to these things, and that, as to art, America is really forging to the fore.

LETTERS TO UNKNOWN FRIENDS

Instead of a single letter, The Outlook printed week before last several inquiries from Unknown Friends with an answer to each from the Editor-in-Chief. There is here given another installment of these queries and answers. For the sake of clearness, the prefatory paragraph is repeated.—THE EDITORS.

From my Unknown Friends I have received a great many more letters than it has been possible to answer through the columns of The Outlook. Some of them have been answered personally, but this also involves an amount of time and thought which is not always at my disposal. In this and later articles I propose to group a number of these letters, answering them briefly. If the correspondent finds the answer inadequate, as in many cases he probably will, I ask him to accept it as a token of interest and good will, and to regard it as a suggestion which he must amplify by his own reflection.

LYMAN ABBOTT.

Please write a little more at length on the Atonement. A friend of mine argues: "If it were not necessary for the saving of the world, Christ would not have died." Without knowing how to answer this, I feel nevertheless that the sacrifice of Christ lay in his life and not in his death. J. M. C.

The word "atonement" occurs only once in the New Testament (Romans v. 11), and in the Revised Version it is there rendered "reconciliation," which is undoubtedly the more accurate translation. "Through our Lord Jesus Christ," says Paul, ". . . we have now received the reconciliation." We are reconciled to God or made one with God when our lives and characters are Godlike. Salvation is character. If mankind had accepted Jesus Christ as their ideal of character, if they had accepted the life he offered to them, if they had begun to live the divine life of faith and hope and love, if under his leadership they had proceeded to organize society on the basis of righteousness and peace and joy in holiness of spirit, it is evident that the world would have been saved. Christ's death was necessary because mankind would not accept Christ as their ideal, nor the life which he offered to them. It was made necessary by the sin of men, not by the love of God. Christ's whole life was a self-sacrifice for humanity; his death was simply the consummation of that sacrifice due to the wickedness of men. If men had not been wicked, or had accepted Christ, still his life would have been a sacrifice, but the death by crucifixion would not have taken place.

Do you confine your belief in immortality to the invisible but lasting impressions we make and leave behind, either by direct or indirect association, on the minds of those who survive us? Do we become immortal in so far as we dwell invisibly in the minds of those who remain and those who come after us? I gleaned this from your able article, whereas others find an intimation of a future state of the soul surviving the body.

I am sorry if my articles on "Immortality" have left room for any doubt on the question you present. I believe that the body is simply an instrument or tool which the invisible spirit of man employs, and that the decay of the tool no more indicates the decay of the spirit than the destruction of the violin indicates the death of the violinist. By immortality I mean not merely that the influence of man will survive his death, nor *merely* that the spirit will live after the body decays and mingles with the dust, but that the invisible spirit which dwells in the body is itself not subject to decay. Immortality is not merely a future hope; it is a present possession.

Is absolute truthfulness possible? Can we, for example, eliminate the element of falsehood from our work of obtaining the necessary evidence for the prosecution of evil-doers? Did

not Mr. Burns resort to falsehood? Was it justifiable? P. L. B.

Paul intimates the principle by which we are to determine the answer to your question. "Put away lying," he says, "because we are members one of another." The evil of lying is that it destroys confidence, and confidence is the bond which unites society and makes co-operation, fellowship, unity of action for a common end, possible. In general terms, it may be said that any falsehood which tends thus to dissolve confidence, and so to destroy community of life, is wrong. The deceits practiced in war and the deceits practiced and the falsehoods told by detectives in the discovery and prosecution of crime have no such tendency.

In your "Confession of Faith," in The Outlook of August 17, you say: "The dogma that it is only in this life that man can repent . . . I repudiate as unscriptural. . . . I refuse to believe that the accident of death transmutes God's mercy into wrath." Do you mean by this that there is no hell and that there is a chance to repent after death? If this is what you mean, and the Scriptures bear out this idea, will you please cite references?

The word "hell" in our English New Testament is used to translate two Greek words, one *Hades*, the other *Gehenna*. Hades means simply the abode of the dead, and might not inappropriately be rendered by the simple word *death*. Gehenna was a valley outside of Jerusalem to which the refuse of the city was carried and where it was cast upon a fire kept always burning for the purpose of consuming this refuse. By the term "hell fire" Jesus meant, and would have been understood by his hearers to mean, the fire burning in this valley. It was a symbol, not of torture, but of destruction. When he says to the Pharisees who devoured widows' houses and for a pretense made long prayers, "How can ye escape the damnation of hell?" what he meant, and what he would have been understood by his hearers to mean, was, How can you, false pretenders, who pride yourselves on your religion, escape being cast out as the refuse of the universe, to be destroyed? It is the fundamental teaching of the Old Testament, repeated again and again, that God's mercy endureth forever. It is the fundamental teaching of the New Testament that Jesus Christ is God manifest in the flesh, the revelation and interpretation of his character. There is nothing in the Scriptures, properly interpreted, to justify the assertion that this mercy of God, affirmed in the Old Testament to be everlasting, and manifested as unfailing and infinite by the life and character of Jesus Christ in the New Testament, ceases for any man at that man's death. It is the eternal quality of God to be sorry for the wrong-doer and to save him from himself if, by repentance and abandonment of his wrong-doing and coming to the Father, he seeks to be saved.

What do you think of prayers for the dead?

I see no reason why I should not express to my Father my affection, love, and desire for those who have gone from my vision into the other life; but my prayers for them would be rather a committing of them to him than an entreaty for them or on their behalf. So far as I can see, the answer to my prayer for any one comes in suggestion to me of something I can do for the one for whom I am praying. If no such suggestion comes, then my prayer is a committal of that one to the Father's care and keeping.

Why did Jesus send his Apostles first to the Jews, since his omniscient mind knew that not through the Jews would the world hear the Gospel?

But it was through the Jews that the world heard the Gospel; they heard it through the Apostles, all of whom were Jews; most of all through Paul, who describes himself as a Hebrew of the Hebrews. In fact, history shows that the religion of Jesus Christ is not a separate religion from the religion of the Old Testament prophets, but a continuation, development, and perfection of that religion. This is what Jesus Christ meant when he said, "I have come, not to destroy the law or the prophets, but to fulfill."

What is your interpretation of "Lead us not into temptation, but deliver us from evil"?

It is the expression to our Father of the desire not to be led into temptation, and of our trust and confidence in him that if temptations assail us he will give us the strength with which to resist them. Directly contrary to the spirit of this prayer is the temper which courts trial in order to display to others or to one's self the strength of resistance; the temper which led Peter into great temptation and through that great temptation into flagrant sin.

FOLLOWING THE CAMPAIGN

A WEEKLY DIGEST OF POLITICAL OPINION
AS EXPRESSED BY PEOPLE AND NEWSPAPERS

POSSIBLE GOVERNORS

NEW YORK

GOVERNOR WILSON remarked, when Mr. Oscar Straus was chosen by the New York Progressives to lead the fight against the Murphy and Barnes machines, "This has put us on our mettle."

Progressive, Democratic, Republican, and Independent newspapers agree.

"It even put Boss Barnes on his mettle," says the New York "Press" (Prog.) . . . "Hedges was the compromise with Progressive sentiment. . . . Boss Murphy, . . . forced to choose between a Progressive Democratic candidate for Governor and disaster to his boss-ship, surrendered to the demand for Representative Sulzer."

Says the New York "American" (Dem.):

When the Progressive Convention made its spontaneous choice of Oscar Straus, the "American" declared that the naming "of that able, accomplished, and stainless citizen would raise the level of State politics." The "American's" prophecy is already fulfilled. The Republicans at Saratoga . . . nominated the honest and independent Job Hedges. Democracy has learned the splendid lesson of the hour, and the value and glory of its free Convention is indicated in its admirable and winning ticket.

Says the New York "Globe" (Rep.):

Mr. Hedges and Mr. Sulzer are both under great obligations to Oscar Straus and to the Progressive State Convention. Neither would have had the ghost of a chance of getting the honor they sought had it not been for the Straus nomination.

Says the New York "Sun" (Ind.):

This State has seldom seen three unbossed political conventions like the three just ended. It is no more than fair to say that the Progressives set the good example. But Republicans and Democrats alike rose to the occasion. . . . The Democratic candidate may lack the distinction of Mr. Straus and the political philosophy of Mr. Hedges, but he possesses a sturdy courage and vigor of his own that will make the three-cornered contest a very fair and even battle.

"The nomination of a man like Mr. Straus is a complete answer to the question frequently asked. 'What is the need of a third party?'" avers the Baltimore "News" (Prog.), and adds:

In this very instance the third party has struck a bad blow at politicians of the type of Barnes, the Republican leader, and Murphy, the Democratic leader. We count it a tremendous gain for good government that within so short a time after its organization the National Progressive party has forced the Democratic and Republican parties of New York to be on their good behavior.

The Washington "Herald" (Ind.) declares:

Mr. Straus is as admirably fitted in character, nobility, in broad public experience, and in the respect which he enjoys among the people, for the Governorship of New York as any man who could be named by any party.

The Boston "Daily Globe" (Ind.) says that "in naming Mr. Straus the Progressives have put forth one of the strongest men in the Empire State, one sure to attract the attention of the country and the support of Independents." The paper adds:

The Democrats of New York cannot expect to defeat such a man with a Tammany candidate, or the Republicans with a Barnes stool-pigeon.

Says the New York "World" (Ind. Dem.):

Oscar Straus is a very popular candidate for Governor, who will admittedly run far ahead of his ticket, . . . but, unless all previous election statistics are hopelessly misleading, the real fight is between Mr. Sulzer and Mr. Hedges.

Of Mr. Hedges the New York "Evening Post" (Ind.) says:

Job E. Hedges has toiled long in the Republican vineyard, and at last has received his reward—the nomination of his party for Governor of New York. Like his namesake of the Bible, he has been patient, though not afflicted nor humbled in the dust. Indeed, he might have held high office before this had he said the word, but he has preferred to work in the ranks and wait until the turn of the wheel should bring him within reasonable distance of the executive chair at Albany. . . .

Now he sits in a three-cornered political game with fairly good cards in his hands, and a clean, wholesome public record as an asset. His contact with voters in past campaigns has made him well known to the people up-State, and here in his home city he needs no introduction. To be sure, Republican stock is at low ebb this year, and the outward signs are against the election of its ticket, but strange things happen in politics, and it is safe to say that Hedges won't throw up his hands until the ballots are counted against him.

The New York "Press" (Prog.) says that "hardly any man nominated for Gov-

ernor of any State ever won so fine a tribute of personal esteem as was paid from all partisan sources to Job E. Hedges." The "Press" adds:

> This testimony to the manhood and individual worth of the Republican candidate must be all the more like gold to him, since it is given by men whose consciences will not allow them to vote for him.

Nevertheless the "Press" concludes as follows:

> The citizen who can get himself generally liked by gentlemen who boss conventions in these New York days is far too amiable to be a resolute and unflagging advocate of the people's interests against special privilege.

The Democratic candidates are thus described by the Brooklyn "Eagle" (Ind.Dem.):

> It was natural and not unfitting that William Sulzer should be named for Governor by a freed Convention, and Martin H. Glynn for Lieutenant-Governor by the same body.
>
> Both men have invariably and consistently led the demand for free action in Democratic nominating conventions. Both have illustrated it in their conduct, in the offices which they have wrung from the rank and file of their party in districts and from the representatives of the rank and file in public tribunals.

As to the so-called "unbossed" Convention, the New York "World" (Ind. Dem.) remarked, before it convened, "Unless the State Convention nominates a candidate for Governor who is publicly known to be an anti-Murphy Democrat, the next Governor of New York will be Oscar S. Straus or Job E. Hedges." The "World" now supports the Democratic candidate, despite such statements as this from the New York "Globe" (Rep.):

> Murphy is in control of the machinery of his party more than ever. The candidate for Governor, during all of his adult life, has been an avowed Tammany man, for twenty-three years a Tammany officeholder, and has opposed every movement within the Democratic party looking to the overthrow of boss control.

To this the New York "Evening Post" (Ind.) adds: "We hope . . . that . . . we shall hear less about the Syracuse Convention as being unbossed. A letter before us . . . reads as follows:"

> The Convention was absolutely in the hands of Murphy. . . . It was all arranged beforehand, and "Sulzer on the fourth ballot" perfectly understood among the initiated.

This is from the Voters' Directories of the "Evening Post:"

> 1892. William Sulzer—Lawyer; has been a member for three terms; is personally honest, but is trammeled by Tammany orders, which he obeys implicitly; voted for many bad bills; defended Judge Maynard, and was Tammany's leader on the floor.
>
> 1893. William Sulzer—Lawyer; Speaker of the last Assembly; thoroughly subservient to Croker in all things, allowing him to select the Assembly committees in the café of the Hoffman House; he was literally Tammany's agent in the Speaker's chair, being one of the most unfair and unscrupulous occupants it has ever had.
>
> 1894. William Sulzer—Lawyer; was a member of the State Assembly for several terms, and Speaker in 1893; he was at all times the personal agent in the Assembly of Croker and Tammany, and used his office entirely for Tammany ends; is a man of ordinary ability and extraordinary self-conceit.
>
> 1896. William Sulzer—Lawyer; has been an office-seeker and office-holder practically ever since he was admitted to the bar; was member of State Assembly for several terms, and Speaker in 1893; was the personal agent in the Assembly of Tammany and Croker; elected to Congress in 1894, and has been a worthless member; has posed as one of the first to grasp Bryan's hand.
>
> 1898. William Sulzer—Lawyer; has been an office-seeker and office-holder practically ever since he was admitted to the bar; was elected to Congress in 1894 and 1896, and previously was a member of the Assembly for several terms, and Speaker in 1893; was the personal agent there of Croker and Tammany; has been a worthless member of Congress; was an ardent and spectacular supporter of Bryan, and has attempted to be the representative of the silver element of his party in this State; is frankly for free silver, and all that the Chicago platform stands for.

This is the more effective since it comes from a paper which is supporting Mr. Wilson, who has expressed his gratification at Mr. Sulzer's nomination. As to Mr. Sulzer's later services in Congress there are two opinions. One is reflected by the New York "American" (Dem.):

> William Sulzer for honest service was given the Committee on Foreign Affairs—a world committee, in which statesmen have failed, but in which William Sulzer won new laurels for judgment, vigilance, and discretion in his country's interests. There is scarcely a piece of progressive Democratic legislation within this decade with which William Sulzer has not been prominently connected.

The other opinion we find in the Chicago "Evening Post's" (Prog.) quotation from Representative Kent's epitome of his fellow-Congressman:

> The statesman who insults a foreign nation is not, as he may suppose himself, the fourteenth stripe and the forty-ninth star in our flag; he is a public nuisance.

MASSACHUSETTS

In Massachusetts the Republican candidate for Governor is ex-Speaker Joseph

Walker. He is a Progressive Republican. He says :

If the Republican party is to return to the confidence of the people, it must get rid of Penrose and Penroseism. In fact, it must get rid of bossism and machine rule of every kind.

If the Democratic party is to gain the confidence of the people, it, too, must get rid of Murphyism and Taggartism.

But the Boston "Journal" (Prog.) thus reminds him :

The Republican party had its great opportunity at Chicago, in June, to cast off bossism. It had the mandate of millions of Republicans in open, unbossed caucus to do so. And this was thrown contemptuously into the wastebasket by . . . Penrose, Barnes, Crane, Guggenheim, and the rest.

Now the man who accepts the work of that Convention accepts the bossism and shares its responsibility. . . .

Men, like Walker, who see the evil, even if they have not the courage of their convictions to combat it, help point the way.

The Democratic candidate is Governor Foss—to succeed himself. Mr. Foss is well known. Not so well known is the Progressive candidate, thus described by the Topeka "Capital" (Rep.) :

In Massachusetts the Progressive party nominee for Governor is a man who has never been actively in politics, a manufacturer who has been a pioneer in recognizing the rights of labor in the modern sense, a millionaire by his own efforts, a man of public spirit known from one end of his State to the other as a model citizen, of extremely progressive views politically—Charles S. Bird, the paper manufacturer. Mr. Bird, like Mr. Straus, wanted no office, but accepted nomination because he regarded it as a duty to stand up for his progressive convictions.

Of Charles S. Bird "Life" (Ind.) says :

Mr. Bird is so energetic and comprehensive in shooing bad persons—Taft and Wilson voters—away from his ticket that it looks as if he could not get votes enough to win. Which is a pity, but he is a better man than Massachusetts needs for Governor, and Mr. Foss will do.

NEW HAMPSHIRE

For Governor of New Hampshire the Republicans have named Franklin Worcester, of Hollis. The Democratic candidate is Samuel D. Folker, of Rochester. The Progressive candidate is the popular novelist and publicist Winston Churchill, of Cornish.

"Collier's" (Ind.), though advocating Mr. Wilson's election to the Presidency, advocates the Progressive ticket in certain States. It says :

In New Hampshire the Democrats have put up a fairly good ticket, but the fine movement headed by Governor Bass and Winston Churchill has deserved well of the people, and it has thrown in its fortunes with the Moose. A Democratic victory in New Hampshire would probably mean a continuation of this progressive work, but not certainly. A victory for the regular Republicans would mean putting the State back into the hands of the Gallinger-Boston and Maine machine. . . .

Years ago, when the Boston and Maine owned New Hampshire and the Gallinger political machine was the agent through which the railroad ran the State, Winston Churchill was the first leader in the effort to shake off the bondage. That effort was successful, and Governor Bass has given a splendid administration. . . . The Gallinger crowd and the railroad crowd are now struggling to get back. They are using their usual tools. . . . The citizens of New Hampshire owe it to themselves to make Mr. Churchill their next Governor.

In his letter of acceptance Mr. Churchill says :

The Progressive party embodies for me a cause both sacred and inspiring. It is the party of the future. As with all great movements, the motive power behind it is religion—the longing of a people for social justice, the determination at last to bring into government Christianity.

CONNECTICUT

As was anticipated, Governor Baldwin has had the honor of a renomination without opposition for the Governorship of Connecticut on the Democratic ticket. The Republican nominee is Judge John P. Studley, also of New Haven. The Progressive nominee is the Hon. Herbert Knox Smith, the efficient Commissioner of Corporations in the Department of Commerce under two Administrations.

As reported by the Waterbury "American" (Rep.), ex-Mayor Studley thus defines his attitude towards the present problems before the State :

Questions of humanity are coming to the front as never before. . . . The party platform this year is unequivocally in favor of a Workingmen's Compensation Act. . . . And I favor, with every lover of Connecticut, the extension of the work of our State Agricultural College and our Agricultural Experiment Station.

Despite this, "Connecticut has long needed such a revolt ; the pity of it is that an uprising of Republicans, of the sort who gathered in Hartford this week, did not take place years ago," exclaims the Springfield, Massachusetts, "Republican" (Ind.). As to the platform on which Mr. Smith stands, the "Republican" adds :

The Progressive platform of Connecticut merits cordial approval for the most part. . . .

The greater portions of its proposals are such that the "Republican" could heartily support them.

OHIO

In Ohio the Republican nominee for Governor is General R. B. Brown; the Democratic, Congressman James M. Cox; and the Progressive, Arthur L. Garford.

The Louisville "Evening Post" (Dem.) thus comments on these three candidates:

The election of Mr. Cox does not at this date appear to admit of doubt. The real fight is for second place between Brown and Garford.

As to the last named, the Topeka "Capital" (Rep.) describes him as "probably the most popular man in Ohio," and adds:

He has never been an office-seeker. He is an "advanced" employer of labor, a millionaire, but a public-spirited citizen of very progressive political views. So strong in Ohio is Garford that it had been the intention in this critical year to nominate him for Governor on the Republican ticket, and it was believed that he would sweep Taft through. . . . After the Chicago Convention he withdrew as a candidate for the Republican nomination of Governor of Ohio. . . . The Convention then turned to another candidate. Garford was later nominated for Governor by the Progressive party.

The Cleveland "Plain Dealer" (Dem.) is forced to admit that "the Ohio Progressives have selected in Mr. A. L. Garford as their candidate for Governor one of the strongest men that has made the race for that important office in Ohio in many years."

INDIANA

The Louisville "Evening Post" (Dem.) also admits that "in the matter of nominations for State offices in the big States the Progressives are playing the game everywhere with great shrewdness." As an example the Louisville paper instances Indiana:

The Progressive nominee for Governor is former Senator Beveridge, under normal circumstances the strongest man politically in Indiana, and certainly one of the best nominations that has been made for Governor in that State in years.

In the Indianapolis "Star" Mr. J. M. Maxwell thus describes the candidate:

I have never met a man in public life with superior intellectual attainments and capacity than Mr. Beveridge. There may be such men in public life—only I have never met them. Moreover, the man is sincere as to his public avowals. There need not be the slightest doubt that he will try to put through to the letter just exactly what he says he will do. So, if Indiana people want that kind of a Governor, now is the chance to get one.

ILLINOIS

In Illinois Governor Deneen is a candidate for re-election on the Republican ticket. The Democratic candidate is Judge Edward F. Dunne, the well-known ex-Mayor of Chicago. The Progressive candidate is State Senator Frank H. Funk, a farmer of Bloomington. The popularity of Mr. Funk may be gathered from the following prophecy printed in the Chicago "Tribune" (Ind. Rep.) and issued by the Progressive headquarters in Chicago:

Theodore Roosevelt for President and Frank H. Funk for Governor will sweep Illinois, from Chicago to Cairo, in one of the greatest political landslides that has ever been known in this State. . . . Hundreds of down-State polls show that Funk for Governor is running along closely with Roosevelt and in some counties is even ahead of the Colonel.

Two testimonies, favorable to Mr. Funk, from journals which support Mr. Wilson for the Presidency, are interesting. "Collier's" says:

In many places the reform movements which are now in progress, the fruit of years of effort against odds, depend for their encouragement upon the success of the new party State tickets. In Illinois, for example, the third party State ticket fully deserves to win.

The second quotation is from the Louisville "Evening Post:"

In relation to the future of the Progressive party, there is no section of the country where the results in November will be more important than in the Middle West. . . . Illinois is believed to have displaced California as the most probable Roosevelt State of any in November.

"It must be given to the new party," says the Topeka "Capital" (Rep.), "that the able, successful, high-class men who have been attracted by its principles and have felt under obligation to accept its nominations this year in many States are bound to strengthen the chances of Roosevelt against Wilson." And the Chicago "Evening Post" (Prog.) thus concludes:

Winston Churchill in New Hampshire, Herbert Knox Smith in Connecticut, Oscar Straus in New York, Albert J. Beveridge in Indiana, Frank H. Funk in Illinois, Charles S. Bird in Massachusetts, Arthur Garford in Ohio; here are seven possible State Governors who more than match the "seven Governors" who signed the call for the Roosevelt candidacy. If the Progressive party does nothing more than force upward the standard of gubernatorial nominees by naming such men, it will again have justified itself before the country.

CONTROLLING THE PASSIONS OF MEN—IN LAWRENCE

BY AL PRIDDY

The readers of The Outlook will remember the serial story "Through the Mill," in which "Al Priddy" told his own experiences as a mill-boy. In addition to the special knowledge of industrial conditions thus gained at first hand, the author, as will be seen from this article itself, has had opportunities to compare the treatment of striking factory operatives in Lawrence and New Bedford.—THE EDITORS.

I HAD the doubtful pleasure of watching the organization and dramatic development of last winter's strike in Lawrence. I was present also on that recent day of riot with which that unfortunate city closed the month of September. I talked with soldiers, policemen, citizens, strikers, manufacturers, and reporters. I haunted the court, the strike meetings; followed the parades; and heard numerous speeches by Ettor and other leaders. I watched the proceedings with as impartial an eye as possible, and tried to arrive at honest conclusions. I am forced to the belief that the militia were not necessary to control last winter's struggle; that through unmilitary tactics and through excited police methods the stormy days of the first strike, and especially the seriousness of the more recent disorders, were worse than they should have been.

One afternoon last January one of the largest demonstrations of the strike took place. After a meeting on the Common, which was addressed by Ettor, who warned the people when they paraded to be orderly and sweet-spirited, the great throng of strikers organized themselves into a procession and paraded through the leading business street—Essex Street. One may imagine a group of children—who love pageantry and martial noise—in the Italians, the Poles, the Lithuanians, and the very few French and Germans who formed that procession. They shouted as children would shout, and sang. (The strikers were the only ones who sang during those hungry days.) It was just the outflow of children's spirits bent on nothing more than an afternoon's recreation—a parade.

A wheezy Italian band furnished the music; a droning, blaring, strumming collection of trombones, guitars, pipes, and drums. They played the "Internationale," and the vibrant, laughing men and women sang it in a Pentecostal merging of languages and dialects.

They shouted and hooted; but they did it good-humoredly, withal.

Essex Street ends against the Everett mill, and there are two ways of exit, one down by the cross street in the direction of the American Woolen Company's mills (those have always been the mills with the strongest guard), and the other up and away from the mills. The exit towards the Wood mill was guarded by a line of militia thrown across the street. The exit away from the mill was guarded by Ettor, standing on a hydrant and braced by some companions. Ettor could be seen towering over all.

As the flood of strikers came to the end of the street and saw their leader facing them, cries of "Speech" and "*Viva!*" were sent up. Ettor, masterly in personality and with a leader's gift of power, said not a word; smiled, and with a graceful gesture of his forefinger and a mere look of his eyes *up* the street, sent the swirling, shouting, laughing paraders *away* from the mills, *away* from the militia and police, to their homes!

Meanwhile something had invited me to stop near the militia and watch while all this was taking place. It was the sight of two officers in charge of the line of soldiers. As the paraders hurried past this guard on duty, what did they see? The two officers were nonchalantly smoking cigarettes and blowing the smoke indifferently in front of them, so that it floated into the nostrils of the strikers! I called a policeman's attention to the officers and said:

"Tactics!" The policeman smiled.

It was the noon hour. Another parade—with a large American flag leading it—was moving. It was the intention of the paraders to demonstrate their strength past the Pacific and the Wood mills. I joined the group that led with the American flag, and watched what ensued. The street leading past the mills was unguarded. Down the entire sweep of it no soldier or policeman blocked the way. No messenger debated with the strikers, saying that they were not to parade down the street. So the paraders began their flourish

of shouts and hoots, and kept moving. Nothing else was done. They had gone but a block when a company of soldiers excitedly ran from near one of the mill bridges which crossed the "moat" to the industrial "castles," and blocked all further marching down the street. It had all happened so suddenly and had been so unexpected that the strikers, naturally, were thrown into confusion.

There was a parley between the militia officers and the leaders of the procession. The parade was to be deflected up a side street. Suddenly the bearer of the American flag broke through the line of soldiers and was followed by the paraders, who drove back the militia for a distance of several yards. Then, with wagon-spokes in hand, the soldiers were able to drive back the rioters, and later, with drawn pistols, were able to keep them in efficient check. So far, so good. The soldiers had permitted the parade to enter for one block of the street, and then, having given them the idea that an orderly procession could pass down, had suddenly, in this last-moment way, put the whole parade of Italians and Poles in confusion. Then a strange thing took place, after the clubbing of the strikers and the attempted deflection of them up the side street, an officer of militia rushed up to the officer in charge and excitedly informed him that he *must let the strikers through!* Tactics again!

One of the leading officers of militia in charge at Lawrence went to Boston during the excitement of the strike and made an after-dinner speech in which, in the next morning's papers, he was reported to have indulged himself in very strong and uncomplimentary comments on the Lawrence industrial workers. He was reported to have called them "an unruly mob" and other stronger types of proletarian lawbreakers. The next morning he went back to Lawrence to be a leader in establishing peace! Tactics again.

In one of the Boston suburbs, when I was speaking with a resident in that aristocratic section, that resident said to me, amusedly:

"Our company of militia went down to Lawrence during the first days of the strike. Most of them had to leave Harvard for it, but they *rather enjoyed going down there and having their fling at those people!*"

On the morning of September 30 I stood in the Lawrence court-room as more than thirty Italians and Poles—men and women, boys and girls—were arraigned. It was somewhat disconcerting to have a dwarfed Italian stand at the bar with his head swathed in white, bloody bandages, and hear him plead "Not guilty!" A young striker, a witness, wandered confusedly into the reporters' section, not knowing what to do with himself. One of the policemen jerked him back with an ugly, brutal gesture, and, not giving the dazed boy a chance to understand, was joined by a brother policeman in thumping the boy in the back and driving him, as one drives a recalcitrant cow, into the room for witnesses. Then the same policeman who had initiated all turned on a young reporter who smiled at him, and almost deferentially listened to the journalist's witticism, in lurid contrast to the event which had just occurred. The young policeman outside the court door talked with me. He gave me several illustrations of the rioting which had taken place on Sunday, and of that which had taken place about the mills two hours earlier that morning. He could not speak calmly of the situation, of course, for he too had been buffeted about. One could not expect him to speak calmly. But this is the point. After his description of these things his eyes flamed, and, with an oath, he hissed:

"But we'll get the ——! We'll give them some lead to-morrow!"

What could the peace of Lawrence expect from such an officer of justice who went out the following day?

In the court-room that morning I sat in the midst of twenty stalwart, capable State police. One had to compare them with the special police drawn up by the city and sent out among the emotional strikers to maintain order. One had to compare them with some of the boyish bluecoats with clubs buckled to their belts—boys of high school age, some seemed, and making a very great effort to appear as dignified as possible in their new trappings.

After the rioting of Monday morning, when a solitary policeman tried to make arrests with drawn club—arrests that demanded a squad of trained officers to handle them efficiently with the least expenditure of passion and head-battering—after the city had paused from this, I sat in a lunch-room with an outsider, a man who had been through the former strike and who appeared to know the situation completely. He had little concern for the strikers or their leaders. Therefore he was not biased in their favor. As we sipped our coffee he suddenly said to me:

"Did you see the trouble? Did you watch it?"

"What do you think gave it the impetus and fire to which it attained?" I asked in return.

"The police," he said. "They're too hot-headed!"

I picked up my paper this morning and read the following from the Boston "Herald:"

SCORES POLICE

"A policeman is given his club and gun to protect himself, and any policeman who makes use of those weapons as the Lawrence police did outside the Arlington mill yesterday morning is a disgrace. It is an outrage the way they acted."

This statement was made by Deputy Chief George Neal, of the State police, at present in Lawrence with twenty-five State detectives. He is indignant at the manner in which the city police handled the strikers, and has instructed his own men to use only such force as is necessary in handling the crowds.

By way of contrast to and emphasis of the foregoing, let me recite a recent strike experience of mine in New Bedford. Lawrence is comparatively a newcomer into the textile strike situation. New Bedford is a battle-scarred veteran. In mill gate tumults and street riots New Bedford's police have had their discipline. They *know* how to keep processions from turning into mobs, and how *not* to turn the parades of mobs into violent, costly hate and strike engendering riots. To them we can look for the efficient control of incipient riots, which they prevent with a minimum of clubbing, blood-letting, or hostility.

The weavers of New Bedford were engaged in a strike over the so-called fining and grading system—a strike which was fought around an adverse ruling of the court which nullified, or so the strikers claimed it did, the legislative act of 1911 which declared that it would be illegal for a textile mill to fine weavers for imperfect cloth.

During the first morning of the strike I stood at the Butler mill gate. The situation was Lawrence over again. The I. W. W. members thronged about the mill gates: Poles, Lithuanians, and Slavs, but no Italians. (Italians might be said to be indigenous to the American Woolen Company, in textile work, for they are where the "Wood" mills are, but are hardly found in the textile cities like New Bedford and Fall River.) The I. W. W. was striving to duplicate in New Bedford what it had accomplished in Lawrence. Much depended for the prestige of the I. W. W. on that morning's picketing. Therefore the I. W. W. leaders were determined to do some desperate picketing.

A group of fanatical Polish women stood in front of the half-opened gate. Their hair streamed down their faces; their cheeks were a dull red with their Amazon labors. While the throng of Poles and Slavs crowded about, while the men incited their wives and daughters to action, the English-speaking people stood off by themselves, exactly as they had in Lawrence, and had no part nor lot in the picketing. Such was the setting, then, for another incipient Lawrence, that should startle the country.

Two policemen were on duty near the gate. Practically in their hands lay the possibility or the impossibility of a recurrence of the Lawrence riots. They were smiling good-humoredly. I had never seen the police smile in Lawrence under such circumstances. The New Bedford policemen smiled. They smiled when the Polish women pickets, inferring from the smiles that they had mastered the police, became more violent in their unlawful manner of picketing. They tore English women's dinner-pails from their hands and slapped English women in the face. They wrestled with English spinners and sent them back away from work. Still the two policemen folded their arms and smiled. In Lawrence clubs had been drawn and many arrests made on lesser provocation. Then, when the policemen determined to shut the gate and tried to reach it, the Polish women pulled them back and mishandled them. But the two policemen only smiled—and shut the gate. Thus for nearly an hour this sort of picketing and policing took place, and then—

Under the efficient leadership of the chief of police, a whole company of police arrived. Waiting until their fellows were with them, shoulder to shoulder, so that they would have the strength of hands instead of the falser strength of revolvers and clubs, the two policemen who had smiled stopped smiling, picked out the leaders in the morning's disorder, and took them into the mill office, while the remainder of the policemen easily and efficiently dispersed the people—not a single club had been drawn during the morning. That decided, too, the outcome of the strike. The I. W. W. had found its most potent sting—riotous incentive—withdrawn. New Bedford was to remain New Bedford. The two policemen had smiled.

THE POLICE SCANDAL AND THE GOOD OLD DAYS

BY RAYMOND B. FOSDICK

FORMER COMMISSIONER OF ACCOUNTS, CITY OF NEW YORK

THE recent revelations in connection with New York City's Police Department provide additional material for those who believe that municipal government is the conspicuous failure of American democracy. Here was a man, a confessed gambler, who, on the eve of his voluntary appearance before the District Attorney to furnish information, was shot down in a public street under circumstances which, in their brightest interpretation, indicate the existence of a definite understanding between the criminal element of the city and the police. In the first burst of hot indignation that followed the disclosure, the cynical opinion was freely expressed by many that there was no hope for municipal government in the country; while our foreign critics seemed to regard the developments as a fresh proof of American degeneracy.

At a dinner at the City Club in New York, shortly after the shooting of Rosenthal, one of the speakers expressed himself in the following words:

"In all this fight for honesty in city government, are we getting anywhere? Have we made any real advance? Are the results of our work permanent? Aren't we treading in a blind circle, coming back to the same problems and the same failures? What is to prevent the return of a Van Wyck in New York or a Reyburn in Philadelphia?"

The speaker faithfully expressed the feelings, not only of his audience, but of thousands of citizens throughout the land whose faith in the possibility of honest government has been a trifle shaken by the glaring police situation in New York. Probably the spectacular element in the disclosures, the gruesome fact that vice and crime have been protected for a consideration—a fact that strikes at the very root of government—is largely responsible for this feeling of uneasiness and concern which finds expression in the remark of a prominent citizen quoted in the New York "Sun," to the effect that nothing like this was discovered in Tweed's time.

The purpose of the present article is not to minimize the seriousness of the police situation. The writer is in a position to know how true are some of the allegations which have been printed in regard to the matter. The situation, however, while momentarily discouraging to those who believe in the future of our experiments in municipal government, is not, in proper perspective, a subject for despair. Had the speaker at the City Club been able to catch a glimpse of the dark years through which New York, in company with her sister cities, has traveled to the present, he would have seen what steady and permanent progress has been made.

The name of Tweed has come to be a standard by which we establish degrees of corruption. In the newspapers we commonly see such expressions as "worse than Tweed," "out-Tweeding Tweed," etc., applied to present-day problems. And yet an intimate acquaintance with the methods to which the real Tweed resorted and the magnitude of his operations is enough to convince one that in these days we are as children at play in comparison with the generation that preceded us. The strange part about the case of Tweed is that he was known to be unscrupulously dishonest for so long before there was any concerted movement to oust him from his position as Tyrant of New York. In 1869 the taxpayers knew that they were being plundered, but they felt their position to be hopeless. "What are you going to do about it?" he had said to them when, in a mass-meeting held in Cooper Union, they had protested against the bills which he was forcing through the Legislature in connection with the widening of Broadway. In the knowledge of their feeling of hopelessness Tweed went his way. He understood the details of the city's business; they did not. His safety lay in their ignorance. He made himself a member of the Board of Audit, and was thus in a position to pursue his favorite method of raising the accounts of those who did work for the city or furnished it with supplies. There were no bureaus of municipal research or citizens' organizations in those days. The city's books of account were not open to public inspection as they are to-day. Practically and legally it was none of the citizens' business what went on on the inside. A man with a bill for $5,000 against the city would be approached by one of Tweed's agents and told to add another cipher to his

figures. Upon the presentation of a bill for $50,000 the creditor would be paid $5,000 *in cash;* the remaining $45,000 would go to Tweed and his friends. The amount thus taken in 1869 was comparatively small; in 1870 it reached 66 per cent, and later 85 per cent. In this manner the repair of the public armories was represented to have cost the city $3,200,000, the actual expenditures on this account being $250,000. If Ingersoll's bill for chairs at $5 each for armory furniture had set forth articles really supplied, it is estimated that the chairs would have reached seventeen miles if placed in line. In no city that I know of—certainly not in any of the larger cities—would it be possible today for any one successfully to operate this scheme. Our supplies are purchased and our contract work is performed under business checks and systems utterly unknown in the municipal administration of Tweed's time.

Tweed's ring undertook the erection of a County Court-House, the same building that now rears its ugly front on Chambers Street. They actually spent $3,000,000 on construction; the city's books, however, showed $11,000,000. Andrew J. Garvey, a humble plasterer, appeared in the books as having earned $2,870,464.06 in nine months in connection with this building! "Generations of plasterers yet unborn will take off their hats to his memory!" said one writer. "Garvey is the Prince of plasterers," said the New York "Times." "Earning $133,187 in the two shortest days of the year (December 20, 21, 1870), his good fortune surpasses anything recorded in the 'Arabian Nights.'" Bills for carpeting this building were paid in amounts enough to have covered City Hall Park three times!

"Out-Tweeding Tweed"? Our business systems introduced in the conduct of all city governments, our improved methods of control, the ever-widening publicity which civic matters receive, the active press, the growth of citizens' organizations, furnishing independent avenues of information, the steady development of a public conscience—combine to make the recurrence of the days of Tweed in any city an absolute impossibility.

History is a cure for pessimism. Those of us who sigh for the good old days, when there was no graft and corruption, no buying or selling of votes, no alliance between crime and the police, may well blow the dust from our municipal histories and read for an hour or two of the deeds of the fathers.

Take New York, for example. Ninety years ago there was but one public school in the city, maintained not by taxes but by public subscription. Water was supplied chiefly by the Manhattan Company, by means of bored wooden logs laid underground from the reservoir in Chambers Street. No fire department was dreamed of, and every blaze had the city at its mercy. The streets were unclean. Only two or three thoroughfares were fit for the passage of carriages. Briefly speaking, the city was filthy and neglected; its public improvements and expenditures were in a chaotic state.

This does not constitute a very favorable setting for the good old times. But let us get at the kernel beneath the exterior. Is it possible that petty graft existed in those days, as in these? Is it possible that public rights were disregarded and sacrificed for the benefit of a chosen few? The man who reads the history of New York City in the first part of the nineteenth century cannot escape the conclusion that it is a record of shameless corruption, in comparison with which our modern New York is Utopia. Public opinion seemed to be lifeless. Exposure followed exposure, only to result in the return of the same old gang to office. Public expenditures were made by committees of the Board of Aldermen, who refused to render any accounting of what they spent. Public contracts were let to public officials. A collector of the port who stole a million and a half of public money was allowed to go unmolested for seven months after the theft was publicly known, because of his political influence. Land owned by the municipality in the heart of the city was sold at low prices to politicians. In this way we lost our dock rights on the water-front and our chance to develop an extensive park system in Manhattan. The United States District Court convened for a while in Tammany Hall because Tammany Hall needed the rent that was paid by the city. Our streets were an abomination of filth; the city fathers refused to furnish pure water; yellow fever and cholera three times devastated the city, and in 1822 it was so deserted as a result of disease that grass grew in the principal thoroughfares. Fraud and violence were customarily used on election day. Wagon-loads of repeaters were openly taken from ward to ward to vote. In 1830 Walter Bowne was elected Mayor of the city by the aldermen through bribery that was never punished. In 1832 votes for

President Jackson were openly solicited at $5 each. In 1838 two hundred roughs were brought by the Whigs from Philadelphia to steer the repeaters at the polls. Inmates of the House of Detention who promised to vote the Whig ticket were set at liberty. In 1839 the Albany police brought twenty-three repeaters to help with the election in New York. In 1840 it was shown that the police justices made a practice of extorting money from prisoners, and of shielding from arrest or conviction counterfeiters, thieves, and street-walkers. Nothing was done in the matter. Public opinion took shape in no definite action. The police justices continued in office. These were the good old days!

From 1840 to 1865, when Tweed came into power, the political history of New York reads like a debauch. Assessments for improvements never actually made were laid on the taxpayers. The aldermen participated in all the profitable jobs. Convicts were allowed to escape from Blackwell's Island on condition that they voted as their keepers ordered. Prisoners whose terms had expired were kept at public expense until election day to get their votes. The inmates of the Almshouse and the Penitentiary were forced to manufacture articles for the use and profit of the officials of those departments. In 1851 the so-called "forty thieves" were in power in the Board of Aldermen. Election frauds were so numerous that they failed to excite comment. Ballot-boxes were stolen. Boys and paupers voted without interference. The police, who were appointed for one year by the Board of Aldermen, were utterly demoralized. In 1851 the Eighth and Ninth Avenue Railroad franchises were purchased from the Board of Aldermen by a boodle fund of $50,000. The Third Avenue Railroad franchise was purchased by $30,000 paid in bribes. The Williamsburgh Ferry lease was purchased by a $20,000 boodle fund. The Wall Street Ferry lease was similarly disposed of. The Board of Aldermen sold the Gansevoort Market property to a Tammany politician for $160,000 in the face of other bids of $225,000 and $300,000 respectively. In fact, as was stated at the time, bribery was considered a joke. The aldermen, the police, and all the city officials extorted vast sums of money in every possible way. And note this: Such was the condition of public opinion that the people paid it. It was part of the game. These were the good old days!

Perhaps this picture is a gloomy one. But at least we can be sure of this: there were no good old days. Insidious influences in American politics have not first appeared in our times. We are not the degenerate sons of our fathers. If we have sinned in our generation, so did they in theirs.

There is ground, however, for a great deal of hope in what we have been reviewing. It is true to-day, as it was fifty years ago, that corruption steals in when the door is open, and the price of liberty is eternal vigilance. But no one who is intimately acquainted with the details of municipal government can deny that the steady advance of recent years represents a permanent gain. Mayor Blankenburg's administration in Philadelphia and much that Mayor Gaynor's administration has accomplished in New York furnish a standard of public work below which succeeding administrations will not be allowed to fall far. The same is true of countless cities throughout the land. Taxpayers are receiving more of honest worth for their money than they did a generation ago. The principles of efficiency which have wrought such revolutionary changes in many industrial concerns are being applied to city departments. Municipal experts are being trained and are now at work whose function is the correction of faulty administrative machinery. A city department is no longer conceded to be "mine," as a former boss of Tammany Hall once spoke of the Health Department of New York. Such a department is looked upon as an indispensable piece of public machinery directly related to the life and health of the people. Where is the boss to-day who would dare call it *his!*

Under these influences, graft as our fathers knew it—colossal, barefaced thefts of public money, brazen acts of robbery and oppression, born of public indifference and countenanced as a corollary of the spoils system—is rapidly disappearing. Occasionally it breaks out, as in the New York Police Department at the present time, due entirely to the lack of adequate administrative control. Such lapses are natural, and they can be looked for again, for the constructive work is in its infancy. But the tools are at hand for the correction of such abuses, and back of the tools is a public no longer impotent.

An illustration comes to mind. The writer was at one time an assistant corporation counsel for the city of New York. It became his duty to render an opinion to the

Comptroller on the legality of a payment of approximately $100,000 to a Tammany firm of contractors which had the backing of a Tammany district leader. The claim was totally without merit, and there was no ground whatever to warrant payment. In fact, it was a sinister deal which had been caught and checked by the active arm of the then Commissioner of Accounts, Mr. Mitchel.

Hearing that I was writing the opinion, the district leader in question came to my office. Big, burly, and profane, with his brown derby cocked at a rakish angle on the side of his head, he loomed above my desk.

"Young man," he roared, "I want that opinion written right. That's my contract. You understand?"

"I understand," I replied, "that under the terms of the agreement the contractors are not entitled to a cent—and not one cent will they get."

With an angry bellow, he shook his huge fist in my face.

"Who in hell are you?" he shouted. "Don't you know who I am?"

I ordered him from the office, and we stood facing each other silently for a few seconds.

"Well, Mr. College-Bred," he sneered, "you fellows think times have changed, don't you? But they *ain't*."

Then he sullenly withdrew, muttering with many oaths that he would have my "job" before nightfall. My "job" remained intact, however, and the contractors were not paid.

The district leader's conclusion was wrong. Times *have* changed. The old order is giving place to the new. Countless agencies are operating to create a broader sense of responsibility on the part of the individual citizen. A new conscience is developing. The old lethargy which hung its head in discouraged silence in the presence of Tweed has succumbed to intelligent agencies demanding to know the facts. The standard of public service is being steadily raised, and the line between right and wrong in public life more sharply and distinctly drawn. This is the hope of the present situation. This is why the police scandal in New York, while serious in itself and utterly without excuse under proper administration, should present no real discouragement to those who have at heart the welfare of municipal government.

THE MESSAGE OF THE NINETEENTH CENTURY TO THE MEN OF THE TWENTIETH[1]

BY LYMAN ABBOTT

FOR nearly sixty years I have been a citizen, and a more or less active participant, in the public life of this Nation. I have seen great changes and great progress, and I ask you to look, with me, at the changes and the progress which have been made in those sixty years, in order that you may see where you begin and what you have to do; for your work, men of the coming generation, and our work who are men of the outgoing generation, are, after all, one. You remember how the cathedrals were built in Europe. They were generations in building. One generation took up the work which another laid down; and it had to correct the errors of the preceding generation and to add to the building construction—here a chapel, there a door, there a window; but cognizant all the time that they were building a structure for the worship of God.

Abraham Lincoln, in his Gettysburg speech, told the American people that here on this continent our fathers founded a new Nation, dedicated to liberty and the proposition that all men are equal. To make a Nation pervaded by a spirit of liberty and equality was our problem, and is your problem. We have done a little of the work. It is for you to carry it on to its completion.

Sixty years ago there were really two nations on this continent, bound together by some loose political ties. In the South was a nation essentially feudalistic, without free soil, or free speech, or free assembly, or free press, or free labor. In the North was a community essentially

[1] Address at Clark College Commencement, June 18, 1912.

democratic, with free soil, free speech, free assembly, free press, and free labor. And between the two there was a widening gulf—in the North a growing sense of the sovereignty of the Nation; in the South a growing sense of the sovereignty of the States. In the North there was a conviction that the people of the South were a people of braggarts who would never fight; in the South, a conviction that the people of the North were a nation of shopkeepers who would never fight; and it took four years of battle between the Blue and the Gray before we learned to respect one another. There never has been, and there never can be, a perfect union except that founded upon the basis of mutual respect; and when we clasped hands at Appomattox Court-House, we of the outgoing generation had cemented the political union; and there are not to-day anywhere to be found men more loyal to the Nation and to the National ideals than are to be found in the Southern States that fought four years to overthrow the Nation.

But we have made only a political union. We have gathered on this continent men from all quarters of the globe, from all tribes, and speaking all languages. The seer of the apocalyptic vision saw the time when men of every tribe and tongue and nation would meet before the throne of God. Well, here they are, although I am not sure that they all recognize that they are before the throne of God! And so we have this heterogeneous population, with no common tradition, no common religious faith, no common political opinion, no common creed, not agreed even upon the most fundamental conceptions of law, and order, and property, and the rights of persons. Out of this great heterogeneous people you have to make a homogeneous people; and you can do it only on the basis of mutual respect. We hear a great deal about our duty toward the immigrant population—what we owe to them. One of the things that we owe to them is the recognition that they have something for us—lessons they can teach us, life they can give us, inspiration they can afford us. We can learn patience from the Chinaman, good humor from the Negro, sturdiness from the Englishman, order from the German, love of beauty from the Italian, and economy (and we need to learn it!) from the Frenchman.

This problem I lay before you educated men—you who are going out with the title of doctor of philosophy, and master of arts, and bachelor of arts, and the right to wear I know not what gowns and hoods in the future—this duty I lay upon you, to make out of this great heterogeneous population a homogeneous people. We have made a political union; it is for you to make it a vital union.

We have abolished slavery. We did it at great cost. I say "we;" I do not mean we of the North—I mean we of the outgoing generation, we who are passing off the stage. We have abolished slavery, and I have lived to see three million slaves grow to be eight million free men. What are you going to do with those eight million free men? We hand over to you, as we pass out of the door of exit, the race problem, as you come in at the door of entrance.

In the history of the past, when a superior and an inferior race have lived on the same continent, one of three things has, I think, invariably happened: sometimes the superior race has exterminated the inferior, as the Israelites are supposed to have exterminated the Canaanites; sometimes the superior race has enslaved the inferior race, as we enslaved the African race in this country; sometimes the superior race has absorbed the inferior race, and a mongrel race has grown out of it as the result which has taken place in the Spanish-American republics. No one of these solutions is possible for us.

We cannot exterminate the Negro. It has indeed been proposed, in times past, to ship him back to Africa—a perfectly preposterous proposition, impossible of realization. We cannot hold him in slavery. We have tried that, and Almighty God has proved to us that a Nation strong and rich and powerful cannot violate the laws of God with impunity. And we cannot intermarry with them. For my part, I stand as the warm, earnest, enthusiastic advocate of the Southern doctrine that any intermixture of the black and white races is destructive to both; nor do I see how any man can spend, as I have, a week in Porto Rico, or make a brief visit, as I have, to Cuba, and not come back with the realization that James Bryce is right when he declares, in his little monograph on "The Relations of the Advanced and the Backward Races of Mankind," that the intermarriage of the colored race with the white race never raises the colored race and always degrades the white race.

You cannot exterminate, enslave, or absorb

the Negro. What remains? Our democracy has proved that men of different religious faiths, who three centuries ago were shooting and burning and fighting each other, can live together in harmony under the same flag. It is for you to prove that men of different races can live on the same continent, neither subjugating the other, each respecting the other, living together and maintaining the purity of their respective races, and establishing neither a slave system nor a caste system, nor anything akin to either. It is a great problem. I am not here to tell you how to solve your problems; I am here to put them on the blackboard for you to solve.

Sixty years ago this country was largely agricultural. The Civil War wrought three results. First, it dignified labor—struck off forever the opprobrium to labor which slavery had fastened upon it. Second, it invited immigrants from abroad to come hither, threw open a great public domain, and told the agricultural population of Europe to come to America and they could have one hundred and sixty acres of land for the asking. Third, by a high protective system we created a great organized mechanical industrial system, producing, as a result, a diversified industry. Thus in the sixty years since my graduation I have seen America pass from an agricultural Nation to a Nation with as highly organized an industry as is to be found anywhere on the globe.

But we have organized it wrong! We have organized it after the Manchester school of political economy, the school that said labor is a commodity, and the laborer has that commodity to sell in the open market; let him get the highest price he can for it, and let the capitalist pay the lowest price he can for it, and let them barter and bargain to and fro, as to-day in a Turkish or Persian shop you barter to and fro with the shopkeeper, beating him down until you can get at your price what he wishes to sell you at his price. In other words, we have organized our industry on a system of conflict between organized groups of selfishness. A great many of the social problems that are put to us to-day amount practically to this: How can we so organize society that ninety millions of selfish, struggling people can live happily and peacefully together? And the answer is, It cannot be done! If you tell the capitalist to buy his labor in the cheapest market, he will give the least wages he can and get his work done. If you tell the workingman to sell his labor in the highest market, he will give the least work he can for the wages he gets. Labor is not a commodity. The capitalist and the workingman are not dealing with a commodity. Labor is a human service; and the difference between a commodity and a human service is as wide as the difference between men and things. And your problem, the problem which we of the outgoing generation hand over to you to solve, is to wipe this assumption of the school of philosophy off the slate, and teach your generation, and the generations that are to come, that the workingman and the capitalist are partners working together in a common enterprise for a common product. The problem is not how much work you can get done for the least money, nor how little work you can do for the most money, but how can you, laborers and capitalists, work together for a common wealth, and find out how that product can be equably, justly, and fairly divided between you.

Now, again, I am not going to discuss that problem, though I would like to. But that would require another address. All I want to do this morning is to put before you your problems, to show you what they are, and to tell you that the future will hold you responsible for solving your problems as faithfully and loyally as your fathers have worked to solve theirs.

There are four great burdens of human society: famine, pestilence, poverty, war. We have abolished famine. I think it is perfectly safe to say that, so far as we can now see, there never will be any widespread famine in the United States. Men will go hungry, individuals will starve; but our system of transportation, our diversified industries, our improved agricultural methods, our larger spirit of humanity, all combine to insure us that America will never be visited by one of those decimating famines that every now and then bring a great tragedy in India or China. Read Kipling's story of William the Conqueror. I think you will agree with me that we shall never need a William the Conqueror to save the great population of America from widespread death.

We have done something in America toward abolishing pestilence. We have abolished yellow fever. Humanly speaking, we may safely say that yellow fever will never,

as a pestilence, visit our shores again. We have probably abolished cholera. Only the older members of this congregation can remember in what terror we stood, in the '50's, of cholera, from time to time, and how we fled from that terror with wisdom, as later we fled with folly from the supposed Spanish fleet. And we are abolishing the hookworm. We have abolished it from Porto Rico, and through the researches of one of our American citizens we have discovered it to be the cause of tropical anæmia, and have pointed out to older nations who are working in tropical countries the way to its extirpation. And we have begun a crusade for the abolition of tuberculosis, and we are beginning to believe that tuberculosis is a pestilence that can be stamped out. We have begun a campaign against typhoid fever, and by our experiments in our own army we have shown how men can be made immune from typhoid fever.

We have abolished famine; we have done a great deal toward abolishing pestilence; it remains for you, gentlemen, to abolish poverty and to abolish war.

You will say with your minds, if you do not with your voices, that this is a large contract. Of course it is a large contract, but you are large men, and this is a large country, and it is worth while to undertake to do only large things; and it is no greater undertaking to abolish poverty than it is to abolish famine and pestilence. It is not enough to give charity to the poor. Every man, says our Declaration of Independence, has a right to life, liberty, and the pursuit of happiness. Poverty denies all three of those rights. It takes the child from the school and from the playground, and puts him into our factories to eke out the inadequate wages of the father. It denies the right to happiness. It denies the right to liberty, and makes the workingman who works twelve hours a day, seven days in the week, and three hundred and sixty-five days in every year, a slave to his own physical necessities. Conclusive figures were put before the Supreme Court of the United States in defending, successfully, the right of the Legislature to limit the amount of labor that women should be allowed to perform, and thus protect the right of this generation to bring forth life to people the Nation in the future.

Professor Sidgwick, of Cambridge University, said, some thirty years ago, that the problem of political economy in the past was the production of wealth; the problem in the future is to be the distribution of wealth. In spite of what the demagogues say, and in spite of the blatant articles in the press, yellow and otherwise, wealth has been distributed in the United States better than anywhere else in the world, with possibly the exception of France. Nearly one-half of the people of America own the land on which they live. We who live in the great cities do not realize that fact. Our generation has made some beginning toward the distribution of wealth; but we have made only a beginning, and it is for you to take up this problem: How shall the great wealth of a great Nation be so distributed that no man shall go hungry or cold or naked? "In my father's house," said the prodigal son, "there is bread enough and to spare." America is your "father's house," and in America there is bread enough and to spare, and we, the intelligent, the educated, the thoughtful, and the comparatively well-to-do Americans, are ourselves guilty of our brothers' blood if we do not see that society is so organized, not that all men shall have alike, but that all men shall have enough to enable them to live in comfort and grow to manhood

And it is for you to abolish war. Not merely to reduce armaments, not merely to ameliorate the horrors of war, but to substitute the appeal to reason for the appeal to force in the settlement of great international controversies.

When I graduated from the New York University, fifty-nine years ago, the public school system had no existence in one-half of this Nation. There were schools in the South, and some provision was made for the education of the poor in some places in the South, but there was nothing that could be called a public school system. Even in Massachusetts the State Board of Education was not organized until 1834—one year before I was born—and in the State of New York the office of State Superintendent of Education was not finally instituted until 1854, the year after I graduated. I have forgotten what year it was—1840, I think—when, in the Athens of America, the Board of Trustees voted that the girls might use the high school when the boys did not have any use for it. In my college, and I think it is true in most of the colleges of the country, there was no laboratory in which the students did any work. There was not an engineering school in the country, nor a school of technology.

There were three learned professions—law, medicine, and the ministry. If you wanted to go into any one of those professions, you went to college; otherwise you did not. What was the use? Now the public school exists in every county in every State of the Union. In some respects the rural schools of the South are setting an example which, I venture to say, the State of Massachusetts could follow to advantage; I know that this is true of my own State, New York. And with this growth of the public school system there has been a great growth of universities, until to-day from four hundred pupils they have grown to four thousand pupils. In some of them there are as many professors in the faculty as there were students in the college when I was a boy.

We ought to be a very well educated people—and we are not! "Education," says Professor Huxley, "is the instruction of the intellect in the laws of Nature, under which name I include not merely things and their forces, but men and their ways; and the fashioning of the affections and the will into an earnest and loving desire to live in harmony with those laws."

In our schools and colleges we are teaching very well the laws of things and their forces—that is, natural science; and we are teaching very well the laws of men and their ways—that is, sociology and the humanities; but in our public school system we are doing absolutely nothing systematically, formally, regularly, to train the affections and the will into an earnest obedience and loving desire to live in harmony with those laws, which are the laws of nature. What is the consequence?

"Thou shalt not steal." Our laws for the protection of property are fairly well observed, though every now and then, on the one hand, a labor leader dynamites a house, and, on the other hand, a bank president goes to the penitentiary!

"Thou shalt not kill." There are more homicides in the United States than in any other country in the world, and more and worse mobs than in any other country except Russia.

"Thou shalt not commit adultery." There are more divorces in the United States than in any other country in the world, and there is nearly as much of this evil as existed in ancient and pagan Rome.

"Thou shalt not bear false witness against thy neighbor." We have a yellow press that is almost as yellow as the press of Japan, and much yellower than the press of any other nation.

What of the remedy? The training of our students into a loving and earnest desire to live in obedience to law. We are an instructed Nation—yes. But we are not a disciplined Nation; and we are not an educated Nation, if Huxley's definition of education be true. Here is a great heterogeneous population with no common religious creed, no common ethical standard. How shall we—Roman Catholics, and Protestants, and Jews, and Christians, and orthodox, and agnostic, and Mohammedans, and Parsees, and Confucians, and the Bahaists—that is the last sect—how shall we find a common ground on which we can work to produce a common morality?

How shall we make this a self-governing Nation? By creating in the higher life of the individual respect for law. For liberty is not lawlessness. Liberty is not exemption from law. There is no such thing as living in this universe of ours and being exempt from law. *Liberty is self-enforced obedience to self-recognized law.* It is for you to grapple with this problem and see how, in our universities, and colleges, and high schools, and grammar schools, and in our whole public school system, there can be, not a teaching of religion—you may teach a boy to repeat the Ten Commandments in Latin, German, French, and English, and he may go out and break them all—not a teaching of religion, but the training of the affections and the will in habits of obedience to self-enforced law.

We have established religious liberty. This was mostly done for us by our fathers, in England, but we have had some little skirmishing to do, even in my own time. It is now accomplished. When they put a book on the Index Expurgatorius, it used to be fatal to its circulation. Now it is the best advertisement that an author can get. You will hear men telling you that the pulpit is not free. Gentlemen, I have been a lawyer, speaking at the bar; I have been a journalist, conducting a National journal; I have been a lecturer on the lyceum platform; and I have been a preacher in the pulpit; and, out of all that experience, I can tell you that there is no platform in America so free as the pulpit—if a freeman stands in it!

We have established religious liberty; but we do not know what to do with it. We

have our scattered churches, our two or three hundred sects, and as many more individual churches that do not belong to any sect. We have yet to learn how to unite our religious forces for the spiritual life of the Nation. That is the problem that confronts the Christian world to-day—pre-eminently the American Christian world.

I wish the ministers would stop discussing the question, Why do not people go to church? and discuss instead, Why should they go to church? These great religious forces—and they are great, but dormant, ineffective, scattered—must be brought together, and the church must change from a guerrilla force into a united army. We shall not accomplish union by trying to make a creed so small that nobody objects to it because nobody cares anything about it. We shall find the point of our union in the object which we seek, not in the point from which we start. One of you young men starts for this college in the morning from one quarter of the city, and another from another quarter. You are going in opposite directions, but to the same place. My Roman Catholic brother, and my Jewish brother, and my agnostic brother, and I, an evangelical minister, have started in various quarters, and are going in different directions, but we are all aiming for the same place. We are all seeking the same end, if we only knew it.

Jesus Christ stated that he had come to preach glad tidings to the poor, to heal the broken-hearted, to bring deliverance to the captives, to give sight to the blind, to give deliverance to those that were under oppression. Was that his object? to put some sunlight into the homes of the poor, to bring some comfort to the eyes that weep, to give some deliverance to men that are in servitude to drudgery and toil, to give some light to the ignorant, to give some freedom and justice to government—was that his object? Then I can work for that end with Cardinal Gibbons, the Roman Catholic; with Rabbi Wise, the Jew; with Felix Adler, the agnostic; and with Bishop Lawrence, the Protestant. I will work for humanity with any man who will work for humanity with me; that is the only condition. And you have this to do—to show the Christian Church what should be its object and purpose and aim, so that all men who have the spirit of faith which sees the invisible, of hope that sees in every day a better to-morrow, and of love that embraces in its desire the whole human race, shall make a common cause for truth and justice and liberty and love.

Thus I put the problem of your future before you this morning. We have made a political union; you have to make a vital union out of a heterogeneous population. We have liberated the slaves; you have to teach this Nation how two races, preserving their racial purity, can live happily, hopefully, and prosperously together on a basis of mutual self-respect. We have organized industry on a basis of selfishness; you are to pervade it with the spirit of love and service. We have banished famine and are banishing pestilence; you have to banish poverty and war. We have opened wide the doors of the school-room and given intellectual instruction to a great ignorant population; you have to learn how to supplement that intellectual education with moral training. We have taken from our fathers religious liberty, perfected and completed it, and handed it over to you; it is for you to bring together the several members of conflicting churches and unite them in a common effort for what Mulford has well called the "Republic of God," for the perfecting of a Nation pervaded by the spirit of liberty and equality, for that kingdom of God which is righteousness, and peace, and universal welfare founded on holiness of spirit.

If I did not believe that when the body goes back to the dust from which it came, the spirit arises to the God who gave it, and goes on in a higher and better sphere in its service of love and sacrifice, I should envy you and want to come back again and join your ranks in the splendid work of service which lies before you in the sixty years to come.

OLYMPIADS AND LIARS

BY PHILIP J. BAKER

The author of the following article is the son of Mr. J. Allen Baker, the well-known Member of Parliament from East Finsbury, and until recently also a member of the London County Council, where his work for social betterment has been marked. Mr. J. Allen Baker is also Chairman of the Anglo-German Churches Council, which during the past three years has arranged for the visits of some hundreds of English clergymen to Germany and of German clergymen to England, the result being a much better mutual understanding, not only between the churches of the two nations, but between the two countries themselves.

Mr. Philip Baker is twenty-three years old, and he has just been graduated from the University of Cambridge, where he obtained the unprecedented distinction of being President for two years in succession of the Cambridge Athletic Club. This office means that Mr. Baker was captain of the track team. Mr. Baker was largely responsible for organizing the Harvard and Yale, Oxford and Cambridge Track Meet, which took place at Queen's Club, London, in July, 1911. Mr. Baker has never been beaten, either at Cambridge or at Queen's, for his distance, and has won, in all, forty-two races. At Queen's Mr. Baker himself won the deciding event—the mile race which turned the scale in favor of the English universities.

Mr. Baker's running record naturally led him to visit Stockholm last summer for the Olympic Games. He was the only other Englishman to run in the final with Jackson, of Oxford, the winner of the fifteen-hundred-meter race. His Stockholm visit only emphasized Mr. Baker's conviction of the desirability of international athletics; and his object in the following article is to endeavor to efface the impression created by a portion of the English press in its adverse criticisms of American sportsmanship, and in particular of the conduct of Americans at Stockholm. Finally, Mr. Baker indicates what he believes should be the attitude of athletes in general towards the Olympic idea.

In addition to his athletic distinction, Mr. Baker was President of the famous Cambridge debating society, the Union. He had already filled most of the offices at the Union, and was the first undergraduate to be President of two such extremely influential organizations as the Union and the University Athletic Club. He also won the Whewell Scholarship in International Law, one of the most important scholarships at Cambridge. During his university career he was known as a keen politician and a strong debater.—THE EDITORS.

NO runner—least of all an English runner—likes to be told that he is a poor loser; which is what some of the American papers have been saying about the English Olympic team. No runner—least of all an American—likes to be told that he is a poor winner; which is what the English papers have been saying about the American team.

If any one were catholic enough—and foolish enough—to believe the press of both countries, he would be forced to the conclusion that the English have made excuses for their defeat, have "squealed," in fact, and cried "won't play;" while the Americans (most of them professionals, be it understood, and guilty of any and every foul in their unscrupulous efforts to win!) have degraded the Olympic ideal by their elaborate preparations before the games, their unsporting conduct in the stadium, and their offensive exaltation over their victories.

On the face of it this silly newspaper quarrel is the result of misconceptions so blatant as to appear almost wilful. Without the grounds for dispute which existed in 1908, the press this year seems to have made a conspiracy to bicker and squabble expressly for the purpose of discrediting the Olympic contest. On the one hand, British journalists—some British journalists—have, without sifting facts or seeking evidence, accused the American representatives of various faults on the most superficial grounds. On the other hand, American journalists, without looking to the source or weighing the authority thereof, have taken the fulminations of a section of our press as the serious opinion of that part of the British public which is interested in the Olympic Games. Both sides have made mistakes which it is hard to excuse. I am only writing now in the hope of minimizing their effects.

Let me deal first with the mistake which I think has been made by the Americans. I want to show, if I can, why a part of the English press has written as it has done; why it has urged that England should shake the

dust of the Olympiad from its feet, and should compete no more; and why it is possible for Americans to mistake this kind of talk for the opinion of any considerable section of the English people.

Because, most emphatically, it is not the opinion either of the British Olympic team or of that English public which, for want of a better word, we call "sporting." If it were, then I agree we should be bad losers. If we had entered the Olympic competition determined to do our best, and, being defeated, had subscribed to sentiments such as these, we should be guilty of a lapse of sportsmanship. But we have not; these sentiments and opinions are not ours. They are the peculiar property of the people with whom they originated—that is to say, of a small section of journalists who are, by their own confession, not interested in Olympic affairs, who never have been interested in them, who have not the remotest understanding of track athletics, and whose sole claim to authority is that they are supported by no less a personage than the famous oarsman Mr. "Rudie" Lehmann, M.P.

Why, then, it might be asked, have these people been able to masquerade in the papers as representing the views of the British sporting public? How do they even manage to "hold down" the job of writing about the Olympic Games at all? And why have their effusions not been greeted with the public ridicule they merit?

The answer to these questions is not obvious. It involves a tedious argument which it is worth while to enter on only because it explains so much both of the past and the present. I will make it as brief as I can.

The answer, then, lies, I think, in the fact that athletics—track athletics—have not for a long time held what I believe should be their proper position in the out-of-door life of England. It is hardly an exaggeration to say that outside the universities and apart from the inter-varsity sports the track has not been taken seriously by the British public in the sense in which cricket or football is taken seriously. Public opinion in general is not "educated" to understand and appreciate the track as it is to understand cricket and football. And of course this has affected the press. There are hardly any sporting editors in England who know the first thing about running; and the result has naturally been that the newspapers have published and the public have accepted comments and articles about athletics in general, and about the Olympic Games in particular, which any one who knows anything about it can recognize at once to be complete nonsense.

But the most unfortunate result of this public and journalistic ignorance is that very few people in England have realized either the meaning or the vital importance of efficiency in the successful organization of athletics. They have no idea how hard it makes it for the runner when his management, so to speak, goes wrong. They have no idea how much easier it is to get ready for a big race when you don't have to worry about the details of meals and lodgings and entries and so on. Above all, they have no conception of the futility and incompetence of the existing organization of the English Amateur Athletic Association. And, not realizing this, nor the results which it inevitably produces in the performances of English athletes, they go on talking about the splendidly sporting rough-and-ready way in which the Englishman always used to take his running—simply not recognizing inefficiency and wasted effort when it stares them in the face.

Because, in the last resort, the attitude of Mr. Lehmann and his friends comes to this: that it is worth while to do a thing badly, and it is not worth while to do it well. It is worth while to organize athletics badly because it is "sporting" and "rough-and-ready;" it is not worth while to organize them well because to do so is to "make a business of what should be a pastime." They call the Olympic Games fantastic, "a horrid orgy," and they say that they cause recrimination and bad feeling; but the essence of their case lies in this catch phrase about business. England must withdraw from a competition which she cannot win without "sacrificing her ideal of amateurism" and without "degrading a noble sport" to the level of commercial enterprise, as the Americans have done.

But what do they really mean by that phrase about business? I don't think they could explain if they wanted to; they have never taken the trouble to think. But, if they mean anything at all, it must be that they object in general and in detail to the American method of organizing athletics. Let me venture on an analysis of the method which they have shirked.

The American athlete specializes on one

or two events; before any race of great importance he devotes his whole energies and time to his training; he has a coach—often a professional—who likewise devotes his whole energies and time to his coaching; he has an organization behind him which is managed by paid organizers; where, in special cases (as, for example, at an Olympiad), there are great expenses which he could not be expected to pay for himself, they are paid for him. All of which system depends on organizing ability and intelligence, supported by a reasonable amount of money.

That is what the American method amounts to. But the odd thing is that every single feature of it can be found in an advanced stage of perfection in the organization of English rowing or English cricket or English football. There is no one in the world who specializes more or devotes more time and trouble to his training than the English oarsman; the professional coach was invented by the English cricketer; every English rugger team takes "expenses" for its tours; every English county cricket club has its paid organizers. There is no amateur sporting event in the world over which more trouble is taken, more time "wasted," and more money expended (per person participating) than the Oxford and Cambridge boat race. It is a "business," if any amateur event ever was, and Mr. Lehmann knows it. It is not done in a business spirit—of course not—nor will the English training for the next Olympiad be done in a business spirit. But time and trouble and money are expended to produce a good varsity crew, in precisely the same way and for precisely the same purpose as they were expended by the Americans before the last Olympic games.

As I have tried to show, the English press, and therefore the English public, know that cricket and rowing cannot be done well unless trouble is taken to organize success. What hitherto they have not known is that the same remark applies to the track. They have not realized that it is impossible to produce a good track team without taking trouble. But they are finding it out, and 1916 will show the result. They will listen to no nonsense about not entering again, but what they do they will take care to do well. We shall enter for the next Games, and I hope the manner and the spirit of our preparation will be sufficient answer to those who think we have been poor losers, and who have mistaken for a representative opinion the weary "squealing" of journalistic ignorance.

But it is better to lose and to squeal than to win unfairly. And this year, as before, the charge of unscrupulous methods has been brought against the American team. It is a charge which Americans resent the more bitterly because it is repeatedly brought against them. It is a charge which I want to repudiate entirely in so far as it concerns the United States team at Stockholm.

The accusation divides itself into two parts. The first count is that of professionalism on the part of the members of the team. Now, for all I know, there may have been some members of the team who have been guilty of the breach of amateurism involved in taking "appearance money." I should think it quite probable that there were. It is a thing which has happened in England, and which it is very hard to prevent. But it is nothing to do with us if it happens in America. It is purely a matter for the vigilance of the American authorities and for the sensitiveness of the American conscience. So that the charge of professionalism, so far as we are concerned, is reduced to the contention that the whole of the American team "sacrificed its amateur status because of the money which was spent on it"—a contention the absurdity of which has, I hope, been shown by what I have already said. I will not labor the point any more. If the American team were professionals, then there are few amateur cricketers or oarsmen or footballers of eminence in England.

So that, having, I hope, disposed of this accusation, I can turn to the charge that the conduct of the Americans in the Stadium was unsporting. And I will say at once that I thought it was noticeably the reverse. The management of the team seemed from the very beginning to be impressed with the desirability of making no trouble with the authorities, and they seemed to have impressed the same thing on their team—which, perhaps I may say without offense, seemed a pleasant contrast to their attitude in 1908.

Not that I think the American, or any other, team were perfect. In the nature of the case that is not what one expects. If you pick a hundred men because they can run well, there are almost sure to be some of them who like to win without much caring how they do it. Or at least there are sure to be some of them who are—shall we say?—

a little rough and ready in their racing tactics, and who, without malice, do things which have unforeseen results.

Perhaps I can explain what I mean by telling what I think really happened in one of the incidents which were made a cause of complaint against the Americans at Stockholm. I refer to the disqualification of the quarter-miler Young.

In one of the semi-finals of the four-hundred-meters Young was drawn to run against Hans Braun, the German who nearly beat Reidpath in the final of the same race. Young drew the inside place on the starting-line, with Braun next to him. The trouble occurred at the first corner, within a few feet of where I happened to be standing, so that I saw exactly what happened. At the beginning of the bend Braun was perhaps two feet in front of Young, and of course outside him. At any rate, he was in no position to try to cross to the inside. But he began to push close in in front of Young in a very dangerous way, and it certainly occurred to me at the moment that he would make him break his stride. Young, however, gave him no chance to do anything of the sort. He simply collided with Braun in a way that sent the latter a good two yards out of the direct route to the tape, and must have given him a good shaking in the bargain. Young won the race, and was promptly disqualified for a foul.

The justice of this particular incident is not by any means easy to determine. In the first place, I have no doubt Braun would have won if nothing at all had happened. But when the collision occurred he was in a position to which he had no right, and, if Young had done nothing, I think Braun would have been disqualified for cutting across. On the other hand, Young's method of clearing the way was more violent than was necessary to keep Braun in his place, and I don't think he can be excused from all blame. But to accuse him of a deliberate foul, as many newspapers did, is to cast an undeserved slur both on him and on American methods. He was only protecting himself—with too much zeal. And the fact that the American managers raised no protest against this (at least) doubtful disqualification was only one indication of their very liberal attitude throughout the Games.

Let me deal with two other races that were the cause of disputes to show why I say that the charge against American fairness at Stockholm was unfounded. First, I will take the case of the hundred-meters final.

In that race there were five Americans and one South African—Patching. Patching is notoriously a very fast but a very nervous starter. Now there were seven false starts, all of them made by the Americans, and when at last they did get off Patching was badly beaten. Obviously there is here quite sufficient material for a charge of unfairness against the Americans, and of course the charge was made.

But, from what I have heard and know of the American runners, I am sure that they had no intention of worrying Patching out of it by continually breaking away. On the contrary, this is what I think happened. The Swedish official who was starting the race was almost as nervous as the people who were running it. It was his first Olympic final, and he was overwhelmingly impressed with the importance of getting a fair start. In consequence he kept the runners "set" for an inordinately long time—so long that it was practically impossible for any one who starts as Craig, for example, does, not to fall across the line. It was Craig who made the first three breakaways, and I am certain he went only when he felt himself falling, and of course it is well known that after two or three false starts men will break away from sheer nervousness. So that, although I think the false starts were most unfortunate in every way, I don't believe for an instant they were premeditated, and I think as much blame attaches to the starter as to anybody. This theory of what really happened is borne out by the fact that in the final of the two-hundred-meters, in which practically the same men were running, and in which there was an almost equal incentive to try to "steal a bit," there wasn't a single false start, which, I believe, was entirely the result of the fact that the starter let them away reasonably quickly.

One more illustration to exonerate the much-abused Americans—the final of the fifteen-hundred-meters, in which I ran myself. In this, if in any race, there was a chance for "dirty work." There were fourteen starters—incidentally far too many for an Olympic final—and they included seven Americans, two Swedes, and two Englishmen, Jackson and myself. In such a crowd and such a race things seem to happen with kaleidoscopic rapidity, and lots of unfair tricks might have occurred without the judges being able to

see. But they didn't occur. Most of the time I was in the thick of the crowd, so I think I am in a position to judge of the fairness of the running. Now, as a matter of fact, I did have to break my stride, owing to an American who came up inside me when I think he shouldn't have done so, and pushed me out of the way. But this was only the sort of thing which happens, and which is bound to happen, in any race in which a lot of people run, and which in the normal course of events does no harm to anybody. Except for that little incident, to which no blame attaches, I cannot remember that any of the Americans ran with anything but the most perfect fairness, and I know that Jackson, who was most of the way quite close to me, would bear me out. Of course in his wonderful sprint in the last lap Jackson had to run wide around some Americans but, despite the newspapers, I can vouch for it that none tried to box him in or hinder him in any way.

I don't think I need labor my point any more. I thought, as the whole English team thought, that both the American management and the American team meant to do the square thing at Stockholm, and did it. It is nothing for them to be self-righteous about; it is really the least that any Olympic team can do. But it does give them a right to resent attacks upon their conduct which have no foundation in fact—and this because they did effectively recognize, as ultimately every one must recognize, that it never can be worth while to try and win any event so big as an Olympic race by mean or discreditable methods.

It is pleasant to be able to come to such a conclusion as this, because on it rests the whole future of the Olympic idea. If the competitors at the next few Olympiads do not show the same spirit as was shown this year, if there is unfairness and the quarreling that necessarily must follow it, then the Olympic idea will of its own momentum run in uncontrollable ruin upon the rocks, and none will regret it. But I am idealist enough to think that there are few of those who feel the clean passion for athletics who will so lose their moral balance as to forget their sense of the proportionate values of victory and honorable conduct. And while runners the world over prefer defeat to unfair tactics, we need not regard with apprehension the attacks of Mr. Lehmann.

Yet even Mr. Lehmann may be asked to prove assertions. It is all right for him to call the Olympic Games "a huge orgy," and to ridicule the whole idea as "fantastic and grotesque." Nobody minds that. But it is only fair that he should substantiate his statement that the Olympiad of 1912 stirred up ill feeling among the nations competing.

He has made this statement, but he has offered no sort of argument in support of it—because there was none to offer. Apart from the journalistic talk which I have tried to discount at its proper value, there was no ill feeling either at Stockholm or afterwards. Of course the papers had to represent the whole English team as seething with discontent against the Swedes and the Americans. But it was almost pure invention. Perhaps when some of the heats were changed at the demand of the Americans, and incidentally very much to our disadvantage, there was a little soreness of spirit. But remember that our nerves had been upset by some of the worst luck that any team ever had. Just how unfortunate we were hardly any one outside the team could guess. And I still think that those heats ought not to have been changed. But the soreness over the episode was the merest flurry of the waters. It was followed by no storm; before the conclusion of the games every Englishman there was full of admiration for the efficiency of the Swedish officials and the American runners—an admiration that obliterated the memory of every feeling more petty than itself.

Indeed, so far from the Games causing ill feeling, the reverse was so conspicuously apparent as to evoke continual comment. Everybody seemed to get on extraordinarily well. Our visits to the steamer Finland will always be a pleasant memory, and they are only typical of what was happening to everybody all the time. I don't think a single competitor came away from Stockholm without a warm corner in his heart for Sweden and a strong respect and liking for the people against whom he ran.

Mr. Lehmann taunts us with trying to make the Olympic Games a "branch of foreign policy." I think we might do worse. I don't want to attach an absurd importance to athletics, but, seriously, it seems to me that international contests do provide a sort of international rivalry that is sane and healthy and desirable. I am not judging from Stockholm alone. The Oxford and Cambridge contest against Harvard and Yale last year

was productive of nothing but the very best sort of feeling and relation among all the people who were in any way concerned in it. I hope that perhaps next year Oxford and Cambridge may come to the United States for a return match ; and, if they do, it is safe to predict that the contest will be—as it was last year in London—a model of what athletic meetings should be, and in itself a sufficient answer to the opponents of international athletics.

And, after all, is the Olympic idea so grotesque ? International meetings are good for the cause of athletics and for athletes ; is it impossible that they are also good in other ways ? Sometimes the results that are unseen are greater than those that are seen. Is it so fantastic to believe that the provision of a sane intercourse and a sane rivalry of nations will help—slightly perhaps, but still perceptibly help—in breaking up the absurd fabric of " routine thinking " on which the present system of international relations rests ? If we can believe such a fantasy, if we can see in the future possibilities greater than the present shows, then we shall enter with redoubled ardor into the Olympic contest, impelled not only by enthusiasm for the trial of strength itself, but also by devotion to the idea that lies behind it.

SEVENTY-FIVE YEARS OF HIGHER EDUCATION FOR WOMEN

BY MARION FLORENCE LANSING

Mount Holyoke College, at South Hadley, Massachusetts, founded by Mary Lyon, last week celebrated with impressive and extremely interesting exercises the seventy-fifth anniversary of its long and useful history. Honorary degrees were conferred on distinguished men and women of other colleges and on graduates of Mount Holyoke who have made their mark in science, letters, or public service. An occasion of special rejoicing was the report to President Woolley by the Committee of the Alumni that the plan of raising a half-million-dollar fund for the College had met with complete success.—THE EDITORS.

FOR movements as well as for persons birthdays begin to have an interest when the allotted term of threescore years and ten is past. This year higher education of women can celebrate such anniversaries in at least four States of the Union. After the close of the Revolution one town here and another there began to give partial instruction to its little girls, recognizing, as the town of Gloucester put it in a resolution of 1790, that " they are a tender and interesting branch of the community." But Mrs. John Adams is sponsor for the statement that in those days " female education in the *best families* went no further than writing and arithmetic, and in some few rare instances music and dancing." During the first third of the nineteenth century elementary school education was still in its experimental stages. As for teaching girls anything more than the mere rudiments of the traditional three R's, that, as Kipling would say, was " another story." As late as 1853 a company of gentlemen from different States, meeting to compare notes on girls' schools, lamented that the very mention of a collegiate course was treated as absurd. They themselves, radicals though they were, shrank from calling the advanced institutions which they were advocating " colleges," feeling that such a term would be " inappropriate," and wasted many hours of their convention searching for some other name which should " indicate an enlightened regard to the different wants of the sexes." Nor were they exaggerating the public attitude to the " phantom of a college-learned lady." Governor Clinton felt obliged, in presenting to the New York Legislature, in 1819, Emma Willard's moderate " Plan for Improving Female Education," to urge that it be received with respect and at least be spared " commonplace ridicule."

Girls hastened to avail themselves of every opportunity open to them. Boston experimented for eighteen months with a girls' high school, but gave it up in despair because

of the numbers which presented themselves. The boys' high school had never had more than ninety in its whole membership, but one hundred and thirty-five girls qualified for entrance to the girls' high school in its first year. Then, too, the boys were always dropping out to go to work, but no girl left, or intended to leave, except for marriage, until she had completed the three years' course. The alarmed city fathers sat down and calculated. In another year there would be four hundred girls; pretty soon there would be seven hundred; before long possibly fourteen hundred, for the girls were deserting the private schools, and, as Mayor Josiah Quincy naïvely admitted, "it cannot be questioned that the proffer of so unexampled a privilege would awaken the strong desire of every parent and female of the admitted age in the city to become partakers of it." "This will never do," said the committee. "No city could be expected to spend money this way." So, in 1828, in spite of the frantic protests of its advocates, Mayor Quincy closed the school, the first of its kind ever opened.

What Boston gave up no other city could be expected to attempt. Girls must look to other sources than public funds for such learning as they sought. Academies sprang up all over New England and New York to meet the demand, and many thought that the problem had been solved. Time proved that it had not. The wisest educators, watching the developments of these schools, were dissatisfied. Many remedies were proposed, but most of them were simply changes within the established limits of the academy system of education. One clear-headed woman came to see that the trouble lay back of the schools in the principle on which they were organized. With Mary Lyon, to recognize a difficulty was to set herself to correcting it. From the moment of her vision she gave her life to working out the plan which she believed to be the solution of the problem. It is evidence of her success that her name is to-day in the Hall of Fame, and that in the second week of October of this year of 1912 educators from all over the United States came together at Mount Holyoke College to commemorate, in the seventy-fifth anniversary of its founding, the beginning of a new era in woman's education in America.

Mary Lyon's criticism of the schools of her day was clear and trenchant. They lacked the "vital principle." No one knew them better than she. Teacher in several, vice-principal of one, she had contributed eagerly towards their success. "Some of them are doing very good work," she explained, "but amidst all their prosperity they have no solid foundation, and in themselves no sure principle of continued existence. Those which appear to have the strongest claim to such a standing are so dependent upon their present teachers, and their funds and accommodations are to such an extent the property of private individuals, that it would not be safe to predict even their existence the next century." That was their weakness. They were private schools, privately owned and privately managed. Such a system could never adequately meet the needs of the daughters of a great democratic nation. It is by no accident of continuance that Mount Holyoke is rounding out its long period of prosperity. Mary Lyon felt sure that it would do so. "This institution will last thousands of years," she told the girls as she organized them into a society for keeping its records. Then, as perhaps their eyes grew big and she saw that she had taxed their credulity too far, she added the remark, which was probably just as surprising to them, "Why, it is as likely that it will continue as that Amherst College will." And the reason for her confidence was that she had founded it upon just the same basis as that of Amherst College and every other men's college, that of public endowment and trustee management.

Since the early settlers of the Massachusetts colony made their contributions towards the support of Harvard it had been the axiom of the institutions for men that higher education was a public benefit, and should therefore be a matter of public concern and an object of public benevolence. This had never till the opening of Mount Holyoke been the basis of a school for girls. Persons of that day could hardly believe that the money for the project was free money, given outright. At least, they said, the principal must have some special privileges. No, Miss Lyon's highest salary was $260 a year. Then the trustees must be stockholders. No, this was a new kind of girls' school, these gentlemen explained. There were no stockholders, no dividends which must be paid from the proceeds. It was a public institution, endowed, incorporated by the State, and held by trustees.

To us Miss Lyon's application of the idea

seems obvious. The principle had worked for men; it should be adopted for women. But to her own generation it seemed impracticable and revolutionary. It is worth while to stop for a moment to consider the means by which she accomplished her end, for it is an inspiring story which should be one of the traditions of the American college woman. That is what anniversaries are for. They make an occasion for stopping and gathering up the traditions which might otherwise be lost in our busy American life.

During the years of her preparation Mary Lyon had thought the matter out. The only way to convince people that her scheme was feasible was to give an object-lesson of such a school as she had in mind. There were two ways to do this, both of which, it may be noticed, are in use in every present college undertaking. She could try to persuade one, two, or a few wealthy men to do the whole. This, if successful, would be the quicker and easier way—the more prosaic, and the one which most people would have taken. The other was to attempt "to interest the whole New England community, beginning with the country population, and in time receiving the aid and co-operation of the more wealthy in our cities." This would require "vastly more time and labor; but, if it were accomplished, an important and salutary impression would be made on the whole of New England." This method she chose. For months and years she traveled up and down New England, soliciting from farmers and their wives, from ministers, ladies' missionary circles, storekeepers, doctors, from rich and poor alike, money to found such a seminary for girls. She had the vision and set it before them, and as the people caught it they responded. The record books of those gifts, with their entries of fifty cents, two dollars, five dollars, a thousand dollars—hundreds of entries—are among Mount Holyoke's dearest treasures. It may well be a matter of pride to all women that the first thousand dollars, which made the attempt possible, came entirely from women, and the most of it from women who had but little to give.

It was an exciting time. We catch a little of the spirit of adventure as we read Miss Lyon's letters. "And I have lived," she writes to a friend, "to see the time when a body of gentlemen have ventured to lay the corner-stone of an edifice which will cost about fifteen thousand dollars, and for an institution for females. Surely the Lord hath remembered our low estate. This will be an era in female education. The work will not stop with this institution. It is a concession on the part of the gentlemen in our behalf which can be used again and again." That was in 1836, just two hundred years after the founding of Harvard. The next year the school was opened. But more than Mount Holyoke had been founded. Miss Lyon's laborious method of rousing interest had done its work. The truth of the principle on which Mount Holyoke was founded was gradually conceded. When one such institution has been established, funds for the second and third will come more easily, she had said. Nor had her prophecies stopped with a few more such seminaries. "Let this principle be fully admitted," she wrote, "and let it have sufficient time to produce its natural effects, and it will be productive of more important results than can easily be estimated. There will then be laid a broad and sure foundation for system, improvement, and elevation in female education. Perhaps the influence which this seminary exerts in this respect will be more important in its results than all its other influence." It is in recognition of this influence, and of the wonderful "effects" which have followed the acceptance of this principle, that so many college presidents attended Mount Holyoke's anniversary.

When we talk of seventy-five years of higher education for women, we are not making the opening of Mount Holyoke our only initial date, though as the prologue to the story of the woman's college it is the most important beginning. In New York Emma Willard had meanwhile succeeded in getting her seminary incorporated by the State, and in having a small amount of State money appropriated to girls' higher education. Georgia was always progressive along this line, and it was here that the first institution strictly for women with the name of "college" and the intention of giving degrees was established, at about the same time as the laying of the corner-stone at Mount Holyoke. Bradford Academy closed its doors to boys in 1836, and became a really advanced school for girls. Oberlin antedates them all, but belongs to a different class, because it was co-educational—probably the first co-educational college in the world. Founded in 1833, it has the high distinction of being the first collegiate institution in the world to open its

doors to women. It divides with Georgia College the honors as to degrees, Oberlin granting its first degree to a woman in 1838, and Georgia graduating a class of eleven in 1840.

None of these institutions attained what we should call collegiate rank in their women's departments. Oberlin's course of study was at first frankly a "Ladies' Course." Mount Holyoke's aimed to offer "every advantage which the state of education in this country will allow." Concerning its standards Miss Lyon wrote as follows:

> In a seminary for females, we cannot, as in the standard of education for the other sex, refer to established institutions whose courses of study and standard of mental discipline are known to every literary man in the land. We make the rules for admission to the classes very rigid in order to raise the standard of education, and hope in fifty years from this the influence will be felt far and wide. . . . We shall look on the studies required, fifty years hence, as we do on the studies of Cambridge in the first year.

When we try to estimate these courses, we should contrast the modest catalogues with those of other schools of the time rather than with the standards of the modern college—and the other catalogues are truly remarkable! The Greenleaf Female Institute, for instance, offered in 1861 to take a pupil at any age and enable her to attain "to *any* desirable proficiency in science and literature." Ingham "University," with a "Lady Principal Extraordinary," scorned such ordinary terms as Freshman, Sophomore, Junior, and Senior, substituting for them "Palmarians, Cardians, Amplians, Novians, Mathians, and Supernumeraries," with elaborate explanations of the meaning of these terms, and glowing accounts of the light of learning which was constantly shed within its precincts. Higher education was evidently the fad as well as the pioneer movement of the period. Between 1830 and 1850 twenty-two institutions were opened. Most of these were Southern and destined to end with the Civil War. Three other institutions deserving place in the annals of higher education for women opened before the war: Rockford College, Illinois; Antioch College, Ohio, co-educational, founded by Horace Mann in 1852; and Elmira College, New York, founded for women in 1855.

The Civil War dealt a heavy blow to education, especially in the South. But it interrupted for only a few years the plans for what is recognized as being the first woman's college established in America in the sense in which we understand the word college. Joseph Emerson, who taught Mary Lyon and several other prominent educators, had had in 1822 a vision of a school for women which should "not only exist but be considered as important as are now our colleges for the education of our sons. But where such an institution shall be erected," he adds, "by whom it shall be founded, and by whom instructed, it is yet for the hand of Providence to develop." We forget the break of forty years and feel as if we had come upon the next chapter of a continued story when we read Matthew Vassar's first communication to the trustees to whom he was intrusting the money for Vassar College. "It occurred to me," he begins, "that woman, having received from her Creator the same intellectual constitution as man, has the same right as man to intellectual culture and development. It is my hope to be the instrument in the hand of Providence of founding an institution which shall accomplish for young women what our colleges are accomplishing for young men." Vassar College was opened in 1865, with requirements conforming as nearly as possible to those of corresponding men's colleges. The woman's college, which was to have in the next forty years so phenomenal a development, had begun. To each succeeding college founded during this period belongs some pioneering distinction. Smith and Wellesley date from 1875, Smith having the honor of being the first to be strictly collegiate in rank without any affiliated preparatory department. Wellesley was thought to be impossibly large because it opened with accommodations for three hundred—less than one-fourth of its present student body. Bryn Mawr (1885) originated the "group system" of major and minor studies, now in use in most women's colleges.

While these schools and colleges were being founded in the East, a parallel movement for co-education was gaining strength in the West. Here the principle of public education was adopted with no qualifications, and as high schools followed grammar schools, and were followed in their turn by State universities, they were all opened at an early date to boys and girls alike. Utah was the first to open its University to women, in 1850, and now all but three, all Southern, have done the same. Only by statistics can we get any notion of the tremendous strength

of women's education. But when we are told that in one year there are thirty-three thousand women enrolled in three hundred and twenty co-educational institutions, and twenty thousand more in other colleges, we begin to realize how many college women there must be in the United States. In 1900 one-third of all the college students in the United States were women, and it is said that the number is constantly increasing.

There has grown up in the East a third kind of institution—the woman's college affiliated with the men's—sharing its faculty and many of its academic privileges, but retaining economic and social independence. All of these are comparatively recent, but are gaining in strength every year. In these co-ordinate colleges, and in the universities which admit girls to their more advanced courses, the graduate departments are an important feature. When we learn that in the last four years one-tenth of the doctorates of philosophy conferred in the United States were given to women—and this takes no account of the numbers in professional schools—we begin to see how high this "higher education" of ours has gone.

The influence of the movement cannot, however, be estimated from statistics, any more than it can be judged from this partial enumeration of colleges. It cannot even be measured within the ranks of the college woman. In the last seventy-five years the status of woman has changed. No one would claim that the result has been all gain, but on the whole her position is more natural and normal. It was, for instance, a debated point of etiquette in 1835 whether Mary Lyon, with two other ladies to support her, might sit down in formal committee meeting with her own men trustees. Emma Willard begins an address to a very select and private audience with the hope that it will not be thought indecorous for her to speak a few words on the subject near her heart. This change in the position of woman has its underlying cause in the new estimate which democracy has put upon woman, an estimate which found its first manifestation and has made much of its progress in the field of her education. With the close of the Revolution the new attitude began to be felt. Through the industrial changes of the periods immediately preceding the Civil War the factory girl, the girl working outside the confines of a home, came into being. It was in the logic of democracy, but it was none the less the salvation of the country, that the educated woman came into being at the same time.

We have picked up the threads of colleges and universities. We have found, what it is good for us to realize, that they were not scattered threads, but were weaving together a pattern which spread across the whole country. If we can but stand off far enough, we shall perhaps be able to see certain predominant features that stand out in this fabric which many hundred institutions have woven in seventy-five years. In the first place, it is pre-eminently American. It is interesting, in this large look which we are taking, to turn once more to the dream of one of the pioneers and see how it has been fulfilled. Joseph Emerson prophesied in 1822 that "the distinguished honor was probably reserved for our rising republic to exhibit to the world such female seminaries as the world has never witnessed." His prophecy has come true. The United States has given the world an exhibition of women's higher education, carried on upon a grand scale, such as no other nation has dreamed of. The best of it is that this system of education is the natural product of breadth of view and democracy, and will carry that spirit with it wherever it goes, whether to the International Institute in Spain, the Woman's College in Constantinople, or the colleges of India and China.

The essential democracy of the system has reacted healthfully in our own country. Nowhere save in America do young women leave their homes in such great numbers and gather in communities to live a life of their own. Fathers and mothers questioned in the early days whether this was well. It might be Jane Addams addressing a commencement assembly to-day rather than Mary Lyon who gives the clear-cut and conclusive answer of democracy: "The young lady needs," Mary Lyons said, "to feel herself a member of a large community, where the interests of others are to be sought equally with her own. She needs to learn by practice as well as by principle that individual accommodations and private interests are to be sacrificed for the public good; and she needs to know from experience that those who make such a sacrifice will receive ample reward in the improvement of the community among whom they are to dwell."

Certain interesting tendencies may be observed in the courses of study. It was the pride of the college graduate of the latter

part of the nineteenth century that her Alma Mater had the same requirements for entrance, the same courses, and the same standards as her brother's college. This was natural until women had justified their contention that they could do the same grade of work. Now we are doubling back to the old idea of differentiation. The sequence has been something like this. At first it was insisted that the education of girls must be different; then it was proved that it need not be different; now we are beginning to assert that it has a right to be different. Even when the men's curriculum was changing, the women's was not. "It has taken *us* two hundred years to get to this point," an impatient professor remarked in 1890; "let the women wait a while before they try experiments." But when at a co-educational college the young man's time was occupied in the engineering rooms, it was not a long step for the young women to spend a corresponding length of time in the domestic science department, and, though they did not know it, they were following out one of the early ambitions of the girls' school. Emma Willard had set forth the theory that "housewifery" might profitably be made a science, the teaching of which would confer a very direct benefit upon the community.

The first educators made their plea that the girl be trained to be home-keeper or teacher. They calculated that thirty thousand teachers would soon be needed in the schools of the rapidly developing country, and it was their burden to meet that demand. Bryn Mawr had among its stated aims "to fit its students to become teachers of a high order," and it is said that more than half the college graduates in the country have taught at some time. Matthew Vassar ventured to suggest the more daring idea that, "if woman were properly educated, some new avenue to useful and honorable employment, in entire harmony with the gentleness and modesty of her sex, might be opened to her." The worthy gentleman might not think that the list of women's employments in the last Census report met his requirements as to their nature, but he would doubtless approve highly of the new associations and bureaus, sponsored by the deans and presidents of the Eastern colleges, to assist college women into other occupations than teaching.

Even these movements, and many more of their kind, measure only a part of the effect of women's education. Really to judge it, we must go out into the world of the business woman, the club woman, the philanthropic expert, the settlement worker, into the world anticipated and longed for by these pioneers, of women together, educated together, working together, and working with men. There had been nothing like college spirit, that wonderful bond which brings back to every college commencement hundreds of devoted daughters, which will bring back to the anniversary at Mount Holyoke members of the fifty-year class, the sixty-year class, perhaps even one or two of the sixty-five-year class. People said to Miss Lyon, "How can a school last? The teacher makes the school." "I know that," she replied; "but I look for a time when there will be a school which will find the teacher." Everywhere in our modern society there are causes, ideals, tasks, which find the woman, claiming and winning her loyalty. The educated woman is not given to talking of her achievements, but there are not lacking those to sing her praises. The best work that is being done in the American city, says a leading civic expert, is being accomplished by disinterested educated women who are giving their services towards its regeneration. And this is only one field among many which might be mentioned.

Froebel has defended the "centenary habit" because it makes us acquainted with the past. "It casts a robe of warm color about a name that had else been cold; it throws enduring light upon some date which had else lain long in the darkness of neglect." But it is most of all worth while to look back if it gives us zest to go forward. The pause at the seventy-five-year milestone will give us renewed pride in our past. It should give us new enthusiasm and inspiration for the future.

THE SPECTATOR

IT was years ago, in Heidelberg. A group of young Americans, strolling down one of the quaint old streets of the town, approached the office of the American Consul, before which hung an American flag. As they passed the house one of the young men took off his hat. The man beside him looked at him, then glanced quickly about, as men do, to locate the person he was greeting. Another of the party fell back and said to him, "Did you see a friend?" When one is abroad, chance meetings gain in importance. The young man smiled. "Why—yes—a friend of mine—and of yours too, I suppose." He pointed back towards the flag, which they had now passed. "Oh!" said the other, feeling a little flat.

"You see," went on the young man, a little sheepishly—an American man is always sheepish when detected in what may seem a bit of sentiment—"I served in the militia a good while, and I got in the habit of saluting the colors; and over here—somehow—"

"Is he apologizing because he saluted his flag?" broke in one of the young women. "I think it's the rest of us that ought to apologize."

The party moved on, and the Spectator had almost forgotten the incident when, years later, he learned that it had borne fruit—it had set a fashion, started a tradition. For since that time, so he is told, the Americans in Heidelberg always salute their flag where it hangs before the office of their Consul.

All this came into his mind last winter while he watched another little scene, this time in his own country, in a New England city. The President of the United States had been a guest in a house where the Spectator had been asked to meet him. The President was taking leave, and the Spectator made one of a group at a window watching the Chief Executive and his escort take their places in the automobiles. Groups of men and boys, who had in some way discovered what was happening, were lounging about on the street corners, gazing curiously at the Presidential party. The honorable guests and the honored host exchanged salutes, and the motor cars moved off, while the crowd watched, with its hands in its pockets.

As the group in the window looked out at the scene one of them exclaimed: "Well! if that isn't the limit!"

"What?" asked the Spectator.

"Why, didn't you see? Not a man of them saluted. They just rubbered!"

Every one laughed, then we grew grave. "What an example for those small boys!" said some one. And we fell into a discussion of American manners compared with European.

Again, last summer, the Spectator was one of a huge audience witnessing an outdoor pageant. It was evening, band music filled the air, spectacular performances were going on in a brilliant electric illumination. All open spaces were thronged and bleachers were full. Suddenly a few people among those on the bleachers rose to their feet. "Down! Down in front! Sit down, can't you?" was variously shouted by those behind, and there were growling comments about people who stood up when, if everybody sat down, everybody could see. The offenders remained standing. The growling comments went on, until suddenly some one muttered, "Shut up! It's 'The Star-Spangled Banner'!" Whereupon the comments subsided, and before the band had ended the bleacher crowd was all on its feet, half ashamed, half amused.

Now, the Spectator finds that these three scenes group themselves persistently in his mind, and persistently recur, producing an undercurrent of speculation and perhaps even of moralizing. "Ought these things so to be?" he wonders. We Americans are often congratulated, we often congratulate ourselves, on our emancipation from conventions, from forms, from traditions. But are we, the Spectator wonders, altogether to be congratulated? Is it entirely to our credit that we are able to stand on street corners with our hats on our heads and our hands in our pockets while our country, embodied in its Chief Executive, passes by? Shall we unreservedly felicitate ourselves that we can stroll past our country's flag without an impulse to salute it? that we can hear one of our National hymns without an impulse to rise? Is this emancipation, or is it something else? He wonders.

Certainly, informality and unconventionality are good things within limits, but are we perhaps passing these limits? For, as psychologists tell us that we cannot think long without words, so perhaps it is also true that we cannot feel long without acts—and acts are forms. Unquestionably the spirit of loyalty may exist while one's hat is on. But the Spectator wonders if taking off one's hat may not perhaps give it a bit of encouragement—like a friendly pat on the shoulder of a boy who is doing well.

Moreover, among the young people who are growing up among us, who "know not Joseph," who think of war as something in a text-book, and loyalty as something mentioned in poetry

and history—among these, would it not give some suggestion and stimulus to the spirit of patriotism, innate in all of us, if they saw those around them giving some tangible evidences of the feeling? It is undoubtedly true that in some cases a feeling grows through being repressed, but it is much more often true that it grows through being expressed. To throw stones at a cat tends to make a boy cruel, while to feed it and pet it and care for it tends to make him tender-hearted. The feeling causes the action, but the action reacts on the feeling. This is the vital circuit.

So it is with the feelings of loyalty and patriotism. From the ages of savagery downward, kings and priests, whether they formulated the theory or not, acted in accordance with sound psychology when they instituted elaborate ceremonials by which the people might give expression to their feeling of reverence. We do not wish to return to barbarism. We do not even wish to wrap ourselves about in all the forms and ceremonies of modern European life, as they appear in some of its phases. But the Spectator wonders whether, in throwing off these cumbrous vestments, we have not got rid of a little too much. Might there not be something midway between the full regalia of a coronation procession and—let us say—a bathing suit? He wonders, to change the figure, whether, in our reaction from all formality, we are not in danger, as the Germans say, of "throwing out the child with the bath."

THE NEW BOOKS

Rich Mrs. Burgoyne (The). By Kathleen Norris. The Macmillan Company, New York. $1.25.

When Mrs. Norris's "Mother" appeared last year, The Outlook commented on it as a wholesome book in a time when a great many people are hearing and accepting unwholesome doctrine in regard to marriage, parenthood, and home life. "Mother" was a reassertion, in a fresh and delightful narrative, of certain elementary claims of humanity. It pointed out certain elemental sources of happiness; and it ran counter to a great deal of the bright, hard, "smart" thinking and living of to-day. Now Mrs. Norris reinforces her protest against overelaboration and competition in dress and habits of living, extravagance and bad taste in all forms, and tells a good old-fashioned romance by way of showing how pleasant life can be when people are sane. This is the story of a sensible woman who keeps within her means and refuses to be swamped by social engagements, lives a normal human life of varied interests, and has her own romance. Seasoned story-readers who like highly spiced food will not like this story, and yet they are the people who need it. There are some of them to whom it would recall old ideals. It is well told, for the heroine, although she recreates a community, is neither a prig nor a preacher, but a warm-hearted, honest-minded, and thoroughly independent woman.

Hollow of Her Hand (The). By George Barr McCutcheon. Dodd, Mead & Co., New York. $1.30.

Mr. McCutcheon has written many stories; several are of the "Graustark" order; but in his latest novel he has made a happy and successful departure from the kind of fiction with which his name has been associated. He has probably invented a new situation—this is so incredible a statement that it must be made with reservation in case some reader hasten to remind The Outlook that the same situation has been used by some French or Russian story-teller—and he has so dramatically developed this motive that he holds the attention of the reader from the first to the last page. He is not always convincing, and he takes wide liberties with probabilities. It may be objected that his chief character is not always consistent with herself. But of the interest of this story there can be no question, and there is some very good character painting in it. The old New York family in all its members is sketched with a great deal of skill. Mr. McCutcheon has done nothing so good before.

Paul Rundel. By Will N. Harben. Harper & Brothers, New York. $1.

Mr. Harben is thoroughly at home in the rustic hamlets in Georgia and with people who live on the slopes of the mountains. That means that he knows at first hand a definite type of primitive Americans living in primitive conditions. He has more than once, with notable fidelity to fact and with unobtrusive skill, described the dramatic situations which arise in the intercourse of these people; and he has more than once drawn with a strong hand personalities which stand out with greater distinctness because the background against which they are drawn is rude. Jane Dawson has something of the dramatic definiteness of outline that Meg Merrilies possesses. In his latest novel Mr. Harben has chosen as his chief motive the development of religious enthusiasm expressed in very simple and naïve ways, and has described the transformation of a rough boy filled with the spirit of vengeance into a man of notable self-control and profound faith. It will doubtless seem to

many that the transformation is too dramatic and the influence of the man too extensive; but in such communities as that in which Paul Rundel lives personal influence is an immense factor. Mr. Harben studiously avoids the imaginative element One may dislike his stories, not because of the way in which they are told, but because of the people with whom they deal; but Mr. Harben's manner is admirably matched, in its directness, its occasional uncompromising hardness, with the social conditions of his characters. Here and there, however, when he is recording some aspect of the lonely and impressive world in which many of his people live, he shows power of natural eloquence.

Romance of Leonardo da Vinci (The). By Dmitri Merejkowski. Translated by Herbert Trench. In 2 vols. G. P. Putnam's Sons, New York. $5.

This romance of Leonardo da Vinci forms one of the trilogy of novels of which perhaps the best known is "The Death of the Gods." The subject of this particular book, however, most easily lends itself to illustration, and, in connection with the great painter whose story it purports to tell, and with the art of his time, there have been selected a large number of photographs, which are here remarkably well reproduced, with the Mona Lisa and a reproduction of da Vinci's portrait of himself as the frontispieces for the two volumes. The novel as such appeals rather to the cultivated than to the popular taste, but it is really worthy of a permanen place in literature.

Railroad Finance. By Frederick A. Cleveland, Ph.D., LL.D., and Fred Wilbur Powell. D. Appleton & Co., New York. $2.50.

This is a work of solid information rather than of theoretical discussion. It describes the methods of financial management employed by railway companies, their systems of accounts and statistics, the intricacies of capitalization, reorganization, and consolidation, and it includes also a careful study of the important questions connected with fictitious capitalization. The original material was a series of lectures before the University of Pennsylvania by Dr. Frederick A. Cleveland, who has had the assistance of Mr. F. W. Powell, a well-known writer on economic topics. The work is indisputably of practical value to students of the railway development of the country.

Correspondence of William Shirley, Governor of Massachusetts and Military Commander in America. By Charles Henry Lincoln. The Macmillan Company, New York. In 2 volumes. $5.

William Shirley was Governor of Massachusetts from 1741 to 1756. His ten years' residence in the Colonies prior to his term of office was the very best preparation that he could have had for entering upon the duties of that office. During his term he distinguished himself by two great events, one civil, the other military. He put the colony of Massachusetts upon a self-respecting currency basis, so much so that Massachusetts became known as the "Hard Money Colony." His second most notable achievement was his part in the leadership of the American forces which resulted in the successful capture of Louisburg (1745) in the French and Indian War. The present volumes comprise something like four hundred letters written by Shirley and his contemporaries. They present an interesting and intimate account of colonial conditions, and are a genuine contribution to our knowledge of our own history—a knowledge in which many of us are deplorably deficient.

T. De Witt Talmage As I Knew Him. By the Late T. DeWitt Talmage, D.D. E. P. Dutton & Co., New York. $3.

We here note briefly the appearance of this autobiography, which is none the less welcome because its publication has been so long delayed. The extremely large number of people who are interested in Dr. Talmage both as a preacher and a personality will find that the book abounds in incidents and reminiscences.

Colonial Homesteads and Their Stories. By Marion Harland. G. P. Putnam's Sons, New York. $3.50.

The author paid visits to the thirty or more mansions of historical interest here described. Each place is treated with loving sympathy as regards associations, and with careful accuracy as regards historical material, family records, and the like. There are many pictures of the places themselves, of rooms having special associations attached to them, and of a few of the famous men and women who have lived in these old houses. The work is not new, but is in compressed form, and is very well worth a place in the library of all those who recognize how much of American life and history is closely related to such famous old places as Johnson Hall in Johnstown, New York, the Jumel Mansion in New York City, Westover and Shirley in Virginia, Morris House in Philadelphia, and very many others.

Sacred Shrine (The). By Yrjo Hirn. The Macmillan Company, New York. $5.

It seems a picturesque combination of subject and author, that of the study of the poetry and art of the Roman Catholic Church as treated by Yrjo Hirn, professor in the University of Finland at Helsingfors. The work is fairly comprehensive and the treatment is extremely suggestive and helpful.

Depths of the Ocean (The). By Sir John Murray, K.C.B., F.R.S., etc., and Dr. Johan Hjort. The Macmillan Company, New York. $7.50.

This is an exhaustive and fully illustrated work which describes important investigations in the North Sea and in the Norwegian Sea. These were instituted at the suggestion of Sir John Murray, who induced the Government of Norway to lend a vessel for the expedition and himself paid for its equipment and cruising expenses. The investigations were thoroughly

systematic and scientific, and there seems to be no doubt that a great deal has been added in this way to the world's knowledge about the life in the depths of the sea, the contour of the bottom, and all other matters relating to the modern science of oceanography.

World's Leading Painters (The). By George B. Rose. Henry Holt & Co., New York. $1.75.

According to Mr. Rose, a competent authority, the world's leading painters were Leonardo, Titian, Rubens, Velasquez, and Rembrandt. Mr. Rose's latest book comprises a study of each of these six. And each of the six essays is equally remarkable whether the reader consults them for biography or for criticism. The biographies are necessarily brief; but the author well knows how to give much atmosphere to them. He quickly transports us into that atmosphere, and the Renaissance becomes as vivid and everyday-like to us as is our own period. As to criticism, the present volume includes the results of the latest researches with regard to a number of disputed points. Concerning the merits of particular works, the views expressed are emphatically the author's own, arrived at after repeated examination of the pictures. We wish that Mr. Rose would write another book describing in like manner six other painters—say Giotto, Botticelli, Correggio, Bellini, Dürer, and Holbein.

Wilderness of the North Pacific Coast Islands (The). By Charles Sheldon. Charles Scribner's Sons, New York. $2.

Mr. Charles Sheldon's book "The Wilderness of the Upper Yukon," published some months ago, received high commendation from the best authorities. We learn that it has been, of all the recently published works on sport, the "best seller." Its successor should find equal welcome, and should take its place on the shelf which may already hold such books as Mr. Roosevelt's "African Game Trails," Mr. Thompson Seton's "Arctic Prairies," and Mr. Hornaday's "Camp-Fires in the Canadian Rockies." The present volume is valuable not only to the lover of sport; it is also valuable to the reader who wants to know more about our mysterious Northwest. If we are not mistaken, this is the first volume to describe at all intimately and adequately the islands of the North Pacific—Vancouver, Montague, Queen Charlotte and Admiralty Islands. It tells about a country much of which had never before been traversed by white men; indeed, some of it had not even been trodden by the natives.

Spell of England (The). By Julia De Wolf Addison. L. C. Page & Co., Boston. $2.50.

We talk about the spell of Italy and the spell of Greece, but the spell of England is no less real. It is hardly felt by those who rush from Liverpool or Plymouth "up to town," and for whom England is principally London and the surroundings of London. But for him who loves Banbury Cross and other quaint spots, who loves to abide beneath the shadow of the great universities, who loves the valleys of the Severn and the Wye and the Dee, there is a spell of England. The present volume will but emphasize it to those who have felt it, and will introduce it to those who know it not.

Making of Western Europe (The). By C. R. L. Fletcher. Vol. I. E. P. Dutton & Co., New York. $2.50.

The Outlook has already called attention to Mr. Fletcher's notable ability to present history in an interesting way. His "History of England" gave abundant evidence of this: the work was written in such manner as indubitably to interest young and old alike. In the present volume we find the same ability for handling broad masses in bold outline. Certainly after reading it we have a better idea than before of just how the present independent nationalities in Europe were born out of those Dark Ages when the Roman Empire was breaking up and the Church was in its infancy.

Majority Rule and the Judiciary. By William L. Ransom. With an Introduction by Theodore Roosevelt. Charles Scribner's Sons, New York. 60c.

This volume is a very thorough description of Mr. Roosevelt's proposal to submit to the people the question of what they mean by their State Constitution when the Court and the Legislature disagree as to its interpretation—a proposition very different from the Recall of Judges, with which it has been sometimes confounded. Even Progressives who have been inclined to favor Mr. Roosevelt's proposal, as The Outlook has been, will be surprised to find how much legal and quasi-conservative authority can be found to support this proposal.

Supreme Court and the Constitution (The). By Charles A. Beard. The Macmillan Company, New York. $1.

This is a careful historical description of the question whether the power of the Supreme Court of the United States to pass upon the constitutionality of acts of Congress is in accordance with the spirit and purposes of the framers of the Constitution. Professor Beard makes out a strong case in support of the belief of the affirmative.

St. Francis of Assisi. By Johannes Jörgensen. Longmans, Green & Co., New York. $3.

M. Paul Sabatier's "Life of St. Francis of Assisi," still our foremost authority, has caused a notable awakening of popular interest in St. Francis and his order. The most recent evidence of this is the translation from the Danish of Johannes Jörgensen's "St. Francis." The translation seems well done—indeed, the English reads as if it were the original language of the book. The style is restful, simple, and direct, and the story of the Saint's life is clearly and frankly told.

BY THE WAY

John Campbell, of Pittsburgh, locomotive engineer, deserves to be put on the roll of industrial honor. He ran an engine for forty-eight years without ever killing a human being, and without even injuring any person sufficiently to draw blood. He was never suspended or censured by his employers during his long career as engineman, which terminated happily on September 6, when he retired from the position which he had so honored.

The number of women students in German universities is increasing. During the recent half-year there were 2,958 of these students, of whom 2,500 were of German nationality. The majority are taking the courses in literature and history, but thirty-nine are studying law, twenty-eight dentistry, and eleven theology.

Is there any town in the United States that isn't a "world beater" in something? Fresh discoveries along this line are constantly being made. A "boosting" circular about Hamilton, Ohio, for instance, contains the information, which we think will be new to most readers, that eighty per cent of the world's safes are made there and that it "has the largest machine tool works and coated paper mill in existence."

If school-boys of the present generation care anything like as much for "Tom Brown" as their forebears did, they will be grieved to know that the original "Tom," at least as far as the fight with "Slogger" Williams went, recently died in England at the age of eighty-eight. Doubtless the original "slogger" (not "slugger," as the despatches have it) went to his reward long ago.

A New York evening newspaper has introduced a novelty in advertising. It has a column for "Barter and Exchange" advertisements, which it inserts free of charge. The advertisers pay only for the answers they receive, five cents each being charged for these.

"Thank-ye-ma'ams," otherwise known as water-breaks, consisting of ridges of earth built across roads on steep grades, are to be abolished in Pennsylvania as a part of its road improvement measures. These water-breaks were once a familiar institution throughout New England and other parts of the country, and are still surviving in many places.

The loganberry, a hybrid of the blackberry and raspberry, is said to make the finest of jellies, jams, and pies. Introduced a few years ago in the West, its popularity has been steadily increasing, and the demand now outruns the supply. Western Oregon and Washington are the greatest producers of the new berry.

A portrait of a young woman has hung for years in the drawing-room of a private school in a small town in New York. Now it has been discovered, so a newspaper article avers, that the picture was painted by Gainsborough and is worth $70,000. Experts are often called upon for opinions as to the authenticity or value of supposed "old masters," and this is one of the few cases in which they have found such a picture to be of real value.

The new parcels post stamps, twelve in number, will it is, announced, probably be ready for distribution to the post-offices of the country by December 1. They will be larger than the ordinary postage stamps, and will have attractive designs—including a mail-carrying aeroplane, as a glimpse into the future.

"New York," says the "Harvard Lampoon" in a Guide to Boston, is "a semi-mythical suburb of Boston. The subject," it adds, "is a painful one to Bostonians, and should be avoided at social functions."

Mark Twain was naturally, according to his own confession as related in his recently published biography, of an indolent disposition. In an old volume of Suetonius, adjoining a reference to "Flavius Clemens" as a man distinguished "for his want of energy," the later Clemens made this annotation: "I guess this is where our line starts." Yet, as printer, pilot, reporter, lecturer, traveler, and author, fate contrived to get a great deal of work out of Mark Twain.

A real estate company has been formed by Pennsylvania Railroad officials to improve the property adjacent to the great Pennsylvania terminal building in New York City. The surroundings of this magnificent structure, like those of many of the great European cathedrals, now present a shabby appearance that detracts from the architectural effect of the building, and the proposed improvements are a welcome testimony to the growth of æsthetic taste in commercial circles.

Useless custom-houses which the Treasury Department proposes to abolish are fairly well distributed over the country. The one at Kennebunk, Maine, collected $6.10 in 1911 at a cost of $266.50; that at Natchez, Mississippi, collected 55 cents, with expenses of $553; Nantucket, Massachusetts, no receipts, expenses $361; Galena, Illinois, no receipts, expenses $384; St. Mary's, Georgia, receipts $21, expenses $670. The position of collector of customs at these places is not always a sinecure, however, for a constant watch must be kept for the dutiable goods that never come.

Milwaukee, in the opinion of Mr. Andreas Dippel, is the one city in the United States which properly supports a German theater. And this though New York City has a larger German population than most of the cities of Germany! Still, the Deutsches Theater in New York is not yet discouraged, and during the coming winter it plans to present many famous German plays "with a cast hardly to be surpassed even in Europe."

Ruskin's attack on Whistler, according to Mr. T. R. Way's recently published book, actually resulted in bankruptcy for the artist. "'Punch's' lament," Mr. Way says,

> "'I takes and paints,
> And no complaints,
> And sells afore I'm dry;—
> When savage Ruskin
> Sticks his tusk in,
> And nobody'll buy,'

proved true for poor Whistler, and there was no market for his pictures. . . . After this came the bankruptcy." So perhaps there was some justification for Whistler's suit against Ruskin for libel.

The Outlook

THEODORE ROOSEVELT
Contributing Editor

THE ASSAULT ON THEODORE ROOSEVELT

The one subject by which the American people last week were universally stirred was the attack upon Theodore Roosevelt. The Outlook naturally devotes correspondingly large attention to this topic. The reader will find in the order named, first, a narrative of the events; second, Mr. Roosevelt's speech at Milwaukee; third, excerpts from the comments of the press; and, finally, The Outlook's editorial comment under the title "Assassins of Two Kinds."—THE EDITORS.

NOT since President McKinley was shot at Buffalo has there been such a Nation-wide expression of concern and affectionate sympathy as followed the assault on Theodore Roosevelt at Milwaukee on Monday evening of last week. The report that Mr. Roosevelt had been shot by a man named Schrank was quickly followed by the news that he had gone on to the Milwaukee Auditorium and was speaking to the people there assembled. The first and natural inference was that the wound was slight, but soon it became known that Mr. Roosevelt was seriously, although not necessarily dangerously, hurt, and that, with the pistol ball still in his body, he had insisted on delivering his message to the people with an inflexible determination and intrepidity which may rightly be called characteristic in relation to him, but which would be astounding in any other public man. That address, unique in the circumstances of its delivery and alive with earnestness and devotion, we publish on another page, together with some of the comments of the press and The Outlook's editorial view of the assault which has come so near to being a National tragedy. Here we recount briefly the facts.

Mr. Roosevelt had just entered an automobile at the entrance to the Gilpatrick Hotel in Milwaukee, on his way to the Auditorium, and was in a standing posture, when the man Schrank, standing near by in the crowd, drew a revolver and fired point-blank. The ball struck Mr. Roosevelt in the right breast, and would beyond question have penetrated the lungs had it not been deflected upward by an eyeglass case and the folded manuscript of his speech in his pocket. The assassin was instantly overpowered by Mr. Elbert Martin, one of Mr. Roosevelt's secretaries, who showed splendid quickness of thought and action, and Schrank's evident intention of firing a second shot was thus thwarted. Mr. Roosevelt's first thought was to save his assailant from bodily injury, and when Schrank was brought before him the only reproach he uttered was, "Don't hurt the poor creature." So energetic was the wounded man to save his would-be assassin that for some moments no one believed the shot had taken effect. When that was learned to be the fact, every effort was made to induce Mr. Roosevelt to receive full medical attention, but his single purpose was to go on with the fight for the people, to seize the opportunity to strike a telling blow for social advance, and to urge that the cause itself rather than himself or any one man was the issue before the country.

So it was that a seriously wounded man spoke to ten thousand hearers, who were moved by awe and stirred by emotion as he talked, sometimes fervently, sometimes quietly, but always with marvelous effectiveness. Wherever the rather imperfect reports of that speech were printed it was read by every one, and it carried conviction everywhere that here was the sincere utterance of the great leader of a great cause. For nearly an hour and a half this address, unique in the world's history, continued. When at

last Mr. Roosevelt yielded himself to the care of friends and medical attendants, it was found by examination and X-ray photographs taken in Milwaukee and later in the Mercy Hospital at Chicago, whither he was removed on Tuesday, that, to quote one of the surgeon's bulletins, this was "no mere flesh wound, but a serious wound in the chest." The ball struck an inch to the right and an inch below the right nipple, fractured the fourth rib, happily did not puncture the lung cavity, but ranged upward and inward four inches in the chest wall. Every care was taken to prevent tetanus and to discover any symptoms of blood-poisoning, of which there is always some danger in such a wound; but no such symptoms have developed, and the doctors have strong hope and belief that they will not appear, and that Mr. Roosevelt will make a reasonably quick recovery, aided by his strong physique, hopeful mind, and temperate, wholesome mode of life. At his hospital quarters Mr. Roosevelt, soon carefully guarded and attended by Mrs. Roosevelt and other near members of his family, received innumerable messages of love and admiration from friends the world over. So far it has not seemed necessary or desirable to remove the pistol ball. It is probable that, all things going well, Mr. Roosevelt will be removed to his home at Oyster Bay early in the present week. He hopes to be present, even if he may not speak, at the great Progressive meeting at Madison Square Garden, in New York City, on the evening of October 26.

What effect should this cowardly and more or less insane attack upon the leader of the Progressive party have upon the campaign? This question that leader has himself answered at least thrice.

In his speech made with the bullet still in his body he said that the fight must go on regardless of any man, and added: "I am in this cause with my whole heart and soul. I believe in the Progressive movement—a movement for the betterment of mankind, a movement for making life a little easier for all our people, a movement to try to take the burdens off the man and especially the woman in this country who is most oppressed."

The second answer was contained in the message which Senator Beveridge delivered to a vast audience in Louisville, speaking in Mr. Roosevelt's name and in his place:

> It matters little about me, but it matters all about the cause we fight for.
>
> If one soldier who happens to carry the flag is stricken, another will take it from his hands and carry it on. One after another the standard-bearers may be laid low, but the standard itself can never fall.
>
> You know personally I did not want ever to be a candidate for office again. And you know that only the call that came to the men of the '60s made me answer it in our day as they did more nobly in their day. And now it is not important whether one leader lives or dies: it is important only that the cause shall live and win.

The third answer was drawn out from Mr. Roosevelt by Governor Wilson's courteous announcement that in his political adversary's disablement Mr. Wilson would withdraw from further campaigning, followed by Mr. Bryan's dictum, "The issues of the campaign should not be determined by the act of an assassin." Mr. Roosevelt said:

> I wish to express my cordial agreement with the manly and proper statement of Mr. Bryan. . . . I wish to point out, however, that neither I nor my friends have asked that the discussion be turned away from the principles that are involved. On the contrary, we emphatically demand that the discussion be carried on precisely as if I had not been shot. I shall be sorry if Mr. Wilson does not keep on the stump, and I feel that he owes it to himself and the American people to continue on the stump. . . .
>
> I cannot too strongly emphasize the fact, upon which Progressives insist, that the welfare of any one man in this fight is wholly immaterial compared to the great and fundamental issues involved in the triumph of the principles for which our cause stands. If I had been killed, the fight would have gone on exactly the same. Governor Johnson, Senator Beveridge, Mr. Straus, Senator Bristow, Miss Jane Addams, Gifford Pinchot, Judge Ben Lindsey, Raymond Robbins, Mr. Prendergast, and the hundreds of other men now on the stump are preaching the doctrines that I have been preaching, and stand for and represent just the same cause. . . .
>
> So far as my opponents are concerned, whatever could with truth and propriety have been said against me and my cause before I was shot can with equal truth and equal propriety be said against me now, and it should be so said; and the things that cannot be said now are merely the things that ought not to have been said before. This is not a contest about any man; it is a contest concerning principles.

The man who shot Mr. Roosevelt, by name John Schrank, a resident of New York, had in his pocket writings which indicate that his mentality and power of judgment are deficient; whether he possesses such a knowledge of right and wrong as to make him a murderer rather than a maniac must be tested fairly by the courts. In some ways, apart from his crime, he seems to talk in an ordinary and matter-of-fact manner,

COPYRIGHT BY MOFFETT STUDIO

THEODORE ROOSEVELT

with little evidence of insanity. But his "proclamation" talks of a vision of President McKinley inciting him to avenge Mr. McKinley's death upon Theodore Roosevelt as his murderer. Another writing declares that it is "the right and duty of every citizen to remove a third-termer." Schrank's further declaration that this country should never have a king, taken in connection with his talk about a third term and his mention of newspapers he had read, namely, the New York "World" and the New York "Herald," is pretty strong evidence that the inciting cause acting upon a weak and disordered mind has been some of the abusive attacks made by unscrupulous papers upon Mr. Roosevelt. And it will be remembered that this sort of incitement was existent in the case of Czolgosz. It is perfectly natural, as Mr. Roosevelt said at Milwaukee, that "weak and vicious minds should be inflamed to acts of violence by this kind of foul mendacity and abuse." An instance of this rabid, excitable talk is the utterance attributed by the New York papers to a Baptist minister, as uttered just three days after Schrank's murderous attack. He said (we quote the New York "Evening Mail"): "If Roosevelt is elected President, there will be no more republic. It will be Theodore the First." If a minister can talk like this, what may be expected from a Schrank or a Czolgosz? One lesson of the assault is decent restraint in journalism and in campaigning; another is closer watch, in the interest of safety of life, over those who are mentally or morally defective.

MR. ROOSEVELT'S SPEECH AT MILWAUKEE

FRIENDS, I shall have to ask you to be as quiet as possible. I do not know whether you fully understand that I have been shot, but it takes more than that to kill a Bull Moose. But, fortunately, I had my manuscript [holding up the manuscript, showing the audience where the bullet had gone through], so, you see, I was going to make a long speech. And, friends, the hole in it is where the bullet went through, and it probably saved the bullet from going into my heart. The bullet is in me now, so that I cannot make a very long speech. But I will try my best.

And now, friends, I want to take advantage of this incident to say as solemn a word of warning as I know how to my fellow-Americans. First of all, I want to say this about myself. I have altogether too many important things to think of to pay any heed or feel any concern over my own death.

Now I would not speak to you insincerely within five minutes of being shot. I am telling you the literal truth when I say that my concern is for many other things. It is not in the least for my own life.

I want you to understand that I am ahead of the game, anyway. No man has had a happier life than I have had, a happier life in every way. I have been able to do certain things that I greatly wished to do, and I am interested in doing other things. I can tell you with absolute truthfulness that I am very much uninterested in whether I am shot or not. It was just as when I was colonel of my regiment, I always felt that a private was to be excused for feeling at times some pangs of anxiety about his personal safety, but I cannot understand a man fit to be a colonel who can pay any heed to his personal safety when he is occupied, as he ought to be occupied, with the absorbing desire to do his duty.

I am in this cause with my whole heart and soul; I believe in the Progressive movement—a movement for the betterment of mankind, a movement for making life a little easier for all our people, a movement to try to take the burdens off the man and especially the woman in this country who is the most oppressed.

I am absorbed in the success of that movement. I feel uncommonly proud in belonging to that movement. I ask you now, this evening, to accept what I am saying as absolute truth when I tell you I am not thinking of my own success. I am not thinking of my life, or of anything connected with me personally.

It is a very natural thing that weak and vicious minds should be inflamed to acts of violence by the kind of foul mendacity and abuse that have been heaped upon me for the last three months by the papers in the interests not only of Mr. Debs, but of Mr. Wilson and Mr. Taft. I will disown and repudiate any man of my party who attacks with such vile, foul slander and abuse any opponents of another party.

I wish to say seriously to the speakers and the newspapers representing the Republican and Democratic and Socialist parties that they

cannot, month in and month out, year in and year out, make the kind of slanderous, bitter, and malevolent assaults that they have made and not expect that brutal and violent characters, especially when the brutality is accompanied by a not too strong mind—they cannot expect that such natures will be unaffected by it.

I am not speaking for myself at all—I give you my word, I do not care a rap about being shot, not a rap. I have had a good many experiences in my time, and this is only one of them. What I do care for is my country. I wish I were able to impress on our people the duty to feel strongly, but to speak truthfully of their opponents. I say now that I have never said on the stump one word against any opponent that I could not substantiate, and nothing I ought not to have said; nothing that, looking back, I would not say again.

I cannot tell you of what infinitesimal importance I regard this incident as compared with the great issues at stake in this campaign; and I ask it not for my sake, not the least in the world, but for the sake of our common country, that my opponents make up their minds to speak only the truth, and not to use the kind of slander and mendacity which, if taken seriously, must incite weak and violent natures to crimes of violence.

Now, friends, what we who are in this movement are endeavoring to do is to forestall any such movement by making this a movement for justice now, a movement in which we ask all just men of generous hearts to join with the men who feel in their souls that lift upward which bids them refuse to be satisfied themselves while their fellow-countrymen and countrywomen suffer from a veritable misery. Now, friends, what we Progressives are trying to do is to enroll rich or poor, whatever their social or industrial position, to stand together for the most elementary rights of good citizenship, those elementary rights which are the foundation of good citizenship in this great Republic of ours.

My friends are a little more nervous than I am. I have had an A1 time in life, and I am having it now. I never in my life had any movement in which I was able to serve with such whole-hearted devotion as in this, in which I was able to feel, as I do in this, that common weal. I have fought for the good of our common country.

And now, friends, I shall have to cut short much of the speech that I meant to give you, but I want to touch on just two or three of the points.

In the first place, speaking to you here in Milwaukee, I wish to say that the Progressive party is making its appeal to all our fellow-citizens, without any regard to their creed or to their birthplace.

We do not regard as essential the way in which a man worships his God or where he was born. We regard as essential the matter of spirit and purpose.

In New York, while I was Police Commissioner, the two men from whom I got the most assistance were Jacob Riis, who was born in Denmark, and Arthur von Briesen, who was born in Germany, both of them as fine examples of the best and highest American citizenship as you could find in any part of this country.

I have just been introduced by one of your own men, Henry Cochems. His grandfather, his father, and that father's brother served in the United States army, and they entered it four years after they had come to this country from Germany. Two of them left their lives, spent their lives, on the field of battle—I am all right—I am a little sore. Anybody has a right to be sore with a bullet in him. You would find that if I was in battle I would be leading my men just the same. Just the same way I am going to make this speech. At one time I promoted five men for gallantry on the field of battle. Afterward it happened, in making some inquiries about them, that I found two of them were Protestants, two Catholics, and one a Jew. One Protestant came from Germany and one was born in Ireland. I did not promote them because of their religion; it just happened that way. If all of them had been Jews I would have promoted them, or if all had been Protestants I would have promoted them, or if they had been Catholics.

In that regiment I had a man born in Italy who distinguished himself by gallantry; there was a young fellow, who came across when he was a child, from Bohemia, who likewise distinguished himself; and, friends, I assure you that I was incapable of considering any question whatever but the worth of each individual as a fighting man. If he was a good fighting man, then I saw that Uncle Sam got the benefit from it. That is all.

I make the same appeal in our citizenship. I ask in our civic life that we in the same way pay heed only to the man's quality of citizenship—to repudiate as the worst enemy that we can have whoever tries to get us to discriminate for or against any man because of his creed or his birthplace.

Now, friends, in the same way I want our people to stand by one another without regard to differences of class or occupations. I have always stood by the labor unions. I am going to make one omission to-night. I have prepared my speech because Mr. Wilson has seen fit to attack me, by showing up his record in comparison with mine. But I am not going to do that to-night. I am going simply to speak of what I myself have done and of what I think ought to be done in this country of ours.

[After Mr. Roosevelt had concluded that portion of his speech in which he referred to his injury, he turned to concrete issues of the campaign, and spoke as though he were making one of the addresses which are a matter of daily routine with him. After he had been speaking for some time he turned to Dr. Terrell and said:

"How long have I been speaking?"

"Three-quarters of an hour," said the doctor, glancing at his watch.

"Well," said Mr. Roosevelt, with a smile, "I'll talk for a quarter of an hour more." He actually spoke altogether for nearly an hour and a half.]

The Democratic party, in its platform and through the utterances of Mr. Wilson, has distinctly committed itself to the old flintlock, muzzle-loaded doctrine of State's rights.

I have said distinctly that we are for the people's rights. If they can be obtained best through the National Government, then we are for National rights. We are for the people's rights, however it is necessary to secure them.

Mr. Wilson has made a long essay against Senator Beveridge's bill to abolish child labor. It is the same kind of an argument that would be made against our bill to prohibit women from working more than eight hours a day in industry. If it is true, it would apply equally against our proposal to insist that in continuous industries there shall be by law one day's rest in seven and a three-shift eight-hour day.

You have labor laws here in Wisconsin, and any chamber of commerce will tell you that, because of that fact, there are industries that will not come into Wisconsin. They prefer to stay outside, where they can work children of tender years; where they can work women fourteen and sixteen hours a day; where, if it is a continuous industry, they can work men twelve hours a day and seven days a week.

Now, friends, I know that you of Wisconsin would never repeal those laws, even if they are to your commercial hurt, just as I am trying to get New York to adopt such laws, even though it will be to New York's commercial hurt. But, if possible, I want to arrange so that we can have justice without commercial hurt, and you can get that only if you have justice enforced Nationally. You won't be burdened in Wisconsin with industries not coming to the State if the same good laws are extended all over the other States. Do you see what I mean? The States all compete in a common market, and it is not justice to the employers of a State that has enforced just and proper laws to have them exposed to the competition of any State where no such laws are enforced. Now, in the Democratic platform it is declared that we shall not have such laws.

Mr. Wilson has distinctly declared that you shall not have National law to prohibit the labor of children, to prohibit child labor. He has distinctly declared that we shall not have laws to establish a minimum wage for women. I ask you to look at our declaration and hear and read our platform about social and industrial justice, and then, friends, vote for the Progressive ticket without regard to me, without regard to my personality, for only by voting for that platform can you be true to the cause of progress throughout this Union.

COMMENT BY THE PRESS

WHEN Senator Lodge, commenting upon the shocking happening in Milwaukee, said: "I am not surprised that Mr. Roosevelt bore himself in a heroic way; he would do that, anyway," he voiced the feeling of everybody, says the Springfield, Massachusetts, "Republican" (Ind.), and adds:

Never has the bullet of a would-be assassin of Presidents or other high officials in this country reached one who did not display splendid self-control and courage. Presidents Garfield and McKinley commanded the admiration of the world by the composure and serenity with which they faced death under the most cruel circumstances. Mayor Gaynor, of New York, tinged public sympathy with admiration by his manly behavior. None of these men exhibited any sign of such resentment as would have seemed but natural under the shocking circumstances. It is something to be proud of as Americans that in such supreme test manhood

does not shrivel, but shines out strong and fine in the crisis.

"Aside from his sheer physical pluck and his forgetfulness of self, his revelation of mental quality and discipline in a time of great emotional excitement must be convincing even to those of little faith," declares the Boston "Journal" (Prog.), and thus concludes:

Bigger than parties, wider than sectional differences, deeper than prejudice, the recognition and the human response to qualities such as these. On every hand the tribute is being paid; in the hasty spoken words of the street, in the careful words which are being written to be printed beyond recall.

The attempted assassination of Theodore Roosevelt has resulted in the tribute of an entire people stirred Nation-wide out of disbelief, and out of partisanship, by a flash of truth.

The Chicago "Evening Post" (Prog.) says that the hour of danger has brought to the people "a glimpse into the soul of Theodore Roosevelt," and, quoting from the prelude to the Milwaukee speech, thus concludes:

There is no false sentiment here; there is no self-seeking. The guards are down. The soul of the man stands forth as it is. In the Valley of the Shadow his own simple declaration of his sincerity, his own revelation of the unselfish quality of his devotion to the greatest movement of his generation, will be the standard by which history will pass upon Theodore Roosevelt its final judgment. This much they cannot take from him, no matter whether he is now to live or to die.

"I tell you now with absolute truthfulness I am not thinking of my own life. I am not thinking of my own success. I am thinking only of the success of this great cause." Commenting on this, the New York "American" (Dem.) remarks as follows:

In the partisan stress of the campaign there have been those who have questioned Mr. Roosevelt's sincerity and unselfishness in the notable movement which he leads.

But no man who heard these words or reads them in remembrance of their tragic environment can fail to believe that Theodore Roosevelt is not only superbly brave but that he is also splendidly sincere in his present struggle for the people.

The Republic can ill afford to lose the energy, the courage, and the directness of this remarkable man.

"When he was shot down, his first thought and first expression was not for himself, but for the man who had tried to take his life. Was that the logical mental tendency of a man whose happiness depended upon prolonging his life? Would a man animated solely by ambition have spoken for an hour and a half risking his life from an open bullet wound in his side?" These questions the Washington "Times" (Prog.) asks, and thus answers them:

The championing of a righteous cause, the leading of devoted followers, the willingness and determination to give all he had for the success of a principle, is the analysis which explains his attitude before and after the bullet struck him, and makes clear his statement that: "I don't care to talk about the nearness of death. There are things that are worse than death, and we know what they are."

An impressive union of a man's political foes in praise of him personally and even politically is shown by Democratic, Republican, and Independent papers alike. The Baltimore "Sun" (Dem.) declares:

This paper has too often expressed its admiration for the many good qualities of Colonel Roosevelt for it to be suspected of insincerity now in saying that the country would have suffered an almost irreparable loss had that maniac's shot last night proved fatal.

However much we disagree with the former President, we must all admit his usefulness. However much we want to see another man President, we must be glad that there is a statesman of his force and courage in opposition. It is an ancient truism that a vigorous opposition is necessary to the success of any administration. If it had not been for Roosevelt, the Democratic party, in all probability, would not have nominated so admirable a candidate as it did at Baltimore. If, and when, the Democratic party goes into power next March, the presence of such a man in our political life will be one of the best guarantees possible of a good administration for the succeeding four years.

Another Democratic paper, the Harrisburg "Patriot," says:

The attack upon Colonel Roosevelt has shocked the entire civilized world and has won universal sympathy for the wounded man. This is no less so because the wound is likely soon to heal, the bullet having struck no vital part. . . . It is unfortunate that Colonel Roosevelt will be unable, perhaps up to election time, to resume his campaigning. But all decent men and women in the United States will earnestly hope for his speedy recovery.

The Columbia, South Carolina, "State" (Dem.) remarks:

We may say that the conduct of the former President of the United States since the moment of the assault on him has been admirable. It could not have been better. In the crisis he has appeared great.

Another Southern paper, the New Orleans "Item" (Ind.), declares:

Roosevelt, under an assassin's fire, acted as every one would have expected. There is no doubt of the Colonel's physical courage. His

bearing here as elsewhere will help the cause which he heads. Assassination is not an asset for the opponents of a man or a cause.

The Troy "Times" expresses the sentiments of other Republican papers:

Amid all the conflicts of political life, animated though they be, there will not be found room for anything but profound grief that one who has done so much for his country and has earned so much of its admiration and affection should have been so grievously assaulted while engaged in the work of addressing his fellow-countrymen. The wish that Theodore Roosevelt may soon return to that marvelous activity which never was more conspicuous than when, freshly marked with a cruel bullet, he was declaring his beliefs and his purposes to an audience of thousands, will be as inclusive as the world of thinking and feeling men and women.

Among "independent" papers none have more virulently opposed Mr. Roosevelt than the New York "Sun" and the New York "Evening Post." The first says:

The "Sun" rejoices that the bullet fired by a mad-brained man of the Czolgosz type at Colonel Roosevelt did not find a fatal lodgment. While we differ with Colonel Roosevelt in his policies, his sudden taking off would be a National calamity, and with the entire Nation we pray for his speedy recovery.

The "Evening Post" says:

In the circumstances of this crazy attempt upon Mr. Roosevelt's life there are many things to dwell upon with gratitude. His characteristic coolness and pluck in danger stood out admirably; and the genuine affection which the vast numbers of his fellow-countrymen have for him has been given sympathetic expression in a way which must be a solid comfort to him. . .

And in face of the statement made under examination by the would-be assassin connecting his assault with partisan attacks by newspapers, the "Post" adds:

But the fact which most people will fasten upon with relief is that the murderous assault upon Mr. Roosevelt cannot be traced to any motive of party. . . . The effort which some are making to explain the Milwaukee crime as a result of the active opposition which Mr. Roosevelt has stirred up is particularly foolish in view of the incoherent writings found on the person of the would-be assassin.

Another Independent paper, the Cedar Rapids, Iowa, "Gazette," remarks as to this:

Mr. Roosevelt has been somewhat intemperate in some of his utterances. But these could hardly be to blame for the attack. Public men much more mild-mannered have been victims of the assassin's bullet. The gentle, mild-mannered McKinley was shot down in cold blood at a time when the country was nearer political peace than at any time since long before the Civil War.

The blame cannot be laid upon Mr. Roosevelt's campaign methods, at least not as much as to some of the intemperate utterances of his opponents.

The third term idea seemed to be uppermost in the mind of the assassin. . . . It is one of the silliest "arguments" of a campaign which has contained much silliness.

As to the crazy wretch who did the deed the Newark "Evening News" (Ind.) says:

A good many of us have thought right along that a man opposed to Roosevelt because of the third term superstition must be a little weak in the upper story, and it seems to be demonstrated now.

"'Poor wretch!' exclaimed Colonel Roosevelt, after a crazed man had fired out of the dark at him. . . . Colonel Roosevelt, with the bullet lodged in his chest, but otherwise as placid and composed as when he rose that morning, looked at the baffled lunatic. 'Poor wretch!' he exclaimed." After this description the Detroit "Journal" (Rep.) proceeds thus:

This will be the prevailing thought in America when the people are finally relieved of all anxiety for Colonel Roosevelt's life. The crime was the crime of a poor wretch: a crime wild and purposeless, a crime planned by the same disordered mind that made those incoherent scribblings found in the culprit's pockets. The very man he wounded could afford to pity him.

"The dastardly attempt on the life of Colonel Roosevelt is a fearful thing to contemplate," says the South Bend, Indiana, "Tribune" (Rep.).

It deserves to be considered exactly as if the effort had proven successful, for it is no fault of the crank who sent the bullet on its frightful mission that it did not prove effective. The would-be assassin was bent on killing the former President, and merely by chance must the charge be "assault with intent to kill" instead of murder. He is just as deserving of that punishment which has been so speedily meted out in the past as if he had murdered Colonel Roosevelt.

The Burlington, Vermont, "Free Press" (Rep.) remarks:

When President McKinley was shot, there was a general demand throughout the country for the adoption of some stringent measures that would tend to prevent cranks from even trying to assassinate a President of the United States, and a law was passed by Congress extending the death penalty to this crime. Unfortunately the law does not apply to an ex-President of the United States, as it manifestly should, for when a man has once entered the White House he seems to become an attractive target for the Guiteau and the Czolgosz type.

Few men have had a wider personal following than Theodore Roosevelt, and there will be

universal regret and horror that his life should be endangered by the assassin's bullet.

"The attack on Mr. Roosevelt was as free from external stimulus as that on Mayor Gaynor," declares the New York "Times" (Ind. Dem.). Among other papers whose bitterness against Mr. Roosevelt has led them into extremities of language, the "Times" disclaims for the anti-Roosevelt press responsibility for the assault by its remark that—

In the campaign he has been criticised by his opponents, and he in turn has criticised them even more vigorously. But there has been nothing in this out of the ordinary; the general temper of the people has been calm. Nothing but a thoroughly disordered or notoriety-seeking brain could have found in the discussions the least inspiration to violence.

Another New York paper, the "Globe" (Rep.), takes this different view of the campaign:

The vituperative campaign against Theodore Roosevelt, carried on with increasing virulence for a decade, produced fruit after its kind last night in Milwaukee. A weak-minded, cowardly creature, who accepted slanders as truth, became convinced that it was his duty to remove what he was told was a menace to his country and to society.

J. Wilkes Booth heard extremists say Lincoln was a tyrant, and believed it. Czolgosz listened to anarchistic talk and conceived that an obligation rested on him to murder McKinley. Schrank fed his eyes on the intemperate attacks of New York newspapers on Roosevelt; his zigzag brain became as inflamed as the stuff he read, and he felt a call from Heaven to sneak after his victim.

One can imagine, therefore, that last evening was no comfortable one to the editors chiefly responsible for the torrent of abuse. Their consciences are not altogether dead, and they are intelligent enough to trace consequences to causes. They knew that, as they had laid responsibility for McKinley's death at the door of one newspaper, so they by the same argument could be held responsible for the murderous assault on Roosevelt.

"Who is responsible?" demands the Grand Rapids "Evening Press" (Prog.). "Is no one responsible? The man thought he was doing the country a service by ridding it of the candidate for a third term. . . . He came from New York, the citadel of the bitter, vicious, and deliberate misrepresentation which to a greater or lesser degree is the part chosen by the stand-pat press."

Says the New York "Sun" (Ind.), which has apparently shown no restraint when it wished to denounce Mr. Roosevelt:

President Taft's message to Colonel Roosevelt, the first direct communication for many months that has passed in either direction between these two former friends, is a model of graceful and sincere expression. It carries sentiments which, as we believe, are universally entertained by the President's supporters in the campaign.

Governor Wilson has not been slow in announcing his own withdrawal from the stump during the term of Colonel Roosevelt's physical incapacity. This proceeding on the part of the Democratic candidate is inspired by personal delicacy and political chivalry alike admirable.

"I speak for the American people," said President Taft, "in expressing the profound hope that Colonel Roosevelt may speedily recover from the effects of this dastardly act."

"Amen!" cries the Buffalo "Express."

The Springfield, Massachusetts, "Republican" (Ind.) makes the following comment on Governor Wilson's course:

In announcing his withdrawal from the stump at the earliest possible date, Governor Wilson meets the new conditions in the Presidential contest in precisely the proper spirit. So long as Mr. Roosevelt remains incapacitated for campaigning, and with President Taft personally taking no active part in the contest, it is fitting that the Democratic candidate should abandon public speaking. If it be said that Democrats and Republicans may still fight each other, the obvious answer is that this Presidential struggle has been in reality a question of Mr. Roosevelt's potency, and the one great undetermined quantity in the political equation has been the measure of support given him by the American people.

One of the bulletins issued by Mr. Roosevelt's physicians reads as follows:

We find him in magnificent condition, due to regular physical exercise and his habitual abstinence from liquor and tobacco.

"What an answer to the slanderers who tried to spread the story that Colonel Roosevelt was a habitual drunkard!" exclaims the Baltimore Evening "Sun" (Ind. Dem.). "What an argument for temperance and proper care of the body!" The paper adds:

Theodore Roosevelt was nothing of a "husky" boy. He made himself robust by caring and working. He has *acquired* a physique that three noted physicians pronounced "magnificent." Of all the deeds which his friends praise him there is probably none more remarkable or significant, none more worthy of praise, than this.

Foreign comment is interesting. The London "Times" says:

It is impossible to calculate the effect of the wave of sympathy for Mr. Roosevelt that is certain to sweep over the whole electorate. All previous estimates and calculations are upset and political prophets will begin again from the

beginning to weigh Mr. Roosevelt's chances in conditions more complicated than before.

The London "Daily Chronicle" says:

The loss of Mr. Roosevelt would be a heavy one for the United States. However people there may agree or disagree with his actions and the policy for which he stands, there can be only one opinion of the point that he is one of the great personalities which the country could ill afford to lose; and we may justly say more—he is a prominent figure whose passing would have left the whole civilized world infinitely poorer.

The London "Standard" says:

Whatever the result of the impending election may be, the United States can ill afford to lose a public man of so vital and commanding personality.

As a display of cool and stoical courage the ex-President's performance is not unworthy to rank with any incident in the lore of ancient Sparta or Samurai Japan.

ASSASSINS OF TWO KINDS

HISTORY affords few more dramatic illustrations of devoted courage than Theodore Roosevelt pleading the cause of the people for over an hour with a bullet in his breast and the blood oozing from his wound. This type of heroism is not infrequent in extra-hazardous pursuits, as that of the soldier, the fireman, or the miner, where imminent danger excites to self-forgetful bravery; but it is rarely seen, possibly because rarely called for, in the pacific work of an orator. Mr. Roosevelt's courage interprets the closing words of his Carnegie Hall speech:

The leader for the time being whoever he may be, is but an instrument, to be used until broken and then to be cast aside; and if he is worth his salt he will care no more when he is broken than a soldier cares when he is sent where his life is forfeit in order that the victory may be won. In the long fight for righteousness the watchword for all of us is spend and be spent. It is of little matter whether any one man fails or succeeds; but the cause shall not fail, for it is the cause of mankind. We, here in America, hold in our hands the hope of the world, the fate of the coming years; and shame and disgrace will be ours if in our eyes the light of high resolve is dimmed, if we trail in the dust the golden hopes of men.

These words interpret the secret of his courage—forgetfulness of self in thought for others. Now that the danger of death is passed, the true significance of the incident may easily be forgotten. But it ought not to be forgotten that he was conscious at the time that this speech might be his last message to the American people; and that, despite the counsels and the protest of his physician and friends, he persisted in his purpose, partly to reassure his followers and his family, partly because the solemnity of the hour would add to the weight and influence of his message.

The world speaks carelessly of the victim of such an assault as unprepared. Mr. Roosevelt was not unprepared. The habit of self-mastery cultivated throughout his life until it has become a second nature was there ready to spring into action the instant it was called for. The calmness of spirit which never forsakes Mr. Roosevelt preserved his serenity while all about him were dazed. The unselfishness of his nature sprang to the protection of his assailant from mob violence and preserved the country from the indelible disgrace which such violence would involve. And his lifelong temperate habits and careful physical culture had endowed him with a physique capable of resisting a shock which would have been fatal to a body poisoned by vice or enervated by luxury. "His superb physical condition," says the chief of the physicians attendant upon him, "due to his outdoor exercise and habitual abstinence from liquor and tobacco, as well as his simplicity of diet, accounts for the small effect produced upon him during his long speech while suffering from such a severe shock."

Unprepared? No! We are never unprepared. Self-control in little things prepares for self-control in great crises. Making the body the servant of the spirit prepares the body to meet disease or disaster when it comes. Constantly living a spiritual life consecrated to the higher ministries makes the spirit strong to serve the purpose of health and healing when the body turns to it for an ally. We are all unconsciously preparing ourselves by our daily life for failure or for success in the unanticipated time of extraordinary trial.

Nor was the country wholly unprepared for this assault. Certainly it should not have been unprepared. Mr. Roosevelt's friends were not unprepared. Great national excitement always inflames the man whose passions are strong and whose reason is weak. Violent speech excites to violent deeds. Revolution breeds assassination. The assassination of Cæsar by Brutus, of William of Orange by

Gerard, of Marat by Charlotte Corday, of the Duke of Buckingham by John Felton, of King Humbert by Bresci, will readily recur to the reader, as well as the assassination of Abraham Lincoln by John Wilkes Booth, of President Garfield by Guiteau, and of President McKinley by Czolgosz.

The "North American," of Philadelphia, published on October 10, four days before the assassination, reported the following list of epithets applied to Theodore Roosevelt by a single American journal in the issues of a single month. The name of the journal it does not give; therefore we cannot report the name:

"Shrieks his hostility," "ridiculous," "contemptible," "his antics," "gnashing his teeth," "eager to use fraud," "unparalleled viciousness and dishonesty," "dangerous demagogue," "insensate ambition," "charlatanism," "plain aberration," "bad faith," "unworthy methods," "shocking demagogism," "baseless and dangerous appeals," "no scruples," "revolutionary and subversive," "horrible glibness," "indecent performance," "Aaron Burr," "shameless," "crazy Socialistic scheme," "blatant insincerity," "hypocritical and dangerous," "howling mobocracy," "shabby tactics," "damning proof of hypocrisy," "hollow and untrustworthy," "duplicity," "shrewd political trickery." "utter untrustworthiness," "dangerous and self-seeking autocrat," "unblushing effrontery," "squalid bandying of words," "no respect for truth."

It is not strange that a journal which vainly endeavors to persuade the country that a candidate for the Presidency, loved and honored as few men in American history have been loved and honored, is a man of "unparalleled viciousness and dishonesty" and is impelled by an "insensate ambition," should succeed in persuading a weak-minded reader to rid the Nation of so dangerous a foe by putting him to death. It is not just to charge any political organization with participation in the guilt of John Schrank. But the spirit of intemperate partisanship which substitutes abuse for discussion is not guiltless. When reputable journals seek by poisoned words to assassinate the reputation of an honored American, a fanatical crank not unnaturally follows with a bullet. This is not surmise; the fact is brought out in Schrank's statement under official examination:

Q.—You are not a member of any party? A.—No, sir. I thought there should be an example of the third term if it should exist any longer. Mr. Grant was refused, and he was satisfied; this man was refused, and he is not satisfied. It's gone beyond limits, if he keeps on doing this after election. He can't possibly carry a solid Western State. The next thing we will have is a civil war, because he will say the scoundrels and thieves and crooks stole my nomination, and now they will steal my election, and they will take up arms in all the Western States. We are facing a civil war just to keep him in a third term, in an illegitimate place.

And in the course of his answers he mentioned by name two New York newspapers.

Speech should be free; public measures and public men should be keenly scrutinized and frankly criticised; immoral character and conduct should be indignantly condemned; but abuse is not criticism. The wholesale vituperation quoted above is no more legitimate campaigning than the dynamiting by the McNamara brothers is legitimate war.

Assassination is not war, whether it be assassination of reputation or assassination of life. The public words and deeds of a public man are, and ought to be, subject to the judgment of his fellow-men, but this judgment should be based on specific words and acts. If the critic of Mr. Roosevelt declares that Mr. Roosevelt has shown his hostility to the Negro race by dismissing from the service a troop of Negro soldiers without trial and in violation of the law, he makes a charge which can be met. Those who believe in Mr. Roosevelt can point to the specific law which gave him authority to dismiss the Brownsville troop, and to the evidence of the troop's participation in the crime for which it was dismissed. The public can read the evidence, hear the arguments, and judge between the accuser and the defender. If the critic of Mr. Roosevelt declares that, in violation of international law and his Constitutional obligations, he recognized the Republic of Panama, the defender of Mr. Roosevelt's Panama policy can give the reasons for his belief that Mr. Roosevelt had Constitutional and legal authority to recognize the Republic of Panama, and that in recognizing that Republic he acted in accordance with international law and in promotion of the rights of an oppressed people. And the reader can consider the facts, weigh the arguments, and decide between the accuser and the defender. But it is as impossible to reply to the vituperation which the Philadelphia "North American" has quoted from the unnamed Tory journal as it would be to reply to the fangs of a rattlesnake.

When Mr. Roosevelt's traducers say that Mr. Roosevelt has himself introduced and sanctioned this kind of campaigning, they say what is not true. Search Mr. Roosevelt's speeches from the beginning to the end of

this campaign; nowhere is there in them anything analogous to the wholesale abuse to which he has been subjected. When he has accused men of lying he has specified the lie, when he has accused men of fraud he has specified the fraud; and he has accompanied his accusation with a statement of the grounds upon which that accusation is based. It is one thing to affirm that Mr. Taft was nominated by a Convention which was tainted by fraud, and to state the evidence upon which that indictment is based, so that the public can judge whether or not the charge is substantiated; it is quite another thing to charge that the candidate of a great party is "ridiculous," "contemptible," "eager to use fraud," "a dangerous and self-seeking autocrat." Such charges it is possible neither to substantiate nor to refute.

We do not wonder that some eminent journals in seeking to defend themselves are endeavoring to befog the difference between wholesale vituperation and indignant condemnation of specified words and deeds, accompanied with a statement of the evidence on which that condemnation is based. But the distinction is perfectly clear, and the American people understand it. Free discussion of platforms and policies, and of the men who stand upon those platforms and represent those policies, is absolutely essential to democratic government, but such discussion is not promoted, it is thwarted, by the personal abuse and the caricature by pen and pencil with which some partisan journals have sought to inflame the passions of their readers. How absolutely insincere as well as unjust some of this abuse has been is evidenced by the editorial utterances of some of these very journals commending the courage and the character of the man whom in previous issues they had been vilifying.

Campaign orators and campaign newspapers will give to their audiences and readers the kind of food which audiences and readers call for. One great good will come out of the evil if this attempted assassination of Theodore Roosevelt shall lead the American people to call for less heat and more light in political campaigning.

THE WEEK

The Balkan War Last week Turkey declared war against Bulgaria and Servia. This happened instantly on the signing of the peace agreement between Italy and Turkey, described further on. Such was the response to the ultimatums of the Bulgarian and Servian agents at Constantinople. The agents had demanded, on behalf of their southern neighbors and fellow-Christians, the introduction at once of reforms and changes of administration in Macedonia, otherwise there would be war. Turkey finally replied that these demands constituted interference in her internal affairs, and that if war were wanted, well and good, there would be war. Also on the conclusion of the peace agreement between Italy and Turkey several Turkish battle-ships appeared in the Black Sea, carrying Turkish troops to land on the Bulgarian coast. The Turks thus compelled the Bulgarian commanders to divert part of the Balkan army towards the sea from its expected activity to the south of the Balkan Mountains. The Turks also crossed the Servian frontier and engaged the less important Servian army. As regards Montenegro, war has been in progress for a fortnight between that kingdom and Turkey. The past week has witnessed a steady advance of the Montenegrin forces south into Albania and east into Novibazar, the only Turkish territory adjoining Austria. Novibazar also separates Montenegro and Servia. In this district the Montenegrins have, after ten days' fighting, captured the town of Berana and have made about seven hundred Turkish soldiers prisoners, taking fourteen guns and large quantities of ammunition and provisions. Hundreds of prisoners and much ammunition have also been captured by the Montenegrins during the week at the four Turkish fortifications on the road into Albania. After this series of uninterrupted victories the Montenegrin forces in Albania are now encamped about the town of Skutari on the lake of that name. Meanwhile, though Greeks have been fighting Turks on the frontier, war has only just been declared between Turkey and Greece. Turkey has given Greece sufficient provocation by continuing to hold a large number of Greek ships in Turkish waters, with the announced intention of converting them into transports for the Turkish army in case of necessity. This has angered the

Greeks, and they have now formally admitted deputies from the island of Crete into their Parliament, despite Turkey's repeated warnings that this would be considered a hostile act, Crete being still under the Sultan's nominal suzerainty. Thus, when one considers all the fighting on the Turkish frontier, it is seen that the efforts of the Powers to prevent war have practically failed. Their efforts must now be bent towards localizing it. With Italy once more neutral, the European concert again becomes one of six Powers—England, France, Russia, Germany, Austria, Italy—and the concert receives thereby material strength in dealing with the Balkan question. Most observers conclude that this increase of strength will make the Balkan States, and Turkey as well, more pliable under European pressure. In any event, two opposing forces now face each other, greater in numbers than any in Europe since the battle of Sedan four decades ago.

Turkey and the Balkan States

If the peace between Italy and Turkey is thus important as regards the Powers, it is also important as regards Turkey. The inevitable result of the Tripolitan war was long since appreciated by Turkish statesmen, and they have endeavored to arrange terms of peace. The chief difficulty in the way has been the bellicose attitude of the Turkish people themselves, who have been liberally fed on false reports from Tripoli that the Turkish armies had met with success instead of failure. With the fanatical Mohammedan population in this temper, it would indeed be difficult to arrange terms of peace, and to convince the people that the Italians and not the Turks were the victors. And yet a peace must be consummated soon, if Turkey were to lose not only Tripoli but also the Sporades Islands in the Ægean Sea, for the possession of at least one of the latter was more and more desired by Italy in her desire to become the chief Mediterranean Power. Thus there was an increasing necessity to conclude peace with Italy, and yet to conclude it with the assent of the Turkish people. At this juncture there occurred a greater unrest than usual in the Balkans. The Turks had been brutally oppressing some of the Christian natives of Macedonia and Albania. This had started up a corresponding resentment on the part of their brethren in the border kingdoms of Bulgaria, Servia, and Montenegro. The Turkish Cabinet cleverly took advantage of this situation. With the menace of war from these three kingdoms and Greece, the Turkish people saw that, in order to have a proper number of the Empire's armed forces to meet the enemy at home, they must be withdrawn from meeting an enemy abroad. Hence the people came gradually into a mood in which they would accept some sort of a peace. Whether they will agree to the conditions now announced remains to be seen. That they will be the more induced to do so may be assumed from their relief on the signing of the peace preliminaries, at the freedom from military operations with Italy, at the nullification of Italy's menace to invade Turkish home territory, and at the release of the small Turkish fleet hitherto held inoperative by the great Italian fleet.

The Peace Agreement Between Italy and Turkey

The signing by Italian and Turkish Ambassadors of a peace agreement terminates the Tripolitan war. It also ends Turkish control in North Africa. To be sure, Turkey remains suzerain of Egypt. But that is an empty title, for Turkey was unable to march her troops across Egypt. Tripoli now reverts to Latin sovereignty, and Italy has appropriately changed the name of the country to its name in Roman times—Libya. The conditions of peace, as announced, are as follows:

1. The absolute sovereignty of Italy in Libya, but without formal recognition there of Italy by Turkey.
2. A continuance of the free exercise of religious authority throughout Libya by the Khalif (the Sultan of Turkey).
3. The withdrawal by Turkey of her regular troops from Libya.
4. The payment by Turkey of an indemnity equal to Libya's contributions to the Turkish treasury.
5. The restoration of the captured Sporades—the Ægean Islands—to Turkey, but only with guarantees from Turkey for the well-being of the Christian populations there.
6. An agreement that no indemnity shall be paid by either side toward the cost of the war.
7. The re-establishment of the former diplomatic and commercial relations.

The Tripolitan war has lasted a few days more than a year. The conditions of peace, closing it, bring about important results to Italy. First, they bring Italy to the front as a colonial Power. Italy's little African colonies of Eritrea and Somaliland in the Red Sea region are of

THE REGION COVERED BY THE ITALO-TURKISH PEACE TERMS

small account compared with Libya—a country half a million square miles in area. Moreover, Libya is within a short distance of Sicily; the other colonies are at a considerable distance. Nor is this all. The eleven hundred miles of Libyan coast-line contain some fair harbors, and one, Tobruk, matches Bizerta in Tunis in strategical importance. As a Mediterranean Power, therefore, Italy now ranks with France. Though the Italians hold only the coast towns in Libya, and the wild tribes in the interior are still unconquered, we expect the country one day to be as successfully developed as France has developed Algeria and Tunis. The whole North African shore, therefore, would seem to be now redeemed to civilization. The European prestige of Italy is proportionately increased, especially her power in the Triple Alliance—Germany, Austria, Italy. Nor is this prestige likely to be lessened by the year's drain upon Italian financial resources. Not only has Italy forged to the fore financially, more, proportionately, than has any other European state, but the entire Italian nation has met the test of war in a spirit of striking unanimity, courage, and confidence. Furthermore, whatever may be felt as to the morality of Italy's declaration of war against Turkey, it must be admitted by all that the Italian army and navy have shown themselves entirely worthy to cope with the tasks laid upon them.

Mr. Wilson as a Campaigner

The weaknesses which the stress of the campaign has disclosed in Governor Wilson's power to state facts plainly and to reason logically from undeniable premises must be a source of disappointment to his best friends. We certainly have been disappointed in this respect by many of his campaign speeches. He has stated that any tariff except for revenue is unconstitutional, and has almost immediately added that, if elected President, the tariff will be modified so gradually as not to disturb business, apparently forgetting that unconstitutional procedure must be stopped, not gradually, but instantly; he has asserted that any kind of taxation except for revenue is immoral, apparently forgetting that taxation for the purposes of regulation is an inherent part of our American system, and that if he means what he says about the immorality of regulative taxation he must, as President, make radical and unprecedented changes with regard to the regulation of corporations and of the liquor traffic, the sale of noxious drugs, the

circulation of "wildcat" State bank notes, and other social dangers which are to a large extent controlled by taxation; and, lastly, as we pointed out in these pages last week—having implied in a public speech at Denver that some of the special interests and trusts were backing Mr. Roosevelt—he has defended his statement by saying that he meant that the trusts were supporting Mr. Roosevelt, not with their money, but with their sympathy. In order not to fall into the same error into which we think he has fallen, of shrouding facts in misty general statements, let us quote his exact language:

> There are some men among them [the trusts] who are members of at least sixty boards of directors of the most important undertakings of the country, and the gentlemen, about thirty, I believe, who constitute the directors of this United States Steel Corporation are so connected, by being presidents or vice-presidents or directors, in the railroad corporations of the country that they control fifty-five per cent of the railways of the United States. These are the gentlemen who are *now backing the programme of the leader of the third party*.

And again from the same speech we quote another still more striking statement by Mr. Wilson:

> I was saying to some of my newspaper companions a little while ago that if I were a cartoonist I would draw a picture of the biggest monopolies of the United States drawn up in line, *and in front Mr. Roosevelt trying to lead them in a hallelujah chorus*.

In all frankness we ask how can there be made a more explicit statement that Mr. Roosevelt and the Progressive party have deliberately framed a policy that shall be highly satisfactory to the special interests?

Mr. Wilson and his Supporters Differ

It is possible that these extraordinary statements by Mr. Wilson are not the products of campaign weakness. It is possible that Mr. Wilson believes them to be accurate, in spite of Mr. Roosevelt's record as Governor of New York on the Ford Franchise Act or as President on the Hepburn Railway Act. But some of Mr. Wilson's stanchest supporters do not accept their accuracy. The New York "Times," for example, courteously calls upon Mr. Wilson to retract his statement if he cannot furnish proofs to substantiate it, and adds:

> What Governor Wilson meant when he said that evidence in support of his statement was coming to him "by way of corroboration every day" in forms that he could not question is not at all clear. If this means that evidence of the Steel Corporation's support of Mr. Roosevelt's candidacy is coming to him, the question would at once be asked why that evidence is not accessible to others, to the newspapers, for instance? . . . Certainly there is no evidence, so far as we know, that the Steel Corporation is helping the Colonel's candidacy.

The most striking criticism, however, of Governor Wilson's allegations appears in an editorial, entitled "Unjust," in the Newark, New Jersey, "Evening News," a paper which is vigorously supporting Mr. Wilson for the Presidency:

> Governor Wilson has several times intimated that the Roosevelt method for trust control was devised by the trusts themselves, and that in their desire to have that plan carried out they are supporting his candidacy.
>
> A good deal of leeway may properly be allowed in a warm political campaign, and assuredly no one expects Governor Wilson to adopt, advertise, and recommend the proposals of his adversary. But we had expected the Governor to draw the line sharply on the safe side of misstatement, and we had not expected him to follow blindly the Roosevelt-haters into their self-contradictory assertion that the worst Roosevelt-haters of all are also his most ardent supporters.
>
> For the rest, it is a simple matter of history that Colonel Roosevelt's dearest foes have been the predatory corporations and their retainers, and that his plan for regulating trusts is one which he has advocated for nine years, and is one which every dishonest corporation fears to the marrow of its bones.

We regret this campaign incident, not because of its patent injustice to Mr. Roosevelt, but because it displays a lack of historical and argumentative accuracy, very common, to be sure, in political stump speakers, but very disappointing in a man of Governor Wilson's training and reputation. We had hoped that he was going to set a higher standard of political debate in this campaign. Mr. Wilson's attitude toward the trusts, it may be added here, was the subject of one of Mr. Roosevelt's recent speeches. He pointed out that Mr. Wilson advocated State control of trusts, and yet as Governor of New Jersey, the creator of more and larger trusts than any other State, he had done nothing to reach these trusts through their charters, or through the prosecution of their officers. The fact that Mr. Wilson did not reply last week to this speech may very reasonably be ascribed to the temporary cessation of discussion following the attempt on Mr. Roosevelt's life.

The True William Flinn

The enemies of the Progressive party have rung the changes so noisily over the nickname "Boss Flinn" that many people who are entirely ignorant of the facts about the life of ex-State Senator William Flinn, of Pennsylvania, have jumped to the conclusion that he is, or was, a boss of the type of Murphy, Penrose, or Taggart. We commend to the reading of such persons the account of Senator Flinn's personality and history which recently appeared in the "North American," of Philadelphia, an able and straight-speaking journal with an indisputably close knowledge of Pennsylvania political history. It preludes its account by the declaration that, "if the very best of his traducers possessed a fraction of his patriotism, his integrity, his zeal in good causes, and his ability to promote them; if his well-meaning but misinformed critics understood the principles of progressivism as thoroughly, and labored for them as faithfully; if there were four other citizens of this commonwealth who had devoted as much sincere effort as he has to bring about civic betterment, political freedom, and social and industrial justice, Pennsylvania would not so long have been a sunken State, but would have led the Union in progressive government." William Flinn (we condense from the "North American" account) is self-made and self-taught; he began to work at the age of nine and was a contractor at twenty-one; he has always been a developer, an improver. In his early experience with a steel plant, with oil lands, with mines, with a small railway, and even in farming, he studied scientific efficiency, although he probably never heard the phrase. All this led him to hate and despise the men responsible for the waste going on in Pittsburgh in health and money. The political rule of Pittsburgh had been for many years under Christopher Magee; this rule was a political despotism, and in the political sense Magee was a boss, but "it was a benevolent despotism, creative and effective in its operation." It is not necessary to approve Magee's methods, but, as a matter of fact, under his political bossism Pittsburgh, industrially and in its energies as a city, was pushed forward tremendously. There were no "sordid scandals," and, although franchises were given away, they were not sold; there were "no shams, no wringing of tribute from vice, no private licensing of criminals," but there was (as was exceedingly common in other cities at that time) a gratuitous transfer of public privileges to corporate control in return for needed public improvements, and thereby the people were undoubtedly greatly wronged. When Magee died, says the "North American," he was regarded as the most public-spirited and the best-loved citizen of Pittsburgh. Mr. Flinn succeeded to control in 1901, but he quickly made enemies because he fought selfish special interests and promoted progressive ideas, while his way of doing these things was domineering. As a political and municipal director of affairs Flinn's career lasted less than a year. He was emphatically not a boss of the Murphy or the Penrose or even the Magee type. But, it is said, he was a great contractor and made large sums from public as well as private work. This is perfectly true, but it is also perfectly consistent with honest methods and public service. The "North American" asserts with full knowledge that in many years of savage controversy, and with his political enemies in control of the city, no charges of fraud ever lay against Flinn's contracts, and that his worst enemies admit that he never got a contract except through open competition and as the lowest bidder. As time went on he became interested in such reforms as uniform primaries, better election laws, the referendum and recall for cities, good roads, local civil service laws, and from these efforts at improvement he naturally grew toward those policies of social and industrial justice and the betterment of humanity which brought him into sympathy with the National Progressive movement as it developed and became the one great issue of American political life. In line with all this also was his work as Chairman of the Pittsburgh Planning Commission, where he served without pay in promoting playgrounds, recreation centers, smoke prevention, pure water, and much else that goes to make the city a better place to live in. This is the real William Flinn; the picture is the very antithesis of the caricature drawn for the benefit of readers who may naturally be ignorant of the truth. That caricature presents a "brutal and insolent boss" and a "political thug," a being as far removed as night is from day from the sympathetic, earnest, somewhat rough and brusque, worker who has done a splendid work for his city and for his country in furthering industrial advance, political efficiency, and justice as between man and man.

Campaign Contributions: The Harvester Trust and Mr. Wilson

Cyrus H. McCormick, President of the International Harvester Company, commonly called the Harvester Trust, contributed $12,500 to the primary campaign of Governor Wilson. There would be nothing specially significant about this if it had not been for the remarks of Mr. Wilson, to which we have already referred, in which he intimated that the Trust was supporting Mr. Roosevelt and the Progressive party. It not only appears from the testimony before the Senate Campaign Contributions Committee that the President of the Harvester Trust contributed to Mr. Wilson's primary campaign, but that his brother, Mr. Harold McCormick, according to his cousin, Mr. Medill McCormick, was also for Mr. Wilson. The testimony concerning Mr. Cyrus McCormick's contribution was confirmed by Mr. Cleveland Dodge, who personally testified that he had raised the fund on behalf of Mr. Wilson's candidacy to which Mr. Cyrus H. McCormick contributed. There is absolutely nothing wrong, so far as we can see, about this contribution. There is no intimation that it is given with any expectation of receiving a favor in return. Mr. McCormick has the same right as any other man to contribute to the campaign fund for the candidate in whom he believes. Mr. Wilson, however, attempted to cast reflection upon the Progressive programme by alleging that it received the support of just such men as Mr. McCormick. Either Mr. Wilson must now admit that Mr. McCormick's contribution to the Wilson candidacy casts reflection upon Mr. Wilson's own programme, and that he was in error in his remarks about the "hallelujah chorus" of the Trusts, or else he must admit that a programme for trust regulation should not be judged by the support it receives, but on its own merits. The charges made by inference and innuendo concerning the relation of the Harvester Trust to Mr. Roosevelt, and in one case the charges explicitly made by the Taft campaign manager, have been shown to be exactly contrary to the truth. It so happens that most of the officers and directors of the Harvester Trust are supporting either Mr. Taft or Mr. Wilson. The pro-Wilson papers and pro-Taft papers that have been making much of Mr. Perkins's support of Mr. Roosevelt have found it convenient to make as inconspicuous as possible their report of Mr. McCormick's contribution to Mr. Wilson; but they have not yet had the grace to admit that they have learned a lesson as to the danger of unfair campaigning methods.

The Campaign Contributions: Judge Parker and Mr. Koenig

Two other incidents of interest occurred during the week of testimony before the Senate Campaign Contributions Committee. One was the appearance of Judge Parker, former Democratic Presidential candidate, on the stand. He gave some hearsay testimony consisting of what had been said to him by Daniel S. Lamont, who is dead. It was on Mr. Lamont's statement to him that Mr. Parker based his charges that the Roosevelt campaign managers in 1904 were virtually blackmailing the corporations. Mr. Parker said that in his speech of October 24, 1904, he had not made any charge against Mr. Roosevelt with regard to solicitation of campaign contributions. As a matter of fact, Mr. Parker's charge in that campaign was what we have stated it to be, and he has now himself failed to give any evidence either to substantiate it or to show that there was any reasonable ground for making it originally. The other incident was the testimony of a man named Aronowitz. Last week we reported the fact that Mr. Ogden Mills, in reply to charges of corruption on behalf of Mr. Taft's candidacy in the primary campaign, made counter-charges of crooked work on behalf of the Roosevelt delegates. Mr. Aronowitz, in reply, testified, in substance, that in the district to which Mr. Mills referred, Mr. Koenig, who was the leader of the Taft forces in the county, virtually took over the management of the Roosevelt as well as the Taft side of the campaign; that Mr. Koenig appointed him as the leader of the Roosevelt Committee in the district, and asked him to appoint as captains on the Roosevelt side his own men, and that the supposed Roosevelt watchers in the district were really the Taft leader's own men in disguise. It is only fair to say that the newspapers report Mr. Koenig as denying Mr. Aronowitz's story. It is certain that there was fraud and crooked work done in the primaries of New York. Mr. Aronowitz's story about the attempt to "double cross" the Roosevelt movement is not in itself incredible. It is this sort of thing that had been done again and again in American

politics, and it is the sort of thing against which there is this year a great uprising.

A Great Naval Spectacle

The greatest naval review in the history of this country and the greatest assemblage of war-vessels that ever took place in river or nearly closed-in bay ended at New York on Tuesday of last week with the passing of the superb fleet down the Hudson River and out to sea—a two-mile-long procession, led by the flagship Connecticut. The review was not only a striking exhibition to the people of the power and efficiency of the American navy, but an object-lesson also to impress the fact that a large modern navy does not mean likelihood of war or temptation to war, but is the most certain guarantee of lasting peace except under unendurable wrong. For Congress it should, moreover, be a warning that niggardliness in naval construction is fatal to American standing among the navies of the world. Strong and fine as it is, our navy should be stronger; and it is absolutely essential that its increase for the future should be planned scientifically and intelligently—a method which Congress is only too prone to ignore. We agree with President Taft in his speech on this occasion that to favor arbitration and to defend the building up of a strong navy are perfectly consistent policies. As a beautiful spectacle the long line of "dreadnoughts," lesser battle-ships, cruisers, torpedo destroyers and boats, submarines, gunboats, and even colliers, was impressive; the firing of salutes, the waving of flags, the review by the President of the United States, and the illumination at night pleased and interested many thousands of people. The statistics of the fleet indicate the great extent of this naval mobilization. There were gathered 127 ships of all classes, with 1,300 officers and 27,000 men. Most prominent among the war-ships were the new battle-ships Arkansas and Wyoming, which are "dreadnoughts" of 26,000 tons each. Altogether there were thirty-one battle-ships, four armored cruisers, four ordinary cruisers, twenty-two torpedo-destroyers, sixteen torpedo-boats, and ten submarines. The formalities and ceremonies of the occasion as between the naval commanders, the visiting party from Washington, and the city officials were observed elaborately, while ordinary citizens to the number of many thousands were received as visitors on board the fleet, and also had the opportunity of viewing a shore parade. Altogether the occasion will long remain memorable both for the metropolis and for the navy.

New York's New Education Building

The new building in Albany for the New York State Education Department was dedicated last week with elaborate exercises. A number of notable addresses were made by men of prominence in the educational field. The building, which has both dignity and beauty, faces the north side of the State House, and is constructed of white marble, terra cotta, and granite. Its front, 660 feet, is a great colonnade, with thirty-six massive marble columns. One of the speakers called attention to the fact that it had been built within the contract price and without scandal of any kind, a statement which the State will read with relief, but which is in itself humiliating. The educational work of the State was unified eight years ago. Mr. Reid, the American Ambassador to Great Britain, who is the Chancellor of the University, called attention to the fact that, although the State Library was destroyed by fire last year with some losses which are irreparable, a large working library has already been collected, the State having appropriated a million dollars for that purpose last winter and pledging itself to the further appropriation of three-quarters of a million for the same purpose during the coming winter. The former library was rich in manuscripts, in the old records of the Dutch government from Peter Stuyvesant's day, in the papers of Sir William Johnson, and in records relating to the early history of the State. Fortunately, a considerable part of these documents were saved in a more or less damaged condition. The State Library is not simply a collection of books for experts; it lends books, either singly or in the form of traveling libraries, to every nook and corner of the State. It is not a local circulating library; it is a great collection of books which are at the service of the citizens of the State. In less than two years after its destruction by fire it has already not less than three hundred and fifty thousand volumes; and its usefulness is evidenced by the enormous correspondence with which it has to cope from every corner of the State and from all parts of the country.

The Progress of Woman's Suffrage

To-day all the political parties are recognizing equal suffrage as a live issue. The National and most of the State platforms of the Progressive and Socialistic parties declare for it. In addition, the following political indorsements of equal suffrage have recently been made: by the Democratic State Convention in Connecticut; by the three parties in Montana; by the Republican Convention in New Jersey; by the Democratic party in Nevada; by three of the parties in Pennsylvania. Eighty years ago no woman in the United States could vote for anything. To-day the women in all but seventeen States (thirteen of the seventeen being east of the Mississippi River) have some form of suffrage—school, taxpayers, bond issue, municipal, or full suffrage. One million one hundred and sixty thousand women in the States of Wyoming, Colorado, Utah, Idaho, Washington, and California now have full suffrage, and from seventy-five to ninety-nine per cent exercise that right. As an indication of the kind of laws upon which women voters are concentrating their attention and work, it is interesting to note that the following laws are on their programme for the coming legislative term in the State of Washington: a minimum wage law, an anti-child labor law, a mothers' pension law, a law providing for equal co-guardianship of children, a law establishing vocational training in public schools and other State institutions, and the repeal of two obnoxious laws which are believed to work injustice towards women and girls, namely, the Corroborative Evidence Law and the Double Standard Law. A common opinion in those communities where women vote seems to be that the women take their suffrage responsibilities seriously. In many regions where women have the suffrage the voting booths have been taken from such places as tobacco shops and put in some instances in the school-house, or, as has been done in Los Angeles, in the churches. It is undeniable that the act of voting by this means assumes a new dignity for both women and men. A California correspondent writes of seeing a young couple come to the polling-place wheeling baby in his go-cart. The mother stepped inside first, leaving the father in charge of the baby, and, having cast her vote, came out to relieve him of the baby while he voted. In a very few minutes the family party, having performed its civic duty, moved on. In California the Women's Suffrage Clubs, having accomplished their original purpose, have now reorganized as civic clubs for the study of public questions upon which the women may now cast their ballot. The avowed purpose of many of these clubs is not only to promote progressive legislation, but to fight against such reactionary movements as the threatened attack on the Eight-Hour Labor Law for Women. These facts illustrate the truth that the suffrage is a duty involving more than the dropping of a paper in the box; and that, although women in several States are assuming the burden of the suffrage cheerfully, it is not merely a privilege but a very real responsibility.

The Suffrage Campaign in Five States

The adoption of woman's suffrage by the States of Washington and California has trebled the suffrage vote in this country, and has brought the entire movement into a very much more prominent public position. The success of the suffragists in these two States has greatly strengthened the well-organized and vigorous campaign for woman's suffrage in five other States, where the question will be voted upon on the Presidential election day. These five States are as follows: 1. Michigan, where woman's suffrage has the active support of the State Federation of Labor, the Grange, and of Governor Osborne, but is opposed by the powerful liquor interests. 2. Wisconsin, where the public-spirited La Follette family are campaigning through the State in its favor. The Scandinavians of northern Wisconsin are practically a unit for woman's suffrage, having been accustomed to parliamentary suffrage for women in Norway; but the Germans of southern Wisconsin are indifferent or opposed, since they still hold to the restricted ideas of "woman's sphere" generally entertained in Germany, where that sphere has been called epigrammatically "church, kitchen, and children." The brewery interests of Wisconsin are also opposed to woman's suffrage. 3. Kansas, where the support of the farmers and the Grange is solidly for woman's suffrage and where women have had municipal suffrage for twenty-five years. 4. Oregon, bounded by three suffrage States, where the sentiment is reported as decidedly for woman's suffrage. 5. Arizona, where, despite the refusal of the Legislature to submit the issue to the electorate, it will come to vote, through the right

of initiative petition, and where it is supported by Governor Hunt. The issue is clouded, however, in Arizona by factional fights which lessen the chances for the success of the suffragists. Of these five States the suffrage organization feels confident of winning two, Kansas and Oregon. Should they meet reverses in the other three States, they believe that the defeat will only be a temporary one. The press of these five States is, on the whole, supporting woman's suffrage, many papers, like the influential Portland "Oregonian," having swung from their apathy or opposition into active support. The suffrage campaigners have had very little money to spend, and the movement has been carried on in large part by voluntary services offered both by men and women. The suffragists believe that it was the influence of the liquor interests, and the expenditure by them of large sums of money, which accomplished the defeat of the Equal Suffrage amendment in Ohio in the month of September. In this Presidential year the States where equal suffrage is already established (California, Colorado, Idaho, Utah, Washington, and Wyoming) control thirty-seven electoral votes. A President might easily be seated by as narrow a margin as this. It is therefore not a matter of surprise that woman's suffrage has ceased to be an academic question and is to-day a very practical and human issue.

Penny Arcades

While the moving-picture show has been the subject of much debate and some efficient regulation in recent years, one of its cousins—the penny arcade—has been neglected. The penny arcade is a cheap substitute for the moving picture. It contains a number of stereoscopic machines which may be operated by a handle or other mechanical means when a penny is dropped into a slot. A recent study by a special representative of The Outlook of the penny arcades in New York City, where conditions are believed to be typical of those in many other cities, indicates that these penny picture shows are usually a source of civic demoralization. Although morbid portrayals of crime and executions seem to be decreasing, all but one of the arcades examined had some pictures that were morally coarse, indecent, or suggestive. Young people of both sexes undeniably are morally and physically tainted by such pictures as "The Sheath-Gown Girl," an especially vulgar one which our representative found in several places; or "Poses from Life for the Artist;" or "A Chorus Girl Preparing for Her Act," and many others of a similar nature. One machine displayed a set of pictures representing a "Burlesque Queen," half dressed and draped in an American flag. Pictures of this kind are chiefly photographs or their reproductions made in studios of the baser sort. An especially brazen arcade which deserves summary suppression was found at Coney Island, for in this particular arcade every machine contains pictures which are either grossly vulgar or positively indecent, and yet they were found surrounded by groups of young men and young women of a type too common at Coney Island. Under a city ordinance the Bureau of Licenses can act where evidence is given that indecent pictures are being shown, either by revoking the license under which the arcade operates or by forcing its owner to close down until the objectionable pictures are removed.

A Substitute for the Penny Arcade

Several powerful forces are now crowding the once numerous and frequented penny arcades to the wall some of these are Nation-wide forces. The loss of novelty is one, for the arcades have made little progress of any kind in the past few years, and many of their patrons soon tire of them. In New York there is a city ordinance, worthy of being copied everywhere, which prohibits the entrance of children under sixteen unattended by parent or guardian, and this cuts off the most profitable customers the arcade owner would otherwise catch. This provision is generally enforced as soon as any clear violation can be detected, as the arcade is usually open to the street. Best of all, the moving-picture shows are destroying the penny arcades, not only taking away the younger children, but their elders also. The public has learned that it does not get a fair return for its money at the penny arcade, since for the payment of a nickel a spectator can sit an hour or so looking at what are often excellent pictures in the moving-picture shows. The result has been in New York City that no new automatic penny picture shows are being established, and the fifty penny arcades of a few years ago have dwindled to about ten to-day. Large sections that formerly had several are rid of them entirely at the present time. The populous One Hundred and Twenty-fifth

Street district and the Jewish section centering in Grand Street have seen every one of their penny arcades closed absolutely. Fourteenth Street possesses but one resort which has automatic pictures, and the Bowery, not long ago the home of the glittering penny vaudeville, has to-day but two seedy specimens. That is a good sign. For, at best, the arcades have slight public value. Any new legislation affecting moving pictures in general, in New York or in other cities, should not fail to contain a clause prohibiting children under sixteen years from entering at least the penny shows. These penny arcades should draw no breath of life at the expense of the children.

A Vigorous Diplomatist

The Right Hon. James Bryce, British Ambassador to the United States, and an Englishman who has the warm affection of the country to which he is accredited, is in several ways one of the most notable men of his time. He is in his seventy-fifth year. That does not make him an old man by modern standards; but it is an age at which the majority of even energetic men are content to rest on their achievements and to maintain the standard of their work. Mr. Bryce is a man of another temper; he does not furl his sail and seek the harbor now that the afternoon has come. Nearly half a century ago he published his standard history of "The Holy Roman Empire," a work of erudition and of interest as well. That was followed, in 1888, by his "American Commonwealth," the most exhaustive, authoritative, and thoroughly intelligent explanation of the American Government, the American political ideas, and the American character which has appeared. In addition to these intellectual feats he performed various physical feats which won him, thirteen years ago, the presidency of the Alpine Club. He had previously climbed Mount Ararat, and had made the final ascension alone. Last summer he visited those experiment stations in democracy, Australia and New Zealand, returning last month. He has just published the most interesting account which has yet appeared of South America, a sturdy octavo volume, packed with the results of close observation and careful thinking; and two weeks ago he made a journey of twenty-five miles in an air-ship. This is a record of physical activity, mental vigor, and industry which explain the extraordinary postion Mr. Bryce holds in the regard of the whole English-speaking world.

THE PROGRESSIVE MOVEMENT

VII—WHY A NEW PARTY?

Why do you wear a necktie? If a man were asked that question, he would probably find it difficult to answer. He could say that ever since he was a boy he has been in the habit of wearing a necktie; that the people with whom he associates wear neckties; that if he did not wear a necktie he would feel uncomfortable and conspicuous; that if he stopped wearing a necktie he would have to explain why he did so; that his father wore a necktie and that he expects his sons to wear neckties; that he has no objection to those who do not wear neckties, that he has no doubt that there are many good men who do not wear neckties, but that for his own part he prefers to wear a necktie and will continue to do so.

That is about the sort of answer which a great many men would give if you asked them to look into their own minds and really find out why they are Republicans or Democrats. Of course the man who wears a necktie might say that he believes in the principle of wearing a necktie; so many a man says he believes in the principles of the Republican party or the Democratic party, as the case may be; but in most such instances the principles of the Democratic party or of the Republican party have as little definite meaning as the principle of wearing a necktie. At most such a man usually means that he likes and admires the sort of men who are Democrats or who are Republicans, or at least that he finds them congenial.

Now suddenly this year there have appeared thousands upon thousands of men who call themselves neither Republicans nor Democrats, but Progressives. If you should ask any one of these why he is a Progressive, he would be very likely to give you fairly definite reasons. He certainly has some definite reasons, whether he can express them or not; for he became a Progressive, not by inheritance, since until this year there was no Progressive party; nor because of his environments, since the Progressive party has come into existence, and could come into existence, only by the voluntary action of thousands upon thousands of just such men as he. He will be able to tell you, in a general way at least, what it was that made him a Progressive, and describe in a general way the Progressives' political faith.

This is a new thing in America—a great party representative of all classes, that is attached to a definite set of political principles. It is not a new thing in most, if not all, other countries where the people vote. In England, in France, in Germany, even in Russia, the people are divided into parties according to their political convictions. On the one hand, there are those who call themselves Conservatives. They believe that the most important thing is to preserve the old institutions and the old traditions which during the generations have made the country what it is; they believe that the greatest virtue in the government is stability and order, and the greatest dangers arise from innovation and any sort of disturbance; when the innovations come and are adopted, these Conservatives accept them as part of the order of society, and adopt them among the institutions that need to be preserved. On the other side are those who call themselves Liberals or Progressives. They believe that the most important thing is to see that the institutions of the country are made flexible and are adapted to the changing conditions of life; they believe that the greatest virtue in the government is this ability to meet new questions promptly and to solve the problems of the people as they arise, and that the greatest dangers arise from the policy that allows wrongs and evils to accumulate without remedy; and when one new measure is adopted these Liberals are not contented with the achievement, but use it rather as a step upon which to mount to a new level. The Conservatives of one year may urge measures which the Liberals of earlier days have advocated; but the Conservatives advocate them as a defense of the national inheritance, whereas the Liberals advocate them as new acquisitions. The Conservatives are primarily interested in custom and law and constitutional safeguards; the Liberals are primarily concerned with those things which make for hardship or ease, injustice or fair dealing, in the lives of the common men, women, and children.

In this country there has been no such distinction between Conservatives and Liberals so far as party lines are observed. Sometimes the Democratic party has seemed to be a Liberal party, as it was under Bryan; sometimes a Conservative party, as it was under Parker. Sometimes the Republican party has seemed to be a Conservative party, as it was under Harrison; sometimes a Liberal party, as under Roosevelt. Sometimes, as under Cleveland and McKinley, the Democratic and Republican parties respectively have seemed to be partly Liberal, partly Conservative. As a matter of fact, neither party has been a Liberal party or Conservative party. There have been influences at work in America to make the difference between Liberal and Conservative obscure, to distribute Liberals and Conservatives between both parties. The difference between the Democratic and Republican parties has been described in an essay by William Garrott Brown. It is the distinction between theory and practice, between idealism and efficiency, between those who are chiefly interested in doctrines and those who are chiefly interested in deeds. To quote Mr. Brown's own words, "Aspiration and Utopianism against purpose and opportunism, genius and eccentricity against common sense and self-interest, the universal and the visionary against the specific and the practical, the kingdom of the air against the kingdom of the earth—such I conceive to be the perpetual antagonism of parties." Each party has had the virtues and defects of its qualities. The idealist is likely to be doctrinaire and impractical; the efficient is likely to be materialistic and opportunist. So we have had in this country, with some exceptions, the impractical and the idealistic Liberals and Conservatives grouped in the Democratic party, and the materialistic and the efficient Liberals and Conservatives grouped in the Republican party.

Within the past few years, however, there has been a new movement among the American people. It is a movement that corresponds to that which is to be found in countries all over the world. It is the Liberal or Progressive movement. It has been discernible in both the Republican and Democratic parties. It has been strong in its advocacy of a freer government, and of a more equal chance for all sorts of men. In the Democratic party it has had the leadership of Mr. Bryan, and there it has shown the Democratic qualities of idealism and of doctrinairism. In the Republican party it has had the leadership of such men as Mr. La Follette and Mr. Roosevelt, and there it has shown the Republican qualities of practicality and efficiency. On behalf of freer government it has stood for direct nominations, for the initiative, the referendum, and the recall. On behalf of a more equal chance (as Mr. Roosevelt phrased it,

"the square deal") it has stood for the regulation of the railways, for Conservation, for inheritance taxes, for a workmen's compensation law, pure food laws, the prohibition of child labor.

During the seven years while Mr. Roosevelt was President this Progressive movement gradually became dominant in the Republican party and in the Nation, and was recognized by the name of the "Roosevelt Policies." Though powerful leaders—Aldrich, Cannon, and the rest—resisted it, at the end of seven years it had made a substantial record in the laws of Congress and in the acts of the Executive; and, what is more important, it was upheld by an overwhelming public opinion.

President Taft, pledged by his own words to clinch the Roosevelt policies, allowed the reactionaries to rise into power, and the Progressive leaders became "Insurgents." As soon as it had a chance, public opinion expressed itself by repudiating the reactionary leadership of the Taft Administration, and transferred as far as it could the leadership in the Nation from the Republicans to the Democrats.

For two years the Democrats have had a chance, and what does the record show? A party divided between Progressives and reactionaries, but under reactionary leadership in Congress. The Democratic House is ruled by the majority of the Democratic secret caucus under the leadership of Underwood and Fitzgerald, both of whom represent the Conservative or reactionary wing of the party.

So the Progressive movement, on behalf of freer government and fairer conditions of life, has been seeking a home first in one party and then in the other, but has found it in neither.

This condition of affairs has been, of course, satisfactory to the Conservatives of both parties, and especially to those Conservatives whose special interest would be disturbed by any Progressive innovation. The rank and file of a party may be dominantly Progressive, but the Conservatives are of course satisfied so long as conservatism is in the position of power.

If the Liberals or Progressives were to succeed in controlling the Republican party, the new movement would couple its own idealism with the Republican trait of efficiency. If the new movement were to control the Democratic party, it would be in danger of becoming merely idealistic and impractical.

The Progressive movement, however, did succeed in enlisting the great majority of the rank and file in the Republican party. This was proved by the primary last spring. But, by means repugnant to popular rule, the party managers defeated the will of the rank and file and kept the reactionaries in control. Then the Conservatives in control of the Democratic party saw the opportunity of winning Progressive votes, and, after proving at Baltimore that they had the mastery of the Democratic machinery, conceded a Progressive nominee but retained the control of the party itself.

This, then, was the situation as it existed at the beginning of the present campaign: the Republican party, the party of efficiency, Progressive in its membership, but under the command of the reactionaries; the Democratic party, the party of theories, partly Progressive in its membership, presenting a theoretical Progressive as its nominee, but dominated by Conservatives and reactionaries.

No one who thinks clearly could see in that situation any chance for a clear-cut issue between Conservatives and Progressives, or any chance that those things which Progressives the world over believe, the things that make for freer government and for fairer conditions of life, could through the victory of either party be themselves really victorious.

Then it was that what appeared to be disaster was turned to opportunity. The Progressive movement, that had been a shuttlecock between the two old parties, became independent of both the old parties, and, under the leadership of the man who as President has done more than any one else to give this Progressive movement momentum and power, became organized as an independent and separate party, the Progressive party.

Into this new party have come Republicans, Democrats, and Independent voters. Without regard to past affiliations, they believe that the greatest danger to the country comes from resistance to needed change, and that the greatest service that can be rendered to the country consists in securing changes that will make government freer and living conditions more just.

So we have to-day three great parties. One, the Republican, avowedly conservative, resisting change and inheriting the

materialism, if not the efficiency, of its own past history. The second, the Democratic, still theoretical and doctrinaire, propounding theories as to States' rights and the Constitutionality of the tariff that have little bearing upon the practical questions of the day, and, as formerly, neither frankly Conservative nor frankly Progressive, but willing to be both at once or by turns, and finding no discomfort in accepting the leadership of three such men as Woodrow Wilson, Champ Clark, and Oscar Underwood. Third, the Progressive, presenting a definite programme in the form of a contract with the people, combining the idealism that is inevitable in every Liberal movement with the efficiency that it has acquired through former party associations of its most effective leaders, looking upon every question not in the light of tradition or precedent but in the light of the needs of the people of to-day, recognizing in every issue both the need for adherence to principle and the need for common sense in its application. We may say, therefore, that the Republican party is the party of materialism and conservatism, that the Democratic party is the party of theories and compromise, and that the Progressive party is the party of efficiency and progress.

The three candidates correspond closely to the parties they represent. Mr. Taft has defended his Administration in terms of material prosperity and has based his political arguments on resistance to change; he thus fairly represents the materialistic standards and the conservative spirit of the party. Mr. Wilson has been discussing political theories, especially theories with regard to the trusts and the tariff and their relation to the Constitutional powers of the States, but without any suggestion as to practical application that would strongly alienate either the Progressives or the Conservatives. He thus fairly represents the liking for theory and the willingness to compromise characteristic of his party. Mr. Roosevelt has been doing in this campaign what he has done in all the course of his public life. His opponents have found fault with him because he is a preacher and also because he is a practical man. As leader of the party he has been a preacher, and the Progressive platform fairly represents what he has preached. As the leader of the Progressive party he has been a practical man, and the existence of the party itself, created within the last four months, is witness to that. He thus fairly represents both the idealism and the efficiency that are characteristic of the new party.

Those voters who are natural Conservatives should vote the Republican ticket; those voters who have no pronounced convictions but are interested in political opinions and theories ought to vote the Democratic ticket; those voters who believe in the efficient application of Progressive ideals to the actual conditions of life to-day should vote the Progressive ticket.

WINSTON CHURCHILL AND IRISH HOME RULE

Winston Churchill, First Lord of the Admiralty in the British Cabinet, is a ready speaker. Indeed, some critics have accused him, as they accused his father, Lord Randolph Churchill, of having a fatal facility of speech. The younger Churchill's speeches, however, if often flamboyant, are generally very readable. In manner they do not "mince matters," and they are as full of "punch" as they are of "pepper and salt." In matter, too, they are sometimes noteworthy.

One such speech was that delivered recently at Dundee, Scotland, the text of which has now arrived in this country. Its natural corollary indicates an ingenious way out of the Home Rule difficulty.

The latest Irish Home Rule Bill is now in the last stage of its struggle in the House of Commons, from which it is expected to emerge triumphant, only to meet defeat in the House of Lords. A principal reason for its expected defeat is the attitude of the people of Ulster—the northernmost of Ireland's four provinces. Most of Ireland is agricultural and Roman Catholic; Ulster is industrial and, in comparison, Protestant. Ulster does not want to be ruled from Dublin—as it says it would be if the Irish Home Rule Bill became law—but from London. Indeed, Ulster would rather fight than submit to a Dublin rule. "Self-government is all very well," say the Scotch-Irish in the north of Ireland. "Let the rest of Ireland have it. Geographically we may be a part of the rest of Ireland. But racially, economically, religiously, we are not. We propose to say who shall rule us, and, if self-government is to be the fashion, we are quite able to rule ourselves."

From this Mr. Churchill made the follow-

ing "excursion." First he discussed the bearing of the Irish bill upon the general question of a federal system for the United Kingdom. That system could be applied to Scotland and Wales as well as to Ireland. But when England was considered a difficulty arose, and this furnished Mr. Churchill with the second feature of his speech. England was so great and populous, asserted Mr. Churchill, that a workable federal system in the islands would involve the division of England into several self-governing areas—Lancashire, Yorkshire, the Midlands, Greater London, etc.

But, objects the London "Times" in commenting on Mr. Churchill's proposals, "by insisting that Lancashire and Yorkshire need separate Parliaments, for various grave and weighty reasons, he has totally knocked the bottom out of every argument for placing Protestant Ulster under the same local Parliament as the Roman Catholic south of Ireland. There are no differences between Lancashire and Yorkshire, or between either of these and the Midlands, that can for a single instant be compared with the differences that divide north and south in Ireland." Very likely not. And very likely the clever Mr. Churchill sees that the only equitable solution of the Irish problem is a separate local government for Ulster; and, in order to lead up to it with the least friction, he proposes local government for similar areas in England.

Certainly this second scheme of devolution into large areas has one thing to recommend it in contrast with the first scheme of devolution into Irish, Scotch, and Welsh Parliaments, for the more numerous the new legislative bodies, the easier it would be to keep them to purely local matters. They are sorely needed, for the Imperial Parliament's time is unwarrantably occupied by a host of trivial matters, which could be better legislated upon by local bodies.

But, objects the London "Spectator," no federated state has ever been formed by devolution. No? How about this country's formation by the division of Virginia into Virginia and West Virginia? by the division of Dakota into North and South Dakota? Our own California has extended home rule to its own counties. Federation may be accomplished by evolution or devolution. Great Britain might go even further into the domain of federalism. It could conceivably make its present Parliament truly Imperial, and in it representatives from Canada, Australia, South Africa, and New Zealand would then have their place quite as properly as those from England, Scotland, Ireland, and Wales. The United States has profited so often from the experience of Great Britain that Americans would find special gratification if in this matter of federalism Great Britain would profit from the experience of the United States.

A PROPHET AMONG DIPLOMATISTS[1]

Dr. Williams's book on the first Chinese mission to foreign Powers makes its appearance at a time when the foreign policy of the United States is, so to speak, under fire from foreign critics, many of whom base their judgment of its spirit and quality, not on its historical record, but on certain general and persistent misconceptions of the American character. The other trading nations of the world have so long indulged themselves in the ancient tale of the American commercial spirit that some of them have come to believe that the distorted America of the old European vision is the real America of to-day. If our critics had merely agreed that in their opinion the act recently passed by Congress relating to the Panama Canal violated the Hay-Pauncefote Treaty, there would have been no objection on this side of the water; but the indecent haste with which most of the foreign journals rushed to the conclusion that there was behind this measure a malignant determination to violate faith, and an expression of the persistent lack of manners in the United States, goes far beyond Mr. Lowell's humorous charge of a certain condescension in foreigners, and becomes another evidence of the persistent injustice of certain foreigners in judging this country.

One of the English papers, in a severe condemnation of the provision in the Panama Bill to which reference has been made, spoke of it as an exception to the "honorable course of American foreign diplomacy." Such a concession is the more welcome because it was unexpected.

The story of American diplomacy is, as a matter of fact, a story of advancing ideals of foreign relations between countries. It is a record of honorable dealing, often of helpful

[1] Anson Burlingame and the First Chinese Mission to Foreign Powers. By Frederick Wells Williams. Charles Scribner's Sons, New York.

friendship. Among the prophets of this larger and nobler view of international relations, Anson Burlingame holds a first place. He did not accomplish what he hoped to; it was too early in the modern history of China. It was also too early in the modern history of England and the United States. But the greater credit attaches to him because his work was prophetic rather than practical; because he struck a great note in the relations of the East and West; and because, with magnificent faith and glowing speech, he set before the world a new and higher ideal of international intercourse. Time has not only justified Mr. Burlingame's faith, but has to a very considerable extent put into practice the policy which he urged with an eloquence born of deep conviction. What Mr. Burlingame stood for forty years ago Mr. Hay adopted as the principle which should govern the United States in its relations with China.

The story of the diplomatic career of this "man of honor and peace," as Prince Kung described him, is not only one of the most creditable chapters in the history of America, but was, in fact, one of those splendid adventures of the spirit which it is the peculiar and lasting distinction of men of prophetic mind to make in the world of affairs. Anson Burlingame was a man of great vigor of character, notable personal magnetism, and ardent imagination. He was trained as a lawyer and early attained prominence in the politics of Massachusetts; was a leader in the great debate which preceded the war between the States; made himself the fiery defender of Sumner after the brutal attack by Brooks; and, in a purely patriotic spirit and from the highest motives, accepted the challenge which Brooks sent him, only to find that he was dealing with a bully; was so outspoken a champion of Hungary and Sardinia that he could not be sent as Minister to Vienna; and accepted the position of Minister to China in 1862, when that country was in the throes of a domestic rebellion after a recent bitter experience of defeat by foreign invaders. The conditions were difficult, not only in China, but in this country; for the nation was discredited at the moment by the disasters which marked the opening of the Civil War. Mr. Burlingame took with him the determination, not only to maintain the right attitude toward the Chinese Government, but to win its confidence by frankness and good feeling—the most prominent characteristics of the man. At a time when Western diplomacy in the East meant a consistent endeavor to take every possible advantage of superior strength and a wider knowledge of modern conditions, Mr. Burlingame claimed the commercial rights accorded the United States by treaty, but refrained from asking for concessions of territory in the treaty ports or in any way interfering with the jurisdictions of the Chinese Government over its own people or threatening the territorial integrity of the Empire, abstained from participation in its internal struggles, treated the Chinese Government at all times as if it were acting in good faith, and endeavored to secure among the representatives of the foreign Powers in China a basis of forbearance and union.

This view of the way in which the Chinese ought to be treated by foreigners was at variance with that held by many of the foreign commercial interests represented in the Empire. China was a country to be exploited by foreign capital, and any attempt to treat it as a representative nation was regarded as a menace to business and an interference with vested interests. So at the very beginning of his career Mr. Burlingame found himself antagonized by what foreigners who live in Oriental countries are apt to call expert knowledge of the country, by large business interests, by the skepticism and rule-of-the-thumb ideas of foreign relations held by many people at home, by the inability of the Chinese Government to speak for its own people and to enforce its own policies, and by the general ignorance and indifference in this country. He was not alone in China, for there were diplomatists of imagination there; but to the foreigners with whom he was associated and who were interested in China he became almost from the start a visionary man, and therefore a dangerous man.

He was from the very beginning passionately opposed to the idea that the only way to deal with the Chinese was to treat them as inferiors. In "Eothen" Mr. Kinglake describes his own unsuccessful endeavors to secure certain privileges from a local Turkish authority, and the turning of defeat into victory by his dragoman, who put his muddy feet on the delicate cover of a sofa. This expression of superiority brought the Turk to his senses. This is a good symbol of the old way of dealing with the Oriental, from which Mr. Burlingame made an instant and radical departure. The old view was, "The Chinese are

conceited barbarians and must be forced into our civilization." Neither Sir Robert Hart, the able Englishman whose loyalty to the higher interests of China was proved through many vicissitudes, nor Sir Frederick Bruce, the British Minister to China, agreed with this policy; but it was reserved for Mr. Burlingame not only to define the new view in its general scope, but to interpret it, both in America and Europe, with persuasive eloquence; and Dr. Williams probably does not go too far when he says that the American Minister was the defender who "more than any other saved China in the period of her greatest peril from the sort of national shipwreck which Korea has met in recent years."

The story of the Mission may be briefly told. China was in great difficulty, and the officials of the Government determined to send an embassy to the Christian Powers to explain the situation and to ask for patience and forbearance. Prince Kung, the most influential man in China, had recognized Mr. Burlingame's sense of fairness in international dealings and was convinced of his real friendship for China; and Mr. Burlingame was offered the extraordinary position of Special Representative of the oldest empire in the world to the governments of the West. Accepting this extraordinary embassy, Mr. Burlingame came first to this country, and was received with the greatest cordiality—more, it may be suspected, because the country was gratified that an American should be selected for such a position than because his spirit and policy were understood. He declared at the outset that the Mission meant peace and the unification of the interests of China with the whole human race; and he declared, with oratorical fervor, "The fraternal feeling of four hundred millions of people has commenced to flow through the land of Washington to the elder nations of the West, and it will flow on forever." Later, after the eloquent Ambassador had died, the misunderstandings and jealousies of foreign Powers, the disorder in China, the question of immigration in this country, had eclipsed this bright vision, and it was the habit to speak of Mr. Burlingame as if he had been the victim of an unfounded optimism. In the light of to-day it is clear that he was not a temperamental optimist, but the prophet of a new time.

In England, where the selfish aggressive policy of Lord Palmerston had just been succeeded by a wider and juster policy of international relations, Mr. Burlingame found a cordial welcome. In Paris he was treated with courtesy, but his mission did not receive serious attention, and his position was bitterly criticised. "It is simply pandering to the bigotry and self-conceit of the Chinese rulers to treat them, under all circumstances and without any reservation, as intelligent human beings," wrote one critic, who was an exponent of the old doctrine that a heathen country has no rights which a Christian country is bound to respect. Mr. Burlingame was not only in advance of European opinion, but he was also in advance of Chinese opinion; and in nothing are the vigor of his character and the nobility of his aim more impressively brought out than in the confidence with which he held to his work between a hostile West and a doubting and uncertain China. He had espoused the cause of a great people whose development had been arrested, whose ignorance of modern conditions and modern weapons had placed them at the mercy of the Western peoples, to urge forbearance and sympathy with the struggle of the progressive leaders for larger liberty and for human betterment; and to-day his judgment of China has been as fully vindicated as was his conviction that the time had arrived for fair and generous dealing.

He secured very important concessions from the United States and from Great Britain; he was listened to with attention by Bismarck, who declared that the sympathy of the German people was with China, and that their desire was to cultivate the most friendly relations with that country. The Czar was exceptionally cordial and gracious to him; but the long, arduous work of the Mission, the strain on his spirit as well as on his body, brought that Mission and the envoy's life to an end in February, 1870. The meaning of his Mission, Dr. Williams tells us, was misunderstood by the West, and the expectations it aroused were exaggerated; but to-day his faith in China is justified, and the principle of international intercourse of which he was the prophet has been followed with signal success by the American Government. Like Commodore Perry, his name, instead of being the synonym for strife, stands for peace and good will between the Far East and the Far West. A larger fame awaits him as the full measure of his great service becomes more clear.

FOLLOWING THE CAMPAIGN

A WEEKLY DIGEST OF POLITICAL OPINION
AS EXPRESSED BY PEOPLE AND NEWSPAPERS

IS MR. ROOSEVELT CONSISTENT?

Many persons have asked whether Mr. Roosevelt's present views are the same as those formerly held by him. The following parallel columns will, we think, show where Mr. Roosevelt's views remain the same and where his present views are a natural evolution from his earlier opinions. In some cases the quotation is taken from the Progressive platform as stating, though not in his own words, views which Mr. Roosevelt holds.—THE EDITORS.

LABOR UNIONS

VERY great good has been and will be accomplished by associations or unions of wage-workers, when managed with forethought, and when they combine insistence upon their own rights with law-abiding respect for the rights of others.

President's Message, beginning of 1st session, 57th Congress.

We favor the organization of the workers, men and women, as a means of protecting their interests and promoting progress.

Progressive Platform.

TRUSTS

I think I speak for the great majority of the American people when I say we are not in the least against wealth as such, whether individual or corporate; that we merely desire to see any abuse of corporate or combined wealth corrected or remedied; that we do not desire abolition or destruction of the big corporations, but, on the contrary, recognize them as being in many cases efficient economical instruments, the results of an inevitable progress of economic evolution, and only desire to see them regulated and controlled so far as may be necessary to subserve the public good.

Speech at Milwaukee, April 3, 1903.

Our aim is to control business, not strangle it. Our aim is to promote prosperity, and then see to its proper division. We do not believe that any good comes to any one by a policy which means destruction of prosperity; for in such cases it is not possible to divide it because of the very obvious fact that there is nothing to divide.

Speech at Chicago, August 6, 1912.

There is no proper place in our society either for the rich man who uses the power conferred by riches to enable him to oppress and wrong his neighbors, nor yet the demagogic agitator who, instead of attacking abuses as all abuses should be attacked wherever found, attacks prosperity, attacks property, attacks men of wealth, as such, whether they be good or bad, attacks corporations whether they do well or ill, and seeks, in a spirit of rancor, to overthrow the very foundations upon which rest our National well-being.

Speech at Milwaukee, April 3, 1903.

Unfortunately, those dealing with the subject have tended to divide into two camps, each as unwise as the other. One camp has fixed its eye only on the need of prosperity, loudly announcing that our attention must be confined to securing it in bulk, and that the division must be left to take care of itself. . . . The other set has fixed its eyes purely on the injustices of distribution, and advocates action which, it is true, would abolish most of the inequalities of the distribution of prosperity, but only by the unfortunately simple process of abolishing prosperity itself.

Speech at Chicago, August 6, 1912.

THE TARIFF

We stand unequivocally for a protective tariff, and we feel that the phenomenal indus-

I believe in a protective tariff, but I believe in it as a principle, approached from the

trial prosperity which we are now enjoying is not lightly to be jeopardized.

Letter to Hon. J. E. Watson, Rushville, Indiana, August 18, 1906.

standpoint of the interests of the whole people, and not as a bundle of preferences to be given to favored individuals.

Chicago speech, August 6, 1912.

CURRENCY

All commercial interests suffer during each crop season. Excessive rates for call money in New York attract money from the interior banks into speculative fields; this depletes the fund that would otherwise be available for commercial uses, and commercial borrowers are forced to pay abnormal rates, so that each fall a tax in the shape of increased interest charges is placed on the whole commerce of the country. . . . There is need of a change. I do not press any especial plan. Among the plans which are possibly feasible . . . is that brought to your attention by the present Secretary of the Treasury. According to this plan National banks should be permitted to issue a specified proportion of their capital in notes of a given kind, the issue to be taxed at so high a rate as to drive the notes back when not wanted in legitimate trade. This plan would not permit the issue of currency to give banks additional profits, but to meet the emergency presented by times of stringency.

Message to Congress, beginning of 2d session of 59th Congress, December 3, 1906.

We believe that there exists an imperative need for prompt legislation for the improvement of our National currency system. The issue of currency is fundamentally a governmental function. The system to be adopted should have as its basic principles soundness and elasticity. The currency should flow forth readily at the demand of commercial activity, and retire as promptly when the demand diminishes. It should be automatically sufficient for all the legitimate needs of business in any section of the country. . . . It should be made impossible to use the machinery or perquisites of the currency system for any speculative purposes. The country must be safeguarded against overexpansion or unjust contraction of either credit or circulating medium.

Chicago speech, August 6, 1912

CONSERVATION

So vital is this question that for the first time in our history the chief executive officers of the States separately, and of the States together forming the Nation, have met to consider it. . . . Natural resources . . . can be divided into two sharply distinguishable classes accordingly as they are or are not capable of renewal. Mines, if used, must necessarily be exhausted. . . . The second class of resources consists of those which can not only be used in such manner as to leave them undiminished for our children, but can actually be improved by wise use. The soil, the forests, the waterways, come in this category. . . . We can enormously increase our transportation facilities by the canalization of our rivers so as to complete a great system of waterways on the Pacific, Atlantic, and in the Mississippi Valley.

Address at the opening of the Conference on the Conservation of Natural Resources, White House, May 13, 1908.

There can be no greater issue than that of Conservation in this country. . . . We must conserve the soil so that our children shall have a land that is more and not less fertile than that our fathers dwelt in. We must conserve our forests, not by disuse, but by use. . . . We must conserve the mines. . . . We should undertake the development and control of the Mississippi as a National work. . . . The man in whose interest we are working is the small farmer and settler. His permanent welfare is the prime factor in developing the policy of Conservation.

Speech at Chicago, August 6, 1912.

ALASKA

Alaska has great possibilities of agricultural and pastoral development. Not only

Alaska should be developed at once, but in the interest of the actual settler.

her mines, her fisheries, her forests, but her agriculture and her stock-raising will combine to make Alaska one of the great wealth-producing portions of our Republic. . . . I shall do all that in me lies to see that the proper kind of legislation is enacted in the Territory. . . . I wish to see such laws enacted and to see them so administered as to be in the interests of the actual settler who goes to Alaska to live.

Address at Everett, Washington, May 23, 1903.

The Government should at once construct, own, and operate the railways in Alaska.

Progressive Platform.

COUNTRY LIFE

This problem of country life is in the truest sense a National problem.

Letter to Professor Bailey, August 10, 1908.

It is of the first importance that the United States Department of Agriculture should become without delay in fact a Department of Country Life, fitted to deal not only with crops but also with all the larger aspects of life in the open.

Special Message to Congress, February 9, 1909.

The development and prosperity of country life are as important to the people who live in the cities as they are to the farmers.

Progressive Platform, 1912.

We pledge our party to foster the development of agricultural credit and co-operation, the teaching of agriculture in the schools, . . . and to re-establish the Country Life Commission, thus directly promoting the welfare of the farmers, and bringing the benefits of better farming, better business, and better living within their reach.

Progressive Platform, 1912.

PARCELS POST AND GOOD ROADS

General immediate needs of the country include better means of communication, including good roads and a parcels post, which the country people are everywhere, and rightly, unanimous in demanding.

Special Message to Congress, February, 1909.

We pledge our party to the immediate creation of a parcels post, with rates proportionate to distance and service.

Progressive Platform.

We recognize the vital importance of good roads, and we pledge our party to foster their extension in every proper way, and we favor the early construction of National highways.

Progressive Platform.

JUDICIARY

If those judges had understood "how the other half lived," if they had possessed a working knowledge of tenement-houses and factories, of tenement-house dwellers and factory workers, and of the lives that were lived where the tenement-house and the factory were one and the same, I am absolutely certain that they would have rendered no such decision [a decision annulling the law prohibiting the manufacture of cigars in tenement-houses, passed by the New York Legislature] as was rendered. They knew the life of the well-to-do, both the business life and the home life. They knew nothing of the lives of those who were not well-to-do. It was this lack of knowledge and the attendant lack of sympathetic understanding that formed the real barrier between the judges and a wise judgment. . . . My reason

The American people, and not the courts, are to determine their own fundamental policies. The people should have power to deal with the effect of the acts of all their governmental agencies. This must be extended to include the effects of judicial acts as well as the acts of the executive and legislative representatives of the people.

Chicago speech, August 6, 1912.

There is no public servant and no private man whom I place above a judge of the best type, and very few whom I rank beside him. . . . But I agree with every jurist, from Marshall downwards, when I say that every judge is bound to consider two separate elements in his decision of a case; one the terms of the law, and the other the conditions of actual life to which the law is to be applied. Only by taking both of these elements into

for relating this anecdote is because from that day to this I have felt an ever-growing conviction of the need of having on the bench men who, in addition to being learned in the law and upright, shall possess a broad understanding of and sympathy with their countrymen as a whole, so that the questions of humanity and of social justice shall not be considered by them as wholly inferior to the defense of vested rights or the upholding of liberty of contract. . . . I do not for one moment believe that the mass of our judges are actuated by any but worthy motives. Nevertheless, I do believe that they often signally fail to protect the laboring man and the laboring man's widow and children in their just rights.

Editorial in The Outlook, March 13, 1909.

account is it possible to apply the law as its spirit and intent demand that it be applied. Both law and life are to be considered. . . .

Address before Ohio Constitutional Convention, Columbus, February 21, 1912.

How can the prevailing morality or a preponderant opinion be better and more exactly ascertained than by a vote of the people? The people must know better than the court what their own morality and their own opinion is. . . . I contend that the people, in the nature of things, must be better judges of what is the preponderant opinion than the courts, and that the courts should not be allowed to reverse the political philosophy of the people.

Address in Carnegie Hall, March 20, 1912.

AN ARGUMENT FOR MR. TAFT

I have been so long a reader of The Outlook, and am, in general, so much in sympathy with its point of view, that I willingly avail of the opportunity you offer to me of stating why I support the Republican party in this campaign. There is in the platform of the Progressive party a human note to which I respond, and I am, moreover, deeply sensible of the indebtedness of the country to Mr. Roosevelt for awakening its idealism. Perhaps I can most briefly indicate my point of view by saying that in this campaign Mr. Roosevelt seems to me to be playing the part of Wendell Phillips rather than of Abraham Lincoln. Wendell Phillips denounced the Constitution of the United States as "a league with death and a covenant with hell" because it recognized slavery; but Abraham Lincoln realized that the Constitution of the United States must be maintained if the Union were to be preserved and slavery itself abolished. Wendell Phillips, by his denunciation of slavery, awakened the public conscience; but the cure of the evil of which he complained was brought about by other agencies. So now, Mr. Roosevelt, with less occasion, I think, thunders against Constitutional restraints in the name of social justice. Greater social justice will come year by year, I doubt not; but it is more likely to come by maintaining fundamental Constitutional restraints than by overthrowing them. No one wishes a Constitution that cannot be adapted to changing conditions and changing public opinion; but when the fundamentals are changed, as I think they would be changed by the recall of the judiciary and of judicial decisions, we are likely to invite greater evils than those from which we shall escape. Mr. Roosevelt is denouncing in unmeasured terms the Republican party, which has been for the last two generations, in my view, the principal agent of progressive legislation in the country as a whole, and in all parts of the Union. The Convention at Chicago made it clear that the rules governing party representation in the National Convention must be reframed in order to accord with modern conditions. It did not at all demonstrate that the party had ceased to be capable of progressive action. On the contrary, I believe that it still has more capacity for bringing about desirable legislation in the country and throughout the States than the Progressive party now has or is ever likely to have unless the unexpected happens.

As to the proposals of the Progressive party to establish, wherever it can, the initiative, the compulsory referendum, and the recall, including the recall of judges and of judicial decisions, I am entirely and wholeheartedly in sympathy with the Republican party in antagonizing these proposals upon their merits. In taking this position, I will not admit for a moment that I am less a believer in the right of the people to rule than the most ardent Progressive. On the contrary, I maintain that it is precisely because I believe in popular rule that I am obliged to antagonize every one of these proposals. The most conspicuous object-lesson involving these devices, with the exception of the recall of judicial decisions, which is still untried, is furnished by Oregon: and my reading of the

practical results in Oregon leads me to believe that they have not worked well there. I believe that in a State like the State of New York, for example, they would work even worse. In a Legislature all parts of a State are represented, and no bill can be enacted without the vote of more than a majority, not of the representatives voting, but of all the representatives elected to the Legislature. Under the Oregon system, groups substantially as small as one-third of the voters taking part in the election have enacted legislation. This is neither popular rule nor government by majorities. It is a rule by groups; and when a group rules it is thinking, not of the general interest, but of its own interest as a group. Under such a system voting is massed, and in a State like the State of New York, where the majority of the population lives in cities, it would practically eliminate the dwellers in the country from any substantial influence upon legislation. The system of direct legislation destroys party responsibility for legislation, and in this respect also its tendency is unfortunate. Political parties, more than any other single agency, divide society perpendicularly. The effect of direct legislation is to divide the population into groups, with more or less common interests within the group and with interests as against other groups antagonistic. I believe it to be the part of statesmanship to maintain unweakened the force of party responsibility, because that always and everywhere unites our citizenship in a common bond. I am ready always to join with Progressives, or any one else, in trying to limit and prevent the abuses incident to party organization; but, despite all such abuses, I believe that responsible party organizations afford one of the strongest safeguards that we have for the perpetuity and happiness of the Republic. I do not say that the Progressive party may not look forward to becoming a party as strong and effective as the old parties which it seeks to displace; but what I do say is that its proposals on behalf of direct legislation are entirely inconsistent with any such result.

It was said at the Centennial of the Supreme Court of the United States by one of the speakers (I quote from memory) that it had been for centuries the boast of an Englishman that "an Englishman's house is his castle." The speaker said, in effect, that in England this was true as against the executive, but that it was not true as against the legislature; for in England the Parliament is omnipotent and can do with the Englishman, in or out of his castle, what it will. In America, on the other hand, the speaker pointed out that the American might make this boast not only as against the Executive, but as against the Legislature, because in the United States the right even of the Legislature to interfere with the individual citizen must be passed upon by an impartial court. The proposal, therefore, for the Recall of Judges and for the Recall of Judicial Decisions strikes at that which is most characteristically American in the structure of this Republic. I do not believe in substituting popular majorities, much less popular pluralities, for impartial courts. I believe these proposals unwise; I believe them unnecessary; and I believe that they touch that which is vital to the continued life of the Republic. These, in brief, are the reasons why I continue to support the Republican party, both in the Nation and in the State.

This paper was finished before I got the unhappy news of the attack on Colonel Roosevelt's life. That it was the deed of a madman is the only comfort. In common with all Colonel Roosevelt's countrymen, I rejoice in his escape. We Americans may differ from him as we will; but no one can justly dispute his claims to undying honor at our hands.

SETH LOW.

Bedford Hills, New York.

[The editorial on another page, "Why a New Party?" states The Outlook's view of the present situation. All we need specifically to say regarding Mr. Low's letter is that no eminent American seems to us less like Theodore Roosevelt, the man who has been President, who has achieved what he has achieved, than the Abolitionist orator Wendell Phillips. If analogies are in order, we would say that Mr. Taft's position may be likened to that of President Buchanan, Mr. Wilson's to that of Judge Douglas, and Mr. Roosevelt's to that of Lincoln. But all historical analogies are inexact. Mr. Low represents evidently what we call, in our editorial, the Conservatives. He puts as supreme the maintenance of "Constitutional safeguards," and has no confidence in those measures which intrust greater powers to the people at large. This is a wholly consistent view. It is distinctly not that of the Progressive. For the rest, we refer our readers to the editorial above mentioned.—THE EDITORS.]

THE BOSSES' DAY IN COURT

BY WILLIAM MURPHY TAGGART BOIES, OF OHIORADO

REPORTED BY ALBERT BUSHNELL HART

PROFESSOR OF GOVERNMENT IN HARVARD UNIVERSITY

WHY shouldn't we have our day in court? It is time that somebody protested against the sensation press which follows up the people who are really keeping the American Government in operation and accuses them of all the crimes in the statute-book from sneak-thieving to kidnapping a Presidential candidate. Our usual policy is to let the magpies swear at us as much as they please, and to keep on with our knitting-work just the same; but there is no sense in our being looked upon as a gang of dumb robbers in a cave. We can talk and defend ourselves as well as anybody else. See what an impression Lorimer made by his twenty-six hours' speech! Why, if he had only spoken fifty-two hours, enough of the opposition Senators would have died of fatigue to leave him a majority. Not that I stand for Lorimer. I never did. It is bad politics to tie yourself up with a man whom the public is down on when there is nothing that he can do for you.

What I want is just to let loose a bit of straight talk to the American people about the realities of what the newspapers try to belittle by calling it Boss Government. If you should ever read the New York "Evening Post"—I understand that some people do—you would think that we had no fixed principles, that we are just operating helter-skelter, every man for himself, dip-your-hand-in-the-hopper-of-the-dollar-mill-every-time-it comes-around-past-you! Of course people who are in active politics know better. They know that we leaders have a perfectly clear conception of public service and all that sort of thing; and, what is more, we have a regular, steady, organized method of accomplishing the public welfare.

I want to tell you straight out from the heart why we know we are right, and how all these reformers and Progressives and educators and Socialists would ruin the country if we did not stand by common sense in politics. Give me credit for sincerity. I won't hide behind such terms as "The System" or "The Organization." There has got to be one-man power somewhere in every government. I do not claim to be the only man in my State party; but when it comes to final decisions, I do not permit any such absurdity as to count noses and then act according to the most red ones. When it comes to a "show down," the majority in our party rules; but it rules by taking my judgment as to what is best, or else the chief steps out, and that doesn't happen very often.

How did I come to be a boss? Frankly, because up to the present time I have been quicker than any other man in my State to see what the party could be induced to do. The daily papers are full of talk about "corrupt bosses." I am not that kind of a boss, and never was. I inherited some money, and my wife's father was in politics a good many years, and I have stocks and bonds. I have always had enough to live on, and nobody can accuse me of taking a single dollar out of the public treasury. I never have held an office, never drawn a salary, never got back in cash my office expenses for all that I am doing for the party.

Of course a man in my position gets some advantages. The city paved the block in front of my house, but there was a public library opposite, and it was reasonable to pave in front of their own property. I have stock in a fire-engine works. We don't sell cheap, but we build a good machine, and we have sold lots of them in my State. Naturally I like to have the cities buy our machines; but that is the small change in politics. It is just as it is in selling railway supplies or cotton-mill machinery—the firm that has the most friends will sell the most goods.

Another popular delusion is the so-called Ignorant Boss. I am no more ignorant than corrupt. Those pictures of a man with a jaw a foot across and a cigar pointing north-east like a telescope searching for a comet are no portraits of me, nor of most of the men in my profession. Matt Quay was a highly educated man, had a beautiful library, read his books, and was a personal friend of

literary men. Tom Platt, the good old "Easy Boss," was not a "plug-ugly." Why, he was a Senator of the United States, associating every day on the floor of the Senate with the greatest and best men of the country. Thurlow Weed and Martin Van Buren and Simon Cameron were bosses in their time, and they were not prize-fighters. For my part, I am a college graduate—State University of Ohiorado—and some of my old professors who won't vote with me still have a soft side for me. I have a family growing up, a boy at Groton, a girl just graduated from Bryn Mawr; they know that their father is not a thief or a blackguard; they have nothing to be ashamed of.

There have been a lot of bosses whom the American people delighted to honor. Sam Adams was the first; but, if you can believe our Ohiorado Professor of American History, John Hancock was smarter, for he made a first-class deal with the Massachusetts ratifying convention of 1788 by refusing to support the new Federal Constitution unless they gave him the governorship—and he got it. Andrew Jackson was a boss in his clumsy way; Abraham Lincoln, the prince of political managers, was a kind of so-called good boss. Bosses have to be, because otherwise who would concentrate the votes or carry through any continuous policy? Bosses are just as legitimate a part of the American Government as vote by ballot or residence in the district that you represent, or log-rolling in Congress. You simply can't get along without those things.

I will give you reformers credit for honestly wanting to improve American government, for meaning most of your talk about representation of the people, about popular government, about honesty and efficiency, about a systematic programme of legislation, about enlightened and progressive leadership. That's all right; but you don't know how to get these things, and I do. You seem to think that we bosses are working without a plan. I have been in the business longer than any of you, and I can assure you that you totally misunderstand the situation. As a matter of fact, we want just the things that you want; and if you would only fall in with the people who know how to secure legislation, you would find it a good deal easier than this getting up third parties and framing fool platforms and diverting the minds of the people from the real issues.

You say you want a representative government; that is what we leaders have got. You reformers do not seem to understand the prime principle of politics, viz., that you cannot elect men or pass laws unless you have the necessary majorities. Our business in life is to keep a majority on our side. Therefore we keep our eyes out for rising young men who ought to be in public life. We give them something to do, throw cases in the way of struggling lawyers and get them appointments as corporation counsel, lend money to promising business men, attach people to us by doing something substantial. How many tons of coal have you people ever bought for poor widows? How many light public jobs have you ever found for heads of families who have just come out of the hospital? How many struggling contractors have you put on a nice little good thing? There is not a county town in my State in which we cannot lay our hands any time on a dozen of the livest young men in the community, representing the people through and through, and every man devoted to us.

What is more, we represent what you are trying to leave out of all your calculations, and that is property. Every successful government in the world must recognize and protect what you call "the Interests." What has made America great if not her manufacturers and mine-owners and bankers and organizers of corporations? You can't keep a government going which does not look out for the property-owners. If you think you can, just cut loose from the farmers and the owners of little houses in our towns and cities, and see what you will have left to represent. The bosses stand for the permanent interests of the people. If we were not on hand to calm and moderate things, the voters would run away with the elections three times out of four.

Not that we have anything against the voters; we carry on a really popular government—popular in a sense and to a degree which your petty vote-getters, your Johnsons and Lindseys and La Follettes and Roosevelts, have no conception of. We believe in the people participating in their government from the ground up through their party organizations. We want people to come to the primaries. Not these modern soap-box primaries, where there is no guarantee of proper consultation and agreement beforehand, but the primaries which have been good enough for the country during three-quarters of a century. The right kind of

popular government means the expression of the popular will through trained politicians so as to make people take an interest in their elections; you reformers can't depend upon bringing out two-thirds of what you call your voters. We believe in acting after things have been talked over by the leaders and passed upon by those who make it a life study to know what is satisfactory. What you call popular government is snap government; people rushing to the polls as though an election were a bargain day in a department store, trying to get they don't know what, and to pay for it the least possible.

You talk a lot about honesty in politics. There are leaks in all governments; but that is not the only kind of dishonesty. It is dishonest to pad pay-rolls or to make the city pay two bills for the same goods; but it is also dishonest not to stand by your friends. It's a crime to turn down a good and useful man because perhaps he is careless about keeping his accounts with the public. It is dishonest to have principles and not to stand by them through thick and thin.

What is all this bosh about the extravagance of boss government? I have noticed that these high-brow reform governments, city or State, always raise the taxes; the rake-off in city and State government is seldom more than ten or fifteen per cent—a small thing compared with the sums that the so-called Progressives spend for such frills as vacation schools and playgrounds, and civic centers and factory inspectors, forest rangers and expert accountants.

If you knew the number of graft propositions that I turn down every year you wouldn't be calling me a thief and a robber. As a matter of fact, the rise of organized leadership—call it bossism, if you like—in the last forty years has done more to purify politics than any other one thing. Very few sensible corporations now purchase members of Legislatures or put up hush money to kill off strike bills. They come to me and I arrange to let them have what they are entitled to and no more. Many a poor member of our Legislature has been saved from temptation by getting a few hundreds in one block through me instead of being the prey of fifty different lobbyists! Everybody in politics knows that there must be some graft. You can't get public business done in any other way. But it is the business of the "boss" to see that those things are reduced to the lowest reasonable figure. He does not get the money; it goes directly or indirectly to keep the organization together.

Another fake cry nowadays is "Efficiency." People seem to think that it is something which the reformers have just dug up. Now efficiency is the breath of life for us leaders. We are leaders because we are efficient. We have the support of city, State, and National parties throughout the Union because we are the people that can get things done. Professor Goodnow, of Colombia, is recognized as an expert in government, and he says that the great trouble in State and city governments is the separation of the executive from the legislative power. The people are accepting that doctrine, as is shown by the great number of city commission governments in which the two powers are merged. We found that out long ago, and have applied it not only in cities but in States. If I can nominate the Governor and control a majority in the State Legislature, I will see to it that the two act in harmony. Why, boss government is just like the English parliamentary system that you hear so much about, where a committee called the Ministry drafts the laws, puts them through, and then executes them. So in American politics, a few men (better one man), acting of course as unofficial representatives of the people, do all those things.

Furthermore, we pass laws that stay put when people try to upset them. In some States, like Montana, we control the judges, who see to it that the principles of the Constitution are not subverted. On the other hand, if an accidental Legislature passes confiscatory laws—employers' liability, and all that sort of thing—the judges apply the beneficent common law, which is superior to any State statute and to any State Constitution. Our power to nominate the judge is a great conservative force, for which the public does not seem to be sufficiently grateful. In nine cases out of ten we put up a judicial candidate entirely satisfactory to the bar, and the tenth man we must have to prevent the destruction of vested interests and the overthrow of organized government.

You have a great deal to say about experts in government. Well, we "bosses" are the real experts. We may not be engineers or skilled doctors, but we know both what the public needs and what a Legislature will pass. Take the question of franchises. People like Maltbie, Prendergast, and Wilcox write articles and books on that subject, but

what do they know about the real difficulties and how to surmount them? For years we have been in confidential relations with those who want franchises; we know what they are worth; we know what a city council can be induced to do, and there is no use going beyond that.

The organized system—yes, the boss system—depends for its success on intelligence and order. We administer one of the most effective political systems that the world ever saw. It begins with personal appeals to party voters. Then come the primaries, in which we always help the voters to concentrate on a few candidates. I admit that there have been too many cases of capturing primaries by holding them without public notice, or having the police club the wrong men if they try to come in and vote. I have never stood for such coarse and irregular proceedings, which are almost certain to prejudice public sentiment. All that is really necessary is to appoint the presiding officer, and he can be depended upon to know whether a question has been carried, and whether a roll call is necessary. You Progressives learned at Chicago how important the President of the political convention or the primary is to political success. Then come the local and State conventions, in which there may be kicking; but good leaders always see to it that the right lot shall have a majority of the delegates, and then there is no further trouble. Platforms of course must be so made up as to agree with the policy of the party, settled by its leader.

You may talk about this as a gum-shoe method, but give me the gum-shoe rather than the horseshoe, clattering away and calling attention to itself. My friends and I play by the rules of the game; if we get worsted, we accept defeat, until we can set up the next convention. Ours are the principles of peace and order and everybody rallying to accept the nominee. I have not words to express my opinion of men who go into a convention, try to nominate their candidate, and when it is proved that they have not the votes, appeal to some technicality, bolt, and nominate a third ticket. They queer the whole business of politics, upset the mature plans of years, and destroy the confidence of the people in their government—that is, in us.

One of the great defects of Progressivism is that it is jerky. Progressives in one county want something different from those in another; the Wisconsin Progressive, the California Progressive, and the Massachusetts Progressive think they are the same thing, but wait till they try to form a platform! The whole idea of your Progressives is to make nominations and carry elections; that is not fifty per cent of politics. Our system means politics all the year, every year; when the Legislature is in session and when it is adjourned; in the long term of Congress and the short; as regular as the delivery of baker's bread; and all over the Union, in every county, the same idea, safe and sane. You can't have one set of political principles one year and another the next. Our great motto is, "The Lord hates a quitter," and anybody is a quitter who deserts the organization and starts off on his own hook to make up a programme of legislation and to try to get a majority in its favor.

That is why we object to the initiative and referendum. I do not need to enumerate the defects of so-called popular legislation. Who is going to draw the bills and the Constitutional amendments, and to make them agree with each other? Why, the whole thing is breaking down in the States where it was supposed to be the strongest. Out in Oregon last fall they had twenty-two propositions on the ballot, and they were so bad that the people had to vote down fourteen of them. Do you call that popular government? Those things are jammed through without proper discussion. People don't know what they mean; they may have jokers in them, authorizing the Lord knows what! Big interests, like the railways or the water power men, may compel all their employees to vote for the things they like. There isn't a Legislature in any State of the Union where proper leadership continues which would pass the kind of measures that go through on the referendum. Nobody can tell what is coming. It throws politics all in confusion. The people will take warning when they find that business will stop, because under the referendum you cannot get the charters and franchises and privileges that attract capital.

Then there are the primaries. I believe in the right kind of primary, made up of those who are interested in politics; not your college professor and minister and small business man, who never had anything to do with our primary, wouldn't come out, wouldn't work, scandalously neglected their political duties. Now those very fellows have got up what they call a primary, but is really a

make-believe election. They come out, and by mere brute force of numbers outvote us, and compel the placing on our tickets of men not really in sympathy with us. Why, anybody can be a candidate now who can get a plurality of the people who appear at the primary, which includes perhaps not half of the party voters in all. Do you call that a popular nomination?

And think of the expense of it! Of course we assess candidates for office; judges in New York sometimes pay a year's salary to get on the ticket, and Governors pay perhaps $10,000 to $50,000. Under the State-wide primary, they say that it cost Deneen and his friends $200,000 for a campaign of information in order to get him nominated on the Republican ticket in Illinois, and now those confounded Illinois Progressives are trying to take that money out of his pocket by putting up a Roosevelt candidate against him. The whole so-called State-wide primary system is just a system of getting second-class men nominated—men who couldn't get one-third of the vote in a State convention. We never shall have strong and orderly National parties till this system of electing a lot of nobodies onto the ticket, and then electing half of them into office, shall be knocked in the head.

Few people realized the danger till the Chicago Republican Convention showed how the State primary had eaten into the National Convention system. There would not have been a bit of trouble in that Convention if the time-honored method of choosing delegates had not been broken up by the illegal holding of primaries for the choice of delegates to the Convention. This threw off the floor of the Convention some of the strongest men in the country—men like Crane of Massachusetts and Penrose of Pennsylvania, who were therefore obliged to run the Convention from the platform. Then it brought in three or four hundred tyros in politics, who actually scoffed at the traditions as to the settlements of contests. The worst was that several States, especially California, defied the National Republican Committee by paying no attention to its rules for choosing delegates. Of course we could not permit a thing like that; for if it should run through the States it would go far toward putting us out of business. So we pried off two of the Roosevelt delegates and taught the State of California, and all the other States, what it meant to attempt to make rules for the choice of the members of a private political club like a National Convention.

I read the Chicago "Tribune" and the Kansas City "Star" and the Philadelphia "North American" regularly, in the hope of finding out what all this fantastic jugglery means; and the thing that strikes me most is the unceasing talk about "leadership," "aggressiveness," "a positive policy," "contact with the people," and all that. Good Lord! was Theodore Roosevelt the first man to see the need of leadership in American politics? We know more about leadership than the so-called Progressives will learn in the two years which I give them before they go to smash, because they have too many leaders and too few officers. There is Professor Hart, of Harvard; one of my friends who graduated there says that for twenty years that man has been telling his students that what the country needs is personality in government; to put strong men in office and then to stand by them and back them up in vigorous administration. Doesn't the fellow know that there are strong men leading the parties now? If they were not strong, they would not be leaders.

Our system of personal, intelligent, systematic interest in politics is the "natural selection" of strong men, the "survival of the fittest." The "Saturday Evening Post" comes near to sizing the real boss in its amusing stories of the good-natured boss, who makes new mayors just to please his wife. You youngsters, you amateurs who are trying to build battle-ships out of candy, don't understand what real leadership is. My friend Murphy has seen the time when not a district leader in New York had any opinion on any subject that did not agree with his. Out in my State I make not only mayors, but Governors, members of the Legislature, Senators. Of course my power consists in doing what the members of my party wish, or will wish as soon as they understand it. True leadership consists in foreseeing just what will keep the district leaders true; and that means, of course, foreseeing what the people are going to want.

Leadership means also that people shall be attached to the leader, and you Progressives don't really understand what loyalty to the chief means. I invite suggestions, listen to everything that is said, and everybody understands that. But when a decision is made, or a platform drawn, or a candidate is selected, then you get the real, genuine loyalty, every

man standing up like the commander of a brigade and pledging his district.

Another thing that the Progressives think they think they want is non-partisanship in municipal affairs, but that is just what we furnish. Wilkins, leader of the other party, and I have for years agreed that we could not plunge the metropolis of our State into partisan government. Wilkins never nominates a mayor without consultation with me, and I never set up a city council without seeing to it that Wilkins's men have a fair share. If we had our way, we would introduce the same non-partisanship into State and National government; and there are some Legislatures where it acts like a charm, where you will see Republicans and Democrats working side by side on bill after bill.

We leaders all know that Theodore Roosevelt is a dead duck, a weakling, a bolter, a quitter, a squealer, who no longer has any hold on the country; a violent and ungovernable shouter who arouses the passions of millions of voters against their natural leaders. The few thousand voters who put their trust in him will go back to their own parties when he is downed, for he is all that holds them together. He is the laughing-stock of our party newspapers and the most dangerous man in the country. If this goes on, he will wreck both the old parties. He has a feeble hold on a lot of small men who want office, and nothing will stop his Socialistic career except a combined effort of the accredited leaders of both the regular parties.

If you want a Progressive party, why don't you go to the people who could give it to you? There never was a time when by remaining in the party and standing by the leaders the so-called reformers would be so likely to get their pet laws enacted. Why do you people throw your votes away? There are lots of able young men, and in the Suffrage States able young women, who have gone into this Progressive movement who would be welcomed in the councils of the organization. They might become district leaders, help to hand out the patronage, get good things for their friends. We would send some of them to the Legislature if they showed a disposition to co-operate. We have made the fortunes of thousands of people.

Do you want parks, boulevards, playgrounds, civic centers, in the cities? Put it to us strongly enough and we will provide them, and we know very much better how to do it than you do. Do you want railway commissions, reorganized treatment of the poor and the defectives, proper regulation of corporations? We have been passing laws of that kind for forty years and want your help in that good work. There isn't anything in the world so progressive as a boss when he is sure that the people want progressiveness.

You might as well give up the struggle to organize politics on a basis of perpetual mass-meetings. You will get tired of it shortly. What became of the Know-Nothing party and the Native American party and the Greenback Labor party and the Liberal Republican party and the Prohibition party and the Socialist party? Did they ever elect a President or a Senator, or anything more than a handful of State and city officers? Ours is a permanent method, because it appeals to human nature. We are in business to do something for the voters. You are trying to start business by making the voters do something for you, or, as you call it, for the public. You don't know the American people. Our experience of years has been that you can't keep the American voter interested unless you make it worth his while. Still, it doesn't take very much: unimportant offices, memberships of political committees that are not allowed to do anything, seats in legislatures at the end of a telephone wire, little private bills. But you never in this world can succeed on your theory that the American voter will respond to what you call a noble sentiment of public interest.

After all, it makes very little difference what you soreheads and reformers and Progressives and third party men do or refuse to do. You are only the passing show, we are the real thing. After this flurry we shall get hold of the steering-wheel again and go along just the same as we did after you tried to sew us up with the Australian ballot. The initiative, the referendum, the recall, the official primary, are temporary attempts to prevent an efficient government. We will see to them when we have squeezed out the third party and again get control of the State Legislatures; then our Day in Court will be every day in the year.

DANCING BLOOD

BY JAMES OPPENHEIM

WITH DRAWINGS BY HANSON BOOTH

IT so happened that I was straight from the machines myself. And so I had an immense somber feeling about civilization: a race of restless creatures who through a splendid million years gave their naked breasts to peril and the unknown now suddenly become slaves in our modern indoor galleys, the factories—these hunters and fighters and fierce free mates standing in their millions to tend the unventuresome machines. Shall these sons and daughters of the great migrations, the base and bloody wars, the ancient crimes, the red love-making and the dance, these children of terror and ecstasy, find adventure in the looms that weave to-morrow what they have woven to-day? Shall a little food and warmth and a tired mating content them? To what shall these offspring of reckless death offer their easily pierced breasts when all day long their eyes are on the wheels, their hands are on the levers—in action mechanical dolls, in essence divine rebels?

I was caught in Pennsylvania that winter. I needed bed and board; I rejected beggary. Only the cotton-mill was open. For four months I stood up a ten-hour day. And then there was a strike. No one understood that strike. People were able to live, work was steady. And yet five thousand men and women marched out of the mills. But I understood: man does not live by bread alone. That strike was an adventure—a return to the sacred and vulgar racial life. It was passionate, perilous, terrible.

April had begun; spring was on the way. And so I left the toilers in their desperate glory and put out again on the open road. A ten-year rover like myself had to go; I wanted Broadway again; I wanted the great sea city; I wanted the Unknown.

Early that evening I reached Darnton, that nest of silk-mills. Seven blocks of Main Street lay like a fierce comet's tail in the night, the white glow clouded with the shuffling, stirring people. Shop light, blaze of theater, drew these Hunters of Adventure; they peered in each other's faces, they invaded the shops, they crowded the motion-picture shows. Youth, fired by April, was at its love-seeking, and everywhere wave after wave of released humanity strove to break itself on the night, to beat out its terrific lust for life against an ice-cream soda or a picture play or the ardor of casual love.

And, joining that pale and exhausted procession, I wondered why these spinners of silk did not also strike. I understood, I shared their savage appetites, their raw desires. Day kept them in a strait-jacket; but the mystic night released them to the strange street and the hunt. And so they wrecked themselves on liquor and license, welcoming ruin. A perfectly human thing to do, all too human.

Tired by my tramp, I sought for lodging. A pallid and grave young man, frowning upon the crowd, but eying it rovingly, almost collided with me.

"Pardon me," I said, "I've come over from Pettigrew, and want a night's lodging. Perhaps you can help me."

He looked at me suspiciously, a keen glance that caught my muddy shoes, my bulging trousers, my open-neck flannel shirt, the bearded face, the slouch hat, and the bag over my back.

"I'm not sure—" he began. "There's a Salvation Army—"

I cut him off with a laugh.

"No, thanks. I pay my way, a dollar a night, with breakfast. . . . My name is Thad Stevens."

By then he had analyzed my two passports—my voice and my eyes—and seemed reassured.

"We have a tiny room we used to let out, a cubby-hole off the kitchen. But you'll have to ask my mother."

"Content," I said. "You see, I left Pettigrew because of the strike. I worked in the L. C. Y. Mills."

That satisfied him, as I had anticipated. Then he spoke in a querulous voice:

"But you'll have to wait a minute. I'm looking for my sister and my aunt. It's time to go to chapel."

Chapel! Then I understood his grave mien, his frowning forehead. I fell in step with him, and we went forward, passing the crowd in review. We came thus to

"OF COURSE I KNEW THAT SHE HAD COME TO SHARE THE SECRET WITH ME. BUT SHE WAS HESITANT; SO I HELPED HER"

the Majestic Theater, whose scarlet posters flamed under the copper glare of great arc lights, and into that theater filed an eager crowd, while the penniless and the uncourageous stood on the pave watching wistfully. And among these watchers we found them.

"Lyn!" cried my young man; "Aunt Janey!" His tone was scandalized. "You're to come straight home; we've been waiting for you!"

They turned, trapped, blushing—a frowsy, middle-aged woman and a girl of about seventeen. And the girl spoke:

"We were just coming back—"

"Sure!" he muttered. "I saw you."

"Well, there's no harm," she said, "in looking at a theater."

"Harm!" he sneered.

We turned and started back, somewhat clumsily trying to keep in one row. But the voice of the girl, gentle and sadly eager, haunted me, and I turned to look at her. She was not above middle height; the shawl round her shoulders swayed out at the ends before her, her rather dilapidated skirt flapped softly, and her bare head with its almost shaggy soft brown hair, through which ran threads of gold, darted out rough curls when the cool wind passed. Nothing extraordinary in all this, yet about her was something extraordinary. I knew after ten steps. It was her light tread, the whole girl rhythmic, as if she walked on air, or as if the ground went with her. And I felt at once that the wave of youth and desire in her, so strong that it almost lifted her off her feet, had swept her out under the lights, and I felt subtly that here was the whole tragedy of the mills. She was caged, caught, betrayed, denied her heritage of love and loveliness: a perilous creature, a human explosive. . . . Chapel for her! Chapel and the silk-mill! No wonder her brother had to hunt her down and drag her away from the wicked night!

We turned a corner, silent, and went into the immeasurable blackness of a side street. There, under the dim lamps, the poor mill-houses grew visible, each with its lighted kitchen. The fifth house was ours: two-story, exceedingly small. And into the meticulous neatness of that lamp-lit kitchen we filed. There was the mother with her bonnet tied, her shawl wound about her thin angularity, and her narrow face cold and bitter, as deadly as a point-blank gun. Yet the eyes shone with life. She did not notice me.

"Janey," she said, in a low, icy voice, "I'd thought you had more sense. But you're wicked as Lyn. . . . Now come. . . ."

I was chilled to the marrow. The whole house now seemed empty and bitter cold, and in the dull light these creatures seemed monsters of sin. Later I discovered that the family belonged to some narrow sect; but already I found myself in the ice-ribbed prison of a dead creed. I looked at Lyn; her misery was appalling, as if she writhed with sin, her greenish-brown eyes wide with revolt.

Then the son introduced me; the mother measured me from head to foot, and I was shown the little shed, the narrow cot. In spite of the hurry of the mother, the chapel-going was delayed while Lyn lugged the blankets from upstairs and Aunt Janey spread a cold supper for me.

I stood at my door, looking in as Lyn gracefully made the bed. Straightening up, she met my eyes. I smiled. I whispered:

"Chapel! chapel!"

And she understood. A radiance came to her face, and in parted lip and wondering eyes and heave of bosom I saw the irrepressible spirit of youth leaping into triumph again. But she was amazed.

"Yes," I said, "I've been there myself."

She smiled in my face, and her eyes grew wet. I reached out a hand and clasped hers. And she passed me quickly, guiltily, possibly sure that her mother had seen and heard from the kitchen at my back.

Later, in bed, in the hushed and empty house, I analyzed Lyn's amazement. And then I knew; she had never before been fully understood. Alone, crushed by the mill and her mother, she had had to accept the universal verdict of Drudgery and Sin. This apparition of a creature of wings among the drudges and the dehumanized family had seemed monstrous; and so Lyn, against her instincts, had thought so too, frightened, writhing, frustrated—until a stranger smiled, whispered, offered a hand.

"Something will come of this," I thought. "You've set match to an explosive. . . .

"Ah," I thought, however, "if no one had released her—what then? Such girls feed the underworld."

And it seemed a miracle that in this world often the greatest thing is the least; as, for instance, a glance, a word, an offered hand.

I watched Lyn curiously the next morning. I was up early, and she got my break-

fast for me. And, more than ever, I was startled and amazed; in her light motion, her fleet-footedness, the ardent and exquisite changes of her face, the gentleness and poignancy of her voice, were hints of unbelievable things—hints of mental and spiritual richness not wholly native. How had such a creature strayed into such an environment?

The April morning was mild, liquid-clear, shining. The door was open, and the little winds flapped the end of the tablecloth; sparrows were preening and chirping on the stoop, a bluebird was trilling, and a sweet, earthy odor freshened the air. Lyn leaned over me, placing my cup of coffee. I looked up.

"You'd rather loaf than work to-day, wouldn't you?"

Dreams were in her eyes. She laughed softly.

"Yes."

"And how long have you been a weaver?"

"A year."

"Ten hours a day?"

"Yes."

"And you hate it?"

She smiled down at me.

"Not exactly—not at times."

"You know, I'm a professional loafer." She stood off, staring. I laughed.

"I'm a tramp, Lyn."

"A tramp?" Her voice thrilled.

"Like a gypsy," I said. "I go roving all over the world. . . . I go seeing things and meeting people. . . . I'm following the spring now, up to Canada; there'll be buttercups for me for the next three months; strawberry blossoms too."

She was amazed, entranced.

"And you don't *have* to do it?"

"Yes, I have to," I replied. "I'm a wild thing; I don't belong to civilization."

I drank off the coffee; she was getting her shawl.

"May I walk with you?" I asked.

"Yes." She was breathless. Out we stepped under flawless blue skies, and I saw now that my words had profoundly thrilled her; she was desperately alive, lapping up life, as it were, with her whole being. But how could I learn her secret without telling her mine? Indeed, we were sworn comrades, almost conspirators, already.

"And you really do that?" she asked. "But how can a person be so free?"

"How?" I asked. "By just *being* so. Who is to stop me? Yet," I went on, hastily, "only a few would call it freedom. It's full of pain and tragedy, Lyn—breaking away from people you love, going hungry, doing nasty jobs, being scorned and despised and rejected, sleeping God knows where, sinning and repenting. Take your mother, for instance. She finds freedom in religion, doesn't she?"

"Why, yes," she cried, shocked by this revelation. "But I—oh, now I know what's the matter with me!" she went on in a strange voice. "Now I know!"

"What is?"

She gave me a queer glance.

"I'm—I'm one of those 'wild things' too."

"Don't be too sure," I laughed. "Everybody is at times."

I was thinking of the strike at Pettigrew, of the fierce parade the night before on Main Street. Surely the whole race is tameless.

But Lyn was rebuffed; as if she thought that, after all, I did not understand her.

The toilers were marching before and behind us, and we had come out to an empty field at the back of which stood the five-story brick mill, handsome and new. And now all these human beings were leaving the April morning, the skies, the dreaming countryside beyond, the song and flash and murmur of the spring, and filing slowly, inevitably, into the prison-house of the Machine.

Lyn and I paused.

"I'll wait for you at noon," I said.

She smiled wistfully, nodded, and left me. Ten hours stood before her.

After an aimless two hours of wandering about, my curiosity brought me to the mill again. I wanted to see Lyn at work. I could not quite place such a creature among the machines. . . . As I stepped into the office an opening door gave the tremendous rhythms of the mill, not unlike some terrific Indian war-dance—the beating and the stamping and the singing. The door shut; I stood in a silence that was scratched by the bookkeeper's pen.

He was averse to my going in. But once I was a reporter in New York; I told him of some vague article in view—"the making of silk"—so he procured me an overalled guide. And into the clamor we went.

That mill was new; its walls were as much glass as brick; its machines were of the latest model, freshly painted, and as we went into the weaving-room of the third floor the effect was brilliant. A center aisle, and the man-

AND SHE DANCED. LEAPING LIGHTLY THROUGH THE DOORWAY, WITH HER TWO RAISED HANDS SHE SEEMED TO LET FALL THE SUNBEAMS DOWN TO THE FLOOR

high machines on either side four looms deep, and from the right the streaming sun. Six rows down we came to Lyn.

She was next a window, partly open, and she had four machines in charge. The sun was on her hair, and the soft brown with its golden threads seemed like the silk that was being woven. And she went from machine to machine, humming under her breath, watching the swift and rhythmic threads, touching with delicate hands the troubled woof, and her eyes dreaming. Into and out of the sunbeams she passed, and paused once to see the motes dance. She was quite unconscious of her surroundings, and seemed merely a bright part of the not unmelodious weaving; for one loom was gushing a silk of scarlet, soaked in sunshine, flowing like red wine; and the dreaming girl brought her living face close to it as she watched the shuttle.

She was surely unique among the mill hands: a thing of wings somehow caught among the dreamless drudges and the industrial machines. I wondered whether the mill-owner knew that he was hiring at ten dollars a week this flame and music; that beyond all glamour and delicacy of silk and all golden profit and standing in the community, there was that fugitive light in his factory which had more of wonder in it than the glory that was Greece. The race follows it instinctively, whether it is silent in cathedrals, or bursting into daisies on hillsides, or shining in the white nights of cities, or frozen in marble, or living in human love. It is what we feel we are; it is romance, music, adventure.

And I thought of the old classification: Earth, Air, Fire, Water. And I asked myself, If even the creatures of Earth cannot endure for long the mechanical day, what, then, of this creature of Air and Fire? Her place was in Vagabondia, on the hills and the peaks, and in the heart of the cities. . . . The rest of the mill seemed shabby enough. . . .

When the noon whistle blew, she came. Her excitement was girlish: as if this were one of the greatest events of her life. But what is greater than finding the Listener?

She said:

"Sometimes I take lunch with one of the girls, so my mother doesn't notice when I don't come home. So can't we walk? I'm not hungry."

She had a precious half-hour. There was no time to lose. I merely stopped at a grocery and purchased a box of crackers, a bar of chocolate. Then we went down a side street that gave into a country road, and climbed an open hill to its top, where under a maple tree we found a large rock. On this, then, we sat. Darnton lay under us, mill-chimneys belching black, a few spires, hosts of tiny frame houses.

The little green grass blades were new and tender, just piercing up; violets were budding; the air cool and washed with fire; a bluebird sat on the fence-rail near by; and far off a man was painting his house a fresh yellow. Mica glistened in little broken rocks; a trickle of water went shining down the mud of the hillside; and in the pale and transparent whiteness of the atmosphere, out near a road, a red-shirted laborer was lying on the dirt, his head resting on his arm, smoking his pipe, while his two great harnessed horses stood near by, perfectly still. And we were caught in the Spring: that new flood of life that fills each one of us so full we can hardly endure it, and want release for this dazzling vitality, this super-energy. And the atmosphere was charged with expectancy, with marvelous portents.

Lyn, sitting a little below me, glanced up now and then as she munched the chocolate, and for the first time I really saw her face. The greenish-brown eyes were slightly close together and rather large; the lips puckered upward toward the curved and rounded nose; ringlets tossed about her low forehead. Her smile was exquisitely sweet, lighting her whole face; and the graceful head was set on shoulders femininely narrow and downward-sloping.

Of course I knew that she had come to share the Secret with me. But she was hesitant; so I helped her.

"Do you get much time for reading?"

"No," she said, eagerly. "But I read all I can. . . . Only, my mother hates to see me read." She laughed. "You know what? I do my knitting at night, sitting at a little table, and in the drawer I keep a book, and when mother's out I open the drawer and read—you see, my fingers can knit without watching—and when mother comes, I just close the drawer."

We laughed together.

"Where do you get the books?"

"There's a library. . . . I love poetry. . . ."

I caught her eyes:

"And is there any one in the whole town like you?"

"Oh, that's what bothers me. I think I'm so sinful. . . . And yet"—she mused a little. "Do you know, people are funny? It seems to me they lead two lives, every one of them. In one they're just weavers or twisters. But underneath they are all sorts of things. There's Bess; I—I think," she laughed ashamedly, "she's a mermaid." She gave me a quick glance to see if I mocked her; then went on, "And Rufus, the foreman, he's a tiger, a terrible tiger."

"And you?" I asked.

"I"—she flushed. "I daren't tell."

"You dare."

"No, I daren't."

"Oh, come—"

"I'm ashamed," she murmured, "Oh, you'll think I'm low."

"Think you're low!" I laughed. "Come." And I put the easiest question of all for girls. "You want to go on the stage."

"No—worse than that. . . . I—I did act once: in Cinderella; the church gave it, so my mother let me; I was one of the mean sisters. . . . No, it's worse than that. . . ." She paused, hesitated, spoke in fright, "I—I want to dance—*Dance!*"

I remembered her light tread, and was thrilled.

"What do you mean?"

"Oh, not just dance—not just jig, or waltz, or kick. . . . No, I want—I'll tell you what I want. . . ." She blushed scarlet. "Here! . . ."

And from her blouse she drew a bit of paper and passed it to me with shaking hand.

"Poetry!" I murmured. And I read:

"I see the little people dance,
The little people of the sunbeams.
They leap and fly in shining music,
And they keep time with the weaving silk.
O little friends, the looms imprison me,
I long to leave my silken weavings,
And leap among you and drowned in sunshine
Fly out the window where the sky is blue."

Artless, surely, and yet wrought by an artist. And I understood then; this girl had the creative impulse, had flowing through her the rhythm and urge of the very life. And I thought of her family and her environment, and was puzzled and amazed. For she had accomplished the true creation; she had wrought beauty out of her drudgery and despair.

"I like it," I said.

She grew radiant, a true artist.

"But, you see," she said, eagerly, "it doesn't satisfy me just to write . . . no, nor to act. That's only using a part of me; I want to use my whole body to say things with. . . . That kind of dancing. . . . But it's sinful."

"Sinful?" I echoed. "But you don't think acting sinful."

"No—the church let me do that."

I leaned toward her.

"Why do you like poetry better than prose?"

"Oh," she exclaimed, "it's music, and keeping time . . . and something deep . . . way deep, . . . you know."

"Well," I said, "dancing is the poetry of the body, and acting is the prose of the body."

She clapped her hands.

"Lovely! Oh, I see now! Oh, you have such a way of saying things!"

I smiled.

"And you've never danced?"

Then the whole secret came.

"I've always danced. Ever since I was three. But no one's ever seen me. I dance that poem I wrote. . . ."

"In the blood," I thought. Then aloud: "But you'll let me see, won't you? I know a great Russian dancer in New York, Kaslovna."

Sharply then the mill whistle blew. With a cry of dismay she rose. And we fled down the hill.

I had time that afternoon to think of Lyn's past. And it seemed to me that she was a peril, a high explosive: one spark might ruin such a nature. For added to the ardent and youthful thirst for life—how wistfully she had looked in at the theater the night before!—was this tremendous creative urge within. And the repression she was under was unnatural, could not last much longer. Soon she would cease to be a manageable girl, and, like so many such winged creatures among the poor, would doubtless fling herself away, give herself in the end to the streets. No normal life for her, surely; and better, I reflected, some safe outlet than this imprisonment. . . . Again I thought of Kaslovna, who yearly took on a girl or two to train; in the end to be added to her marvelous troupe.

That evening, after the dish-washing, the mother and brother went out, leaving me with Lyn and Aunt Janey. Lyn sat at her knitting, still excited, now and then looking at me in the knowledge that we shared a secret.

"OH," SHE WHISPERED, "I OWE MY LIFE TO YOU!"

The night was very still and cool; a kettle bubbled, the lamp was dim.

I whispered to Lyn.

"I've got a plan . . . but we'll have to tell your aunt . . ."

She looked at me dubiously, then shrugged her shoulders.

I spoke to Aunt Janey:

"Did you know Lyn could dance?"

Aunt Janey was terribly startled.

"Dance!" she cried. "Lyn dance?"

"Yes," I went on, "and she's going to dance for us now. 'The Dance of the Sunbeams.'"

Aunt Janey nodded her head. But on her face was a strange look, as if she had seen a ghost.

"All right," she whispered, in a hollow voice.

Lyn didn't want to for a while, but we persuaded her. She changed then wondrously; rose alert, energetic, wholly un-self-conscious. Her laughter, the youth of her voice, were charming.

"I must dress for it," she said, and disappeared.

When she came in, she had on a white loose dress—the Cinderella dress. It was crossed with two yellow ribbons; a yellow ribbon was bound across her forehead, and slippers were on her feet.

"Are you ready?" she asked. Then she went out.

And she danced. Leaping lightly through the doorway, with her two raised hands she seemed to let fall the sunbeams down to the floor; her playing fingers suggested the quick motes; the play of her body the joy and flame of the sun. Then she stood off, and, with pendulations of her young body to and fro and with eager dart of flashing hands and with measured beat of feet, suggested the looms, the swing of a thousand

threads in the warp crossed by the leap of the woof, and the wheels clashed and rattled. . . . Next she was Lyn, standing over the looms and dreamily watching the sunbeams. . . . The dance grew lovelier. . . . The machine caught her, crushed her, but she held out hands to the sunbeams; she tried to escape and leap up the golden ladder of the rays out of the window and up the blue heavens. And at last, breaking loose, she whirled, a mote among the motes, flaming joy and love, and so disappeared through the doorway.

I was stung with the wonder of life; it seemed to me then that a silk-mill was a place of music and beauty; a palace of the human spirit. No doubt of her power; Lyn was a dancer born; one who used her whole body and heart and mind to express the desire, the life, and the dream of man.

Her aunt sat stiff and staring, but I applauded, called for the dance again. And again she came in and let the sunbeams fall.

Then sharply, from behind me, came a hoarse cry, and Lyn brought up, dazed and paralyzed.

"Lyn! Lyn!"

It was her mother. I turned. The dead face was blanched horribly, the eyes starting. Then in the silence an amazing thing happened. Aunt Janey rose and spoke in a sudden tigerish fury:

"There, Martha! That's what's come of your churching her and keepin' her in! *You can't church her father out of her!*"

"Her father?" I echoed.

"Yes." She turned to me. "Her father was an actor, a dancer in vaudeville, died when she was three . . . and that fool woman killed him too with her saintliness. . . . God! he had to get off the stage, and it broke his heart. But it's in her. I've known it all along: it's in her blood!"

The mother said not a word, but laid down her shawl and passed from the room.

Lyn was weeping. Aunt Janey clutched her close.

"Never mind, dearie," she said; "you and I—we'll hang together."

Next morning I left Lyn at the mill entrance. Her eyes were shining.

"Oh," she whispered, "I owe my life to you!"

"Good-by," I murmured.

"Good-by!"

And off I went down the long road that led to the Lights. . . . But Lyn was soon to follow: she and Aunt Janey with a letter to Kaslovna. . . . And I knew that, for good or evil, I had released one drudge to the great adventure of life. . . . She would somehow be a dancer, obscure perhaps, never rising to fame. . . . But do the people of the Sunbeams care whether they are famous or not?

CLIMBING OUT THROUGH MUSIC

BY CONSTANCE D. LEUPP

MANY years ago, so a Russian legend tells us, a shepherd found a reed and blew upon it. He made sounds so sweet that the other shepherds were enchanted and gathered about to hear. Presently they said among themselves: "This fellow makes such pleasant music with his pipe, why should he waste his time tending sheep? We will care for his flock, and he shall play for us all day."

And they did; and this was the first division of labor.

And the fame of the piper grew until the shepherds came from far and wide in all that countryside to hear him, and the shoemakers, and the basket-weavers, and the potters. They took great delight in his piping, and their labor was the lighter for the joy they had in his music.

And presently the King of that land heard of the piper and sent for him. And he went and played for the King and his idle nobles gathered in the palace. And this was the first concert.

And the King was so pleased with his pipings that he kept him and made him Court Musician, and let him go back no more to play among his kind.

And so music passed from its original purpose to its secondary stage.

Now, in twentieth-century America there has arisen a movement bent upon rescuing music, bringing it back once more from out the concert-halls and opera-houses into the lives and homes of the working people.

A young violinist in New York named Emily Wagner began it all in 1894; she played for the little foreigners in the East Side streets, and they swarmed eagerly about her to listen. Then it occurred to her to teach them, and in the basement room of the College Settlement she founded her "talent-saving station." It quickly outgrew its borrowed room and moved into new quarters.

Around the corner of the Bowery and a stone's throw from Cooper Union it stands now, in the midst of a teeming block. Three buildings house it; there is a staff of seventy teachers, and the enrollment of pupils this year is hard on eight hundred. It has become a power to be reckoned with in the musical world, and has taken its place as a vital factor in the life of the East Side. For in this wonderful place pupils of all ages and stages of progress are welcomed, and for twenty-five cents a lesson they receive as good musical training as is to be had in the city.

It is on Sunday morning that the Music School Settlement is on dress parade, for then comes the weekly rehearsal of the Senior Orchestra. The bare concert-hall with its white plaster walls is a room built for serious work; sky-lighted, with a side window giving upon the tiny yard, Della Robbia's "Singing Boys" the only wall decoration, unfurnished save for the grand piano and the chairs for the performers and a few score auditors.

"Piano! Pianissimo!" The conductor's baton raps sharply. "Second violins, that was clumsy, *schrecklich!* Try it again." Sixty rapt, sound-sensitive faces are raised at the command of Mr. David Mannes, and the boys and girls of the Senior Orchestra, the common axis of whose years is a scant fifteen, go through the bar again, accepting the criticism in the spirit in which it is given, as the suggestion of one musician to his fellows. Little wonder that there is criticism, for this is the first gathering of the orchestra after the long summer vacation, and at their own urgent request the members are playing as a simple exercise in sight reading the "Fifth Symphony" of Beethoven. Next come Mendelssohn, Tschaikowski's "Andante Cantabile," a lively Strauss waltz, a bit of the overture from "Die Meistersinger," and then Handel's "Largo."

In the informal gathering of the audience the life of the neighborhood is reflected. Here is the father of a first violin who comes regularly, out of pride in his daughter; there is an old Bohemian woman, a peasant once, now one of many who dwell in crowded tenements, bearing always in her saddened eyes a mute protest against the city's herding of humanity; her grandson, a thoroughgoing American child, in spruce gray suit and scarlet tie, is playing among the second violins. Her eyes and ears are not merely for him, however. She comes to listen to the music and dream of the green valley where she was born and the village dances of her youth.

There is a line of critical piano pupils in the front row; behind them a director who never misses a rehearsal; near the door are four or five hatless ladies who are the residents of the Settlement school.

As you watch and listen, you find that you are growing strangely excited and moved—moved as you have never been by the masterly touch of professional talent. It is not merely because these young people play classical music with such astonishing ability and appreciation; their poise and their response to the masterpiece they are interpreting sits oddly with their manifestly normal youth. But the significance of Sunday mornings at the Music School Settlement goes far beyond that. Your imagination is caught and held captive as you begin to notice the individual performers and the national traits they display, for a dozen races have contributed to the able group before you, here, if anywhere, is the love-feast of the nations of the world.

"We have our own plan for bringing about a universal disarmament," the Director has said.

You note with pride that the girl *Concertmeister* is unmistakably an American. Behind her sits a blue-eyed, flaxen-haired boy from the plains of Saxony; there are two Russian 'cellists, a boy and a girl, while among the second violins is a Pole, next an Austrian, then an Italian and a Bohemian. Whatever may prevail outside, no race antagonism finds its way into the school. There is no room for it, in fact, for every pupil

DAVID MANNES

The Director of the Music School Settlement

before you is a genuine musician, conscious of the dignity of his art and of the sacrifices which it exacts.

Here you find no long-haired prodigies destined to startle two continents with their virtuosity. A few of the boys wear their hair long, for some, of course, must imitate their beloved Director, but there are no precocious youngsters present. On the contrary, there is an indefinable atmosphere of saneness and hard work about the performance which indicates a high average of everyday scholarship. The Senior Orchestra is the epitome of the school. Instead of two or three anæmic, egoistic, ill-starred concert performers, the school presents as its proudest exhibit these sixty young people, all a little better nourished, much cleaner, and vastly happier than their fellows in the street outside. And the visitor is told that, while many of them will teach, very few are to make a profession of music otherwise.

To appreciate just how much character is crystallized in the good work of this Sunday rehearsal one must imagine the difficulties under which practicing is done in a crowded tenement.

"I would have played the Rondo in E," explained little Isaac, coming to his teacher with an unprepared lesson, "but they were painting by us, and they spilled a gallon of gasoline on my music and took all the notes right out of it!"

Besides the crowding and the noise at home, there is daily enacted a peculiar tragedy within these European-American families where the tides of two civilizations meet. Parents and grandparents still live in their youth, clinging in thought and tradition to the Old World, enduring our new, crude civilization for the greater prosperity it brings them; the children are growing up irreverent, careless of those customs which their parents hold most dear, prone, in their ready acceptance of American habits, to absorb the least admirable of our National traits.

Music is a great comforter, welding the generations in a common interest, and bridging the painful transition; and the proof of this lies in the sacrifices which parents and children alike make for it.

Here and there is a family in which social and religious customs are preserved intact; in which Saturday is strictly observed as the Sabbath in the midst of surrounding commercial activities; in which strange rites are performed in commemoration of the dead. A boy of twelve whose father died recently goes to the synagogue at sunrise and sunset for eleven months to pray, for this is the custom of the oldest son of a mourning family among his people. But all the time he is performing this exacting duty his practicing does not suffer, nor his school work.

EVERY PUPIL IS A GENUINE MUSICIAN

For eighteen years the movement represented by the Music School Settlement has been going on quietly in the heart of New York's foreign quarter. Within a year or two it has broken out in a dozen other cities and towns, and now bids fair to become an epidemic of startling proportions.

A National Federation of Music Schools has been formed, and the parent school in New York is kept busy answering questions and demonstrating to visitors how easy it is simply to gather up and direct the instinct which is already present; for every community, especially where there is a sprinkling of immigrant population, is charged with that untrained love of music which is all that a good teacher requires for a working basis.

To get the full significance of what the movement is destined to accomplish one must visit the parent school during the week between two in the afternoon and ten at night, when lessons and rehearsals are going on ceaselessly.

Walk down the corridors of the upper floors, and you will see through the glass panel in the door of each of the twenty-five soundproof little rooms a lesson going on, apparently in pantomime. Enter any room, and you are welcome. Neither teacher nor pupil is embarrassed, as less scholarly musicians would be. You know it is a lesson, so the assumption is that you have not come in a spirit of carping criticism; the pupil is doing his best, for this precious half-hour comes but twice a week and is dearly bought at a quarter from a scanty family budget.

The teacher is good or the teacher is shifted, for that is the principle of the school. And to one who has studied music a generation ago and still remembers the hatred with which he practiced scales the lesson is a revelation. Here is a baby of eight learning to transpose on the piano; and she can do it, for has not the teacher explained that the key is merely the house in which the tune lives? And every tenement child knows what an every-day affair it is to move. As for practicing, that is fun; for, instead of endless scales and arpeggios, there are tinkling little tunes to be learned, and phrasing, which appeals to the imagination; and in the harmony class the whys and wherefores of the sharps and flats are revealed.

Every half-hour a bell rings, and all along the corridor the doors open, one set of pupils comes out while another set goes in. The key to the complicated schedule is kept by the registrar, whose duty it is to arrange for thirty-five thousand lessons given by seventy teachers to over seven hundred pupils in twenty-five rooms in the course of a year.

As for the teachers, they are of two classes, regular professional teachers and "pupil teachers." The latter are advanced pupils of the school who have proved themselves competent to give lessons. In the early days pupils and "pupil teachers" were indistinguishable to the naked eye. All wore short trousers or brief skirts, and there was an indiscriminate interchange of first names.

While lessons are going on upstairs, the library on the ground floor and the registrar's office in the basement are both busy places. The music library, the recipient of many donations from publishers, is one of the finest in America, and this the pupils draw upon for work at home.

Down in the registrar's office one may see the wheels go round. Every scholar reports here before going up to his lesson. A month's lessons are paid for in advance; they come twice a week and are twenty-five cents each, and there are scholarships for those who are unable to pay even this modest sum. Behind the desk is a glass case full of violins of all sizes, of strings, bridges, rosin, and other implements of the tune-maker's art. These supplies the school buys at wholesale rates and sells at cost to the pupils. Four dollars and a half will buy a violin, bow, and case, and it is a revelation to find how much music can be extracted from instruments of this grade.

In the back of the room, at the long magazine table, are brothers waiting for little sisters, pupils who have come early for their lessons for the privilege of reading a story first, others who come early for no special reason except that they would rather spend their time in the school than in their crowded homes or in the streets.

Meanwhile the Junior Orchestra is rehearsing in the concert-room. These are the pupils who have graduated from the Primary and are climbing painfully up the steep path to the Senior. Last year three were promoted. Who knows who the lucky ones may be this year?

Mr. Stowell, the Assistant Director of the School, conducts. There is a difference between this and the Sunday rehearsal. There is more noise and less music, yet here is obviously the other in the making.

At six o'clock the rehearsal is over and the performers pour out, while the applicants for admission to the violin department file in. Half a dozen urchins from the orchestra remain, a critical jury, lined up on the edge of the platform behind the piano stool on which sits Mr. Stowell in judicial calm. When the quavering flatted notes of a particularly incompetent little applicant resound through

the big room, the members of the jury have to be severely reminded that they are hosts, and that their criticism has not been requested. But when a boy or girl of real ability is being tested, instantly he commands the respect of the volunteer jury. Now and then Mr. Stowell even asks for their comments.

After each test Mr. Stowell fills in the registration card with a word as to the child's rating, and in the long waiting list this is used as a guide for admission.

Applicants to the school vary all the way from the tiny boy carrying a three-string fiddle in a brown paper bag, accompanied by an anxious mother, who explains that he gathers pennies by playing on the street corners, to the prosperous children of Grand Street merchants who refer to themselves as "difficult on the piano;" they can pay for private teachers, but vaguely realize that none are to be had on the East Side so good as those at the School. Some there are who have studied with "professors" of the neighborhood—talented children, perhaps, whose ability has been well-nigh ruined by the training they have received in stiff, accurate, joyless music, which must be unlearned before they can be started on the right track. In one of the "professor schools" a teacher came upon two children playing different tunes at one time on the same piano.

Dinner-time comes, but the sound of piano and violin does not abate for a minute. Pupils who come between six and eight snatch a hasty meal before or after the lesson, while the evening shift of teachers succeeds the afternoon shift without a break.

By the time dinner is over for the residents the evening programme is well under way. The school combines with its teaching all the normal activities of a settlement; clubs and lessons are going on upstairs, and a game of basket-ball on the electric-lighted roof. In the concert-room is a student's recital, perhaps, or the choral class. On Tuesday evenings comes the weekly rehearsal of the Wage-Earners' Orchestra, which is the latest addition to the Settlement's programme, made in protest against the assumption that the school is only for children and young people.

This orchestra welcomes every one who plays a stringed, wood, or wind instrument. Thus there has gathered not only from the immediate neighborhood but from the city at large a group of men and women who work all day and have no time for study or practice. They come, a motley crew: here a bookkeeper who is at his desk from eight to six; there a young Jewish dentist who practices his profession long hours—he has a correct ear and some facility on the violin; here is a girl 'cellist who in the daytime is a stenographer in a business office; two sisters who play the cornet; a grocer with a second violin; a dry-goods clerk with a bass.

Of course the hospitable terms on which the orchestra is conducted mean a bad proportion of instruments; but this work is primarily for the relaxation of the players, and the performance will grow more tuneful with age. Meanwhile everybody concerned enjoys Tuesday evening hugely.

One wonders, perhaps, how much difference the School makes in the lives of the pupils and their families. Ask the residents, and they hardly know how to answer you, for the question is one of intangible spiritual values. They will tell you any number of stories, funny, pathetic, tragic.

There is Samuel, whose father was inspired to take violin lessons and arranged with his small son to learn from that son each week what the teacher at the School had taught him. With one set of lessons and one teacher between them father and son had been working side by side some time before Sammy happened to mention this very natural arrangement at the School.

"And does your father practice regularly, Sammy?" asked the amused teacher. Sammy looked up in hurt surprise.

"Does he practice? *Sure* does he practice!" said he, simply. "And why wouldn't he practice when he didn't have it when he was young?"

There is Etta, aged nine, who is unusually gifted with a sense of rhythm and a correct ear, whose little hands patter over the keys with an airy precision that would do credit to a performer of twice her years. For a while Etta had no piano at home, and managed her practicing on a table. In the mazes of a complicated schedule it so fell out that Etta's lessons and those of her brother Isidor were set this year for different days. The family lives miles from the School.

"The Subway in rush hours is no place for little girls," said Isidor, sagely, and quietly set himself the task of coming and going twice a week with his little sister and waiting for her while she had her lesson. When there is to be a piano recital in the evening, however, Isidor is not drafted for the

A REHEARSAL

return journey, for Etta always wants to stay for these, and the older brother, who is a clerk in a downtown store, never misses a chance to attend them.

And so with family after family it develops that the School is the center of activity for all their scant hours of leisure.

After you have learned to know the pupils a little you no longer question how much difference the School makes in their lives; for you see that it has wrought something rather like the miracle that the fairy godmother's wand wrought for Cinderella—only the effects are lasting.

It is as if this School with its wizard Director had hewn out of the toneless substance which makes up the daily life of the poor a doorway set with a fast-closed gate; as if the hands of each little pupil had been intrusted with a key that he might unlock the gate and pass out into the endless possibilities of that other world where the warping, dwarfing powers of poverty no longer swallow up individuality; where artist meets fellow-craftsman on a level of mutual respect; where each traveler is estimated at the value of the thing in which he excels, and where physical conditions are set at naught.

And so they live and work side by side—those who clasp the precious key and those who have it not; and to those with the key is given the power to open the gate a little way for others to catch a glimpse of the shining vistas beyond.

You can see the miracle work any evening in the homes of these people when a weary father returns from work and Izzie or Miriam gets out the fiddle and plays, and all along the tenement corridors doors open and the neighbors listen.

And then you understand perhaps why, in the eyes of the Director of this School, the life of a professional musician seems a paltry thing in comparison with the opportunity open to these boys and girls to go forth among their people bearing their message of cheer into the colorless lives of those that labor and are heavy laden.

From Einstein

An Interview with

David Warfield

By Hartley Davis

WARFIELD AS EINSTEIN

WHEN David Warfield talked of his work, he was earnest. When he talked of his landscapes, he was enthusiastic; his eyes sparkled, his voice had the vibrant feeling that grips his audiences.

He didn't talk about its "atmosphere," its "feeling;" he didn't use a single one of the familiar stock expressions of the amateur of the studio. He loved the painting for its tranquil peace, the tender sheen of the trees, the silver lake nestling among them. Above all, he loved it for the good green earth in the foreground.

"Isn't it lovely?" he said. "Isn't it beautiful? There are worms in that ground."

It was very plain that if Warfield did not feel there were worms in that ground he would not have cared for the picture, because honest ground that is beautiful always has living things in it. He might have expressed the idea much more poetically; but the idea came to him in simple, concrete fashion, and he gave voice to it. That is the Warfield way. He is one of the most effective actors that ever lived, because he never strives for effect. He tries to make you see and feel as he sees and feels, to make you understand as he understands.

He is genuine always. Of all the actors in the past twenty-five years whose greatness has been recognized, he is the simplest. He has mannerisms, but no affectations. His clothes have the commonplaceness of dull respectability, except the soft hat, which is generally shapeless. He never wears jewelry, but he gladly pays $500 for a beautiful snuff-box or an antique watch for his cabinet of gems. He has many valuable paintings, nearly all of them landscapes, and superb tapestries.

"They are beautiful too," he said. He caressed a wonderfully wrought Venetian piece with tenderness. As I watched the stroking motion of his hand I knew he would say:

to Peter Grimm

"We have no children; so we fill our home with the beautiful things we can buy."

The commercial value of his art treasures interests Warfield not at all; his measure of them is their appeal to his sense of beauty. He may chuckle over the fact that a dealer offered him $1,200 for a watch that he bought at a sale for $200. He briefly gives the history of the gold snuff-boxes, if you ask him, but he becomes eloquent when he speaks of the design, the workmanship, the color of the enamel.

He lives in an apartment overlooking Central Park in New York City. Its frontage of eighty feet on the Park appeals to him more than anything else.

"I would live in a house of my own," he said, "but—we have no children, and I have only one season in three in New York. There is no one but my wife and her sister, and they feel safer and less lonely in an apartment than they would in a house."

These things go far towards explaining how David Warfield could pass so surely from Einstein to Peter Grimm; they reveal some of the qualities that make him what he is. For my part, I think him the greatest living actor in English, greater even than Forbes-Robertson. I am sure that Warfield could move his audiences as deeply as does the English player in "The Passing of the Third Floor Back," and I doubt if Forbes-Robertson could play Einstein with Warfield's effectiveness and humor.

If you call Warfield a genius, he looks bored; if you say he has the soul of an artist, he will flush with pleasure and stammer that he hopes it is true. He knows perfectly well that all players are fond of the word, that they use it in a sense that makes it ridiculous, but for him it has a broad and fine significance.

"I am not an intellectual actor," and he added, with a little trace of regret, "I am not an intellectual man. I am just human, and I try to be natural and honest." Then, with a chuckle: "But, as an actor, I have always had a very good opinion of myself." With a sudden transition to seriousness: "I suppose that is why I have succeeded. I have had confidence in myself to do the things I set out to do.

"When I was a school-boy in San Fran cisco, I made up my mind to be an actor, and, being a boy, I was to be a great actor.

WARFIELD AS PETER GRIMM

Most of the other youngsters had the same ambition. I clung to mine. I was a good story-teller." He paused, then, with the impersonal air of a man determined to be absolutely just: "I was a very good story-teller. The values of a story seemed to come to me instinctively, just as dialects do."

"What is the secret of dialect?" I interrupted.

"It is purely a gift which is something you could not gain by practice or by cultivation. It is a matter of the ear in receiving delicate shades of intonation, of understanding idiom, and the ability to reproduce the intonation with absolute accuracy. All dialects that I have ever heard came to me easily, yet I never consciously studied one.

"When I was seventeen, I began giving little entertainments before lodges and clubs. I imitated actors. I gave burlesques. I had one of Bernhardt in 'Camille,' in which I imitated three or four characters. I worked in a theater as an usher so that I might have opportunity to see as many plays and actors as possible. When I came to New York—"

"Had you been on the professional stage then?"

"For a few minutes only. My first appearance was a fearful failure. It was in a kind of beer hall in San Francisco. I was so frightened that my stories fell flat. I told them mechanically, and the audience laughed me off the stage. I wasn't permitted to appear again. My pride was terribly outraged. I wanted no more of San Francisco then. I determined to come to New York, and when I left San Francisco I said, 'I will not come back till I come as a star.'

"It was just a silly boast of youth, but it happened to come true. I did not see San Francisco again for ten years, when I appeared there in 'The Auctioneer.'

"My first appearance in New York was in a concert hall in Eighth Avenue—Payne's, I believe its name was. I was glad to get an opportunity to tell my stories and give my imitations for $15 a week. It was exactly the same entertainment I attempted in San Francisco, but it had a real success in New York."

"How do you explain that?" I asked.

"I don't know," he said, simply; "it just happened. I passed muster. It was to be."

While he was working in the concert hall he went to William A. Brady, whom he had known in San Francisco, who gave him a small part in "The Inspector," a melodrama. Afterwards he played an Irishman in "O'Dowd's Neighbors," and was successful in his specialties in both. Then he joined Russell's comedians in "About Town." In the company were Luke Schoolcraft, Willis P. Swettman, Dan Daly. He told his stories and gave his imitations at the Bijou Theater in New York, and, while he was successful, he did not attract any particular attention. It was in "About Town" that Warfield was compelled to be on the stage for thirty minutes without having a thing to do. This gave him opportunity to show the stuff that was in him. Purely on his own initiative he developed a lay figure into a pantomime part that dominated the entertainment. This so impressed the manager that he had a play written practically for Warfield, in which the actor played the part of a detective who used many disguises. It was in this that Warfield created the character which made his early fame and which revolutionized the type of the comedy Jew on the stage, and which is known familiarly as Einstein. No character has been so universally imitated, even to the smile out of the corner of the mouth. I asked Warfield about the original of the stage character.

"I never studied the character of Einstein; I just saw him. There were hundreds of him on lower Broadway. All that I could see was the collarless man in the frock coat, the derby hat jammed on the back of the head, thrusting the ears out. They all seemed alike, even to their walk, clamping along on their heels with their toes turned outward. They all seemed to have the same straggly whiskers that had never known the touch of the razor. Everybody in New York was familiar with the type. It just happened that nobody else happened to make use of it for stage purposes.

"The comedy in which Einstein first appeared was never given in New York. But it was so successful that my salary was fixed at $80 a week—only I didn't get it all.

"The first appearance of the character in New York was for one night only, and it came about as the result of a benefit ball game. Mr. Lederer engaged me to play in the burlesques of 'Sans Gene' and 'Trilby' at the Casino. I asked for permission to introduce the Jew character. He wouldn't hear of it. 'That's my clientele,' he said to me. 'If you caricature the Jews on the stage, my people will walk out of the theater.' I couldn't convince him.

WARFIELD IN "THE AUCTIONEER"

"It happened that a benefit baseball game had been arranged between actors in two companies, in which they were to appear in their stage costumes. Mine was so commonplace that I decided to go on the ball-field made up as Einstein. When I walked across the field, collarless, the shabby frock coat, the old derby hat jammed against my ears, the straggly beard, the expression of earnest intentness, there was a roar. The people recognized the walk immediately. They jumped at the conclusion that the character was real and began to guy me. And then it dawned on them that it was a stage make-up.

"When Lederer heard of the hit at the ball game, he suggested that I try the specialty the last night that the 'Merry World' appeared at the Casino in New York. I went to Lee Harrison's dressing-room—he was the best 'feeder' in the specialty that I ever had—and asked him if he would help me out on it. He said he would. The appearance of Einstein at the Casino made a sensation. They laughed so heartily all the time I was on the stage that I didn't have a chance to say a word. The pantomime was all that was necessary. The next day we went to Chicago, and Einstein had a firmly fixed place in the performance.

"But the real introduction of Einstein to New York did not take place until the following season, when Mr. Lederer produced 'In Gay New York.' In the meantime I had developed the specialty. In fact, it grew all the time I was playing it. I added new pantomime, or, as we call it, 'business,' and new stories from time to time."

Within a week Warfield was established as one of the drollest and most original fun-makers that New York had known. It was shown that he had one of those quick-thinking minds that enabled him to take advantage of every opportunity. Einstein's stories and his sayings became a part of the vernacular.

I asked him what was the most successful story he told in this character. He replied without hesitation:

"It was the story in which Harrison told me about his wonderful house, the furnishings of which cost him $2,000 and on which he had $20,000 insurance."

The slow smile that spread over Warfield's face and the significant expression with which he asked the question, "Why don't you—" brought a storm of laughter.

"It is a curious thing," Warfield observed, "that if I had completed the sentence nobody would have laughed. In fact, I tried it on two or three occasions, just to prove this, and there was not even a chuckle."

There was also the dog story. Warfield came in breathless, explaining that a barking dog had pursued him, whereupon Harrison said: "What's the matter with you? Don't you know that a barking dog won't bite?" There is no way of conveying the earnestness and reproach of Einstein's manner and intonation as he replied:

"Yeah, I know a barking dog won't bite; you know a barking dog won't bite; but the dog—he don't know it."

Warfield does not know where he got his Hebrew dialect, which is so perfect. He simply says he had it, that he never consciously studied it. The three-cornered smile, which has become characteristic of the type, had no foundation at all. Warfield is inclined to think that he always had a habit of smiling out of the corner of his mouth, although it is quite possible that the many years he played Einstein may have caused this peculiarity.

His fame was already great when he went to Weber and Fields, where he remained three years, and the character of Einstein became known all over the country. He received an offer of a thousand dollars a week to go into vaudeville and did not even consider it, although his salary at that time was only $300 a week. He was the most distinguished of the greatest company of fun-makers ever gotten together in one organization in this country.

That organization was known as the "Happy Family," but the happiness was mostly on the outside. The performance took up a certain number of minutes, of which a considerable part was given over to the choruses, songs, and dances. There was so little time left for the comedians—and there were many of them—that the rivalry for supremacy was very great. The man who could provoke the most laughter was entitled to hold the stage longest. In these encounters Warfield never was worsted. Yet of the comedians he was the least paid.

"Don't think that I didn't appreciate my worth from a box-office standpoint," he said; "but it wasn't important enough to fuss about. I was always looking ahead, waiting for the time when I could play serious parts. I knew it would come. I was getting ready for it. I told you I always had a very good opinion of myself as an actor. That is why the vaudeville offer didn't move me. If I had gone into vaudeville, I would have been there yet and would never have amounted to anything."

It was when Warfield appeared in the burlesque of "Catherine" at Weber and Fields that it first dawned upon me and upon others who saw him that he was not merely a comic but truly a great actor. In this burlesque he travestied a rôle played originally by Mr. Lemoyne, and his work was a revelation. The swift transition from laughter to tears was almost uncanny. He swayed his audience at his own will. When I spoke to Warfield about this, he said:

"Burlesque is one of the great arts of the theater. There is nothing which makes such demands upon an actor. I think I learned more from the burlesque that I played in while with Weber and Fields than from anything else. Offers were made to me to become a star when I was in the music-hall, but the managers always talked to me in the language of money. I wanted something more than that. The vaudeville managers constantly increased their price, until they reached a point where they were willing to pay me $2,500 a week.

"One evening, when I went to the music-hall, I found a letter from David Belasco. Before I had read it, I said to myself, 'I am going to be a star, and I am ready.' That night I told my wife so, although Mr. Belasco merely asked me if I would come and see him. I called on him the next day. His first question was, 'How would you like to be a star?' which was exactly what I expected him to ask. Everything was settled within ten minutes—the business arrangements and all. I didn't see Mr. Belasco again for a year and a half. My contract with Weber and Fields had that much longer to run, and of course I would make no attempt to break it.

"It was natural that we should decide that, as a star, I should play a character like that of Einstein, which, of course, could be developed into something finer and better as the play proceeded. The character of Levi in 'The Auctioneer' presented the sentiment and pathos which Einstein had hidden from the world.

"I was terribly frightened when we put on 'The Auctioneer.' It wasn't a very good play. Furthermore, I had been so long identified with low comedy that it was a question whether the public would accept me when I tried to be serious. The play was an utter failure when we first produced it; but we worked over it night and day. Mr. Belasco brought all his wizardry to bear. We made change after change. When we brought it into New York, two weeks later, it made a big hit.

WARFIELD IN "THE MUSIC MASTER"

Warfield paused. "They have always liked me in New York," he said, naively, as if he had just made the discovery.

"Did you like the character?"

"I loved it," he said, with conviction. "Somehow I always manage to persuade myself that the particular character I am playing is the best I ever had. I seem to do it very easily. And the longer I play it, the more my enthusiasm grows. I never give a really good performance until after I have played a character for at least six months. It takes that time to build it up, to develop its possibilities, to make it rounded and complete.

"I played 'The Auctioneer' two and a half years. During one year of that time we were considering the next play, which was to mark a radical departure. I told Mr. Belasco that I wanted to play a German of extreme refinement, delicate sensibilities, who spoke English with absolute precision, yet with the unmistakable German accent. Belasco suggested that the character be that of a musician, and Charles Klein was engaged to write the play. The result was 'The Music Master.'"

"Was the Beethoven suggestion planned?"

"It just happened. The idea of making up to look like Beethoven never entered my mind, although Mr. Belasco probably saw the possibilities. The arrangement of the hair

brought it out very strongly. I have discovered that a different arrangement of the hair makes me look remarkably like Andrew Jackson.

"For myself, in making up for von Barwig in 'The Music Master,' my only thought was to arrange my hair like that of the musicians I had seen. Probably the one I had selected has followed Beethoven's way. The character of 'The Music Master' appealed to me so strongly that I never had the slightest fear of its success. I knew I could play the part, because it moved me so profoundly when I read it.

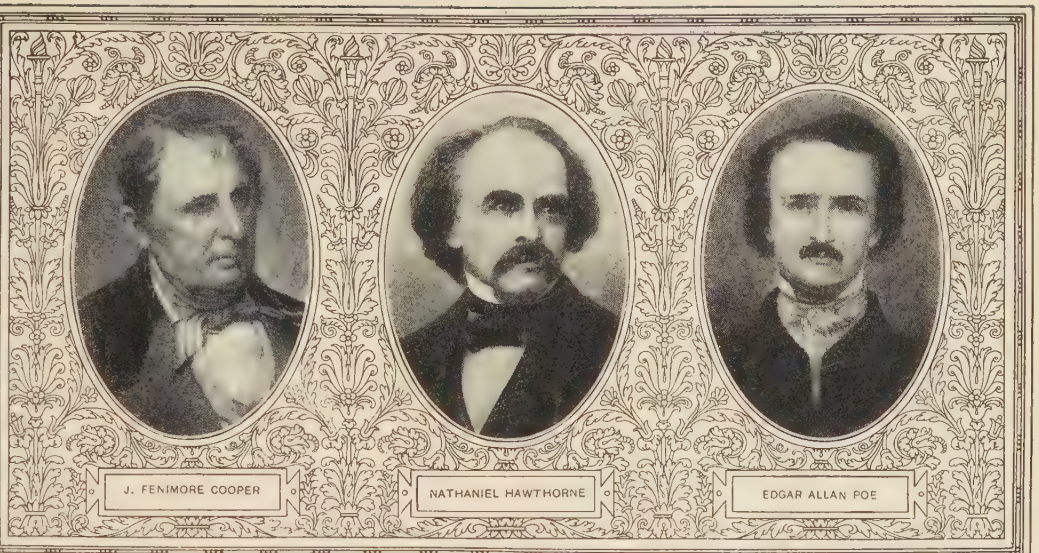
"I never study in the sense in which that word is conventionally used. I told you I wasn't an intellectual actor. My way is very simple. I read a complete play four or five times. Then I read my part over and over until it gets into my system. The things which move me most in the first reading become the most effective scenes in the play, and, if I am not stirred from the very first, no amount of building up, no subterfuge, enables me to increase the value of the scene. I don't know how or where the knowledge of what I am to do comes to me. I simply seem to feel it. It is a sort of intuition.

"It seems to me that the really successful actor is in a way hypnotized by the character he plays. It possesses him to a wonderful degree. It takes possession of his entire personality, culminating in the climacteric scenes with something that has in it the nature of hysteria. To me it is a kind of mystery. At times I strike awful notes of agony which seem to me more terrible than my own unaided imagination could conceive. I have known moments when the acting seemed to reach heights so much greater than I that I have been almost appalled. You see, I can't explain it at all; I can hardly even describe it to make it sound reasonable.

"You are not to think that I actually feel the emotions I try to portray every time I go on the stage. If I did, I should be worn out before the season was a month old. That is where the mechanics comes in. It is impossible for an actor to portray any great emotion unless he has really experienced that emotion. Once having had that experience, his technique will enable him to give the effects of it without any great drain upon his physical or mental powers.

"I find that every one doesn't know human nature—at least, not in the theater. It is all very well to read a long speech gracefully, with a finished rhythm. But people don't talk that way. They talk as I am talking to you: they stammer, they hem and haw, struggle for the right word; and that is the way I talk on the stage. I try to be just natural and honest. My characterization is built up of an infinitude of little things, and in this Mr. Belasco is a remarkable aid, as well as in the big things.

"Never have I played a part which frightened me so much, which has proved so difficult, as that of Peter Grimm, for, you know, in two acts of this play Peter Grimm is a spirit. There is no mechanical art by which the idea of a disembodied spirit can be visually conveyed. Manifestly I must stand on the stage in the flesh. There is no mechanical aid whatever to give the impression that I am not an ordinary human being. It must all be done by suggestion. In the second act I am on the stage for fifty-five minutes, and that one act takes more of my vitality than three whole performances of 'The Music Master.' For nearly an hour I must concentrate my forces to think every blessed thing I make the people about me say, the people who can neither see nor hear me. If I did not succeed in this, I would lose my countenance and the spirituality of the idea would be lost. I would become ridiculous. In all that time the many speeches I have are really one long soliloquy. I never once can catch the eye of the person I am talking to. I cannot even look at him; I must look *through* him. If the spiritual idea eludes me for a second, the whole play becomes ridiculous. 'The Return of Peter Grimm' is by far the most difficult thing I have ever done, and I cannot tell you how I learned to get these effects any more than I can tell you how I learned to get the others. They are all a part of the great mystery."



AMERICAN FICTION OLD AND NEW

BY HAMILTON W. MABIE

THERE were novels in this country before "The Spy" appeared in 1819 and the world began to read American fiction. It was the twilight of the Provincial period in American letters, and Cooper turned to England for a subject when he wrote "Precaution," a feeble imitation of the old-fashioned society novel. It was a failure, as it ought to have been, and Cooper was not slow to discover the reason. A good English novel, like a first-class Englishman, is a joy, but an imitation Englishman is even more unattractive than a sham American. If tradition can be trusted, Scott's success in dramatizing Scotch character and incident gave the American the clue to his own field, and he crossed the Harlem and found his material close at hand, as it always is when the man of imagination appears on the scene. The success of "The Spy" was due, not primarily to its art, but to its vital interest; it was a product of the soil, and Cooper had first-hand knowledge of his subject; his knowledge of the manners and people he tried to draw in "Precaution" had been second if not third hand.

And Hawthorne knew his shadowy people—drawn with sensitive skill but almost as bodiless as the figures in Poe's tales; for both these writers, whom we count among the half-dozen Americans who have made contributions to the literature of the world, were magicians living in a country of fantasy and dealing with men and women whose features faintly veil typical ancestral experiences, inherited tendencies, morbid temperaments. Hilda is no more tangible than Hester Prynne, and the mysterious crime in "The Marble Faun" is as remote as the tragedy of "The Scarlet Letter." The three American early story-writers whose audience was European as well as American presented curious contrasts; Cooper was a deeply dyed Romanticist, but his novels were made out of real stuff, handled without any pretense at subtlety; while Hawthorne and Poe threw shadows

BRET HARTE

on the mist or made the air of reality as impalpable and as elusive as the atmosphere in which Maeterlinck's plays are enveloped.

Mrs. Stowe, who next caught the attention of Europe, came on to the stage as suddenly as Charlotte Cushman appeared in "Meg Merrilies" and held her audience breathless for two hours and more. The great debate was in its last stages; all other interests were overshadowed by it. Those who had the gift of second sight already caught glimpses of a host of men moving across fields overhung with clouds through which lightning played. "Uncle Tom's Cabin" was not the work of an artist, but of an impassioned woman of great energy of feeling and an imagination which kindled at the touch of emotion. It was not, like Turgenev's "Letters of a Sportsman," primarily a work of literature and incidentally a moving picture of class oppression; it was primarily the dramatization of a great issue in terms of human condition, and incidentally a moving novel. It was no more distinctively American than "The Spy" or "The Scarlet Letter," but it ran level with the hour and was a prelude to the birth of the Nation.

The war ran its course, the smoke was carried away by friendly winds, and the country began to see that a new day had dawned. As the shadows lifted, the second great wave of emigration westward was moving with swift momentum and new types of character were defining themselves on the great Plains and the lonely defiles of the mountains beyond the Plains, and the frontier was nearing the Pacific coast. At the eastern gates of the continent an army of immigrants was pouring in, bringing with them tongues that were strange in American ears. In New York the "Little Citizens" and "Little Aliens" of the future were predicted in the young Jews and Slavs who had heard the old cry, "Westward ho!" and followed it as men of pre-Revolutionary ancestry were following it to its ultimate goals. Over the whole continent there was a great stirring of life which was later to be precipitated in a host of stories.

The hour of reunion between the North and the South was also the hour of a closer relationship with Europe. The era of the international marriage, often tragic in the event but always alluring to the socially ambitious, set in; the self-made man stayed at home with his vast interests and sent his wife and daughters to Europe, and the American could be studied for the first time against a foreign background. It was the settled conviction of Europe that there was only one American and that he was undesirable; of the variety of American types most Europeans had as little idea as they had of the extent of the country. One delightful Englishman is reported to have promised to speak in Portland one evening and in New Orleans the following evening; and the writer was once asked by a charming woman in a Devonshire inn if Boston was not the most attractive suburb of New York!

At this moment Mr. Henry James appeared on the scene with those early stories which made young readers glad to be alive when "The Passionate Pilgrim" came from the press. The style has a solidity, a substance of thought, observation, and

knowledge of the way the world lives, which were new in American fiction and gave people a feeling that at last we had "arrived," so to speak. Then followed a series of studies of international relations which the historian of the future will first study and then read; for, in that solemn pursuit of the elusive fact which we call history, play must follow work. In "The American" and in "Roderick Hudson" he will find character sketches of subtle and beautiful skill, and will discern the action and reaction of race and environment upon unsophisticated natures. The American in the older world will show his distinctive quality with a frank disregard of traditional opinion of what he ought to be to conform to the settled type which had then become fixed in the European mind.

Daisy Miller was a type quite as certainly as Isabel Archer, though many Americans were unwilling to recognize her; and "The Portrait of a Lady," it will be remembered, was the portrait of an American. So much has been said of the vulgar American abroad that one forgets that while he is more noisily vulgar, he is by no means so offensively vulgar as the vulgar German or Englishman.

Mr. James has said a good many plain things about his own country, and so has had the usual experience of the truth-teller, and has been charged with lack of patriotism by those whose test of loyalty is blindness; but Mr. James has failed in patriotism only at one point: of late years he has let intellectual interest in problems overtop artistic interest in people.

Mr. Howells was fortunate in starting life on the Ohio River and then going to Venice; he has kept his early simplicity unspotted from the sophistication of the world. He, too, has studied the American abroad—and the fresh, unworn charm of the American girl who had the good fortune to be born in the rather remote country comes back like a breath from an old-time New England garden when one recalls "The Lady of the Aroostook." A writer of great heart, Mr. Howells has used the tools of a Benvenuto Cellini, and has made sketches of American manners and traits as veracious as they have been unobtrusively charming, with a vein of humor running through them which has not yet received full recognition.

Mr. Howells has done more than paint delicately finished cabinet pictures; in "The Rise of Silas Lapham" he has drawn a full-length portrait of the self-made man who has been so vociferously celebrated by himself and others of late years; and in "A Hazard of New Fortunes" he has made the vicissitudes of the young American on the way to his place in the world dramatic without being spectacular.

While Sectional America was taking on the larger aspects of National America the historical spirit responded with an impulse which has given us a library of books in which American beginnings are traced with scholarly skill and charm of style. But American endings were fortunately dearer to American novelists, and the receding landscape of social life and habit in New England, the South, and the West was painted in that happy afternoon hour when the light blurs the sharp outlines that it may more subtly convey the spirit of

the scene. The short stories of Mr. Cable, Miss King, Mr. Allen, Mr. Page, Miss Jewett, Miss Wilkins, Mr. Garland, Bret Harte—to choose a few among many names—not only transferred a vanishing world at the very moment when it was beginning to fade, but added a group of what the French would call little masterpieces to our literature, developed a mastery in the writing of the short story which the French alone have rivaled, and fulfilled the prophecy implicit in Poe's tales of a skill born of sincere feeling, alert intelligence, and a delicate and sure artistic sense. Here is a group of stories so distinctively American that they form a series of local studies of a fidelity which sacrifices no truth and yet suffers no fact to detach itself and stand alone. To this period also belong Mark Twain's inimitable "Huckleberry Finn" and "Tom Sawyer;" tales of Americans of the middle period of refreshing vividness, unconventional vigor of diction, and original humor upon which the fame of this greatly overworked man of genius will finally rest. Edward Eggleston's "Roxy" and "The Hoosier Schoolmaster" are less important but not less veracious and convincing. Written at a time when the popular novels of the day were second-hand reports of polite society, these rustic tales seemed so rude to the unfortunate victims of the plush and gilt school that Mr. Eggleston used to recall with glee the question put to him in all innocence, "Mr. Eggleston, when are you going to put some folks in your stories?" Folks were people who had gotten away from the soil and begun to wear starched linen.

It is significant that this wide extension of literary interest and activity came at the hour in which Sectional America was passing, and that this, the prelude to the birth of the Nation, was a response to the feeling that something rare and significant was vanishing.

The next stage in the development of vital as distinguished from manufactured fiction in this country was marked by the appearance of Frank Norris, whose work was immature but profoundly significant. Copious and despondent writers had shown conclusively that the materialism of the country had sounded the death-knell of art. How many times the requiem of art has been sung, and how persistently art has shown an indecent disregard of mortuary preparations! The same blindness has fallen on those other prophets of lamentation whose long, monotonous chant has told the world that this is a materialistic age and that its achievements are purely mechanical, and has marshaled the railway, the steamship, the telegraph, the telephone, wireless telegraphy, the automobile, to prove their case—and have not so much as caught a glimpse of the marvelous ethical and spiritual possibilities which these wonderful devices for carrying speech and accelerating motion have put into the hands of the race.

To men smitten by this infirmity of vision the raising, transportation, and distribution of wheat were matters of business. They had never understood Emerson's significant words, "It came to them business, it left them poetry." Norris saw, what every man of imagination has always known

and what the most uninspired are now learning by experience, that business is not a colossal activity conducted in a vacuum, but a form of human energy vitally related to character and so sensitively a part of the life of society that the mere shifting of opinion, the lightest change of mood, automatically affects values. Norris understood business in terms of human life, and if he had lived to complete the trilogy of which "The Octopus" and "The Pit" were the initial volumes, he would have given us the Epic of Wheat in prose. The project was beyond his years and experience, but it was one of those noble failures which are preludes to the great successes.

There have been great changes since Norris died, and they have been so swift that they have already put into the hands of writers of fiction the stuff of which art is made. In the stir and strain of a changing society in which men and women are inspired to great enterprises, as General Armstrong, Dr. Frost, of Berea, and Miss Jane Addams, for example, have been, other men and women are made restless by the sense of great emotions and experiences which are beyond their reach. The tragedy of a small nature striving, not by the grace of aspiration but by the power of ambition, to achieve something which only a rich nature can command is admirably put in dramatic terms in Mr. Robert Grant's "Unleavened Bread;" a study of the crude, hard, ambitious American woman who has made possible the charge so often heard in France that American women are shallow, selfish, and "smart" in ideas, character, and manners. But Selma is not a typical American woman; she is one of the many victims of an age which intoxicates women of her slight nature, as it liberates and inspires large-souled women. Mr. Grant is a student of manners and men whose appearance is significant of the growing complexity of American social life.

When "The House of Mirth" appeared, its striking ability was recognized, but there were those who declared that it was un-American. In one sense that was true: there was very little that was indigenous in the story. It was a veracious report of the habits and morals of a small group of men and women to be found in every age and country, in whom leisure, wealth, and absence of intellectual interests conspire to produce laxity of moral standards and a certain coarseness of fiber barely concealed by agreeable manners. The plain fact about the "fast set" in all times and places is that it is the vulgar set; and its vulgarity is more offensive because it is not a stage of social evolution but of social retrogression; it is almost invariably the vulgarity of people born to better things. Mrs. Edith Wharton is an artist of distinguished ability, whose integrity of observation is unassailable however one may dislike her subjects, and whose craftsmanship is sensitive and adroit; and the people she has drawn in her novels are Americans of a type which always appears when ethical instincts lose their sensitiveness and wealth is divorced from culture. For wealth is always materialistic and needs to be "converted" in every generation.

Dr. Lavendar, like Colonel Carter, is a man of the com-

WILLIAM ALLEN WHITE

munity large enough to bring out his kindly comradeship and small enough to make room for his charming provincialities. In such figures locality seems almost to attain personality. Colonel Carter has vanished; he survived his age and became a kind of contemporary Don Quixote; but in the native chivalry and inborn and invincible courtesy of the man a passing social order found its happy record. Mrs. Margaret Deland has written novels of great importance since she made the earliest sketch of Dr. Lavendar; she is not only an artist but an original force in fiction; but Dr. Lavendar remains the happiest portrait yet made of the shrewd, kindly, humorously wise American who has attained a knowledge of the world without going far from his hearth and in whom simple integrity rises to the height of a beautiful and beneficent nature.

If one looks at the book-stalls to-day, he is oppressed by the feeling that the ancient and honorable art of fiction has become a thriving trade in which competition remains unrestricted. But in this "welter of inanities," as Carlyle would probably have called it, there are books which show that a clear stream of literature still flows through the muddy stream of current story-writing.

The manufacturing of novels has become a lucrative industry, and, as the stories turned out by modern appliances wear out with a single reading, the stock in trade needs to be replenished almost hourly. It is said that skilled workers in this industry produce four complete stories a year; if reports are to be trusted, there is nothing incredible in this production, because, as in the case of other manufactured articles, the story is made in parts by a number of experts, and then put together with the dexterity of a trained mechanic. Side by side with these mechanicians the artists are at work, dealing with real things in a sincere spirit and with vital skill. Half a dozen recent novels might be named as examples of sound, honest work. Among stories which deal with distinctively American types and may be read not only as fiction but as social history Mr. Meredith Nicholson's "Hoosier Chronicle" marks such an advance on the earlier work of this promising writer that one is tempted to over-praise it. The distance between it and "The House of a Thousand Candles" is so great that one is ready to say that Mr. Nicholson has "arrived;" but there are higher achievements within his reach. His latest story is full of truth in its reproduction of local conditions; it has atmosphere, which means that its characters breathe; one of them is a piece of portraiture of which an experienced painter of character might be proud.

The story gives one a glimpse of the American life in which real idealism is set against simplicity of background. It is loosely constructed and not convincing at all points, but it is unaffectedly human in the wholesome Central Western way. And Mr. Jesse Lynch Williams's "Married Life of the Frederic Carrolls" has the same air of modest integrity. It is less romantic than Mr. Nicholson's story, and is, to that extent, more sincere. Those who care only for highly seasoned stories of social "climbers" and of the walking-on-the-edge-

of-the-precipice plot will not care for Mr. Williams's admirable novel; that is one of the evidences of its soundness.

Mrs. Mary S. Watts evidently knows her field at first hand; she has the courage of a woman of unaffected integrity of insight in facing the facts of life, and her style is extraordinarily concrete; she makes her people tell the truth about themselves with appalling frankness.

In "Nathan Burke" she sketched the career of a man of elemental energy with unflinching frankness of detail, and reported the local background of the Mexican War with unsparing realism. In "The Tenants" and "Legacy" the fading dignity of the older social order of the Ohio Valley and the rise of the self-made men who were born on the soil are studied with keen insight, reinforced by intimate knowledge of motives and manners. Mrs. Watts has a field of her own and a style as individual as it is convincing.

Mr. Owen Wister finds his place among the most distinctly American novelists of the day, not because he writes about cowboys, but because he is so elementally democratic in spirit and so "thoroughly man," to quote an effective colloquialism. It is this quality which has made him the authentic reporter instead of the exploiter of the men who made the old frontier so dramatically interesting. A writer of the best traditions, both academic and literary, Mr. Wister has the directness of insight and the quick, instinctive sympathy of the elemental human being. He might have been a "little New Englander," of whom there are not a few; or a "little Philadelphian," of whom there is no lack; but he has escaped these sectional handicaps and is an American to whom no type of genuine man is alien. He has as quick a sense of fellowship with the man with the lasso as with the man at the head of the university; but this fellowship is genuine, not dramatic; it is not the professional interest of the impressionist in search of local color, but of the normal man surviving all educational processes and emerging intact from the discipline of a generous culture.

This characterization would be impertinent if the writer and the man in Mr. Wister were not one and the same, so that it is impossible to interpret the work without revealing the man. "Lady Baltimore" is at the farthest possible remove from "The Virginian," and achieves an entirely different kind of success by the play of precisely the same qualities. It would be interesting to analyze the artistic skill which gives these two novels a place in American literature as well as in American fiction; they strikingly illustrate the difference between the dexterity which can be gained by practice and vital literary art.

It is interesting to note that the two men who have studied the American in his recent political and business activities live in States as far apart as Vermont and Kansas. Mr. Winston Churchill has shown from the beginning a definite impulse toward the study of the National temperament and character, not so much from the standpoint of analysis as from the dramatic and epical point of view; the point of view, in a word, from which movement and events are more important than the careers of individuals. In "Richard Carvel" he made an

MARY S. WATTS

WINSTON CHURCHILL

OWEN WISTER

interesting and picturesque sketch of the Colonial American; in "The Crossing" the American is seen in the first great movement of emigration Westward which peopled the Mississippi Valley; in "The Crisis" the two types of American, one bred under Northern influence and the other under Southern traditions, are shown in contrast and collision in the very center of the continent. In "The Career of Richard Crewe" and "Coniston" the scene of action narrows and the characters stand out with greater vigor and definiteness; and in these stories the emphasis rests on contemporary aspects of American life. Mr. Churchill's work will bear revision, and his art is not always adequate to the heavy tasks he lays upon it, for he deals with themes of epic significance and makes as great demands on himself and on his readers as does Sienkiewicz; but his talent runs along broad, generous lines, and he knows his field because he, too, is deeply sympathetic with the democratic movement.

When Mr. William Allen White answered his own question, "What's the Matter with Kansas?" it was obvious that he was on familiar ground and was afraid neither of the seasoned conventions of the East nor of the more recent but not less exacting conventions of the West; and it was simply a matter of time when his humorous observation, his journalistic instinct for "nailing the fact," and his unconventional picturesqueness of style would dramatize the rise of a typical man of energy and force climbing to fortune by the aid of a mounting tide of prosperity in a Western community.

The most striking qualities about "A Certain Rich Man" are its broad, simple, human interest, its reliance on the facts of life to carry the interest of the narrative, its homespun sincerity. In the field of fiction this elemental American novel has something of the interest of Whitman's verse in the field of poetry; it has a climate, as Mr. Burroughs has said of Whitman; an out-of-doors air of indifference to old-established values and a courageous faith in the interest of the facts of human life when they are not obscured by social customs or deflected by rigid conventions. It is the story of a career carried forward with audacious energy, in a spirit of adventure as bold and as indifferent to the interests of others as that which pushed through to success in the Renaissance, but checked by the rising resentment of the community. It is the story of a buccaneer in terms of modern business, and is a key to much of the discontent of to-day. There are flaws in its structure, but its fidelity to life is unimpeachable.

In such novels as "A Certain Rich Man" the commercial evolution of the American in a period of swift and bewildering prosperity finds a record illuminating in its disclosure of character corrupted by rank materialism.

GOING TO SCHOOL

THE FIRST OF A NEW SERIES ON AMERICAN CHILDREN

BY ELIZABETH McCRACKEN

ILLUSTRATED WITH PHOTOGRAPHS BY ALICE AUSTIN

AN elderly woman was talking to me not long ago about her childhood. "No, my dear, I did not have a governess," she said, in answer to my questionings. "Neither did I attend the public schools, though I lived in the city. I went to a private school. The pupils in it were the girls of the little social circle to which my parents belonged. There were perhaps twenty of us in all. And there were three teachers; one for the 'first class,' one for the 'second class,' and a French-German-music-and-drawing-teacher-in-one for both classes."

"And what did you study?" I asked.

"Besides French, German, music, and drawing?" my elderly friend mused. "Well, we had the three R's; and history, English and American, and geography, and deportment. I think that was all."

"And you liked it?" I ventured.

"Yes, my dear, I did," replied my friend, "though I used to pretend that I didn't. I sometimes even 'played sick' in order to be allowed to stay home from school. Children then, as now, thought they ought to 'hate to go to school.' I believe most of them did, too. I happened to be a 'smart' child; so I liked school. I suppose 'smart' children still do."

A "smart" child! In my mind's eye I can see my elderly friend as one, sitting at the "head" of her class, on a long, narrow bench, her eyes shining with a pleased consciousness of "knowing" the lesson, her cheeks rosy with expectation of the triumph sure to follow her "saying" of it, her lips parted in an eagerness to begin. Can we not all see her, that "smart" child of two generations ago?

As for her lesson, can we not hear it with our mind's ear? In arithmetic, it was the multiplication table; in English history, the names of the sovereigns and the dates of their reigns; in geography, the capitals of the world; in deportment—ah, in deportment, a finer lesson than any of our schools teach now! These were the lessons. Indeed, my elderly friend has told me as much. "And not easy lessons, either, my dear, nor easily learned, as the lessons of school-children seem to be to-day. We had no kindergartens; the idea that lessons were play had not come in; to us lessons were work, and hard work."

My friend gave a little sigh and shook her head ever so slightly as she concluded. It was plain that she deprecated modern educational methods. "Schools have changed," she added.

And has not the attitude of children toward going to school changed even more? Do many of them "hate to go"? do any of them at all think they "ought to hate to go"? Is a single one "smart" in the old-time sense of the word?

A winter or two ago I was recovering from an illness in a house which, by great good fortune, chanced to be situated on a suburban street corner, not only near a large public school, but directly on the main route of the children going to and from it. My chief pleasure during that shut-in winter was watching those children. Four times a day—at half-past eight, at half-past twelve, at half-past one, and at half-past three—I would take the window to see them going by. They were of many ages and sizes; from the kindergarten babies to the boys and girls of the ninth grade. None of them could possibly have been described as "creeping like snail unwillingly to school." As a usual thing, they came racing pell-mell down the three streets that converged at my corner; after school they as tumultuously went racing up, homeward. I never needed to consult the clock in order not to miss seeing the children. When I heard from outside distant sounds of laughing and shouting, I knew that a school session had just ended—or was about to begin. Which, I could only tell by noting the time. The same joyous turmoil heralded the one as celebrated the other. Clearly, these

"CHILDREN DO NOT STUDY GRAMMAR NOW; THEY ARE GIVEN 'LANGUAGE WORK'"

children at least did not "hate to go to school"!

One of them, a little boy of nine, a friend and near neighbor of mine, liked it so well that enforced absence from it constituted a punishment for a major transgression. "Isn't your boy well?" I inquired of his mother when she came to call one evening. "A playmate of his who was here this afternoon told me that he had not been in school to-day."

"Oh, yes, he is perfectly well!" my friend exclaimed. "But he is being disciplined—"

"Disciplined?" I said. "Has he been so insubordinate as that in school?"

"Not in school," the boy's mother said; "at home." Then, seeing my bewilderment, she elucidated. "When he is *very* naughty

at home, I keep him out of school. It punishes him more than anything else, because he loves to go to school."

Another aspect of the subject presented itself to my mind. "I should think he would fall behind in his studies," I commented.

"Oh, no," she replied; "he doesn't. Children don't fall behind in their studies in these days," she added. "They don't get a chance. Every single lesson they miss their teachers require them to 'make up.' When my boy is absent for a day, or even for only half a day, his teacher sees that he 'makes up' the lessons lost before the end of the week. When I was a child, and happened to be absent, no teacher troubled about *my* lost lessons! *I* did all the troubling! I laboriously 'made them up;' the thought of examination days coming along spurred me on."

Those examination days! How amazed, almost amused, our child friends are when we, of whose school days they were such large and impressive milestones, describe them! A short time ago I was visiting an old schoolmate of mine. "Tell me what school was like when you and mother went," her little girl of ten besought me.

So I told her. I dwelt upon those aspects of it differing most from school as she knows it—the "Scholarship Medal," the "Prize for Bible History," and the other awards, the bestowal of which made "Commencement Morning" of each year a festival unequaled, to the pupils of "our" school, by any university commencement in the land, however many and brilliant the number of its recipients of "honorary degrees." I touched upon the ease with which even the least remarkable pupil in that school could repeat the Declaration of Independence and recount the "causes" of the French Revolution. Finally, I mentioned our examination days—six in January, six more in June.

"What did you do on them?" inquired the little girl.

"Will you listen to that?" demanded her mother. "Ten years old—and she asks what we did on examination days! This is what it means to belong to the rising generation—not to know, at ten, anything about examination days!"

"What *did* you do on them?" the little girl persisted.

"We had examinations," I explained. "All our books were taken away, and we were given paper and pen and ink—"

"And three hours for each examination," my friend broke in. "We had one in the morning and another in the afternoon."

"Yes," I went on. "One morning we would have a grammar examination. Twenty questions would be written on the blackboard by our teacher, and we would write the answers—in three hours. On another morning, or on the afternoon of that same day, we might have an arithmetic examination. There would be twenty questions, and three hours to answer them in, just the same."

"Do you understand, dear?" said the little girl's mother. "Well, well," she went on, turning to me before the child could reply, "how this talk brings examination days back to my remembrance! What excitement there was! And how we worked getting ready for them! I really think it was a matter of pride with us to be so tired after our last examination of the week that we had to go to bed and dine on milk toast and a soft-boiled egg!"

The little girl was looking at us with round eyes. "Does it all sound very queer?" I asked.

"The going to bed does," she made reply; "and the milk toast and the egg for dinner, and the working hard. The examinations sound something like the tests we have. *They* are questions to write answers to, but we don't think much about them. I don't believe any of the girls or boys go to bed afterwards, or have milk toast and eggs for dinner—on purpose, because they have had a test!"

She was manifestly puzzled. "Perhaps it is because we have tests about every two weeks, and not just in January and June," she suggested.

She did not seem disposed to investigate further the subject of her mother's and my school days. In a few moments she ran off to her play. When she was quite out of hearing her mother burst into a hearty laugh. "Poor child!" she exclaimed. "She thinks we and our school were very curious. I wonder why," she continued more seriously, "we did take examinations, and lessons too, so weightily. Children don't in these days. The school days of the week are so full of holiday spirit for them that, actually, Saturday is not much of a gala day. Think of what Saturday was to us! What glorious times we had! Why, Saturday was *Saturday*, to us! Do you remember the things we did? You wrote poems and I painted pictures, and we read stories, and 'acted' them. Then, we

had our gardens in the spring, and our experiments in cake-baking in the winter. My girls do none of these things on Saturday. The day is not to them what it was to us. I wonder what makes the difference."

I had often wondered; but these reflections of my old schoolmate gave me an inkling of what the main difference is. To us, school had been a place in which we learned lessons from books—books of arithmetic, books of grammar, or other purely academic books. For five days of the week our childish minds were held to our lessons; and our lessons, without exception, dealt with technicalities—parts of speech, laws of mathematics, facts of history, definitions of the terms of geography. Small marvel that Saturday was a gala day to us. It was the one "week day" when we might be unacademic!

But children of the present time have no such need of Saturday. They write poems, and paint pictures, and read stories, and "act" them, and plant gardens, and even bake cake, as regular parts of their school routine. The schools are no longer solely, or even predominantly, academic. As for technicalities, where are they in the schools of to-day? As far in the background as the teachers can keep them. Children do not study grammar now; they are given "language work." It entails none of the memorizing of "rules," "exceptions," and "cautions" that the former study of grammar required. History would seem to be learned without that sometime laying hold of "dates." Geography has ceased to be a matter of the "bounding" of States and the learning of the capitals of various countries; it has become the "story of the earth." And arithmetic—it is "number work" now, and is all but taught without the multiplication tables. How could Saturday be to the children of to-day what it was to the children of yesterday?

My old schoolmate's little girl had spoken of "tests." In my school days we called such minor weekly or fortnightly matters as these, "reviews." We regarded them quite as lightly as my small friend looked upon her "tests." Examinations—they were different indeed. Twice a year we were expected to stretch our short memories until they neatly covered a series of examination papers, each composed of twenty questions, relating to fully sixteen weeks' accumulation of accurate data on the several subjects—fortunately few—we had so academically been studying. It is little wonder that children of the present day are not called upon to "take" such examinations; not only the manner of their teaching, but the great quantity of subjects taught, make "tests" of frequent occurrence the only practicable examinations.

"Children of the present time learn about so many things!" sighed a middle-aged friend of mine after a visit to the school which her small granddaughter attended. "What an array of subjects are brought to their notice, from love of country to domestic science! How do their young minds hold it?"

I am rather inclined to think that their young minds hold it very much as young minds of one, two, or three generations ago held it. After all, what subjects are brought to the notice of present-day children that were not called to the attention of children of former times? The difference would seem to be, not that the children of to-day learn about more things than did the children of yesterday, but that they learn about more things in school. Love of country—were we not all taught that by our fathers as early and as well as the children are taught it to-day by their teachers? And domestic science—did not mothers teach that, not only to their girls, but to their boys also, with a degree of thoroughness not surpassed even by that of the best of modern domestic science teachers? The subjects to be brought to the notice of children appear to be so fixed; the things to be learned by them seem to be so slightly alterable! It is only the place of instruction that has shifted. Such a quantity of things once taught entirely at home are now taught partly at school.

It is the fashion, I know, to deplore this. "How dreadful it is," we hear many a person exclaim, "that things that used to be told a child alone at its mother's knee are now told whole roomfuls of children together in school!"

Certainly it would be "dreadful" should the fact that children are taught anything in school become a reason to parents for ceasing to teach them that same thing at home. So long as this does not happen, ought we not to rejoice that children are given the opportunity of hearing in company from their teachers what they have already heard separately from their fathers and mothers? A boy or a girl who has heard from a father or a mother, in intimate personal talk, of the

THE CHILDREN PAINT PICTURES, A REGULAR PART OF THEIR SCHOOL ROUTINE

beauty of truth, the beauty of purity, the beauty of kindness, is fortified in an endeavor to hold fast to these things by hearing a teacher speak of them in a public, impersonal way.

Indeed, is not this unity between the home and the school the great and unique fact in the education of the children of the present time? They are taught at home, as children always have been, and doubtless always will be, an "array of subjects;" and they are taught at school, as children perhaps never before were, other aspects of very nearly all the matters touched upon in that "array."

My old schoolmate said that Saturday had lost the glory it wore in her school days and mine; but it seems to me that what has actually occurred is that the five school days of the week have taken on the same glory. The joys we had only on Saturday children have now on Monday, Tuesday, Wednesday, Thursday, Friday, *and* Saturday!

It is inevitable, I suppose, that they should handle our old delights with rather a professional grasp. One day recently a little girl, a new acquaintance, came to see me. I brought out various toys, left over from my childhood, for her amusement—a doll, with the trunk that still contained her wardrobe; an autograph album, with "verses" and sketches in it; and a "joining map," such as the brother of Rosamond of the Purple Jar owned. My small caller occupied herself with these for a flattering length of time, then she said: "You played with these—what else did you play with?"

"I made paper boats," I replied; "and sailed them. I will show you how," I added.

She watched me with interest while I folded and refolded a sheet of writing-paper until it became a boat. "There!" I said, handing it to her.

"Have you any more paper you can spare?" she questioned.

"Of course," I said. "Should you like me to make you more boats?"

"I'll make some things for *you*," she remarked, "if you will let me have the paper."

I offered her the freedom of the writing-paper drawer; and, while I looked on, she folded and refolded with a practiced hand, until the table beside us was covered, not only with boats compared with which mine was as a dory to an ocean liner, but also with a score of other pretty and somewhat intricate paper toys. "Who taught you to make all these lovely things?" I asked.

"My teacher," answered the small girl. "We all do it, in my room at school, every Friday."

They do so many things! Their grown-up friends are hard put to it to find anything novel to do with, or for, them. Not long ago a little boy friend of mine was ill with scarlet fever. His "case" was so light that the main problem attached to it was that of providing occupation for the child during the six weeks of quarantine in one room. Remembering the pleasure I had taken as a child in planting seeds on cotton in a glass of water and watching them grow at a rate almost equal to that of Jack's beanstalk, I made a similar "little garden" and sent it to the small boy. "It was lots of fun, having it," he said, when, quite well, he came to see me. "It grew so fast—faster than the others."

"What others?" I queried.

"At school," he explained. "We have them at school; and they grow fast, but the one you gave me grew faster. Was that because it was in a little glass, instead of a big bowl?"

I could not tell him. We had not had them at school in my school days in a big bowl. They had been out-of-school incidents, cultivated only in little glasses.

They have so many things at school, the children of to-day! If many of these things have been taken from the home, they have only been taken that they may, as it were, be carried back and forth between the home and the school.

I have a friend, the mother of an only child, a boy of eight. Her husband's work requires that the family live in a section of the city largely populated by immigrants. The one school in the vicinity is a large public school. When my friend's little boy reached the "school age," he, perforce, was entered at this school. "You are an American," his father said to him the day before school opened; "not a foreigner, like almost every child you will find at school. Remember that."

"He doesn't understand what you mean when you talk to him about being an American," the boy's mother said the next morning as we all watched the child run across the street to the school. "How could he, living among foreigners?"

One day, about two months later, the small boy's birthday being near at hand, his father said to him, "If some one were planning to give you something, what should you choose to have it?"

"A flag," the boy said instantly; "an American flag! *Our* flag!"

"Why?" the father asked, almost involuntarily.

"To salute," the child replied. "I've learned how in school—what to say and what to do. Americans do it when they love their country—like you told me to," he added, eagerly. "Our teacher says so. She's taught us all how to salute the flag. I told her I was an American, not a foreigner like the

"UNCLE BILLY TOLD ME, IF HE WERE DOING IT, HE WOULDN'T WORRY ABOUT IT; HE WOULD SAY THEM 'ATHER' AND 'NATHER'"

other children. And she said they could be Americans too, if they wanted to learn how. So they are going to."

The small boy got his flag. The patriotism taught at home and the patriotism taught at school, diverse at other points, met and mingled at that one most fundamental point.

In former days children did not quote their teachers much at home, nor their parents much at school. They do both in these days; occasionally with comic results. A little girl of my acquaintance whose first year at school began less than a month ago has, I observed only yesterday, seemed to learn as her introductory lesson to pronounce the words "either" and "neither" quite unmistakably "ather" and "nather."

"This is an amazing innovation," I said to her mother. "How did she ever happen to think of it?"

"Ask her," said her mother, plaintively.

I did inquire of the little girl. "Whom have you heard say 'ather' and 'nather'?"

"Nobody," she unexpectedly answered.

"Then how did you learn to say it?"

"Uncle Billy told me to—"

This uncle is an instructor of English in one of our most famous colleges. "My *dear* child," I protested, "you must have misunderstood him!"

"Oh, no," she affirmed, earnestly. "You see, papa and mamma say 'eether' and 'neether,' and my school-teacher says 'eyether' and 'nyether.' I told papa and mamma, and they said to say them the way my teacher did; and I told my teacher, and she said to say them the way papa and mamma did! I couldn't say them two ways at once; and I didn't know which one way to say them. So Uncle Billy told me, if *he* were doing it, *he* wouldn't worry about it; *he* would say them 'ather' and 'nather'!"

She is a very little girl, only seven; and she has not yet rounded out her first month of school. I suppose before she has been in school a full term she will have discovered the impracticability of her uncle's method of settling the vexed question as to the pronunciation of "either" and "neither." Very likely she will decide to say them "eyether" and "nyether," as her teacher does.

It takes the children so short a time to elevate the teacher to the rank of final arbiter in their intellectual world. So soon they follow her footsteps in preference to any others along the ways of education. Not only do they pronounce words as she pronounces them; in so far as they are able, they define words as she defines them. In due course, they are a bit fearful of any knowledge obtained otherwise than as she teaches them to obtain it. Is there one of us who has attempted to help a child with "home lessons" who has not been obliged to reckon with this fact? Have we not worked out a problem in "bank discount," for instance, for a perplexed youthful mathematician, only to be told, hesitatingly, "Ye-es, you have got the right answer, but that isn't the way my teacher does bank discount. Don't you know how to do it as she does?" Or, with a young Latin "beginner" in the house, have we not tried to bring order out of chaos with respect to the "Bellum Gallicum" by translating, "All Gaul is divided into three parts," to be at once interrupted by, "Our teacher translates that, 'Gaul is, *as a whole*, divided into three parts.'" If we would assist the children of our immediate circles at all with their "home lessons," we must do it exactly after the manner and method ordained by their teachers.

This condition of things ought not to be displeasing to us, for the reason that, in the main, we have ourselves brought it to pass. The children, during their first days at school, are loyally ready to force the views of their fathers and their mothers, and their uncles and aunts, upon their teachers; and their teachers are tactfully ready to effect a compromise with them. But before very long our reiterated, "Your teacher knows; do as she says," has its effect. The teacher becomes the child's touchstone in relation to a considerable number of the "array of subjects" taught in a present-day school. School-teachers in America prepare themselves so carefully for their duties, train themselves to such a high order of skill in their performance, it is but just that those of us who are not teachers should abdicate in their favor.

However, since we are all very apt to be in entire accord with the children's teachers in all really vital matters, our position of second place in the minds of the boys and girls with regard to ways of doing "bank discount" or translating "*Gallia est omnes divisa in partes tres*" is of small account. At least, we have a fuller knowledge of their own relations with these mathematical and Latinic things than our grandparents had of our parents' lessons. And the children's teachers know more about our relations to the subjects taught than the teachers of our fathers and mothers knew respecting the attitudes of our grandfathers and grandmothers toward the curriculum of that earlier time. For the children of to-day, unlike the children of a former time, talk at home about school and talk at school about home. Almost unconsciously, this effects an increasingly co-operative union between home and school.

"We are learning 'Paul Revere's Ride,' in school," I heard a small girl who lives in Boston say recently to her mother.

"Are you, darling?" the mother replied. "Then, shouldn't you like to go some Saturday and see the church where the lanterns were hung?"

So much did the child think she would like to go that her mother took her the next Saturday. "You saw the very steeple at which Paul Revere looked that night for the lanterns!" I said, when, somewhat later, I happened to be again at that child's home.

"Twice," she replied. "I told my teacher that mother had taken me, so she took all of us in my room at school on the next Saturday."

Perhaps the most significant influence of the American home upon the American school is to be found in the regular setting apart of an hour of the school day once, or twice, or even three times a week, as a story hour; and the filling of that hour with the stories, read or told, that in earlier times children never so much as heard mentioned at school by their teachers. It is indeed a pleasant thought that in school-rooms throughout the land boys and girls are hearing about the Argonauts, and the Knights of the Round Table, and the Crusaders; to say nothing of such famous personages in the story world as Cinderella, and the Sleeping Beauty, and Hop-O'-My-Thumb. The home story hour is no less dear because there is a school story hour too.

The other afternoon I stopped in during the story hour to visit a room in the school of my neighborhood. The teacher told the story of Pandora and the tale of Theseus and the Minotaur. A small friend of mine is a member of the "grade" which occupies that room. At the end of the session she walked home with me. "Tell me a story?" she asked, when, sitting cozily by the fire, we were having tea.

"What one should you like?" I inquired. "The story of Clytie, perhaps, or—"

"I'd like to hear the one about Pandora—"

"But you have just heard it at school!" I exclaimed.

"I know," she said; "but I'd like to hear you tell it."

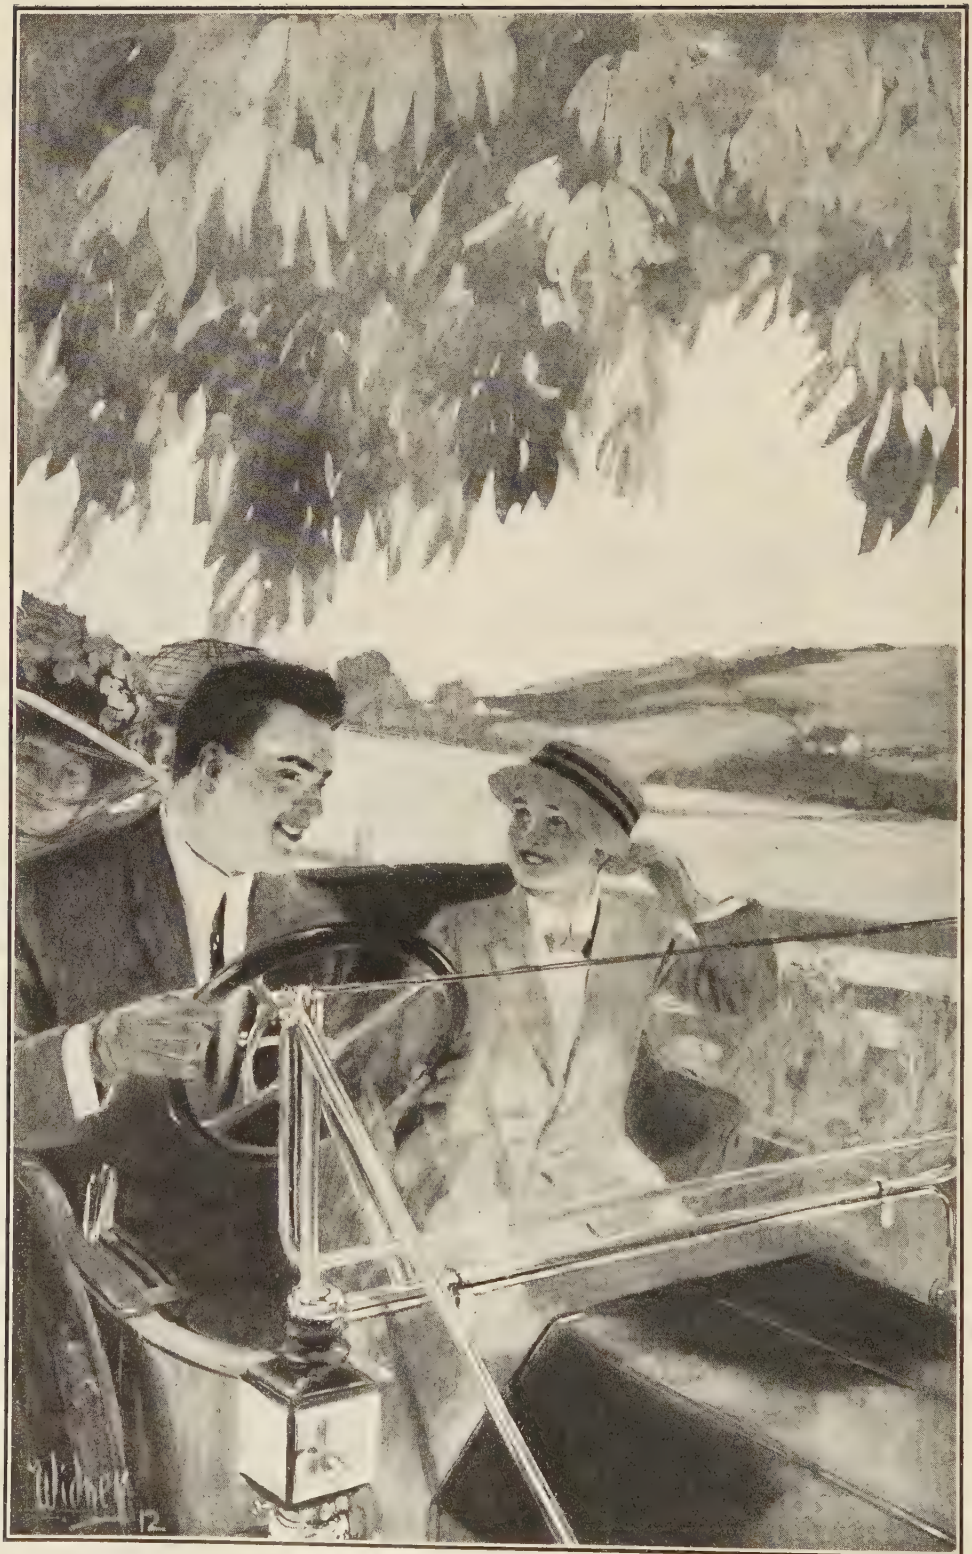
When I had told it, she begged me to tell another. Again I suggested various tales in my repertory. But she refused them all. "Tell about the man, and the dragon, and the ball of string, and the lady—" she began.

And once more when I interposed, reminding her that she had just heard it, she once more said, "Yes; but I'd like to hear it again."

Some of the children whom I have in mind as I write go to private schools and some of them go to public schools. It has not seemed to me that the results obtained by the one type of school are discernibly different from those produced by the other. In the private school there are fewer pupils than in the public school; and they are more nearly alike from the point of view of their parents' material wealth than are the pupils in a public school. They are also "Americans," and not "foreigners," as are so many of the children in city public schools, and even in the public schools of many suburbs and villages. Possibly owing to their smaller numbers, they receive more individual attention than the pupils of the public school; but, so far as my rather extensive and intimate acquaintance with children qualifies me to judge, they learn the same lessons, and learn them with equal thoroughness. We hear a great deal about the differences between public and private schools, and certainly there are differences; but the pupils of the public and the private schools are very much alike. It is considerably easier to distinguish a public from a private school than it is to tell a public school child from a private school child.

There are many arraignments of our American schools, whether public or private; and there are many persons who shake their heads over our American school-children. "The schools are mere drilling places," we hear, "where the children are all put through the same steps." And the children—what do we hear said of them? "They do not work at their lessons as children of one, two, or three generations ago did," is the cry; "school is made so pleasant for them!"

Unquestionably our American schools and our American school-children have their faults. We must try to amend both. Meanwhile, shall we not be grateful that the "steps" through which the children are put are such excellent ones; and shall we not rejoice that school is made so "pleasant" for the boys and girls that, unlike the children of one, two, or three generations ago, they like to go to school?



"GEE, DAD; YOU KNOW HOW TO MAKE HER ZIP!"

CRACKERS, COMPETITION, AND AUTOMOBILES

PETE CROWTHER, SALESMAN, TALKS IT OVER WITH THOMPSON

BY ELMER E. FERRIS

WITH DRAWINGS BY G. C. WIDNEY

"YOU see, Pete, I've been selling crackers in that territory for eighteen years," said Thompson, "and all those merchants were friends of mine. I was acquainted with their families. Why, I knew every dog that barked along that line. I had that trade solid, and then along came that infernal trust cutting and slashing prices; it was fierce. The company finally saw that it was sell out to the trust or go to the wall, so they sold out. The old plant is closed down now, and here I am out of a job. It's an outrage the way these trusts are gobbling up everything; it's enough to make a Socialist of a man."

"It is pretty tough," admitted Pete; "but then you can get another good job if—"

"Oh, sure, if I wanted to work for a trust and begin all over again. But what kind of a layout is that? A traveling man's capital is his acquaintance and customers, and that trust has wiped out all the capital that it took me eighteen years to accumulate. They had the gall to offer me a new territory and $500 a year less salary. I said nit. I wouldn't work for that bunch, anyhow, after the way they run us out of business. You take it from me, Pete, these trusts are going to put salesmen down and out. Just as soon as they get competition knocked out they won't need anything but clerks."

"Don't you fret. They'll never knock out competition. You see, Thompson, competition isn't a mere matter of prices. The main thing in competition is ideas, personality, something new and different, a better article, better service, and all that. Every successful business is built up around some person who had new ideas. That's the essence of competition. Of course prices cut a big figure, but even on that basis the trusts couldn't knock out competition. The only reason why they've had the advantage so far is because they haven't played the game fair—they've been hitting below the belt. They have had illegal rebates and high tariffs, and have been going into territories and selling goods at less than cost to wreck somebody and then making it up by raising prices somewhere else. They've got to stop that monkey work. The people won't stand for it. They have quit that rebate business already, and it won't be long before they stop that bulling and wrecking. Just see how the Inter-State Commerce Commission has got the railways to feeding out of its hand. We'll find some way to make the trusts lay down and roll over too. They've got to play fair, and then they can't put the smaller concerns out—not on the merits. Did you read the argument that Mr. Brandeis, that Boston lawyer, made before the Committee at Washington, where he showed that when a trust gets about so big it grows topheavy and can't do business any better than a smaller concern? He proved it, too."

"Oh, well, Pete, a big concern can buy to better advantage than a small one, and—"

"Nit—not if the small buyer is on to his job. Any traveling man will admit that a good buyer can get bottom prices even on a small deal."

"All the same, the big companies are going to get you grocery men. See how the department stores and mail-order houses are walking over you."

"Not on your life! My company has been growing faster than ever, and so have our customers. Those mail-order concerns have picked up a good trade, but business has been growing a mighty sight faster than they have. We are living in a highly civilized age, Thompson, and civilization, you understand, simply means wanting more stuff. Then, besides, we get right at the people. It's personal contact that counts. Nit—they'll never knock out the salesmen."

"Well, anyhow, it looks to me as if selling goods is on the blink just now."

"That's where you're 'way off, Thompson.

The chances are bigger than ever. I was talking yesterday with the sales manager of a big manufacturing company, and he said there was more demand than ever for first-class salesmen and more money in it. He told me what their salesmen were doing, and it was a corking good showing. You see, new inventions keep springing up and new lines of business. Take this automobile business. Why, they sold over $400,000,000 worth of automobiles in the United States last year. It took a lot of salesmen to do that. Do you remember George Gray that used to travel for us? He quit and went to an Eastern city two years ago and began to sell automobiles. I met his brother Charlie last week, and he said that George cleaned up over $9,000 on his first year's sales. That's going some, eh? I heard a couple of traveling men talking on the train yesterday, and one of them said that he made $2,000 extra commissions last year selling automobile supplies. Then you take all this modern electrical machinery and these industrial stocks and securities, and business insurance, and typewriting machines and printograph machines—why, it will be aeroplanes next! Say, if I didn't have a mighty good trade and a first-class house I'd quit the grocery business cold and jump into one of these big specialties. Believe me, old man, a specialty salesman never had so good a chance."

"Possibly so; but it's a pretty raw deal to begin all over again in a new line. You see, Pete, I had just got things about where I wanted them, I owned some stock in the company, and in a few years I was going to quit the road and—"

"Yes, and move up on Easy Street; but, you take it from me, as soon as a man strikes Easy Street he begins to go to seed. Do you remember Joe McDonald that used to travel up Northwest selling dry goods? He was a bully good salesman, and always full of schemes and ginger. The last time I met him on the road, about four years ago, he showed me a telegram from Seattle. You know Seattle was one of Mac's towns, and he got to dabbling in real estate out there when the boom was on. Well, some parties telegraphed him an offer of $85,000 for a piece of property that cost him $15,000. He cleaned up about $185,000 altogether on Seattle real estate, so he quit the road and moved up on Easy Street. I met him again about a month ago, and I hardly knew him. He had a paunch on, and a grouch too, that he didn't use to have. He wasn't the same fellow at all. He didn't seem interested in things the way he used to be. He told us he had half a mind to go back on the road; but he won't. Easy Street spoils a man for hard knocks. It's like this, Thompson, a man's interest in life depends on hustling and making things move, and that's where salesmanship has got Easy Street skinned to a finish."

"Maybe so, Pete; but, all the same, you intend to move up on that street yourself some day."

"Why, sure, everybody does, but that don't prove that it's a good thing. The fact is that the man who's obliged to hustle is the lucky gink, and that's where you are fortunate. You are being pushed right out into some big selling proposition. Here you are in good health, with lots of selling experience, and you've got a knack of making friends, and you know all the wrinkles of salesmanship. I don't see why you should be down on your luck. I almost wish that something of that kind would happen to me."

"That sounds good, Pete, but I'm getting along in years. I was fifty my last birthday, and I can't hustle the way—"

"What of it? One thing a salesman learns when he gets into middle life is how to save his energy. One of the best salesmen we've got is over sixty years old. He goes gumshoeing around and you'd wonder how he gets the orders, but when the proper time comes to put in the licks you bet old Fordham is right there. These young fellows just starting on the road keep their coat-tails cracking around the corner and waste lots of energy. They're like a baseball pitcher just in from the bushes; he pitches his head off every ball he throws. But old Mathewson doesn't do that. He saves himself and lets the fielders earn their salary. But when men are on bases and nobody out, then watch Matty put on the smoke. That's the way a salesman should put 'em over when he gets to be fifty."

"Yes, but old age is old age; you can't get by that."

"Sure. But what is old age, anyhow? Do you remember how Doc Osler proposed to settle that?"

"Wasn't he the guy that the newspapers talked about?"

"Yes. He was one of the big guns among the doctors at St. Louis, or Baltimore, and he introduced a bill—I don't

know—to chloroform men when they get to be sixty years old, because he claimed that when a man is sixty he's all in—no good."

"Talking through his hat, wasn't he?"

"Sure. Just trying to start something—and he started it all right. The way these Pro-bono-publicos got after the Doc in the newspapers and magazines was something fierce. Of course what he said was hot air, because he was sixty himself about that time, and he hasn't taken any chloroform yet—not that anybody knows of. And when he was sixty-two he was elected to the head of the medical department in a big English university. And now he's the big medical noise over in England. And, you take it from me, when Osler is eighty years old he'll be on the job. Do you know Doc Henson?"

"No. Who is he?"

"Why, he was one of the big Baptist preachers in Chicago and Boston. Well, when he was about sixty-eight years old he was called to Tremont Temple, one of the largest churches in the country. I was in Boston one Sunday, and heard him preach. He was seventy-one years old then, and he pranced around that platform like a bay colt, and preached a crackerjack sermon, too. He has retired from the active ministry now, and a while ago, on his eightieth birthday, a newspaper sent a reporter out to interview him. And Doc Henson told the reporter that he was just starting to write a new book. The reporter asked him how it seemed to be so old. And Doc Henson said, 'Why, I'm not old, sir. I never intend to grow old. I'll die first.' Now that's the way to talk it. You can't draw a dead line on a man when he puts up such a front as that. They say he does physical culture stunts every day, too. If ever I go up where he lives I'm going to run in and shake hands with the old geezer. When a man is as full of pep as he is at eighty, why, you've got to take off your hat to him. The fact is, Thompson, a man isn't old until he admits it. His best working years ought to be from fifty to seventy-five. When I'm eighty-five, I propose to be the cockiest gent on the board-walk—you watch my smoke."

"Here's hoping that you will, Pete," laughed Thompson.

"EASY STREET SPOILS A MAN FOR HARD KNOCKS"

"The trouble is that you've got the wrong slant at things," continued Pete. "The best part of the game is in front of you. You haven't begun to do your best work yet. It all depends on what a man thinks he can do. I met a college professor on the train last year and he started me to thinking about that. These college professors come across with the ideas. This fellow gave me a big song and dance about psychology and salesmanship, and I didn't take much stock in it until I got to thinking about it afterward. He kept quoting a Professor James, and a few months later I was in the public library with my wife and saw a book by Prof. James, so I took it out to see if I could get on to his curves, and, believe me, it was great stuff. One point he made was this: He claimed that every man has got it in him to do something a mighty sight bigger than he's ever done yet, but the trouble is he limits himself in his own mind—sort of locks himself up in his own think-tank, see, and never goes any further. One reason why men get drunk is because alcohol kind of unlocks a man's think-tank and turns him loose and makes him see himself big. One man will think he's a captain of industry, and another one will think he's an orator or a singer, and, by George, that's probably what they really are, but of course alcohol paralyzes a man's action and blows off his energy like steam in the air and never gets him anywhere, and when he sobers up he finds himself back in the same old think-tank with his energy all gone and worse off than before. But just suppose, Thompson, that without the alcohol a man could see himself big like that and have all his faculties in good working order, why, believe me, there'd be something doing; and that's just exactly what he can do by getting the right ideas into his cocoanut. You need to get a new slant at yourself, old man. You are cut out for some big selling game. Why don't you tackle automobiles? It wouldn't be six months before crackers would look like thirty cents."

"Do you remember that man Thompson I was telling you about two or three months ago?" Pete asked his wife one evening.

"The one that lost his position through the trusts?"

"Yes. I met him this afternoon. He opened up an automobile garage here last month, and he seems to be right up and coming. He had a new suit of clothes on and is full of business. He said that he sold two machines last week."

"Perhaps your talk helped to encourage him, Pete. You are always so hopeful."

"Maybe; anyhow, it's good to see Thompson bucking up after being down on his uppers so. He said he was coming around to give us an automobile ride to-morrow afternoon. Can you arrange it?"

"Yes, and we'll take Billy along. Since the Spencers got their auto Billy has been crazy to ride in one."

"Thompson sold Spencer that machine. I guess it's a good one."

The following afternoon when Thompson treated the Crowthers to an auto ride he improved the occasion by showing Pete how to operate the machine. "It beats the band," said he, "how easy it is to run one of these things. Just try it."

Pete accepted the invitation, and soon got his first inoculation with the lust for speed.

"He takes hold like a professional chauffeur," said Thompson to Mrs. Crowther. "Pete would make a good driver, because he's got the nerve."

"Thanks, Thompson; have a cigar. It's worth that to get a boost in front of my wife."

Pete turned on more power.

"Gee, dad, you know how to make 'er zip, don't you?" said Billy, admiringly.

"Going some, eh, boy?" grinned Pete.

Mrs. Crowther laid her hand nervously upon Pete's shoulder. "Please don't go so fast, Pete, dear. I'm sure it must be dangerous to go as fast as this."

Pete slowed down. "Wait till you and dad go out together, boy, and we'll hit 'er up."

"You bet! We don't get scared up the way mother does, do we, dad?"

When Thompson landed the family at their door, he invited Pete to come down to the garage some evening and examine the interior of the machine. "Automobiles are getting so common now that everybody ought to understand one, and it's an interesting proposition," said he.

That very evening Pete went down and spent over an hour with Thompson inspecting the mechanism, attachments, and latest improvements in automobiles. "It's a mighty expensive game, though," said he. "It looks to me like a rich man's sport."

"Oh, not when you come to think of all that a man pays for other amusements and luxuries that he can just as well cut out if he

"IF I EVER GO UP WHERE HE LIVES I'M GOING TO RUN IN AND SHAKE HANDS WITH THE OLD GEEZER"

gets a machine; and, see here, Pete, look at the towns that you make within a hundred and fifty miles from here. You can't work more than three a day by train, but if you had a machine you could work half a dozen and get home every night. A traveling man could actually save money by it."

During his next trip, which lasted thirty days, Pete investigated the expenses incident to automobile ownership. "Thompson claims," said he to his wife the first evening after he arrived home, "that a traveling man can save money by owning a machine, but it's a pipe dream. When you come to figure the cost of tires and garages and all the toggery you have to buy and all the extra meals and the depreciation in value of the machine, you don't get by for less than ten or twelve cents a mile. If a man thinks he can economize by owning a machine, he'd better forget it. You know, Jen, I've intended to buy a farm this year. I can get that Green farm for $4,500, and it's just about what I want, but if I should buy a machine now—"

"Isn't it strange, Pete," interrupted his wife, "I've been thinking about a machine myself since you went away."

"Well, I'm not exactly thinking of buying one, you understand. It would cost at least $2,000, and that's all I've got in the bank just now. I'd have to put off buying that farm until next year if I should buy a machine."

"Why do you want a farm, Pete? I'm sure you'd never be a farmer."

"I don't intend to be. I'd keep a man on it. But one reason why I want a farm is this: When I was a boy and worked in the store, there was a man named Roberts who lived in the city and owned a farm out beyond our village. He used to drive through the village out to his farm three or four times a week. He would stop at the store and buy a cigar and sit and chat with the farmers about crops, and everybody considered him a plutocrat; and ever since then my idea of being well fixed is to live in town and own a farm and drive out to it. That's the kind of a plute I want to be. Another thing: I want to go out to my farm and walk around

with the hired man and look at the pigs and cows—*my* pigs and cows, you understand—and I want to go out into the fields and look around and say to myself, 'This land belongs to Pete, and don't you forget it.' What does a man want to own property for, anyway, Jen? Why does John D. want all that oil stock? He can't eat it. I'll tell you why he wants it: it makes him feel good, that's why; and a farm would make me feel just as good, and then I'd like to know where John D. would have it over me—see?"

"Well, you shall have your farm, dear, but if you had it now you would need an auto to go out and in. Why not get the machine first? Another thing I've been thinking about: You don't get enough recreation. You are too intense. You ought to relax more. An automobile might be the best possible thing to divert your mind from business. Then, too, it would give us such a nice chance to take recreation together. Mrs. Spencer says that they never had such lovely family outings as they've had since they got their machine; and just think how Billy would enjoy it!"

"Yes; and that's one reason why we shouldn't get it. Why, when I was Billy's age, I had work to do. I used to get up early and build the fires and take care of a horse and cow and hoe in the garden, and every summer my father would buy eight or ten cords of hard wood that my brother and I had to saw and split for winter. Boys had to work in those days! But look at Billy! he hasn't got a lick to do and you have to pull him out of bed for breakfast. We are bringing that kid up too soft, and now we propose to dawdle him around in an automobile; gee, it's fierce!"

"Well, Pete, dear, Billy doesn't do chores because there aren't any to do. Perhaps if you had a machine he could take care of that and—"

"Yes, he'd take care of it by taking joy rides. I'm on to Billy's curves."

"Don't be too hard on Billy, Pete. Just see what good work he's doing in school this term. Have you noticed his report cards?"

"Yes, he's getting on pretty well in school, but—"

"And he does an hour's work every day in the manual training class. See what he made and brought home for me last week." And Mrs. Crowther produced a neatly made cutlery box. "Isn't that nice work for a boy of his age? And then he plays baseball on the school team, and plays in the banjo club. He puts in an hour of practice every day just as faithfully."

"Yes, I guess so," grinned Pete. "Graves says that you can't hear anything in the neighborhood any more but tink-ety-tunk. Billy seems to be getting there on the banjo, all right."

"You see, Pete, Billy is probably just as active as you were when you were a boy, only his activities are different because we are living differently from the way our parents did. How many suits of clothes a year did your father buy?"

"A year! He bought one suit in about three years. He wore overalls most of the time."

"And how many cigars a day did he smoke?"

"Cigars? Nit! He smoked a clay pipe and used Adams Standard tobacco that cost six cents for a quarter of a pound, and that would last a week. I see your point, Jen. I buy four or five suits a year and I spend fifty cents a day for cigars all right, but—"

"Well, I'm not complaining, Pete. But if you aren't willing to live the way your father did, why do you wish Billy to live the way you did?"

"I don't; but all the same we are making Billy too high-toned. Somehow we keep letting out more slack on expenses all the time, and—"

"Do you think I'm extravagant, Pete?" and Mrs. Crowther's lip trembled slightly.

"Nix! You've always played the game fair, Jen. When I got only a hundred a month didn't you roll up your sleeves and do all your own work, and when Billy was a baby didn't you take care of him day and night? One reason why he is such a healthy kid is because you kept his little machine working like a clock, and we never blowed ourselves on expenses any faster than we could afford to. Nit! If any one says that you're extravagant, girlie, I'm ready to fight."

"Then what is it you want, Pete, dear?" asked his wife in perplexity.

"Well, when you come right down to it, Jen, I want that cussed machine myself—that's what!"

"Why not buy a nice runabout, then?" suggested his wife. "I'm sure we would enjoy that just as much as we would a more expensive one."

"Nit! If I buy a machine, it's going to be a good one. Do you suppose I'm going

to take Spencer's gasolene smoke? Not on your life!"

That afternoon, as Pete was going down the street, he met Thompson driving the new car. "Jump in, Pete," invited Thompson; "I'm only going up to the other end of town and right back." On the way Thompson called attention to the manner in which the car responded to the slightest touch. "She's a beauty, Pete, and don't you forget it."

"How does it compare with Spencer's?"

"Well, that machine of Spencer's is a mighty nice one; but, between you and me, this is quite the finest car I've had in the garage. It's just about the last word in automobiles, and that's a fact." As they approached the garage Thompson slowed down. "See here, old man, I've got a special reason for wanting to do you a favor. This machine is worth two thousand dollars if it's worth a cent. Give me your check for nineteen hundred."

Pete took out his book and wrote out the check and handed it to him. "It's my piece of junk," said he.

"Will you put it back into the garage?" asked Thompson.

"Not just yet. I'll run up to the house first and make my wife a present." Pete started up the street, but suddenly he put on the brake and stopped. "Oh, I say, Thompson!" he called.

Thompson came hurrying out of the doorway. "What's the matter? Anything wrong with the machine?"

"No, the machine is all right. But say, Thompson, how's crackers beside of automobiles?"

"Don't mention it," laughed Thompson. "Crackers are nix."

THE DOCTRINE OF THE LEAN BAG

BY DONAL HAMILTON HAINES

WITH DRAWINGS BY PAUL BRANSOM

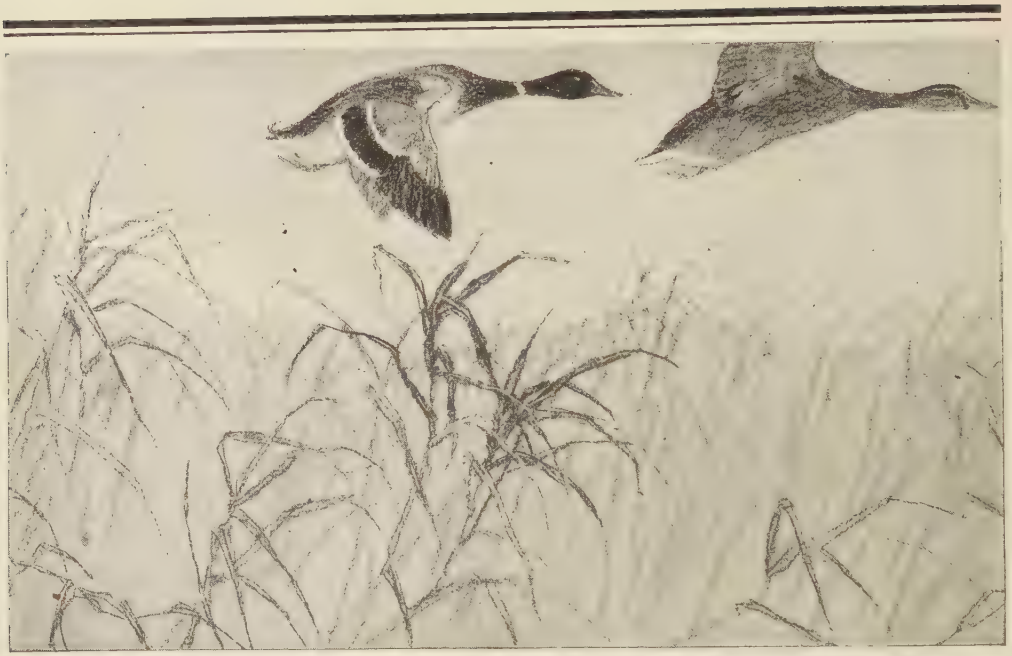
I AM only a fair shot. That may be at the bottom of my philosophy, but the result is the same. Sometimes I tell people that I am glad I don't shoot any better than I do. They don't believe this. Neither, in a measure, do I; but it answers the purpose, and gives my system a basis of respectable plausibility.

This is no attempt at proselyting. I abhor the idea. It is merely that a natural fund of vanity makes me mildly proud of my point of view. I do not care whether it suffices for another man or not. I merely like it enough to want to tell about it.

I have said that I am not a particularly good shot, and that the admission may be the underlying principle which supports the entire scheme of my duck-shooting. If I am not a good shot, it is not because I have not done my best to become one. I have read many volumes; I have listened to the advice of many a wizard of the gun; I have taken well to heart the ofttimes aggravating proofs of experience in the field. Yet am I far short of that standard which I once thought to reach. And therein lies the great charm of my shooting. Every time I judge distance aright I flatter myself that I have learned—and am happy. Every time I know that I have shot behind, I vow that I will shoot well ahead of the next bird—and am hopeful, which is but happiness spelled in terms of the future.

Some day I may find myself becoming expert. If I do, and I find at the same time I am losing one grain of the fine joy of uncertainty, I shall deliberately buy a gun which does not fit me, and begin where I began years back.

Proceeding along this line, I suppose I ought to say that I am content to shoot with a camera—but no! There is enough of the savage in me to demand that sudden closing up in the air which spells not so much the death of a living thing as the working out of an almost divine destiny. I want to bring



THEN THEY COME—NEVER FROM

down a duck as earnestly as does the veriest pot-hunter holding his breath among the reeds while the feeding flock swims into a thick bunch before him. But (and here lies what point I have to make) I do not demand that there shall be a long-necked mallard or a stumpy blue-bill toppling over every other minute, or every other five minutes for that matter.

I want breathing-space. I want time to think about every kill, or prod into the reasons of every miss. I want time to fill my pipe, and spread out the bird in front of me, and pat the breech of the gun, and exchange congratulations with the dog. After I have done these things I may be ready for another shot, but, even then, I am in no hurry. I can be content to sit back and watch them circling out over the lake with contemptuous side glances for the stool, or sailing over my corner of the marsh to another where the food is better.

This is not a pose built on a long experience of lean bags. I had one big day—and it was not the best I have known. The blue-bills could not get to the decoys fast enough, and I smashed at them with dense powder until the base of my neck throbbed like a drum and the blind was a litter of feathers and empty shells.

Once I thought this was merely the slight disgust of being surfeited. Now I know better. I had lost my respect for the ducks themselves! They were playing too much into my hands. I had come out for a battle and had found a shambles. They were obtruding themselves into the cosmos too much. I wanted to watch the decoys riding the waves, and note with some small satisfaction the job of repainting I had done on some of them; I was prevented. A single blue-bill wallowed in and had to be blotted out before I could watch the decoys. Then I had to go out in the boat after him, and got wet doing it!

A lot of people will think this last bordering on the edge of folly. That is exactly where I lay claim to being a superior order of human! I am not so dependent upon the game. I detest a blank day as heartily as the next man, but I want things in proportion. There are so many things you miss if your mind is altogether on the birds.

In the first place, there is the weird charm of that intensely black, cold hour when you get out of bed. You wake up with the firm conviction that it is seven o'clock, and that the strip of moonlight across the floor is daylight. You get out of bed with a rush—otherwise you might not get up—and discover that it is an hour until the first streak of dawn.

THE DIRECTION YOU EXPECTED

You are a light sleeper (or at least I am), but subject to attacks of heavy sleep at just such times. It will not do to take another chance with bed. So you shiver into your clothes and putter with the coffee-pot and what is going to be a fire, while Charlie or Win and the dog go on sleeping.

Every few minutes you go to the window and study the sky in the east. You don't trust that sky to wait for breakfast, almanacs and calendars to the contrary notwithstanding. Your distrust increases, and you wake the others. Then you have the few unpleasant minutes of the day. You are hungry, in a hurry, and chock-full of enthusiasm; the rest are sleepy, regard all ducks as nuisances, and any man who would wake them as a brute deserving of instant annihilation. The coffee changes all this. They become as reasonable as you are, and by the time the pipes are lighted they are pulling on their boots with the same sidelong glances at the growing light you have been giving these many minutes.

And then, whether it be in a blind with the decoys showing dimly against the gray water, or on the edges of a marsh where the long grass is full of a thousand little whisperings that *may* be quick-moving wings, you stand and watch the day come. You are not there for the dawn—you are there to shoot ducks, and you swear fervently if they do not fly. But the dawn happens, and you watch it, whether you will or no, and afterwards you remember it—every pink and yellow detail! You remember it because you are so much a part of it, so thoroughly in sympathy with every element of the moment. You shiver in the thin, cold wind as does the blade of sedge at your side; your dirty hunting clothes take on a glorious shade of brown as beautiful as the tawny colors of the maple behind you; if you could voice your feelings without bothering to put them into words, you know that they would sound very like the vibrant singing of the red-wing blackbirds among the cat-tails where the night mist still hangs.

All this but puts you in shape for the great moments which may be in store for you. Fifteen minutes of this and you are ready. You have not grown impatient. The first pipeful is still alight, and the chill of the unsunned air has not cut through cloth and flesh. Your nerves are winding up slowly toward a point that is going to be delightful—almost painful in the intensity of its tension. Your ears are as keen as a dog's. You find, to your surprise, that you have been listening to the ticking of your watch and

thinking it the morning tapping of a woodpecker. Your eyes are very gimlets. You wonder if it is yet light enough to see the ducks; a small dark object darts in front of you, and your fingers tighten on the wet wood of the stock. You discover that you have fixed your straining eyes on a spider stringing his web from reed to reed ten yards away! Your mind is a succession of doubts. Of course you have loaded your gun, but you open the breech to be sure, then you change the shells and put in your most perfect loads—for the first chance may also be the last one. You are certain that the ducks are coming from one particular direction. You have nothing on which to base this feeling, but it remains stuck in your mind. You watch that point of the compass until your eyes ache.

Invariably there will be one thin black cloud in that part of the sky which fools you. You focus your eyes on it suddenly, unexpectedly, and it assumes the form of a fast-moving flock! You will be fooled more than once, and then the cloud changes form and your peace of mind is preserved.

Then they come! Never from the direction you have expected, but from exactly the opposite. Your first warning is a quack—a hearty, unguarded, cheerful greeting that makes your blood hammer. Outwardly you are calm—very calm. Your face betrays the emotions of a cigar Indian—but inside! Five minutes before you were vowing to yourself that you would remember every tenet of shooting you ever learned; you would be effective if you could, but you would shoot calculatingly and according to the rules, if you had to let them get almost out of range.

You forget all this the instant that strong, reedy voice lets out its sturdy quack. You are excited—excited as you were the first time if you are fortunate as I am and you have not lost the first fine enthusiasm with the years. Only the fact that it is good, strong walnut prevents the stock from crumbling beneath the pressure your fingers put on it! You know that your legs are shaking the least bit in the world—and you are glad of it.

Then, before the soft whispering of wings sounds overhead, the man beyond you signals. We always do this, and it's another element making toward complete enjoyment. The first man to see the birds signals—a single whistled note, not sharp nor long-drawn. But how that whistle carries! You can sense in its insistent quality and its slight tremor all the pent-up eagerness of the man who has pursed his lips.

The actual *dénouement* comes quickly. A sudden rush of sound above your head, the double thud of a gun behind you, a fusillade of startled quacks from the birds—then the long-necked fliers swing out above you and your own gun flashes up.

Twenty-six grains of a certain brand of smokeless powder fired at a tin can on the end of a pole in your back yard will lame your shoulder and give you a headache that will last an hour. The same charge fired straight overhead at a string of mallards has no effect on your physical being. You are hardly conscious of the explosion.

You should score a hit on this first shot. Afterwards you may miss as often as you please, but the first soiling of the barrel should bring with it the downward plunge of the duck and your own mad, hasty wallowing through the mud and grass to the spot where he thumped down so satisfactorily. You pick him up and gloat over him; the sun whips up a long feeler of light and warmth, and his red edge shows over the hill. A voice shouts from beyond:

"Get one?"

"Yep!"—thus happily your own voice.

"So did I—drake!"

And a fine day is finely begun!

One duck is not enough for one day of hard work in the marshes—but twenty-five are too many. There should be time for cheerful callings back and forth—discussions of shots made and missed, of that single who sizzled through like a streak of feathers and passed unscathed through the fire of your three guns, of that big flock which veered off just as it was getting into range, of how well the dog behaved chasing two wounded birds at once through the tangle of weeds and bushes.

Let there be two or three birds to the man, say, when you wade out of the marsh and make for a little hard-wood knoll where Charles has already got a fire blazing, and the wet, ridiculously happy dog is smelling about among half-stale rabbit scents.

While the coffee is taking its own time boiling, perhaps three big flocks will swing in over the place you have just left. If you can grin philosophically and watch them with an academic interest in the movements of their strong wings and the clean lines of their outstretched necks, you will have understood

"HE KNOWS I AM GOING TO SHOOT AT HIM"

something of what I have been trying to get at. If you swear persistently (and this with two green heads in the pockets of your shooting-coat) at the combination of circumstances that has set you before the fire and taken you out of the marsh fifteen minutes too soon, you—well, you do not deserve the two in your pockets.

And then, finally, the ducks themselves! If you are inclined to look at only one side of the relationship of duck-shooting, and consider the birds only as so much animated target before you pull trigger, and as so much feathers and meat afterwards, you lose half the enjoyment.

It's hard for me to say just how I regard the duck. I feel that the relation is rather close between us. I always feel that he *knows* I am going to shoot at him, and that he regards the possibilities of the situation in much the same way that I do. Of course it may mean death for him, and the worst it may spell for me is disappointment, and yet when I have folded one up I do not feel that I have broken a commandment or even been a brute. He does not appear to me as the victim of an unfair adjustment of things, nor can I feel that I have been the means of wrecking some minor cog of the universe. I suppose I fall back on a sort of fatalistic doctrine—which is convenient because you can't possibly explain or defend it.

If you have gone through the day in this fashion, living every minute of it, losing no whit of the great clean-smelling outdoors about you, using the shooting only as a leaven to make the day perfect, you face the red glow in the evening sky with the same fine enthusiasm of the morning, and you pick up another mallard who splashes down into the darkening marsh, unload your gun, and wave a good-natured "So long!" at the tail of the flock which lost him.

On the other hand, if you have sweated and struggled through the day, blind to everything but the downing of another duck, and another, and yet a third, you have filled your pockets with—no, not ducks, but meat! You have seen neither the sun rise, the grass and sedge waving in the noon breeze, the pleasant afternoon shadows among the tree-trunks, nor the smoke from your pipe eddying up against the crimson western sky.

You are as the man who comes to a table set for an epicure, and kills his appetite by emptying a dish of stuffed olives and dill pickles ere ever the soup has been served. He may go through the courses, but he will not enjoy them—and subsequently he will have indigestion.

DR. HENRY MOSKOWITZ

HENRY MOSKOWITZ: A SOCIAL REFORMER IN POLITICS

BY J. SALWYN SCHAPIRO

"OTHER times, other men," might well be the motto of the present radical movement in American politics. In every great epoch in history—and we are living in one now—there appear upon the public stage personalities who hitherto have been content to work behind the scenes for the betterment of mankind. To the Progressive party have now been drawn men and women with no axes to grind and no wires to pull, whose uppermost thought is to make this world a better place to live in. Social reformers of every type have enthusiastically rallied to the standard of the new party, for it alone has boldly taken up the "condition of the people question." It is to the lasting credit of Theodore Roosevelt that these new personalities have been given a directing hand in the political life of the American people. Many of the leaders of the third party are college-bred men and women, students of sociology, economics, and philosophy; but they are not the type of the "college man in politics," so often praised in commencement addresses. Rather are they the exponents of a new and far more democratic ideal, the "college humanitarian in politics."

An excellent example of this new type is Dr. Henry Moskowitz, head worker of the Madison House Settlement in New York and associate of Professor Felix Adler, leader of the Ethical Culture Society. After leaving the public schools, Dr. Moskowitz entered the College of the City of New York, from which he graduated in 1899. He then took courses in economics, ethics, and philosophy at Columbia University. Later he left for Germany

and studied at the Universities of Berlin and Erlangen. From the latter institution he received the degree of Doctor of Philosophy in 1906. On his return to America he associated himself with the Ethical Culture movement and became the head of the Madison House, a non-sectarian settlement on the lower East Side.

Dr. Moskowitz's public career is quite short—only six years—yet this brief period contains an amount of civic activity that is amazing. He is largely responsible for the existence of the Board of Moving Picture Censorship, of which he is a member. The widespread movement to organize facilities for wholesome recreation among the working classes has enlisted the co-operation of many reformers. Dr. Moskowitz, who is an active worker in this movement, pointed out its real significance when he declared in an address that, "under our modern industrial system, people work to exist, but they live in their play. Because industry wears out the body and does not feed the soul, the question of recreation has become a matter of prime importance." The law regulating dance halls, which was enacted several years ago by the New York State Legislature, was the result of an agitation conducted by a group of settlement workers of which Dr. Moskowitz was the moving spirit. This measure aims to eliminate those semi-vicious resorts in which the first step towards degradation is often taken.

One of the most interesting features of the Fourth of July celebrations that were held in New York City the last two years was the part taken by the East Side. Mayor Gaynor had appointed Joseph Barondess and Dr. Moskowitz to direct the celebration in that part of the city. For the first time the adult immigrant was aroused to participate in an American festival. Independence Day was an opportunity to bring home to the foreigner "the higher mood of American democracy," for the immigrant often gets his first impression of this land of the free from those who seek to exploit his ignorance. There were monster parades, patriotic speeches, and music. The Declaration of Independence was read to vast crowds that manifested the greatest enthusiasm. So many East Siders voluntarily contributed their mite to the appropriation made by the city for the expenses of the celebration that there was an actual surplus, which was turned over to the Mayor.

Dr. Moskowitz, like Jane Addams, has come to the conclusion that the social settlement would lose its main significance if its influence were confined merely to those who come within the walls of the institution; that a settlement, to be a power for good in the neighborhood, must be a center radiating social and political reform. In other words, he is a settlement expansionist, who is intent on carrying the ideals of the movement into larger fields. For this reason he is intensely interested in economic and political reforms. New Yorkers will not soon forget the horrors of the Triangle factory fire, in which so many lives were sacrificed to the greed of employers forgetful of everything but profits. At the great indignation meeting held at the Metropolitan Opera-House Dr. Moskowitz read a report of an investigation he had made of the bad sanitary conditions in many of the New York factories, as a result of which a Committee on Safety was formed to secure legislation that would safeguard the lives of those employed in factories. Most of the recommendations made by this body to the Governor and Legislature of our State have now been enacted into law. Dr. Moskowitz was also a member of a group of social reformers that secured the passage of the law prohibiting the employment of women in factories for more than fifty-four hours a week.

Living in a crowded neighborhood, and understanding the people and problems of the East Side as very few do, he has perceived clearly enough the intimate relations that exist between bad conditions and bad conduct. "I ask a fundamental question," he declared in an interview with the New York "Globe." "Are these tenement-houses homes? Are they not, after all, merely places to eat and sleep in? Are they the spiritual anchorages that homes ought to be? Do they give the members of the family the opportunity to enjoy free and intimate experiences? No; the tenements are not homes. That is why boys and girls go wrong. Dark hallways are not good places for courting, nor crowded streets good playgrounds. Congestion is a fundamental evil which causes juvenile crime, high death rate, and immorality." His interest in the problem of overcrowding has led him to become a member of the Committee on Congestion, which seeks to prevent exploitation of the land for the benefit of real estate speculators. The ability that this young reformer has displayed in getting the Government to take a hand in the reforms in which social settlements are vitally interested has surprised and delighted many

of his co-workers. For this reason he was made Chairman of the Committee on Legislation of the Association of Neighborhood Workers.

Some of the most notable achievements of Dr. Moskowitz are in the field of labor disputes. As may be expected, he is a strong champion of the cause of unionism. To him the labor union means an appeal to the worker to lift his class to a higher level. In an address delivered before the Brooklyn Ethical Society he declared that the union was a "school of social responsibility and a moral check to the appetite for profit." "Worst of all," he went on to say, "is the fact that the law, which operates instantaneously to protect property, moves with leaden feet when measures are proposed to lighten labor's burdens. Adverse court decisions, which paralyze strikes or keep the worker from just compensation for injuries, have made countless law-abiding citizens declare that the law is weighted against the workingman." The great strike of the cloak-makers two years ago, which involved about seventy thousand men and women, and which threatened the existence of the entire industry, was brought to a peaceful close largely through the efforts of Mr. Louis D. Brandeis and Mr. A. Lincoln Filene, prominent citizens of Boston, and Dr. Moskowitz. The terms of peace between the workers and the manufacturers known as the "protocol" are unique and deserve a detailed explanation. In the first place, the principle of collective bargaining is maintained not only by the recognition of the union of laborers, but of the union of employers as well. Machinery for the adjustment of any grievance which either organization might have is fully provided for in the document. The agreement also establishes what is called the "preferential shop," by which is meant that, while union men are preferred, non-union men are not excluded. A permanent board of arbitration is established, with power to settle all controversies between the union and the employers. Another feature of the "protocol" is the establishment of a Joint Board of Sanitary Control, whose function is to elevate sanitary standards in the industry. On this board are two representatives of the workers, two of the employers, and three of the public. Dr. Moskowitz, representing the public, is secretary of this body. This settlement, so fair to all parties concerned, has succeeded in establishing peace in an industry that has been strike-ridden for years.

In order to bring about an abiding peace between labor and capital it is absolutely necessary that a third element, representing the general public interest, be given recognition. Dr. Moskowitz is an ideal "representative of the public." Absolutely independent in his judgment, utterly devoid of any sense for money-making, and gifted by nature with a most genial personality that invites confidence, he is eagerly sought as an arbitrator in labor disputes. While his sympathies are always on the side of the under dog in the fight, yet his wholesome common sense often saves him from allowing his emotions to run away with his judgment. Employers of labor, too, have confidence in Dr. Moskowitz, for he has educated many of them to the new point of view—that if the public interests are safeguarded, private interests have nothing to fear in the long run. He has taught them a fundamental lesson in modern economics, namely, that the labor unions are here to stay, and the wisest policy would be to recognize and co-operate with these organizations instead of trying to cripple them. It is no small thing in these days of class bitterness to have won the confidence of both sides. He was also one of the men who drew up the memorial to Congress to establish the Commission on Industrial Relations, with power to examine the conditions of labor in large industries, the causes of strikes, etc.

The political activity of Dr. Moskowitz is inspired by the same motive that inspires his other activities—his passion for the common weal. He has proved himself a true "son of the city," in the eloquent phrase of Dr. Finley, the President of his Alma Mater, for he has participated in many of the reform movements that seek to make New York a better and nobler city. He is a member of the City Club and of the Executive Committee of the Citizens' Union. The fight against Tammany Hall during the last mayoralty election, which resulted in the almost complete triumph of the Fusion ticket, was conducted by the Committee of One Hundred, of which he was one of the leading spirits. During the campaign he had charge of the famous exhibit known as the Chamber of Horrors, which so effectively dramatized the facts of Tammany misrule. He also aided in the election of Governor Hughes by taking charge of his campaigns on the East Side.

When the Progressive movement came along, Dr. Moskowitz was one of the first to enlist under its banner. To him, as well

as to other socal reformers, it means that now, for the first time, a great National party has recognized the existence of a "social question." To unify the scattered endeavors of many Progressives and give form, color, and substance to their demands is the avowed aim of the new party. "To me," declared Dr. Moskowitz, "this third party movement is infinitely bigger than any man. It represents a sort of American crystallization of two of the great movements of our time—the social movement and the woman movement, especially the former. This was the psychological moment in which these movements have been crystallized Nationally and brought into politics." The alignment of settlement workers with the new party is very significant. It is interesting to notice how a person entering the settlement movement a conservative frequently emerges a radical. The reason is not far to seek. The settlement worker at first goes merely to reform the bad conditions of a certain neighborhood. Before long he, like a wise physician, begins to realize that local diseases are really symptoms of general debility of the entire body. Jane Addams of Hull House, Chicago, Lillian D. Wald of the Nurses' Settlement, John D. Adams of the Lincoln House, Boston, and Dr. Moskowitz are types of social workers who see in bad housing, lack of recreation facilities, child labor, the signs of a diseased social organism. Intimate knowledge of actual conditions, even more than the study of sociology, forced these men and women, some of them conservatives by temperament, into the radical current. At the Chicago Convention of the Progressive party Colonel Roosevelt was in constant touch with a notable group of social workers, who advised him on the social justice planks in the platform.

At the Syracuse Convention of the Progressive party Dr. Moskowitz was one of the most notable figures. To him was assigned the chairmanship of the Committee to Draft Resolutions. He, in conjunction with other prominent social reformers, prepared the excellent reform programme contained in the Syracuse platform. Dr. Moskowitz is now the director of the campaign on the East Side. Very wisely did the Progressive candidate for Governor, Oscar Straus, choose him as his "guide, philosopher, and friend." There are very few men in the State who could advise him more soundly, particularly in social reform matters, than this young man of thirty-three.

About twenty years ago a little group of men and women came down the lower East Side and organized the Neighborhood Guild, now the University Settlement, the first social center in America. This was the golden age of the settlement movement, the age of obscurity, of small establishments, of self-sacrificing devotion. There was a touch of the early Franciscan spirit in persons like Stanton Coit, Charles B. Stover, James K. Paulding, John D. Adams, and Helen Moore. These men and women, representing America at its best, gave a spiritual propulsion to those who came in contact with them that has lasted down to this day. Among the children who came to this settlement, absorbed its influence, and was inspired by the ideals of its founders was Henry Moskowitz.

ART

BY E. ELLSWORTH SHUMAKER

Where Nature's hand undoes her loveliest scroll,
Two painters, finding beauty without flaw,
Sought to record the vision that they saw.
One had the master mind; the other's soul
Glowed with a fire lit by the living coal
From off the altar—fanned with the breath of awe:
Each wrought according to the inner law
That holds the creative hand in its control.

Untiringly they labored, and with fine
Unerring touch portrayed in colors true
Rock, tree, and stream, exact in curve and line,
Till to completeness the two landscapes grew:
One was a *picture*, perfect in each part—
The other was a living work of Art.

OUT OF THE WORKSHOPS OF FASHION

SOME TYPES OF PARIS WORKING-GIRLS

BY ELIZABETH SHEPLEY SERGEANT

WITH DRAWINGS BY ARTHUR COVEY

ONE evening in the late spring I was sitting on the bench of the raised stern platform of a river-boat that was steaming in the sunset light down the Seine. Before us the Trocadéro rose purple against the yellow sky, with a glorified pictorial effect that its ugliness can never claim in the daylight; on the opposite shore the Eiffel Tower lifted its black mechanical traceries into the pale upper blue. Behind us the old gray bridges and towers of the past were shining out of the dim evening haze. The guard went about the decks, jingling his bag of small brass tickets and exchanging them for the sous of the passengers. The boat slid every few minutes, with a bang, to a landing-place by a bridge, discharged one little jostling crowd, took on another, and then spurted quickly off again.

The three who had chosen the stern with me got on at the bridge of La Concorde. The two young girls, I gathered from their talk and the unmistakable "air" of their perfectly simple clothes, were apprentices at one of the great dressmakers' on the Rue de la Paix. They had been followed to their bench by a dapper young man—boy, I should call him but for the look of weary decadence that the Parisian face assumes, long before twenty, when its lines are cast in certain places. He had small, sharp eyes, well-oiled black hair, and cheaply smart clothes that smelled of musk. He was on his way to Issy-les-Moulineaux, where the aeroplanes race, and seemed to be a clerk of some sort who went the rounds of the dressmakers with samples. When I began to observe the group, he was telling the elder girl that he had seen her "in the stock-room" that morning.

"You were getting a yard of mauve crêpe," he said. "Didn't you see me? I noticed your blouse immediately. *Chic*, that!"

His ferret eyes stared her in the face over his jaunty little cane, and passed appraisingly from the buff blouse over her whole person.

At this, the younger girl, who could not have been more than sixteen and was shy and softly innocent, gave her friend a quick, troubled glance. The friend was a year or two older, and had a small, seductive face that might one day grow hard. She listened to the compliment with the ironic little smiling manner of one who knows her world, and threw a reassuring look to her companion. "I can take care of myself. Listen, and you'll soon learn how to manage them," she seemed to say.

"You think so, Monsieur? Do you really like it?" she encouraged very prettily.

"Yes, *parbleu!* What do you call that model—the 'Madeleine,' isn't it?" He spoke as one possessed of all the secrets of the sanctuary. She quickly brought him low.

"The 'Madeleine'! Pray, who would wear a three months' old model? This is our latest; one of Madame Jeanne's." She knew that he knew that she had made the blouse herself, out of a remnant from a bargain counter. But she also savored his appreciation of the *chic* that was hers by inheritance and acquisition—a *chic* that no Anglo-Saxon customer of her establishment could ever buy.

"It suits your coquette type," the young man began again, pulling the waxed ends of his mustache and fixing his eyes on hers. "Women should always dress for their type."

"Monsieur knows a great deal about women."

"I should be glad to know more about you, Mademoiselle Marie."

"Ah, I don't take up with the first comer, not I." Having fairly caught her fish, she turned her slim back and entered upon an impassioned discussion of "skirts" with her blushing friend. The young man, touched at last, edged nearer.

"Mademoiselle!" His tone was humble, and she turned her head slightly.

"You're ravishing! Won't you—consider me?"

"Thank you for nothing, Monsieur.

"HIS FERRET EYES STARED HER IN THE FACE OVER HIS JAUNTY LITTLE CANE"

We're very happy as we are; aren't we, Marguerite?"

"But," anxiously, "you haven't already a *petit amoureux?*" (sweetheart.)

"Naturally!" with bravado.

"You don't want to change?" he asked, low and eagerly. "Think of it!" He was really in earnest now.

"Thanks. The present one suits me very well. I'm quite content as I am. Isn't that so, Marguerite?"

She got up, nodded with a semblance of insolent carelessness, and, taking Marguerite's arm, walked to the gangplank. The boat stopped at Passy, and they hurried off. I looked back and saw them making their way quickly along the *quai* towards a row of poor white houses, where they doubtless lived honestly and frugally in an attic room together. But how long could it last? I saw my question reflected in the young man's face. He, too, was following the girls with

his eyes, and, like the bird of prey he was, noting the direction they had taken. He chewed the end of his cigarette, tapped his cane on the floor, and gave an occasional half-angry, half-admiring exclamation:

"Humph! satisfied! satisfied! There's a cheeky one for you!" he muttered to himself, screwing up his white eyelids and puffing smoke from his lips. But his small black eyes gleamed.

When the boat drew in to the next station, he was in the line of stragglers who handed in their brass tickets and stepped ashore, and I saw him turn back towards Passy, regardless of the aeroplanes. His furtive air suggested that, first of all, he was going to find out the truth about that imaginary little lover of hers.

It is from scenes like this that the stranger concludes—and not entirely without reason—that the young Paris working-girl of to-day is the direct descendant of Mimi Pinson, of whom Alfred de Musset drew so immortal a portrait: Mimi of the charmed fingers, light-headed, light-hearted, living from hand to mouth; Mimi of the round face, the turn-up nose, and the sparkling black eyes, who plied her needle all day for small recompense, but was not averse to making merry at night with Bohemian students:

"*Mimi Pinson est une blonde,*
Une blonde que l'on connaît.
Elle n'a qu'une robe au monde,
Landerirette!
Et qu'un bonnet."

Art and literature have liked to perpetuate the tradition. What is Charpentier's "Louise" but a modern version of the same young woman? Louise wears a hat, to be sure, instead of a little white cap, but in other respects times haven't changed much since 1840, we say to ourselves, as we see her in her giddy dressmaker's shop, and at last, rebelling against the parental onion soup, carried away on a wave of intoxication to seek joy of life with artists in Montmartre.

When one visits, as I did last year, the establishments of the great dressmakers and the milliners in the neighborhood of the Rue de la Paix, a Mimi-Louise seems the inevitable flower of the artificial soil in which she grows. This world of the *métiers de luxe*—the gilt-edged trades, one might call them, which minister only to luxurious tastes and large bank-accounts—is a world apart; a world, moreover, of striking contrasts. On one side of a door all is splendid glitter and a suave, extravagant ease that sounds in the smooth voices of the saleswomen, in the rustle and trail of the frocks displayed by the *mannequins* (living models), in the very chink of the bottomless pockets of the millionaires. On the other side of the door, dingy back stairs, bare corridors, crowded, confused workrooms, an atmosphere tense with effort and frenzied haste. The forewoman from a raised platform drives the needles forward with quick, sharp gestures and watchful eyes: "A little more care with that cuff, Marguerite." "You're slow, Alice; hurry up a bit there, my little girl!" She knows to a sou what every girl is worth and how far she may be goaded. The only standard common to both sides of the door is that of the Parisian secret, the *cachet Parisien*. Its form changes, subtly or fantastically, from week to week; its value never changes but to increase. The girl of the skillfulest fingers, however, thinks herself lucky if her *métier de luxe* gives her three or four, or at most five, francs a day.

Yet from these very workrooms and from those of the region to the eastward of "the center"—the region of wholesale houses, of flower and feather shops, which, in proportion as it stretches out towards the suburbs, declines in standards of workmanship and wages—from these countless *ateliers*, as I discovered, trudge home at night to their humble rooms, not only the light-headed grisettes, but girls whose hearts are burning with an ardor for social regeneration as keen as that felt by any Russian Jewess or any English factory hand; and gentle souls of another stamp, who live out their days in the glow of a sort of romance that no *petit amoureux* has ever known how to kindle.

At the Café du Sillon from Justine and Henriette, at the Bourse du Travail from Mademoiselle Marcelle, and from a milliner called Marie Constance, I learned many things about the life and outlook of the Paris working-girl that opera and fiction have not celebrated.

Marie Constance illustrated for me just how hard it is for a girl of fastidious taste to exist alone on five francs a day. She considered it impossible, indeed; that is why she trimmed hats in the evening on her own account.

Our first meeting occurred, characteristically, after ten o'clock, one October night. Hearing a timid knock at my door, I looked out, and found her standing in the corridor, where the lights were turned low. I could

see nothing at first but an enormous scooping hat-brim. It was as if the hat's owner, with a kind of inverted ostrich instinct, sought to hide away under its smart roll her beseeching dark eyes, her shabbily modest figure, and the bulging yellow-paper bags with which she was laden.

"Ah, pardon; Mademoiselle was retiring?" She seemed all ready, timidly and silently, to vanish into the gloom, and I almost put a hand on her arm to hold her back. She was the modiste whom my friend Madame B. had sent. "But if it were too late for Mademoiselle?" Her voice was as frail and thinly sweet as her little face.

As she came in and sat down in a tired heap on the couch to open her bags, I said that if lateness were in question she was the person to be considered. She hastened eagerly to explain away her obvious weariness. There was no resisting the radiant appeal of those soft dark eyes.

"It was her busiest season, that was it," for she was trimmer at a milliner's who "created" the models for the Rue de la Paix. Having worked through the summer on the winter's models, they were now beginning "on the spring." It was just a little fatiguing to think in straw in October! Every night her forewoman said, as she bade them goodnight, "Ideas, ideas, young ladies!" One really had to lie awake, for one couldn't let the other trimmers get ahead of one. And then there were her private patrons for evening work—ladies like Mademoiselle's charming friend Madame B. "And if Mademoiselle would say what sort of hat she wanted?"

That was our first meeting, but the slim, black, drooping figure, with the big, modish hat, the paper bags, that had odd protuberances to fit a feather or a bow, and the Bazin novel—she always read on the "Metro," she told me, and Bazin was her favorite novelist—was soon a familiar presence in the house, and to be seen gliding through the court and up the stairs in the early morning, at noon, or in the late evening. She worked in the *atelier* from nine until seven, and therefore must visit her own ladies in the scraps of time that remained. Yet she would come again and again for a single hat. The difficulty was to make her spare herself at all. Her artist's soul was no respecter of her bodily needs; hers was a real cult of service and of perfection.

Even the *concierge* (janitress), suspicious of everybody, and, above all, unfriendly towards those late-comers or late-goers who forced her to pull the door-rope from the bed where she was always comfortably snoring after ten o'clock—even Madame Lise referred to her affectionately as "that nimble, silent little fairy." "Your little fairy of a modiste is waiting for you," she would call to me from her lodge as I went up the stairs.

Léonie, the chambermaid, too—Léonie was a woman of the south, and in general conscious, in the presence of these Parisians, of her thick waist and her clumsy fingers—found pretty ways of describing her: "She's so dainty, Mademoiselle, like some little flower." This native, flower-like refinement, which in the Paris working-girl is so often touched with corruption, was in Marie tempered with nothing more urbane than an exquisite politeness that took heed of every delicacy, and seemed to deny herself the right to a personal existence.

If she were very late, for example, she was "heartbroken to keep Mademoiselle up; but I was at Madame B.'s, on the Boulevard St. Germain. I waited indeed from eight to ten, but she was dining, and I couldn't dream of disturbing her—a lady so distinguished in all her person, and so kind!" On rainy nights, when she came in dripping, without an umbrella, her fears were all for my carpet: "I! Why, my big hat makes my umbrella—a little creature like me!" And, though her long journeys from one end of Paris to the other were made without a morsel of food, I could not induce her to take so much as a glass of milk. Patrons were patrons, and, if American ladies did not know what was suitable (I was made to feel), no customer of hers should ever see her milliner eat.

"I have told Mademoiselle," she said, bending a bow over my eye, "that I always make my little dinner when I get to my room. An omelet, or something like that. It suits me perfectly, this arrangement. I am never hungry till midnight. After my dinner I am refreshed; I dash off my customers' hats in no time. I need little sleep, and I assure Mademoiselle that I am never late or tired at the *atelier*. Monsieur Louis winks at my copying his models, just because I am so prompt at nine o'clock, and come with courage in my heart and imagination in my fingers."

Monsieur Louis was a thoroughly satisfactory patron. At Louis's what you needed was a *flair* of a special sort; the *flair* to

THE OTHER SIDE

OF THE DOOR

foresee through the mists of autumn the forms and colors that would take shape on worldly heads in the spring, and in the spring and summer to forget the green leaves and "think," in turn, "in velvet." The best, the most intoxicating materials, were at your disposal: old lace, silky plumes, and flowers. Marie's love of beauty and elegance here found their reward, it was clear, and every fiber in her being responded to the subtleties of tone and texture in which she worked.

There was no dull season at Louis's, either. That was another advantage, for most milliners had only half a year's work. And if, like all steady work, hers did not pay well, there were her own ladies besides, many of them as charming to make hats for as those one saw at the "five o'clocks."

"The 'five o'clocks'?" I asked.

"Ah, didn't Mademoiselle know? Twice a month we trimmers go with our *première* [forewoman]—a most elegant person herself—to make a round of the tea-rooms where society assembles. We go—wearing hats that Monsieur Louis lends us, of course—to observe, to get our ideas stimulated."

If Marie lacked anything, it was not ideas. She conceived them and carried them to their logical conclusion with a doctrinaire rigidity that couldn't have been surpassed at the Sorbonne. I shall never forget the horror with which she discovered that I was wearing a straw hat in October—"Straw at this season!"—she almost gave me up on the spot; nor her scornful appraisement of some old hats for which I had a liking. One was pure *camelote* (ready-made), the other was simply not worn. I might take it from her that in the right places it never had been. I was not, however, to get the whole savor of her blend of the doctrinaire and the romantic until the evening when she brought me my "small hat."

"Mademoiselle Marie! Is that what you call a *small* hat?" The peaked Gothic extinguisher with curving sweet-pea sides that she had proudly taken from the dejected bag made me gasp. Marie's sensitive little face stiffened with a sudden authority, and her voice rang out hard and clear.

"But yes, Mademoiselle. *Of course* it is a small hat. As I explained, there are only two kinds of hats this year—the large and the small. This is the best model of the *petit chapeau*, the greatest success of our house this season."

I wondered, weakly, whether it could not be modified a little to suit a New England nose.
